"It happened a little over two years ago in northern Maine. I was hunting in the neighborhood of Mt. Katahdin, and had as companion one of the most experienced and successful guides in the State. Although we had been in the woods several days, we had not seen or heard a moose, or in fact any other large game, and I had about determined that a change of locality had become a necessity. Early one morning, however, my guide, who was the most expert moose caller I ever met, succeeded in attracting the attention of a big bull, and soon we heard him crashing through the woods in our direction.

"On he came, bounding over underbrush and windfalls, uttering at intervals a peculiar, discordant note. With the guide I was ensconced in a little clump of sapling spruces, where I waited with ready rifle for a favorable opportunity for a shot. The guide repeated the call, and the moose drew nearer; the call was again given in a very low tone, and soon the huge animal came into view. He was a magnificent specimen, with very widely spreading and perfect antlers.

"I had raised my rifle to my shoulder, and was at the point of firing, when there was heard a cracking of sticks a short distance to the right of us, and in a moment a cow moose appeared upon the scene. She was, of course, instantly discovered by the other, and it took but a moment for him to join her.

"'I've called many a bull,' whispered the guide, 'but never a cow moose before.'

"I made no reply, but again raising my rifle was about to draw the trigger when the smashing of sticks caused by some large animal was again heard in the direction from which the cow moose had come, and another male bounded through the thicket and joined the others.

"The scene that followed was the most remarkable that I ever witnessed; it was a battle that I shall never forget.

"In an instant the bulls came together with an impact that seemed to shake the earth; with a loud clash their antlers met and became interlocked, and then, straining every nerve and fiber and muscle, each of the savage animals tried to force the other backward or from his feet. Around they swung, now here, now there, sometimes the advantage being with one and as often with the other.

"Ever and anon their weapons became separated, and then the duelists sought by quick leaps and dexterous lunges to adroitly reach within each other's guard and strike a vulnerable spot.

"The agility, the celerity of attack and defense that were displayed in this battle were astonishing and hardly to be expected from such huge and apparently clumsy animals. I gazed upon the scene almost entranced—even forgetting that I had a rifle and was there to kill—and if it had not been for my guide, who touched my arm and pointed to the cow that stood gazing stolidly upon the fight, I dare say that the duel would have continued until one of the bulls was conquered.

"The action of the guide and his whispered remark, 'There is always a female at the bottom of all trouble,' aroused me, and, aiming at one of the bulls, I fired. The discharge of my rifle alarmed the cow and she quickly disappeared in the forest, but the others paid no attention to the report and continued their battle.

"I thought for a moment I had missed my aim and was about to send another ball into my quarry, but he began to waver and stagger about, and soon grew so weak that the other forced him down and began viciously to gore him.

"Disapproving of such unchivalric conduct toward a conquered foe, but not wishing to kill the survivor, we emerged from our covert and advanced toward the bull, expecting, of course, that on discovering us he would take flight; but in so doing we made a serious mistake, for the moose turned like a flash, and charging upon us caught the guide before he could escape, and gave him a toss that I thought was fatal, and then swung for me. I had no time to take deliberate aim, but holding my rifle almost at arm's length I fired, and he dropped as if struck by lightning, the ball having pierced the thick skull at the only vulnerable point, and entered the brain.

"The guide was badly bruised, but not seriously injured, and he was in a short time able to flay the two carcasses.

"'I've had lots of scrapes with moose,' he said, 'but that was nearly the worst of all.'"

"By Jove!" exclaimed one of the group when the story was concluded, "that was an adventure worth having. I have always longed for an opportunity to meet a big and lusty moose, but have not yet had that pleasure. I mean, however, to make the effort next fall, and it will be strange if I do not succeed, plentiful as they now are in the Maine woods.

"My largest game thus far has been our common deer, of which I have killed quite a number in different sections of the country. I have still-hunted and stalked them with hounds in the North, and pursued them with hounds in the South; in fact have had my share of experiences in all the methods that are followed. Jack-hunting I have tried but once, and probably shall never attempt it again. The incident is hardly worth describing, but it may prove somewhat interesting to those who have never hunted in this manner. It occurred during one of my outings a number of years ago in the North Woods. A small party of us had been encamped for several days, subsisting on trout and the different 'store goods' we had brought with us.

"The supply of these, though abundant in quantity, soon grew monotonous in variety, and it was finally decided that nothing but 'fresh meat' could satisfy the cravings of our

appetites. The term 'fresh meat' in the woods usually implies venison, and it was decided by lot that I should procure it. In compliance with this decision I started early in the afternoon for my nocturnal hunt, accompanied by two of our guides who carried one of our canoes on their shoulders. Our objective point was a small lake some four miles distant in the wilderness, where it lay completely surrounded by mountains. It was a famous locality for deer, but was extremely difficult of approach, the path leading to it being of the roughest character imaginable, and an ascending one nearly all its length besides. I am a fairly good pedestrian, but my enthusiasm was at a low ebb before the tramp was ended, and I have always had a doubt concerning the length of those alleged four miles.

"However, we reached the outlet of the lake at last, although it took us until dusk to accomplish it, and we began preparations at once for the night. Placing the canoe in the water, one of the guides lighted a small fire and boiled the tea-kettle, while I and the other picked hemlock boughs and laid them for a bed.

"It took but a short time to accomplish this, and as soon as our supper was disposed of and we had a brief but enjoyable smoke, we were ready to begin the hunt. It was now quite dark, there being no moon and the stars shining but faintly through the thin haze which arose from the water.

"As many of you are doubtless aware, the 'jack' is a lantern very similar to some of the carriage lamps in ordinary use; it is attached to a staff in the bow of the canoe, and fastened behind it is a brightly polished reflector which causes an intense light to be thrown in front of the hunter in an ever-widening swath, leaving him and the boat in obscurity.

"Our lantern was lighted and placed in position, and we embarked, I sitting in the bow of the canoe with my rifle laid across my knees, and one of the guides taking his place in the stern. The other man, not being needed with us, remained at our camping place.

"As we moved like a phantom through the outlet and upon the lake, impelled by the silent paddle of the guide, the scene was weird and beautiful in the extreme. The foliage, illuminated by the brilliant light of the lantern, gleamed like silver against the dark background of the forest, every leaf standing out bright and distinct. The gnarled and twisted trunks and limbs of dead trees assumed many singular and fantastic forms, and ever and anon some wild bird or animal, alarmed at our presence, rustled away through the woods as we passed by.

"Occasionally a muskrat swam alongside the canoe and inspected us, evidently wondering at our being in that retired spot. Twice we passed through families of wild ducks, our craft almost touching them as we went by, and once we drew so near a great blue heron, which was standing on a jutting point of the shore, that I could easily have touched it with a trout rod if I had one. The lantern gave none of these wild creatures the least alarm.

"We had floated along the shore for nearly a mile before we heard our first deer. He was evidently in the water feeding upon the leaves of aquatic plants, and as he walked about the splashing he made could be heard a considerable distance in the still night air. Slowly and silently we drew near the sound, and in a short time he was plainly visible.

"What a beauty he was! how large he seemed as the strong light fell upon him! Closer and closer did we approach, but he paid no attention to us other than to occasionally look at our light, which, however, he regarded with as much indifference as he would the rising moon. So stolid did he seem that I had almost begun to regard him as being stupid, but I was soon undeceived, for as I was at the point of raising my rifle he gave a shrill whistle, turned about as quick as a flash, and with three magnificent leaps disappeared in the forest. What caused his flight I could only conjecture. I certainly had made no sound, and the movements of the canoe had been absolutely noiseless. Possibly in our close proximity he had 'winded' us, or perhaps the vibration of the paddle in the water had been felt by him.

"'Better luck next time,' whispered the guide, 'you waited a leetle too long.'

"'Yes,' I replied, 'I was not quite quick enough; the next one will not get away, you may be certain.'

"The paddle was again resumed, the canoe following the sinuosities of the shore as it had previously done, and it was not long before we heard another splash in the water ahead of us. Drawing near the sound, we discerned two deer moving around, but as we approached them I discovered that they were a doe and fawn, and of course declined a shot at them.

"A little further on we found another female with fawn, and it was not until we had seen at least a dozen of these that we discovered a buck. He was standing on the edge of the shore, his form showing plainly against the thick background of alders, the leaves of which he occasionally cropped and ate.

"Silently we drifted toward him, the canoe gliding with an almost imperceptible motion; he stood quietly, but evidently regarded our light with curiosity.

"At length, when we were, as I judged, near enough to insure a successful shot, I took careful aim and fired.

"How the report echoed and reverberated among the mountains around us! Back and forth it rolled almost like a fusillade for at least a minute, growing fainter and fainter until it finally died away in the distance.

"When we reached the buck we found he was quite dead, so quickly and effectually had the bullet done its duty.

"The hunting knife was now used in its allotted work, and placing our game in the middle of the canoe we resumed our course.

"Following along the shore, we passed several does and fawns, and two more bucks, but I did not try to shoot either of them, for we had all the venison that could be used.

"But I felt a desire to see as much of them as possible, and for an hour or two we paddled around, sometimes alarming them while a few yards away, but more often approaching so closely that in some instances I could almost have touched them with my rifle.

"At length, probably greatly to my guide's satisfaction, my investigations came to an end, and turning the canoe toward the outlet we soon reached the landing place, where, after hanging up the deer, we quickly joined the other guide on his bed of fragrant boughs.

"Before I fell asleep, however, in reviewing the events of the night, I arrived at the conclusion that I had not only no desire for any further experiences in 'jack-hunting,' but was convinced, judging by what I had witnessed of the ease with which the animals may be approached, and their utter unconsciousness of danger as they stand in the strong light of the lantern, that it is a method that all sportsmen should condemn, destructive as it must be if practiced by reckless and unscrupulous persons.

"Our stay at the mountain lake was but a brief one, for we arose in the morning with the sun, and after partaking of a hasty breakfast, in which some choice bits of the venison played an important part, we started down the rough path for our 'home camp.'

"Our welcome was a flattering one, but I received the congratulations of my friends with much greater equanimity than I would have felt had I killed the deer in any other way than by 'jack-hunting.'"

The deep, rich tone of the gong in the great clock that stood in the corner of the room sounded the hour of 10 as the narrative came to a close.

"Well, boys," exclaimed an elderly gentleman rising from his seat, "the evening has been a delightful one to me, but it is now my bed hour, and if I am to do any trout fishing to-morrow I think I had better retire now; I will therefore say good night and leave you."

"Yes," said another, "we had all better turn in; 10 o'clock is good bedtime down here, and I feel tired enough to enjoy an all-night sleep."

This example was soon followed by others of the group, and it was not long before the room was entirely deserted.

EDWARD A. SAMUELS.

THE NEW YORK BASS SEASON.

Editor Forest and Stream:

Among the many proposed amendments to the fish and game law now before the Legislature is the usual one of making the open season for black bass commence on the first day of July, and it is understood that the advocates of this change claim that an extension of the present close season is necessary for the reason that black bass are usually on their spawn beds during the entire month of June and frequently until the middle of July.

The black bass is the coming fish, not only of this State, but of most all of our Northern States. Our trout have been largely destroyed by the introduction of pike or bass in many lakes and streams where they formerly abounded, and the gradual depletion of the water in many of our present trout streams indicates their gradual extinction in many waters in the near future.

Within the last thirty or forty years the black bass has been so generally distributed throughout this State that a very large proportion of our streams, both large and small, as well as our lakes and ponds, are now stocked with this fish, where it furnishes not only sport for the skilled angler who takes it with the fly, or by dragging or drifting, but it also furnishes both sport and food for thousands of our citizens who are limited to a day off now and then for fishing, and it should therefore be fully protected; but after my personal observations, extending through several years, and after obtaining the views of many others who have had a large experience, I am forced to the conclusion that as a rule black bass are through spawning in most of the waters of this State by June 1, and are rarely on their spawn beds for the purpose of brooding their young later than June 10; and the exceptions to this rule are some of our lakes where the waters are deep, and remain cold until late in the season.

I am familiar with the conclusion arrived at by Dr. Henshall in regard to the spawning season of black bass, and recognize him as the most eminent authority on this subject; but when he made his exhaustive examination into the habits of this fish, it appears by the books which he has published that his observations were confined largely, if not entirely, to lakes, and he has not given us any facts in regard to the depth or temperature of the water of the lakes which he examined.

It is well understood that the black bass remains in a dormant or sluggish condition during the winter season, and does not emerge from this condition and work toward the spawning ground until the waters are warmed to some extent in the spring, and for that reason the spawning period is not at all uniform, and in this particular the black bass seems to be a fish *sui generis*.

It was noticed by the warden of the Blooming Grove Park Association some few years ago that in one of the ponds under his charge, which was 75ft. in depth and fed by springs from the bottom, the bass were on their spawning grounds until about the middle of July; but the grounds of this Association are about 1,500ft. above tide water, and the lakes are sometimes not free from ice until quite late in the month of May, and the surrounding hills are frequently snow-clad quite late in the month of April, and this simply emphasizes what is claimed as to the habits of this fish—that it does not make for the spawning grounds until there is a change in the temperature of the water.

In our rivers and streams the water becomes more or less warm, as a rule, at least two weeks earlier than in our lakes and ponds, except those where the waters are shallow, and as most of our streams and lakes which abound in this fish are shallow, the open season, if the law is made uniform throughout the State, should commence when the bass in these waters have left their spawn beds. If it is claimed, however, that the open season as applied to these waters would result in the destruction of the bass in deep lakes and ponds, then as to them an exception should be made, either specifically or a general exception as to all deep, still waters; but such exception should not be made without the fullest investigation as to the habits of the bass in the waters to which it is to apply.

Without stating at length the sources of my information, it is enough for the purpose of this article to say that there is a pond in this county, covering perhaps 600 acres, in which I have fished frequently on May 30 or 31. The waters in this pond are shallow, and I have never seen but one bass on the spawn beds on those days.

I have in my charge a large, shallow pond in Ulster county which abounds in bass, which I visited on May 30 a few years ago, and did not find a single bass on the beds, and this corresponds exactly with the information I have gained in regard to other like waters in this vicinity and throughout the State.

I am also advised that in Canada, where the lakes and streams are ice-bound at least two weeks longer than in this State, the bass are through spawning, as a rule, by June 15 or 20, and there should be a difference of at least the same time between Canada and the State of New York in the period of spawning.

If the above views are correct as to the time when black bass usually spawn throughout the State, then a uniform law extending the close season to July 1, or even to June 15, would practically defeat itself. Such a law would be commonly regarded as arbitrary and prohibitory and wholly unnecessary for the purpose of proper protection.

Thirty-five or forty years ago it was practically impossible to enforce any fish laws in the counties comprising the lower water-shed of this State (where trout at that time were very abundant), for the reason that all the inhabitants claimed that all the streams and lakes were free, and that they had a natural right to fish when and where they pleased. Juries would not, as a rule, convict on the very best of proof, and an attempt to collect the penalties prescribed by law frequently resulted in the destruction of some of the finest ponds, where the trout were destroyed by pike which had been placed in these ponds as an act of retaliation or in a spirit of revenge. A gradual but decided change of sentiment has, however, taken place not only in this region, but also throughout the entire State; the rights of riparian owners are now respected, and the general sentiment is in favor of observing the law, because its provisions and restrictions in regard to the taking of fish meet with general approval, and the necessity for the protection of our fish during the spawing seasons is commonly recognized.

If the close season for taking black bass is extended as proposed, it will be regarded by our people generally as unnecessary for protection, and instead of meeting with popular approval it will be met in a spirit of defiance, and efforts to enforce the law will generally fail, because the spirit of approval which now exists will have given place to one of hostility; and in that case many who now respect the law as to the present close season would disregard it wholly, and the bass would in many places be deprived of the protection which they now have.

J. S. VAN CLEEF.

POUGHKEEPSIE, N. Y., April 10.

THE CASTALIA CLUB.

MR. J. E. GUNCKEL sends us these notes from the Toledo, O., *Bee* of the Castalia Club fishing in March. We think likely he wrote them himself:

It takes a very enthusiastic angler to follow the winding, icy bound trout stream of Castalia in the month of March, particularly if the weather is so cold that the line is covered with a coating of ice and it falls heavily upon the water at every cast. Snow, sleet, rain, wind nor cold were known to stop the members of this famous club from fishing in the cold creek stream. The opening days in March, with exception of cold, were followed by unusually good luck, and the records show an increase in number and weight over former years. There must be something peculiarly charming about these opening days at Castalia, for Dr. Beeman one day, walking up the path, exclaimed as he stepped upon the veranda of the club house: "I have traveled over 1,000 miles to attend this opening." He did, for he came direct from the Bermuda Islands.

Notwithstanding, in the pools, in the eddies and under the floats, can be seen thousands of trout, and very often the surface seems perfectly alive with them in their morning and evening antics; but there are days, and many in succession, when no bait, be it ever so tempting, and dropped ever so naturally before these finny beauties, not one will rise or even wink his eyelid. This is a case when the angler knows there are plenty of fish. As this is true here, so is it in the Maumee and adjacent waters.

There is no question but what this stream, with its unlimited supply of running water, its many pools, fine spawning beds, contains more trout than any stream of like dimensions in the world. The hatchery is one of the most complete in the country and they can turn out as many trout after each spawning season as they desire. It may be of interest to the reader to learn a few points touching this method of fishing and why it is men are so soon wedded to its enchantments. Why it is considered an art.

The Castalia Association has not always sailed over peaceful waters. The beautiful stream and its surroundings are the results of many hard-fought battles and considerable outlay of money. In some cases even the Supreme Court has been appealed to, but just as everything seemed amicably settled, at the opening of this season, and the storms had all passed over with clear sunshine and brighter prospects, another cloud hangs heavily over these fair anglers. Early in March it was discovered that the trout in some of the pools were unusually agitated. They leaped upon the water cress—some, through fright, even leaped out upon the ground. This was not confined to one pool, but to many, and Mr. Englert became greatly alarmed at what surely meant the total annihilation of the trout. The disturbance followed the pools up stream. For many days Andy watched for a cause. One morning at daybreak, in Sweeny section, he saw the water foam, the trout leaping in every direction, and as he raised his head over the high bank he discovered the secret of the trouble. There, basking in the sun, he saw a monster muskalonge, that had found its way from the lake to this paradise. Seeing Andy, it quickly disappeared under a float in a deep pool.

In spite of his many years' experience as a fisherman, after trying every known art, he could not capture this fish. He could pick from any pool the trout he wished, but a monster like this was beyond his learning. He could do nothing with a net. No bait tempted this greedy fish. A consultation was held with several members present at the club house, but their efforts proved unavailing. By accident, some one hinted that there lived a man in Toledo whose reputation as a truthful angler was unimpeachable, and whose record for successfully capturing large fish was unequaled. After another week passed, and each member took a trial to capture this fish, using all kinds of bait, the board of trustees was called, and the meeting resulted in the following note sent to Toledo:

CASTALIA, Ohio, March 10.—J. E. Gunckel, Toledo, Ohio: *Dear Sir:* In our stream there is a fish of monster size, who is devouring our young trout at a fearful rate. Knowing that you stand alone in luring these big fish, we most cordially invite you to our club grounds, and hope you may be able to capture this tormentor. The keeper will be pleased to show you the hiding places of this fish. The password to be admitted on the grounds for '97 is "Gum."

BY ORDER OF THE TRUSTEES.

Gunckel accepted the invitation, and a few days before the season opened he was at the club house. Then in the shadow of a willow tree, lying at the bottom of a favorite pool, rested a muskalonge which certainly would not weigh less than 40lbs. He was motionless, except an occasional movement of a fin. He was round as a balloon—the results of his having gorged himself with trout. Gunckel took in the situation, and after preparing his favorite rod he attached to the line a Harris floating meadow frog. Down the stream it floated several times—trembling as if alive, and by its nature expecting at almost any moment to fall the victim to some wary fish.

At the third cast the lure floated directly over the apparently sleeping muskalonge—a terrible splash and the bait

was gone down the stream like a flash of lightning, now leaping high in the air, then circling around the great pool. But he soon discovered the master hand of an expert angler. Owing to the water cress and extending roots the fish could not be landed until after forty-five minutes' careful handling. It proved to be a lake muskalonge, weighing exactly 49lbs. Firmly fastened in its great jaws were several artificial flies, one quickly recognized by Capt. Hasbrook, he declaring he was "snagged by the monster." From its stomach were taken twenty-one trout, weighing from 4 to 10oz. It is hinted that Gunckel will be unanimously elected an honorary member of the club at its next meeting.

PENNSYLVANIA ASSOCIATION.

PHILADELPHIA, April 11.—*Editor Forest and Stream:* The regular monthly meeting of the Pennsylvania Fish Protective Association was held Saturday evening, April 10, at the rooms, 1020 Arch street, Philadelphia, and was well attended.

A large number of applications for membership were presented, among them the Delaware County Fish and Game Protective Association, of Chester; the Bucks County Fish Protective Association, of Doylestown; and the Beaver Falls Rod and Gun Club, Beaver Falls.

Numerous communications were read from local organizations throughout the State showing the work accomplished in stocking the waters and the protection of fish.

The executive committee reported having received notice of the proposed draining of several of the city reservoirs, and said it would continue the work of transplanting bass and other fish found therein to adjacent streams, with the co-operation of the proper officials of the water department.

A special committee reported having made considerable progress in an effort to have placed in all the public schools of the State charts containing the colored plates of fish printed in the annual report of the Fish Commission, together with other information for the guidance of the youth.

The legislation committee reported as to the Delaware dam bill hearing before Gov. Griggs.

Mr. Marion G. Sellers delivered an address on "Fly-Fishing in the Upper Delaware and its Tributaries," concluding with a paper upon "Late Developments in the Artificial Hatching of Small-mouth Black Bass."

M. G. SELLERS, Sec'y.

Report of the Legislative Committee of the Pennsylvania Fish Protective Association.

PHILADELPHIA, April 10.—*Mr. President and Members:* Your Legislative Committee reported at the last meeting its efforts at Harrisburg. This month we have to report the effort which we made at Trenton, and our interview with Governor Griggs in presenting objections to the New Jersey bill to allow of the placing of a dam across the Delaware River at or near Trenton.

The members who were present were Marion G. Sellers, Wm. E. Meehan, Howard W. Chase, Bernard L. Douredoure, and the chairman of the committee, Dr. Bushrod W. James.

We had a pleasant and generous reception from the Governor, who accorded us full time to express our opposition to the bill.

Mr. Meehan was also the representative of the Pennsylvania and United States fish commissioners and of the Academy of Natural Sciences of Philadelphia; he presented their objections and stated that the objections to it were two-fold: (1) The destruction of the fisheries, and (2) that valuable franchises were being given without any compensation, either for the franchise or the injury done the fisheries. He admitted that the corporations interested would benefit, and that the manufacturers and those who used the power would be benefited, but held that these benefits would be more than counterbalanced by the financial and other losses to the people of four States. The destruction of fish by these dams, he argued, was not speculation, but could be proved, and the three bodies that he represented stated positively that the shad industry would practically be destroyed. It was true that the bill provides for fishways, but experience shows that such fishways were not entirely effective for shad. Proof of this was had in the Susquehanna. There some years ago, when that river was far more profitable than the Delaware, a large dam was built at Columbia from shore to shore, and others placed above, and immediately the shad industry above there stopped. Fishways were erected, but the shad refused to go up them in any quantity. Three hundred was the number of shad caught the following year, and the greatest number ever caught since while the dam was entire was 3,000. The shad is a very timid creature, and seems to look upon fishways as traps. But even if they did go through freely, the bill would still be objectionable and cause injury to the fisheries on account of the canals and raceways which might be built. The young fish spent their early days in the upper river, and on their way down are drawn into the race or canal ways and would be killed by the million. Many complaints, he said, had been received by both the Pennsylvania and New Jersey commissions of the few raceways that even now exist. The Pennsylvania Commission has a station at Bristol, hatching about 8,000,0.0 annually, and the United States Commission hatches about 30,000,000 young shad at Gloucester. If the bill passed, the Bristol hatchery would have to be abolished, and it would only be a little time when the United States would follow suit at Gloucester. Last year the value of shad in the Delaware, at the nets, was half a million of dollars, of which $30,000 worth was above the Trenton Falls. This represen's a million and a quarter dollars at the consumer's price. Five million pounds of fish were caught and 15, 00,0.0 people fed. Then, too, an infant fish industry is threatened, namely the Atlantic salmon, a fish that now sells for 50 cents per pound at the nets—the greatest food fish known. Two thousand pounds were caught last year, the second year of the run, and inside of twenty-five years it will be a profitable industry.

Mr. Meehan read a letter from Commissioner Brice, of the United States Fish Commission, in which it was stated that if the bill became a law the United States would stop the salmon work in the Delaware. It was then argued that no franchise such as the bill proposed should be given without heavy money payment, and that large payments should be exacted for the injuries done to the fish industries; yet not $1 was offered. There was no dire necessity for the dam. It violated the treaty between Pennsylvania and New Jersey of 1874, providing that the maintenance and increase of fisheries was far more important than the erection of dams.

Dr. Bushrod W. James called the Governor's attention to the fact that there was a joint State agreement between New Jersey and Pennsylvania, made many years ago, that they should always maintain the Delaware as an open stream by mutual legislation, and that one of the most important rights of either State was the maintenance of this compact, and that we of Pennsylvania feel that by giving corporate rights and privileges and control to any company at any point on the stream, we would be deprived of our just rights in the use of this public waterway, which is the equivalent of a highway upon land.

He also stated that the Pennsylvania Fish Protective Society had been working for fifteen years to have the Delaware River properly protected by good laws and the food fish allowed freer access to their spawning grounds in the upper waters of its tributaries.

"Having obtained this desirable end by statutes adopted by the Legislatures of New Jersey and Pennsylvania, and the products of the stream thereby becoming more valuable from the increased supply of shad, and in time no doubt by the salmon, which are increasing, we are confronted with this inimical bill, which destroys all the efforts we have made We of your sister State look to the executive of New Jersey to prevent this disastrous result from occurring and to maintain the neighborly relations which we have thus far enjoyed."

Dr. James said that the Association which he represented was composed of members from all parts of the State of Pennsylvania, and that their sole object was to see that good laws were made to protect all the streams of our State as well as the border stream—the Delaware River. It not only aimed to have the best laws enacted, but desired to defeat bad legislation wherever it presented itself in this direction. We have no private interests to subserve.

Gov. Griggs inquired whether our organization had not a commercial interest in the products of the river, to which Dr. James and Mr. Sellers both replied that there was none whatever. That their whole object was to see that good legislation was obtained and maintained for the protection of the streams which they helped to populate with good and valuable food fish.

Dr. James called the attention of the Governor to the fact that giving control of any part of the river to a corporation carried with it the contents of the stream, hence all the food fish value would be practically given to the corporation erecting the dam.

Pennsylvania furnished annually from the Bristol hatchery alone, and New Jersey from the Gloucester hatchery, millions of small-fry food fish for propagation in the upper streams of the Delaware.

It is now proposed to give this value of the present and the great prospective future value to a private corporation, which we believe on an open navigable river it has no right to obtain, the river being, as stated, an open American waterway subject to the Government control.

He also took strong ground from a sanitary standpoint, that as the waters of the river might be needed for the larger towns and cities along the Delaware River, in the future, that it was hardly the neighborly act to contaminate the water by damming it up and making slack water of a now quite rapidly running stream. Sanitarians all know that in order to maintain a stream free from impurities and deleterious accumulations the water must be kept in constant agitation and exposure thereby to the atmosphere. At Philadelphia we already take a quantity of the Delaware water for the northeastern district of the city.

Now this water right corporation will no doubt contaminate the water which we are obliged to use by damming it back as slack water, and not only making it still water, but will fill it with malarial products by covering over many thousands of acres of land now under tillage, and which is saturated with soil decomposition.

This covering of these areas with slack water will undoubtedly fill the water with a vast amount of decomposed vegetable matter, so much so as to produce a widely diffused malarial influence, not only locally here in and about Trenton and far above it, but the water will be greatly impregnated by these vegetable decompositions which will be taken up by the water, and especially so in dry seasons of the year, when the stream is low and its borders exposed.

Persons along the border of the stream above the dam will certainly be more or less affected by these contaminating malarious germs.

As friends and neighbors in friendly relation with you and the people of your State, we urge with all of our energies the careful consideration of this whole matter by your Excellency, and we trust that the bill may be set aside and the injurious influence which it will doubtless exert, if it becomes a law, thereby averted.

Mr. Marion G. Sellers traced the shad industry from 1882, when at least 500 weirs were in use in the Delaware River from and above Trenton, at which time the valuation of the catch was about $62,000. He laid particular stress upon the hard and persistent effort carried on by the Association for fifteen years to clear the river and increase the product to a valuation of more than half a million annually.

The Delaware was practically cleared in 1892, since which time this great increase has been brought about.

He then contrasted this condition with the Susquehanna River to show the ruin that must follow if the Delaware is dammed. Also that fishways would not open the upper reaches of the river (the natural spawning grounds) to shad; experience with the Susquehanna had proven this; then again the formation of sand bars and the accumulation of debris render them inoperative.

Mr. Howard A. Chase spoke of the overwhelming public sentiment in Philadelphia and throughout the State against the bill, as voiced not only by the newspaper press, but by societies and associations that had taken action, including city councils. He also told the Governor that the members of the Legislature from Philadelphia were opposed to the bill, and while expressing confidence that the measure would be defeated at Harrisburg, he asked the Governor to aid us in this good work by vetoing the New Jersey bill. He also touched briefly on the broad and sweeping rights and privileges granted to corporations by this bill, especially the right of eminent domain, which is contrary to the spirit of our institutions. He also referred to the privileges granted in the bill for consolidation by lease or otherwise of the various companies that might be organized under its provisions, which would result in a gigantic monopoly.

The same arguments were made before the Senate Committee on Heat, Light and Water of the Pennsylvania Legislature, at Harrisburg, March 16, 1897.

The Knack of Fly-Casting.

MR ANDREW ENGLERT, the Castalia Club's keeper, is certainly one of the most successful fly-casters of the times. "What is fly-casting?" I asked him, as he stood looking over the meadow stream.

"Well, to get right at the point," replied Andy, "fly-casting is a very simple movement and not a flourish. The elbow is kept down at the side, the forearm moving only a little, and most of the work is done by the wrist. Holding the rod by the 'grip,' the part of the butt wound with silk or rattan to assist the grasp, one finds that the reel, which is just below the 'grip,' aids in balancing the rod. The reel is underneath in casting. After hooking a fish, many anglers turn their rods so as to bring the reel to the upper side, thus letting the strain of the line come upon the rod itself instead of upon the rings or ferrules. Now," continued Andy, with right foot in advance, "for the first cast, take the end of the line, like this, in the left hand, and bring the rod upward and backward until the line is taut; as you release the line the spring of the rod carries the line backward. This is the back cast. Then comes an instant pause, while the line straightens itself out behind, and then with a firm motion of the wrist, helped a little by the forearm, the rod is thrown forward and the line flies easily out in front. Begin with a line once or once and a half as long as the rod and lengthen it out by degrees. The main points to be remembered are to keep the elbow at the side, to train the wrist, to move the rod not too far forward or back, always to wait until the line is straight behind on the back cast, and to make sure that in this case the line falls no lower than your head, a process which it will take time to accomplish. Now, notice the pull when the 'Man from Maine' caught his large fish a few years since."

In less time than it takes to write, Mr. Englert was peacefully playing one of those big fellows that has toyed with Oswald's and Waite's flies for many years. Just as Andy was dropping the speckled beauty into his creel Dr. Beeman approached, his face beaming with smiles. "I got 'm this time," he said. Sure enough, he laid upon the ground eighteen very fine trout. Mr. Englert whispered, "I caught these for him before he started out this morning." The largest weighed 10oz.

"I have fished in Florida waters and caught all kinds of fish," said the Doctor, "but there is more romance and the finer feelings of man are more easily aroused through the strike of one of these wiry fellows than the tugging of a Pensacola shark or a leaping tarpon. I am going home and will begin at once writing a book, in two volumes, 'What I Know About Fly Casting; or, The Recollections of a Busy Life.'"—*Toledo Bee.*

A Late Connecticut Trout.

WATERBURY, Conn., April 5.—Upon preparing for a pleasing repast a number of trout that I caught in this neighborhood a few days since, I was surprised to find quite well developed spawn in one of them. Such an occurrence never before having come to my observation at this season of the year, I would ask if it is not something very unusual?

F. S. L.

[Yes, it is unusual; but such untimely fish are occasionally reported.]

Salmon Fishing for Sale.

FREEHOLD, on the best fishing waters of the southwest Miramichi River (Burnt Hill). For terms and particulars apply to Thomas J. Conroy, 28 John street, New York city.—*Adv.*

Clammy Truth.

Editor Forest and Stream:

Here is a cutting from the London *Truth*, descriptive of "the American way of cooking clams:"

First place them in salt and water to remove all sand; have ready a basin of batter (beaten eggs and flour); take the clams from the water and drain them on a cloth; dip each into the batter and then pop them into a pan of boiling fat; drain on kitchen paper. Arrange on an ornamental fish paper; decorate with small bunches of young watercress, as the fish are of a pink shade. These fish congregate in hundreds and go down to the shore to throw off their shells; they are then collected and sold by the fishmonger as a great dainty to epicures. The fish are dormant, although alive, and are insensible to the process of cooking.

This gives us such new and valuable information concerning the natural history of the clam that it seemed to me Mr. Cheney should be put in possession of the startling facts here first disclosed concerning the frolicsome and peculiar habits of the festive clam.

LANGUAGE USED IN ADDRESSING DOGS

A VERY interesting treatise, entitled "The Language Used in Talking to Domestic Animals," is that which was read to the Anthropological Society, of Washington, March 2, by Prof. H Carrington Bolton, Ph.D. There is enumerated in it a surprising multiplicity of terms used in communicating with the lower animals, and still more surprising is the accuracy with which they learn the terms and understand them. Horses, oxen, sheep, goats, swine, cats, poultry, etc., each have a knowledge of a certain limited language which is associated with certain needs and acts. The following is specially devoted to the dog, and is an excerpt taken from the treatise afore-mentioned:

The superior intelligence of dogs and their constant close companionship with man enable them to comprehend the ordinary forms of speech to a surprising extent. The words used often acquire a special significance, being adapted to secure definite action on the part of the animal under training.

English literature at an early period contains many allusions to the terms used in controlling dogs. Halliwell quotes the following hunting cry to dogs:

"Thai halowyd there howndys with *how*
In holtis herde I never soche hew."
—*MS. Douce 302, f. 34.*

The same authority gives another cry in hunting:

"Now is the fox driven to hole, *hoo* to hym, *hoo!*
For and he crepe out he wille you all undo."
—*Excerpta historica, p. 219.*

In Scotland shepherds incite their dogs to pursue sheep by the cry *how sheep; how* is said to be related to the Islandic *hoa* (Jamieson). Another term, for the same purpose, is thus referred to by Sir Walter Scott: "Little Wasp barks at Dinmount, who cries while half asleep: 'Hoy Yarrow, man far-yaud, far-yaud,' imagining he was calling to his sheep-dog and hounding him (Guy Mannering, ch. 48).

In the chorus of the famous old hunting song, "A Southerly Wind and a Cloudy Sky," the terms *hoyke* and *hark forward* are applied to foxhounds:

Drag him on, hoyke, wind him, my steady old hound,
Drag him on, hoyke, wind him, the coverts resound,

Chorus to the next verse.

Hark-forward, hark-forward, hark-forward, brave boys,
Hark-forward, hark-forward. Zounds! don't make a noise.

Chorus to the last verse.

Hark, Drummer, hark, hark, Tuner, hark, Tuner,
He's dodging and jumping at every bush.
Old Vixen has fastened her tooth in his brush.
Whoop! tear him, whoop! tear him, he's fairly run down.
Whoop, tear him, whoop, tear him; give Joe his half crown.

The chorus to a song by O'Keefe contains further exclamations used in controlling foxhounds:

With a hey, ho, chivy,
Hark-forward, hark-forward, tantivy,
Hark, hark, tantivy,
This day a stag must die.

The chorus in the "Fox Chase" has analogous expressions:

Tally ho, tally ho,
After reynard we go,
While echo on echo
Redoubles the song.

And in the same song occurs the word *yoix:*

Yoix, yoix, tally ho.

In England trainers of pointers and setters use a number of words having special significance. Thus to cause the dog to lie down the word of command is given, *down*, or, *down-charge*, also *charge;* to come to the master's heel and remain there the order is, *heel;* to gallop forward, *hold up;* to abstain from taking food placed near, or to stop running in to birds, the peculiar term *toho* is used; to prevent the dogs from breaking fence, the order is *ware fence*, and to come back from chasing cats, poultry, hares, etc., *ware chase;* to prevent the dog from chasing furred animals the order is *ware fur*, or to stop the chase of birds, *ware feather.* The abbreviation of beware to 'ware is obvious. All these expressions bear out my remarks on the dignified speech used by man toward dogs. Of another character are the common ejaculations *st* to encourage a dog to watchfulness, and *stŭ-boy* to order a dog to seize another animal or a person. *Steady, dead bird, bring 'em in, hie on*, are words of common speech; so is *sick-'em*, a corruption of "seek-him." Jamieson records the term *who-yaud* as used in Lanarkshire to make dogs pursue horses. At the death of the chase, hunters cry, *whoo-up* (Halliwell).

In southern United States almost every hunter has a special language for his own dog, so that the animal will

not hunt for any one unfamiliar with the peculiar commands.

Some of the calls for "Come here" used by different nationalities sound strangely to Anglo-Saxon ears, but are merely corruptions of the words "come" and "come here" in the given languages. Thus the Cherokee Indians cry *hŭn, hŭn*, to call their dogs to the person, *hun* being derived from *h'ani*, meaning "here." In like manner the Polish call *kotschino* simply means "come here."

It is interesting to note that in Bohemia, Denmark, Courland (Russia) and even in Prussia the natives address dogs in the French language, even when otherwise ignorant of it. For example, *allez*—go on; *avant*—start on the chase; *marche*—get away; *apporte*—bring, and *couche*—lie down. In East Prussia *couche* becomes *kusch*, identical in sound, and is used in combination with German, as *kusch-dich* (for *couche-toi*), "lie down."

The absolute dependence on dogs by the several tribes of the Eskimo race is well known. The natives at Point Barrow urge forward their dog teams with two cries; a man or woman runs before the animals crying *tūlla*, and another man runs behind the team calling *coo*. To call a dog to the person the Eskimo cry *an*, which also means "yes." In ordering dogs they use the third person, saying, for example, "Let him lie down" (communicated by Mr. John Murdoch)

The Eskimo of Baffin Land cry *yatit*, also *yowksa koksa*, and *hwee* to urge on dogs; to direct them to the right they exclaim *ówa, ówa, yă-ów;* and to the left, *choïa, choïa, yă-choï;* to stop the animals they call *o-o o-oa* (communicated by Dr. Franz Boas).

Mr. W. H. Gilder, of New York, who has traveled extensively in the Arctic regions of both hemispheres, sent me an interesting letter, from which I make the following extracts:

"The Eskimo of North America have no domestic animals except dogs, and in calling them they say *hăr-hăr-hăr* in a low tone, pausing a long time between each word, or rather repeating it at intervals as often as necessary to gain the dog's attention and secure his obedience. In the sled there is always one well-trained dog for a leader—one which understands the word of command; but it is at no time a very easy matter to make the animals mind. They are often obstinate or unruly, and about the best a driver can do is to get them to go somewhere near the direction he would have them go. The word to the right is *why-ăh-war har;* the *ah* is short, but strongly accented, as is also the last syllable. To the left is *ah rroot,* the first syllable long, the *a* as in far, and the *r* rolled somewhat. The Eskimo use a whip with a handle about 18in. long and a lash from 18 to 40ft. in length.

"The Indians and the half-breeds, as well as the trappers of the Hudson Bay Co.'s service generally, have a man to run ahead to lead the dogs where a track has not been broken. If there is a track the dogs will follow it, but it keeps them up better to be led by a man. The driver constantly calls the dogs by name, or throws pieces of sticks at them to keep them at work.

"The Tchoucktchis of Siberia as well as the Russians of Kamtchatka say to their dogs *tok-tok*, to go to the right, neither syllable accented; to go to the left they say *năh năh*, the *a* as in hat. The Tchoucktchis use a stick 3 or 4ft. long, shod with iron, terminating with a point, which can be applied as a brake to stop the sled; it usually has some iron rings at the top which jingle when shaken, and urges the dogs to greater exertion, and it reminds them of the skill with which the driver can throw it and hit any dog in his team. The driver recovers the stick without leaving his seat as the sled glides past on the snow.

"In driving reindeer the animals are guided by a rein and not by the voice. The rein comes back to the driver upon the sled from the base of the antlers of the off animal, and the near one has his halter tied to the antlers of his mate. A steady pull means go to the right, and a series of jerks indicate the left. In starting, the driver always leads the team for a few steps, and then they break into a trot, the driver jumping on the sled as it comes past him.

"In driving herds of domestic reindeer the natives constantly shout *chow-chew*, and it was this expression that the Cossack conquerors of the country heard and finally corrupted into Tchoucktchis (pronounced *chook chee*).

"The horses in northern Siberia belong to the Yakouts. In driving or riding they guide them with a pair of reins, and urge them forward with the cry *hut, hut, hut*, repeated three times as written, the first word in a moderate tone, the second louder, and the third with a very strong accent. In traveling with these people you hear this cry all day. To stop the horses the driver blows his breath forcibly through his lips, which are closed, but relaxed, making a peculiar rattling sound difficult to express in writing."

So far Mr. Gilder's interesting letter. I suggest symbolizing the sound alluded to in the last paragraph by the letters *prrrr*. The items about horses and reindeers are not exactly in place in this section, but it seemed best to preserve the letter as a whole.

In German-speaking countries, besides the French already named, the following language is used. To call dogs to feed, *da, da*, and *za, za, zâ* are of much antiquity, occurring in Tristan, thirteenth century (Grimm). A common command used to-day in East Prussia to urge a dog to seize another one or a person is *fass!* sometimes strengthened by the prefix *alle* (from *allons);* thus, *allefass*. To drive dogs away the word is *willehem*, which is an abbreviation of *will er heim*. Dogs are ordered to lie down, after pointing, by the expression *ti-bo* (tee-bo).

In the Tyrol dogs are summoned to the person with the call *dê, dé, dâ, dâ;* driven off with *huss, huss*, and ordered to keep quiet, *unteri, gehst hinteri!*

In Denmark dogs are urged to attack a person by the cry *pooss*, or *sook, sook*. In Norway dogs are called by the chirp *psp*. In Bulgaria by the cry *kuts-chu*, and driven away by *schit*.

In southern Finland dogs are called by *prisse*, and driven off with *kush*.

In those provinces of Russia on the Baltic where the natives speak the Lettish dialect dogs are called to the person with *se, se*, and *kuts, kuts*, or *kutso, kutso;* but if they are called to feed the term is *lak, lak*. They are driven off with *sa-lauka, sa-lauka* (*lauka*—without). Young puppies, however, are called with *tschu, tschu*.

In Illyria dogs are called to the person with *cuka, cuka*, and *na, na*. They are driven away with *os, osa*, and *cuki, cuke*. Puppies, however, are called with *ps* and *kuc*, and driven off with *sibe*.

In Poland and the other Russian provinces where Polish is spoken a variety of terms is used to control dogs. They are called to the person by *na, tu, tu, tu*, "tu" meaning "here"; also by *na, ty, ty*, and by *pojdz tu*. In Podolia the call is *sa, tu, do, neg*. In Lublin the common cry is *nă, nă, nalū-lū-lū*. Dogs are driven from the person with *a hyj, a ciba*, and *a gruz;* in Lublin with *a-ha, pojdzies*.

In urging dogs to attack man and animals the terms vary with the animal to be seized. The general command is *huz go* or *gryz go*, sometimes *pyf;* to attack hogs, *huzie swe*, also *swi swi;* to attack geese, *gaz gaz szukaj*, the latter word meaning "seek"; to attack hens, *szukaj kur;* to attack cattle, *szukaj bydla;* also *niedaj ta, nă-tū na, să, sa, sa*.

In the Ruthenian dialect dogs are driven from the person with *atschéebă!*

In Turkey and Greece dogs are ignoble animals, and are spurned by men rather than called. In Greece they are driven off with the cry *hossé*, and urged to attack each other by *too-too-tooré*. In Van, Turkey, they are driven off with *guch* and *osht;* but Kurds use *werre;* and the animals are urged to attack each other with *kush, kush, puss*, and with *ha guee*.

In Spain the common call to dogs to approach the person is *chu-cho* (pronounced tchu-tcho), or *tus-tus;* from the latter we have the saying: "Á perro viejo no hay tus-tus." It is useless to call *tus-tus* to an old dog, *i. e.*, "You can't catch an old bird with chaff." In some provinces *tus* becomes *cus*. In the same country they frighten or drive away dogs with the ejaculations *éjé* and *za* (pronounced ayhay and thah).

In Japan the natives call dogs by names given in consequence of some peculiarity of the individual, as the color of their hair, and if a dog has red hair he is called by the word for red; but foreign dogs are called *kame, kame*, which conveys two meanings—one is "that dog," and the other is "come" (communicated by Mr. H. Ichikawa).

In the Zulu language the exclamation *tyi tyi* is used to set on dogs, and this gives rise to a verb "tyityi zela"—to set on as dogs (Colenso's Zulu-English Dictionary).

Professor Hans Oertel, to whom I am greatly indebted for voluminous correspondence exhibiting philological erudition, sends me an amusing incident with regard to a term used in South Africa. Herr Joest, writing of his travels in Africa in 1883, says: "The traveler in South Africa hears daily and hourly the singular word *futsekk*, which means take yourself away! get out! and is used by persons of all nations chiefly to dogs, though occasionally in personal intercourse. This word is so widely and constantly used that an English globe-trotter, after some weeks' sojourn at the Cape, wrote in his journal as follows: 'In Africa all dogs are called *futsekk*, and it is very remarkable that when you call them they always run away.'" Herr Joest points out, however, that *futsekk* is a contraction of the Dutch words "voort, zeg ik"—that is, *Fort, sage ich* (or in English, "Go away, I say").

JACK.

NEW YORK.—*Editor Forest and Stream:* As our thoughts revert to days long past, they are associated with events that have left the deepest impressions. To the sportsman his success with gun and rod is lived over and over during many a pleasant reverie.

In the 70s Jack was my constant companion, skirting hill, dale and brier copse in quest of "Bob White" during the crisp November days—days when the stubbles glistened in the morning sunlight like radiant jewels; days when the little brooklets struggled against the embrace of the ice king; days when the highways were flint-like in their hardness, and the dead leaves fluttered beneath our feet on every pathway in the woodland. Such glorious, delightful days; no weighty cares or responsibilities rested upon us then and we were free to commune with all wild things in nature.

When Jack was but four months old he was given occasional rambles in nearby stubbles, and at this early age gave promise of great things. His education became a pleasure and when November came we were both ready for business. Through the five or six years that followed, Jack and I were almost inseparable, and many were the brown-backed beauties that found a quiet resting place in the pockets of my shooting jacket.

On the days when my "shooting clothes" were not on, Jack would look the picture of disgust and scarcely notice me, and after a number of inexcusable misses he would lose all interest in life, then look up and say (in dog language), "You're off to-day, go home and take a rest."

One of our days in '79 stands out as the red-letter day of my boyhood. It was late in November and the morning sky was filled with black, murky clouds from which oozed a heavy mist, and the outlook was far from encouraging. This weather had been preceded by much rain

Having been housed up during this period, Jack and I were both anxious to take the kinks out of our legs. At midday the clouds parted and the sun soon shone in all his brightness. We haste to the stubbles, and with what zest does Jack range far and wide, with head high in air, nostrils distended to catch the delicious aroma that tells of the hiding place of the mottled covey. Jack has suddenly disappeared from view. Ah! there he stands quivering in every limb, his eyes rolling as his head is turned from side to side, body rigid; but his actions betoken that the birds are lying all about him. Advancing cautiously, the birds are flushed and two reports ring out in quick succession. One bird is seen to fall and is soon retrieved in faultless style, the covey is marked as well as the laggard that seemed hard hit with the second barrel. On entering cover this bird is soon found quite dead. A double on the first rise fills both dog and hunter with joy. One more is scored here and we hie on to other fields known to be prolific. Through the piney woods, where our footfalls are as noiseless as on a carpeted floor, beyond the deep shadows to the old road, and then the broad fields on either hand invite us to exploration. Acre after acre is crossed and quartered by Jack without a find; one more corner is to be run, and as he enters this likely-looking spot his pace is slackened and the advance is now made with cat-like tread. He halts, now advances and suddenly becomes statuesque. With heart beating like a sledge hammer, I steady my nerves by a powerful effort and advance on the quarry. Ah! one bird is down and the cloud of smoke (black powder) prevents use of the second barrel. With what a delighted look is this bird laid in my hand and how affectionate is my caress as a reward. These birds drop in a little ravine bordered by birches, and in less than fifteen minutes five more birds are brought to bay over four points, one double being scored. Perfect work and shooting of the same order; how seldom it happens thus. After drawing many fields blank we locate a covey in tall weeds near a large swamp and succeed in making a quick double. What pleasure can be compared to such days afield? After gathering in three more denizens of wood and field we retrace our steps.

The sun was now sinking behind the hills, flooding hill and dale with soft and rosy light. A few fleecy clouds floated here and there, cold and somber where hanging in the shadows, but warm and glistening where pierced by the fast dying sun. Quiet reigned, save for the barking of a dog on a nearby farm and the shrill whistle of a locomotive far away. Jack was seemingly content "at heel," while I was lost in admiration of the beautiful twilight. As we reached a thicket adjoining a rail fence, which was necessary for us to surmount, Jack began sniffing the air in an interested way. On reaching the fence he suddenly stopped, while in the act of jumping, with his front feet on the top rail. Rigid as a sphinx he stood; and how I loved him at that moment. This picture now stands as vividly before me as though it were but yesterday. As the birds flushed they rose high in air and were clearly outlined against the roseate sky. At the gun's flash a thud was heard and one more beauty joined his fellows in my capacious game pocket.

Fourteen quail and but fifteen shots fired is a record never since equaled by myself, and Jack was largely responsible for my success. Every bird was pointed and retrieved by him, and his work was of the most perfect character. Dear old Jack has gone to the happy hunting grounds, being carried off by poison before his time. May the miscreant who administered it some day meet his just punishment. As Jack lay cold in death he was wet with my tears, and then his body was tenderly laid to rest.

The years have passed in quick succession, and many days have been spent afield—North, South, East and West—but none have given the same exquisite pleasure as when Jack was my companion way down in "Jersey."

E. H. GOODNOUGH.

POINTS AND FLUSHES.

A French bull dog club was organized in New York city on April 5. They decided that the bat ear is the correct type of ear. Twenty-one members comprise the number of the new club. Officers were elected as follows: President, Walter W. Watrous; Vice-President, G. N. Phelps; Treasurer, R. H. Hunt; Secretary, J. R. Buchan; Executive Committee, Blakely Hall, J. L. Kernochan, R. H. Hunt, G. L. Ronalds, Jr., G. N. Phelps, J. R. Buchan, W. W. Watrous. The following was adopted:

"The French bull dog should have the appearance of an active, intelligent, muscular dog, smooth coated, compactly built, and of small stature.

"The size of mature dogs to be 22lbs., and that of mature bitches 20lbs.

"The ears, as shall hereinafter be known as the bat ears, shall be large in size, being broad at the base, well elongated, with rounded tops. They should be set high in the head, but not too close together, and carried erect, with the orifice plainly visible from the front. * * *

"Dock tails, mutilated ears, and other than bat ears shall be disqualified."

The Manitoba Field Trials Club has been fortunate in securing the consent of Mr. Thomas Johnson to act as judge at the club's forthcoming trials on chickens. As an expert in such matters he ranks with the best, besides having a natural firmness and decision of character which will make his office respected.

Beagle owners should keep in mind that the National Beagle Club of America's Produce Stakes have limitations beginning on April 20. For full information address the secretary, Mr. George W. Rogers.

Wheeling.

FIRST LESSONS.

LEARNING to ride a bicycle is, in one essential at least, like training a wild beast, as it is a contest in which success is largely a matter of will power and in which advance can only be made by keeping the upper hand over your intractable subject. It is of vital importance that the rider realizes that he is master, and if his mount develops a tendency to get the best of him he should stop his lesson then and there and not begin again till he can go at the thing with the requisite determination and fearlessness.

Fear is fatal to success. If you are afraid of your bicycle the bicycle will detect it to a certainty and turn upon and rend you just as the wild animal turns upon his trembling trainer. On the other hand, if you keep your wits about you, and a wholesome contempt for the inanimate thing upon whose subjugation you have determined, learning is easy.

It is one thing to ride in a bicycle school and quite another thing to ride on the street. On the street, even when the course is clear and the danger of collision with moving objects at a minimum, the surface varies to such an extent that the bicycle school graduate can only get along with the greatest difficulty and he often feels that he has to learn all over again.

Dry asphalt furnishes the easiest surface for him to try at first and next to that macadam, but even on such roads he is bothered by the constantly changing grade. Hills are something not previously dreamed of in his philosophy, and when he tries to climb them he is like a man in a nightmare who ought to be able to down his difficulties, but who feels as if his hands were tied and his efforts impotent.

Bicycle school instructors know of the troubles their pupils encounter when first beginning outdoor riding, and generally advise a few street lessons. These finishing lessons are really the most important part of pupils' bicycle education; but many fail to realize this, and as a result develop an unnecessary timidity out of doors and make slow progress.

In France people are more logical, and they endeavor from the start to fit the learner for the actual conditions he will encounter when thrown upon his own resources in the outer world. The level-headed Frenchmen conduct their pupils through a series of advancing grades, which suggest actual outside conditions as nearly as possible. As soon as the pupil has learned to balance and turn on a flat riding ground he is tested with mild inclines, which, when surmounted, are exchanged for steeper grades and rougher surfaces, until the rider is finally taught to pedal up and down actual hills and is pronounced fit for the road.

Hill climbing presupposes some knowledge of ankle work, which is the keystone of successful cycling; but, as a rule, this nicety of wheeling is entirely overlooked in our American schools. The rider is simply taught to mount, to bal-

ance and to turn in one direction, and the great requisite of a proper understanding of the application of power to the pedals is completely ignored The pupils are turned out capable of riding on level surfaces under favorable conditions, or down hill, provided they keep their wits about them, but when it comes to an up grade or a head wind they have everything to learn. This is not as it should be, and it is to be hoped that the time is not far distant when we will incorporate something of the French method in our schools.

In Germany women riders are not allowed on the streets till they have passed an examination proving their skill. The rider must demonstrate before the police authorities her ability to control her wheel under the common contingencies of cycling before receiving her permit, which is in the form of a document declaring her to be the rightful owner of a bicycle. This document must be carried with her whenever she goes riding, and produced on demand by the police.

No doubt the rule prevents fatalities that so often result from inexperience, but it is not the kind of a thing our American girls would tolerate.

WHEELING NOTES.

WHEN riding for pleasure, never test the limit of your endurance. It is an easy matter for the casual rider to exhaust his strength, and this is likely to happen if he attempts to keep the pace that is commonly set. Most wheelmen ride too fast, accepting as their standard the speed maintained by the younger and more athletic riders. This speed is based on the rate attained by a runner, whereas for many wheelmen the pace of a leisurely walker is more suitable.

If a rider moves his feet only a little faster than the ordinary walking gait, he is pretty sure not to overfatigue himself, even though he lack any constitutional vigor.

An eminent physician, who has advocated the use of the bicycle for women since the days when the exercise first became popular, says that now, after five years' study and observation, he has only one reservation to make. The necessity for moderation is greater now, he says, than in the days of heavier wheels, because overexertion is so much easier with our modern light models that enthusiastic riders overdo unknowingly.

Yachting.

THE English and Continental papers are much exercised over a rumor that Defender will be fitted out and raced in British waters, various details as to skipper, crew, etc., being stated most positively. The report has its origin exclusively on the other side of the water, and is entirely without foundation. Defender is still at her moorings in Echo Bay, and will remain there in all probability for a long time to come.

It has recently been reported that James Gordon Bennett has purchased Britannia from the Prince of Wales, but the report is not confirmed, and is probably untrue. At the same time, Britannia is for sale, and the Prince of Wales will probably replace her with a new Watson cutter.

IN the accounts thus far published of the new Gould steam yacht, which is expected to equal if not to surpass anything afloat, no mention whatever is made of the name of the designer. So far as we can learn, no designer will be employed, but the vessel will just be built after the usual American plan which has resulted in so many conspicuous failures in the "protected cruiser" class of steam yachts. Considering the cost of such a vessel and the absolute necessity for special skill of a very high grade in all the planning, this would seem to be a very risky experiment.

Racing in Restricted Classes.

THE *Field* of March 20 has the following account of a new restricted class that differs somewhat from the usual "one-design" classes:

Mainly owing to the series of races for open sailing boats given by the West Quay Regatta Club last season, a new club has been formed at Southampton under the name of the Southampton Sailing Club, and it bids fair to be very popular and successful. Its object is the encouragement of open boat sailing, and the burgee is red, with white vertical bar in the center. The rules provide that the boats are to be open, not exceeding 14ft. over all, to carry no ballast, nor have fixed keels, fins or other addition to the outside, while the centerboard is not to exceed 5-16in. plate. All spars are to fit inside the boat; the mast must be stepped on an ordinary step, or on the keelson of the boat; only two spars allowed to the mainsail, and no battens in the after leach, and only two fore-and-aft sails will be permitted. The length of the bumpkin is restricted according to the size of the boat; no guys or fastenings allowed on the fore side of the mast, or other evasions which would tend to allow the spinaker to be used as a fore-and-aft sail. The boats are to carry life-saving apparatus; the anchor is not to exceed 22lbs., and rope cable only will be allowed. The time allowance is at the rate of one minute per foot, and for every first prize won in a club race the winning boat will have to allow in the following races one minute to each boat which competed against her in the race when such prize was won. The crew is not to exceed three, and no boat will be allowed to be sailed single-handed; they are also to be steered by a member of the club, and the crews are to be members, or gentlemen amateurs. Although only started in January, the club already numbers nearly forty members, and there are now ten boats available for the class matches in addition to others building.

The first annual meeting was held at the Pier Hotel, Southampton, on Monday evening, under the presidency of Mr. A. Spooner (Commodore), who was re-elected, as were also Dr. R. E. Lauder as Hon. Sec., and Mr. F. V. Beaton as Hon. Treas., and the committee were appointed as follows: Messrs. F C. Carter, F. Dewey, G. Dewey, J. Fisher, H. J. Grandison, A. B. Heanley, F. Quinton, W. A. Richards, B. H. Trippe, J. H. Williamson, T. H. Hine and A. A. Alexander. It was reported that eleven matches had been arranged for the coming season—ten for the 14ft. class and one for boats belonging to members which do not come within the class. Mr. Tankerville Chamberlayne has given a cup for the boat winning the greatest number of points during the season, and prizes have also been promised by the commodore, the mayor of the borough (Mr. E. Gayton), Sir Francis Evans, M.P., Dr. Lauder, Mr. J. Lauder and Mr. F. V. Beaton. The subject of promoting a one-design one class of boat for sailing in Southampton Water was debated at some length, the general opinion being that a centerboard boat of about 17ft., with a moderate amount of lead on the keel, and to cost about £40, would be the best type; but ultimately the design and other matters were left to the committee, as were also the questions whether the 14ft. class should be allowed to carry spinakers, as the danger of their so doing was evidenced more than once last season, and whether each boat shall have a number on the peak of the mainsail, as is the case now in the Solent classes. A vote of thanks to the commodore for presiding closed a very successful meeting.

Another One-Design Class.

THE *Field* of March 27 gives the following account of a one-design class of 25ft. cutters now building for Belfast Lough:

The coming yachting season in Belfast Lough promises to be interesting and eventful beyond anything of previous years. For many seasons past it has been the desire of local yachtsmen to get a number of boats of similar build and design, with a view to keener competition, and in this they have partially succeeded. The members of the Bangor Corinthian Sailing Club took the lead, and from time to time got boats of a similar class and design built which afforded excellent sport and close finishes—so much so that in the majority of instances premier places in races in which they competed were only secured through skillful handling and seamanship. Following the matter further up, a number of gentlemen representing the different clubs of the lough decided, at the close of last season, on building a new class, and Mr. Fife, the eminent Scotch designer, was asked to design a boat which would meet the general wishes and wants. A particular design was accordingly prepared and decided upon, and tenders were invited, with the result that that of Mr. John Hilditch, of Carrickfergus, was accepted out of quite a number sent in, not only by builders on this side of the Channel, but by several well-known firms on the Clyde. Mr. Hilditch entered on his contract about the beginning of the year, the stipulation being that the boats—seven in all—are to be ready by May 1 next. Mr. Hilditch's yard at the present time is well worth a visit. The work of construction is going rapidly on, and all the boats are in a forward state, so much so that it is expected the majority of them will be ready for launching by the middle of next month. They have been designed and built with a view to comfort as well as speed, as the following dimensions will show. Each is 38ft. over all, waterline 25ft., beam 8ft. 7in. The keels are of cast metal, each weighing 3¼ tons. The hulls are very well forward, and the boats should prove dry in bad weather. They will be cutter rigged, each mast being 39ft. long, and the boom about 28ft. They will carry gaff topsails, which will be somewhat of an innovation for local yachtsmen who are accustomed to the smaller classes of boat. So far as measurement is concerned, the newcomers will be about 3 5 raters. The timbers are all steam bent, the lower planking is of pitch pine, and the top sides yellow pine. They will be named after the feathered tribes, and have already been drawn for by the owners. The names chosen are as follows: Hoopoe, Wimbrel, Feltie, Halcyone, Tern, Flamingo and Merle. The hulls will be painted different colors with one exception, and in this case the top sides will be kept bright. There could not possibly be any choice in the boats, as all have been built off the same moulds, and if there should be any difference in their sailing capabilities it will undoubtedly be attributable to training or seamanship. The first cruise is expected to take place early in May, and the result will be watched with much interest. Mr. Hilditch has just received an order for, and is about to enter on, the building of another boat of exactly similar design for Mr. Lee Hill, of Londonderry. Although this boat is intended for the Foyle, it is quite possible that she may turn up at some of the Belfast Lough regattas during the coming season. In addition to the above, Mr. Hilditch has on hand a steam yacht built to the order of Mr. A. J. A. Lepper, J. P., Carrickfergus. This yacht is now almost ready, and only awaits the engines, which are being constructed in the Isle of Wight. The length of the yacht is 66ft. over all, with a waterline of 48ft. She was designed by Mr. Dixon Kemp, and will be schooner-rigged. Never before was the yacht building and yacht repairing industry so brisk at Carrickfergus, and as a consequence a large number of hands are being employed. The result of the winter's labor promises to add to Mr. Hilditch's well-known reputation as a builder.

Loss of the San Francisco Club's House.

SAN FRANCISCO, April 5.—A great calamity was the burning of the handsome club house of the San Francisco Y. C. a few days since, with heavy loss to the club and individual members. It was a clean sweep of the building, burning down to the water's edge the foundation piles, on which it stood over the water, and which were the most expensive portion of the structure. Fortunately most of the handsome rowboats and canoes were saved, but the contents of the reception room, with its valuable paintings, piano and a beautiful model, some 10ft. long, fully rigged, of a cutter, valued at $500, were lost, and the undersigned lost some forty odd models of famous Eastern and local yachts. The club also lost a handsome silver pitcher presented by Com. Ashbury as a prize, and a portrait of himself and models of the Cambria and Livonia.

As there was very little insurance on the house and contents, and most of the members are young men on salaries, I do not see how we are going to be able to rebuild. There is some talk about consolidating with the Pacifics, but there is some antagonism of long years' standing resulting in the switching off of sundry members that organized the Pacific Club.

Then there is the Corinthian Club, composed of youngsters that term us old fogies and say they do not want us, as their rules do not admit of anything in size beyond the ability of Corinthians to handle, and some of the San Francisco Club's yachts are large schooners. So we are wonders on the face of, not the earth, but the waters, and know not where to lay our heads. PODGERS.

The Cruise of the Energy.

STOTTVILLE, N. Y., April 7.—*Editor Forest and Stream:* Having read with great interest Lieut. Meigs' letters describing passage of smacks Energy and Relief from New London to Valparaiso in 1832, published in FOREST AND STREAM of 3d inst., I believe that I can give a little information as to result of this fishing venture.

Some years ago my boatman at New London told me the story of this voyage, and said that the smacks went out to introduce Yankee ways of fishing on the coast of Chili. The venture promised to be successful until the Chilian Government imposed duties, which stopped the business. The smacks afterward returned to New London. It is said that when the Energy went into the harbor of Valparaiso, the flagship to which Lieut. Meigs was ordered was laying at anchor off the city. Capt Eldridge luffed the smack up alongside the ship, as he would have gone to his wharf at New London. The admiral happening to be on deck came to the gangway, and looking down upon the Energy's deck remarked, "You fellows will be coming round the Horn on a toothpick next!" Probably the frigate could have taken the smack on deck about as easily as she handled her own launch. I have always supposed this thing to have been an old sailor's yarn, but it certainly fits the letters which you published.

Possibly the New London library has a full account of this venture, and certainly the files of local papers could tell us all about the vessels. A. C. STOTT.

A Large Schooner.

THE announcement is made this week of a new cruising schooner nearly as large as Yampa, to be designed by A. S. Chesebrough and built by the Harlan & Hollingsworth Co. (who built Yampa) for an Eastern yachtsman. The dimensions given are:

Length over all	135ft.
L.W.L.	104ft.
Beam	26ft.
Draft	14ft. 6in.

Eastern Y. C.

THE Eastern Y. C. has for some years suffered even more than the New York clubs from the reaction of the 90ft. extravagance, and the best efforts of its race committees have failed to bring about anything more important than knockabout races. The fault has not been with either the club or the committee; both have labored in vain against the adverse conditions that have beset racing in the middle and larger classes. The new commodore, Henry W. Lamb, of the schooner Marguerite, has for some time been interested in the subject of the revival of general racing, and under his leadership the club will this year make a new effort. Com. Lamb has already written to the New York Y. C. in regard to combined races of the two clubs on the occasion of the New York cruise around the Cape. The Boston *Globe* speaks as follows of the plans of the race committee for the season:

There is a fair prospect that the regatta committee of the Eastern Y. C. will be successful in its efforts to promote racing in the club, and that the coming season will see competitions in something beside the knockabout class. The response of yacht owners to the invitation of the committee to meet its members at the second general meeting of the club, last Tuesday evening, and to offer suggestions for a revival of the racing interest formerly displayed, was very satisfactory, and seemed to show possibilities of sport which might not have been brought except by some such plan.

As a result of the conference and of suggestions offered, the committee has decided to give several handicap races for yachts enrolled in the club, in cruising trim, and to offer suitable prizes in the several classes. The arranging of the handicaps will be a most difficult matter, but if anything like a reasonable scheme can be thought out, the plan has promises of success which make it well worth trying. The attempt will be made in any event, and although members will not envy the committee the task it has laid out for itself, still they will not withhold their approval or coöperation in whatever way may be deemed advisable.

These handicap races will be entirely apart from whatever racing the committee may decide upon, in connection with the visit of the New York fleet, and yet they may furnish sufficient sport to make them the feature of the season. It is proposed to give three of these races, and the date for the first one will probably be Saturday, July 3. The committee realizes that handicap racing is not the ideal sport, but if it serves to bring out the boats and to awaken an interest that shall lead to out-and-out racing in some one class, the committee will feel that its labors have not been in vain.

There will be two classes for schooners in the handicap races, the first for boats over 75ft. waterline, and the second for those of 75ft. waterline and under. In cutters there will be three classes. The first class cutters, over 70ft. waterline, will be kept together for the first class, while in the second class will be grouped the boats under 70 and over 35ft. waterline. The third class will be for boats of not over 35ft. waterline. It is proposed to start the boats in divisions, the slowest starting first, so that if the handicaps are fortunately arranged the boats will finish somewhere near together, and thus be enabled to see what they have in comparison with the rest of the fleet.

The committee's plans are not yet perfected, but the outline as thus given seems capable of being completed with no small chance of a satisfactory result. The club's season will therefore be looked forward to with more than ordinary interest.

Amateur Builders.

BOYS who are fond of tools, carpenter's work and building boats, from a "cat" of a few inches to a "Defender" of 2ft. or more in length, will be interested to know of the Criterion Y. C., a flourishing boys' club, which holds its meetings at 1711 Park avenue.

The C. Y. C. was organized in October last with five boys, but now numbers fourteen enthusiastic members from nine to fourteen years of age. The boys meet every afternoon by threes or fours to learn carpentry and boat building and to some extent, recently, wood carving.

They make at the club the many useful and ornamental things boys can make of wood, after some instruction in the use of tools, nature of materials, etc. Their proceedings are guided by rules and discipline largely of their own devising. Each member is led to feel his responsibility, with the result of developing manly self-reliance and self-control. The educational value of the club's work is therefore very decided.

Members are obligated to do work and race boats against any like organization in Baltimore. They have a library of books for boys, with monthly dues to meet expenses and provide various adjuncts of sport, exercise, etc. There is a librarian and treasurer, with the usual officers and committees of an organized club.

It is the object of the Commodore to practice eye, hand, taste and judgment, and carefully help each member in his special bent or talent Training of this nature can but be helpful in after life in any business or profession, manual training being always useful.

The first term of the class will close about June 1 with an exhibition of work done by the boys. It is the intention of the Commodore to take up work again in the autumn, with a competent assistant if necessary.

A fleet of boats built by the boys will be launched early in the summer, and the members of the club will compete for prizes. The officers are: Board of Governors—Wm. W. Ammen, Robertson Griswold, Owen Palmer, Effingham Wagner, Henry Hough; Treasurer, R. Griswold, with Eff. Wagner assistant; Librarian, Eff. Wagner, and W. E. Morton assistant; Secretary, Owen Palmer, and Harry Hough assistant; Commodore, W. E. Morton, and Eff. Wagner assistant. The members are: Wm. W. Ammen, R. Griswold, Eff. Wagner, Edgar Wagner, John Owen, Marshall Chew, Samuel C. Chew, Jr., Thos. Owings, Owen Palmer, Rufus Goodwin, Jos. Cushing, Edward Birmingham, Harry Hough, Ralph Hill.—*Baltimore Sun.*

Alcedo II.

THE new yacht Alcedo II., designed by A. S. Chesebrough for George Washington Childs Drexel, was successfully launched by the Harlan & Hollingsworth Co. at their yards, Wilmington, on April 10. Her dimensions are:

Length over all	185ft.
L.W.L.	154ft.
Beam	24ft. 2in.
Depth of hold	15ft. 2in.
Draft	11ft. 3in.
Freeboard, least	10ft. 6in.

The hull is of steel, built to Lloyd's requirements; she is schooner-rigged and the engines are 14½, 24 and 37×22in., the wheel being 7ft. 6in. in diameter, with a pitch of 10ft. Three Almy boilers are carried.

The Society of Naval Architects. 1896.

THE fourth annual volume of the "Transactions of the Society of Naval Architects" has just been published by the secretary, Naval Constructor Francis T. Bowles, containing the records of the Society's business for the year 1896, and also the twelve papers read at the annual meeting last November. The Society is now in a flourishing condition, with a list of 525 members, and a balance of $6,000 on hand. The papers, which are all of high technical value, are accompanied by the stenographic reports of the discussions and by many large plates. The membership list includes a number of well-known yachtsmen, and there is room for more.

A Fin-Keel Cruising Schooner.

THE drawings here given show the sail plan and interior arrangement of the little schooner whose lines appeared last week. The interior requires little explanation; it is one of the merits of this type that it gives a very large amount of internal space in available form for cabins, and when helped out by a house, as in the present case, there is plenty of both head room and foot room; the cabin floor is 8ft. wide, extending even under the lockers. The house is 20ft. 6in. long, with 18in. sides. The space is divided, as shown, into two large cabins, with a very roomy forecastle, which will be particularly well arranged, as in the previous boats. The dimensions of the sail plan are:

Foremast, from end of L.W.L	00ft. 0in.
deck to hounds	33ft. 3in.
truck	52ft.
diameter at deck	8in.
hounds	7in.
Mainmast, from end of L.W.L	16ft.
deck to hounds	34ft. 6in.
truck	55ft. 6in.
diameter at deck	8in.
hounds	7in.
Bowsprit, beyond end of L.W.L	23ft.
stem head	16ft. 6in.
diameter at stem head	5in.
Fore boom	15ft.
Fore gaff	16ft. 6in.
Main boom	33ft. 6in.
Main gaff	23ft.
Jib, club	18ft.
Topsail yard	17ft. 6in.
Area of mainsail	880sq. ft.
foresail	420sq. ft.
jib	360sq. ft.
Total lower sail	1 660sq. ft.
C.E. forward of C.L.R	6in.

The New Gould Steam Yacht.

ON April 5 Mr. Howard Gould, owner of Niagara, signed the contract for the new steam yacht which has been talked of during the past winter, the builders being the Harlan & Hollingsworth Company, of Wilmington, Del. The new yacht, which will be named Niagara II., will be of steel, bark-rigged, with twin screws, and is to be delivered by April 15, 1897; the contract speed being 14 knots. The dimensions are:

Length over all	270ft.
L.W.L.	245ft.
Beam	36ft.
Depth of hold from spar deck	28ft.
Depth of hold from main deck	20ft.
Freeboard amidship	13ft.
at bow	18ft.
Tonnage	1,900

The hull will have a double bottom and three decks, and the vessel will be built to the requirements of Lloyds and the American association. The engines will be triple expansion, cylinders 18, 28 and 45×30in., with three Scotch boilers of 160lbs. pressure. Capt. W. G. Shackford, formerly of the Pacific Mail Steamship Company, who has been for some years in command of the steam yacht Atalanta, will have charge of the construction and will command the yacht when she is completed. Mr. Gould will spend the summer abroad, chartering a steam yacht, Niagara I. not going into commission. When the new yacht is completed he will make a long cruise in her.

The arrangement of the deck and interior is described as follows by the New York *Herald;*

On the upper, or spar, deck there will be a continuous house of steel 100ft. long by 16ft. wide. This will be covered with mahogany or teak. In the forward part of this house will be the chart room, which will contain duplicate steam steering gear, to be used in bad weather, and connecting with this room are the captain's quarters, which are spacious and very comfortable. The social hall, 32ft. by the full width of the house, follows aft, this to contain settees or seats, as may be determined upon, while adjoining will be the smoking room, 12×16ft.; a passageway from it along the engine space on the port side, which is to be glass inclosed, leads to Mr. Gould's room on this deck, of the same size as the smoking room. From the owner's quarters the observation room, which is in the extreme after end of the deck house, is reached. This room is believed to be new in steam yachts, and it will be used by the Niagara's people particularly in rough weather. The sides are to be of glass, and the ends rounded, but will not meet; the after entrance being hung with heavy curtains, while the roof of the house will extend a short distance over it and be neatly finished. From the after end of the deck house to the taffrail there is a space of 45ft. The bridge, from which the yacht will be steered except in boisterous weather, will extend from the forward end of the chart room aft to the smoke stack. The woods with which to finish the interior of the house and fittings are matters for future consideration. None of the crew will ever be found on the upper deck except when on duty.

From both the forward and after ends of the social hall will be broad stairways, the former leading to the staterooms on the main deck—all accommodations being forward—and the latter to the library, which opens into the dining saloon. The library is on the starboard side of the yacht, 22ft. ×12ft. The after end of this room is fitted as a large armory, and will be inclosed with glass. The dining room is 24ft. long by 36ft. wide, the full width of the vessel, and with the other handsome furniture will contain a piano, while a fireplace of exquisite and appropriate design will add much to the spacious and cosy apartment. Domes in the sides of the social hall, ingeniously concealed from view within, will give sufficient light and additional ventilation to the dining saloon, and at the same time will permit of very effective and artistically arranged electric lights.

From a door on the starboard side of the dining saloon Mr. Gould's suite is entered, including a bedroom, 16ft. ×16ft.; a dressing room, 7ft. ×10ft., and a bath room, 5ft. ×10ft. On the port side, directly opposite, is the largest guest's suite on the yacht, the three rooms being similar in size to those of the owner. The finish and fittings of these six rooms will be rich and handsome and determined upon later. There will be no thoroughfare in these suites. Four staterooms, each with a private bath, are forward, one a doctor's room; a photograph room, and a brushing room, together with linen and other lockers. The occupants of these rooms will use the stairway leading from the social hall to the upper deck.

Going back to the library there will be found opposite it on the port side a large butler's pantry; two kitchens, which are connecting, one for the owner and guests and the other for the officers and crew; a laundry, a "hospital room" and a room for a valet.

The quarters for the officers and crew are aft on this deck and particularly commodious. They will have a recreation space of 40ft. by 36ft., which will be lighted and ventilated from large square port holes, hooked back from above, thus giving them really a shaded open deck. There will be about fifty all told in the ship's company.

The stairway from the social hall will continue to the lower deck, where there will be found three more guests' rooms, a hall for the servants to meet in, rooms for the maids, together with trunk and general storage rooms. All of these are large and will be appropriately finished and fitted. The plumbing work is to be of the most modern description and simple as is possible in its workings. Hot and cold fresh and salt water will be found in all bathrooms, as will be such other conveniences as are required.

The yacht will be lighted throughout by electricity, two dynamos being supplied, together with a large storage battery, which will be found extremely useful and convenient.

The Niagara will carry eight boats: one steam launch of 5ft., one naphtha launch of 24ft., two gigs, two dinghys and wo lifeboats.

Royal Swedish Y. C.

JUBILEE REGATTA OF HIS MAJESTY KING OSCAR II.

IN celebration of the twenty-five years' reign of His Majesty King Oscar II, the Royal Swedish Y. C., of which His Majesty is the patron, proposes to arrange a series of international races for yachts of all sizes, to take place between July 7-14 next. The races are to be held on the waters near Stockholm and on the Baltic off Sandhamn, at which place a club house has been erected this year for the Royal Swedish Y. C.

The Royal Swedish Y. C. was founded in the year 1830 and is the oldest yacht club on the continent; the number of its members is at present about 1,400, and the yachts belonging to the club are about 200, most of them of a modern type.

The Royal Swedish Y. C. has the privilege and distinction of flying the ensign of the Royal Navy with the Royal crest in the center.

This ensign has been flown in waters where the colors of no other yacht club have been seen. The renowned arctic explorer Prof. Nordenskjöld sailed through the Northeast Passage on his ship, the Vega, then belonging to the club, under these colors.

Hopes are entertained that his Majesty the Emperor of Germany, who is first honorary member of the club, will honor the regatta with his presence, and will send the two yachts Meteor and Comet (formerly Thistle) to take part.

His Royal Highness the Prince of Wales, who is also first honorary member of the Royal Swedish Y. C., attended in 1885 one of the races of the club, and accompanied the yachts after the race on their way home to the capital through the beautiful inlet, studded all the way with islands glowing with illuminations and fireworks. A grand banquet was given the day after in honor of His Royal Highness.

As for the rating of the yachts, a modification of the old English rule will be in force, that is to say,

$$\frac{\text{L.W.L.} \times \text{S.A.}}{131} = \text{Rating.}$$

The number of the races will be four for all classes of yachts, and about 130 prizes are offered, besides which there will be a race for an extra prize called "His Majesty King Oscar II.'s jubilee cup" for yachts up to 2½ rating, and 7.20 meters waterline. The rules relating to these races are sent to the principal European and American yacht clubs, which are invited to take part in this regatta.

On account of the date on which these races are to be held, July 7-14, it will be found very convenient for yachts which have previously attended at the Kieler regatta to proceed immediately afterward in company of the German yachts to the Stockholm regatta.

Stockholm is a city well known for its beautiful scenery, and has a special attraction this year, as a Scandinavian exhibition is to be held there this summer.

The waters where the races are to take place are considered the best that can be found anywhere, and are admirably adapted for sailing. There is no tide, scarcely any current, grand sheets of sheltered water of sufficient depth even for the largest yachts, with safe anchorage anywhere.

Considering that there is reason to believe that the best yachts from Norway, Denmark, Russia, Finland and Germany will meet at this regatta, it is to be hoped that American yachtsmen will be sufficiently interested to pay a visit on that occasion to the land of the Midnight Sun, where, at that time of the year, there are no nights.

RULES RELATING TO THE RACES FOR THE JUBILEE CUP OF HIS MAJESTY KING OSCAR II., ISSUED FEB. 4, 1897.
THESE RULES ARE TO BE IN FORCE UNTIL JAN. 1, 1903.

SECTION 1. This cup has been instituted by the Royal Swedish Y. C. in commemoration of and with a view of celebrating the twenty-five years' reign of His Majesty King Oscar II.

SEC. 2. All yacht clubs which are duly registered and recognized are entitled to participate in the race for the cup; no club, however, being permitted to run more than one of its yachts in one and the same race.

SEC. 3. Any yacht to be eligible for this race must have been designed by a subject of the country to which the club belongs. She must have been built in that same country, and the suit of sails to be carried during the race must likewise be of the make of that same country. Her rating by the rule of the Royal Swedish Y. C. is not to exceed 2.5 and her length of waterline is not to exceed 7.20 meters.* The waterline to be measured when the yacht is lying in perfectly smooth water, with full equipment and outfit for the race, but no crew, on board.

SEC. 4. The invitation to the races will be issued by the officers of the Royal Swedish Y. C., who will also arrange the races on a properly marked course of 10 to 11 nautical miles, either on one of the fjords near Stockholm or on the open sea outside the capital. The course of the race to form a figure as near as possible like an equilateral triangle.

SEC. 5. The number of persons during the race, including the pilot, if used, is not to exceed three on yachts of 1.5 rating or less; and on yachts of more than 1.5 and up to 2.5 rating that number is not to exceed four. The helmsman to be a member of the club to which the yacht belongs.

SEC. 6. The races are to be run under the racing rules of the Royal Swedish Y. C., but without any time allowance. Every owner or commander of a yacht participating in the race is absolutely bound to submit to the decision of the sailing committee without further appeal.

SEC. 7. The races are to take place between July 1 and Aug. 15, on a day fixed by the officers of the Royal Swedish Y. C., and the date to be given in the invitation. Every race fulfilling the conditions mentioned below to be considered valid. Only one race a year to take place; the first one in 1897. A race to be considered valid when at least two yachts have taken part in it, subject to the course being traversed by the winning yacht within a space of time of not more than three hours.

SEC. 8. Entries to the race should be sent to the secretary of the Royal Swedish Y. C., Stockholm, before the expiration of the time specified in the invitation. In order that the entry may be considered valid it must be accompanied by the following documents: 1. A certificate showing that the yacht that is to take part in this race is the one chosen for that purpose by the club, of which the applicant is a member. 2. A certificate, issued by the official measurer of that club, stating the length of waterline and sail area as measured by him within the year in which the race is to take place. 3. The entrance fee fixed in the invitation.

SEC. 9. At least twenty-your hours before the race is to take place the yachts must be assembled at the place stated in the invitation, in order that they may be remeasured, if required, by the official measurers of the Royal Swedish Y. C.

SEC. 10. The cup remains with the Royal Swedish Y. C. until it is won in accordance with the regulations laid down in Sec. 11.

SEC. 11. The cup becomes the property of such yacht owner who, representing one and the same club, becomes the winner in three of the races, whether with the same or with different yachts. A silver medal and an extra prize to be awarded to the winner of any of the races, except of the final one. The names of all the winners to be engraved on the cup.

SEC. 12. Should the cup not have been definitely won before Jan. 1, 1903, the Royal Swedish Y. C. is entitled to alter these rules as circumstances may require.

* The rule of rating of the Royal Swedish Y. C. reads as follows: "The sail area in square meters is to be multiplied by the length of waterline in meters; the product divided by 131 will give the rating."

Seawanhaka Corinthian Y. C.

The regular April meeting of the Seawanhaka Corinthian Y. C. was held on April 6, with Rear-Com. Henry A. Van Liew in the chair. The following amendments to the racing rules were adopted:

To strike out from Sec. 2, Rule II., the following words: "All yachts in the 30ft. and lower classes shall be measured," and to substitute in place thereof: "In sloop classes of 25ft. and under, and in all classes of catboats the measurement."

To strike out Sec. 3, Rule III.

To strike out from Sec. 3, Rule XII., the words: "In classes 30ft. and under shall not carry more than one professional," and to substitute in place thereof: "In sloop classes 25ft. and under, and catboats in all classes shall not carry more than one professional."

To number the new rule limiting draft, adopted at the meeting held Jan. 12, 1897. "IV.," to change the number of the old rule IV. to V. and to renumber all the following rules.

To change the phraseology of our rules, to conform them to those of the Yacht Racing Union of Long Island Sound adopted March 9, 1896, and amended Dec. 19, 1896. A copy of these rules has been placed in the club house for the inspection of members.

The following proposal, introduced by the race committee, was indorsed by the club and will be submitted to the Royal St. Lawrence Y. C., whose approval is necessary before the change of conditions can be made.

Under the provisions of Art. XIII. of the declaration of trust governing the Seawanhaka international challenge cup for small yachts, add the following at the end of Art. VII.: "A club defeated in any match may not challenge until after the expiration of thirty days from the date of the conclusion of such match.

The object of the change, as will be evident, is to give an opportunity to clubs at a distance to put in a challenge for the cup; the loser in a race at the present time, being on the spot, having an advantage over all other clubs. It is a question whether the barring entirely of the loser for a month is quite fair to him, but no better solution of the difficulty has thus far been proposed.

The trustees proposed informally for discussion an entirely new scheme: the establishment of a class of members, not over thirty years of age, who shall pay no initiation fee and but $15 per year dues in place of the regular dues of $50. The idea is to increase the membership from a most desirable contingent, the young men who are sailing all the small racing boats to-day, and who, with other incidental expenses of yachting and racing, find the regular dues of the club too heavy a tax. The sentiment as expressed at the meeting was in favor of the plan, and it will probably be adopted at an early date. Messrs. Schutt & Sieck were appointed agents of the club at Kiel, Prussia. On motion of the race committee, a vote of thanks was passed to Mr. J. A. Brand for a handsome model of Spruce IV. lately presented to the club. A resolution was passed deploring the death of Mr. R. C. Townsend, one of the younger but more popular members of the club.

A special meeting has been called by the board of trustees, to be held at the club house, No. 19 East Twenty-second street, on Thursday, April 15, at 8:30 P. M.

At the regular meeting of the club, on April 6, the board of trustees presented a report, in which was offered for the consideration of the members a plan having for its object the introduction into the club of young men. To achieve this the trustees recommended that in the case of all candidates under the age of thirty years the entrance fee should be waived, and also that the dues of all members under that age should be limited to $15 per annum. The meeting favored this plan, and the following resolution will be moved at the special meeting:

Resolved, That Sections 1 and 2, Chapter XXV., of the by-laws of the club be amended so as to read as follows:

ANNUAL SUBSCRIPTION AND INDEBTEDNESS.

Section 1. With respect to the payment of an entrance fee and the amount of the annual subscription members shall be classified according to their age as follows, namely:

Class A shall consist of all who are thirty years of age or over, and Class B of all who are under thirty years of age.

Sec. 2. The annual subscription shall be $50 for all members in Class A, and for all members in Class B shall be $15.

Sec. 3. A member-elect in Class A shall pay the sum of $50 as an entrance fee and a subscription for the current year as follows: If elected between Jan. 1 and April 1, $50; if elected between April 1 and July 1, $37.50; if elected between July 1 and Oct. 1, $25; if elected between Oct. 1 and Jan. 1, $12.50.

A member-elect in Class B shall be exempt from the payment of an entrance fee, and shall pay a subscription for the current year of $15.

If the payment provided for in this section is not made by any member-elect within thirty days after notification thereof, his election shall be void.

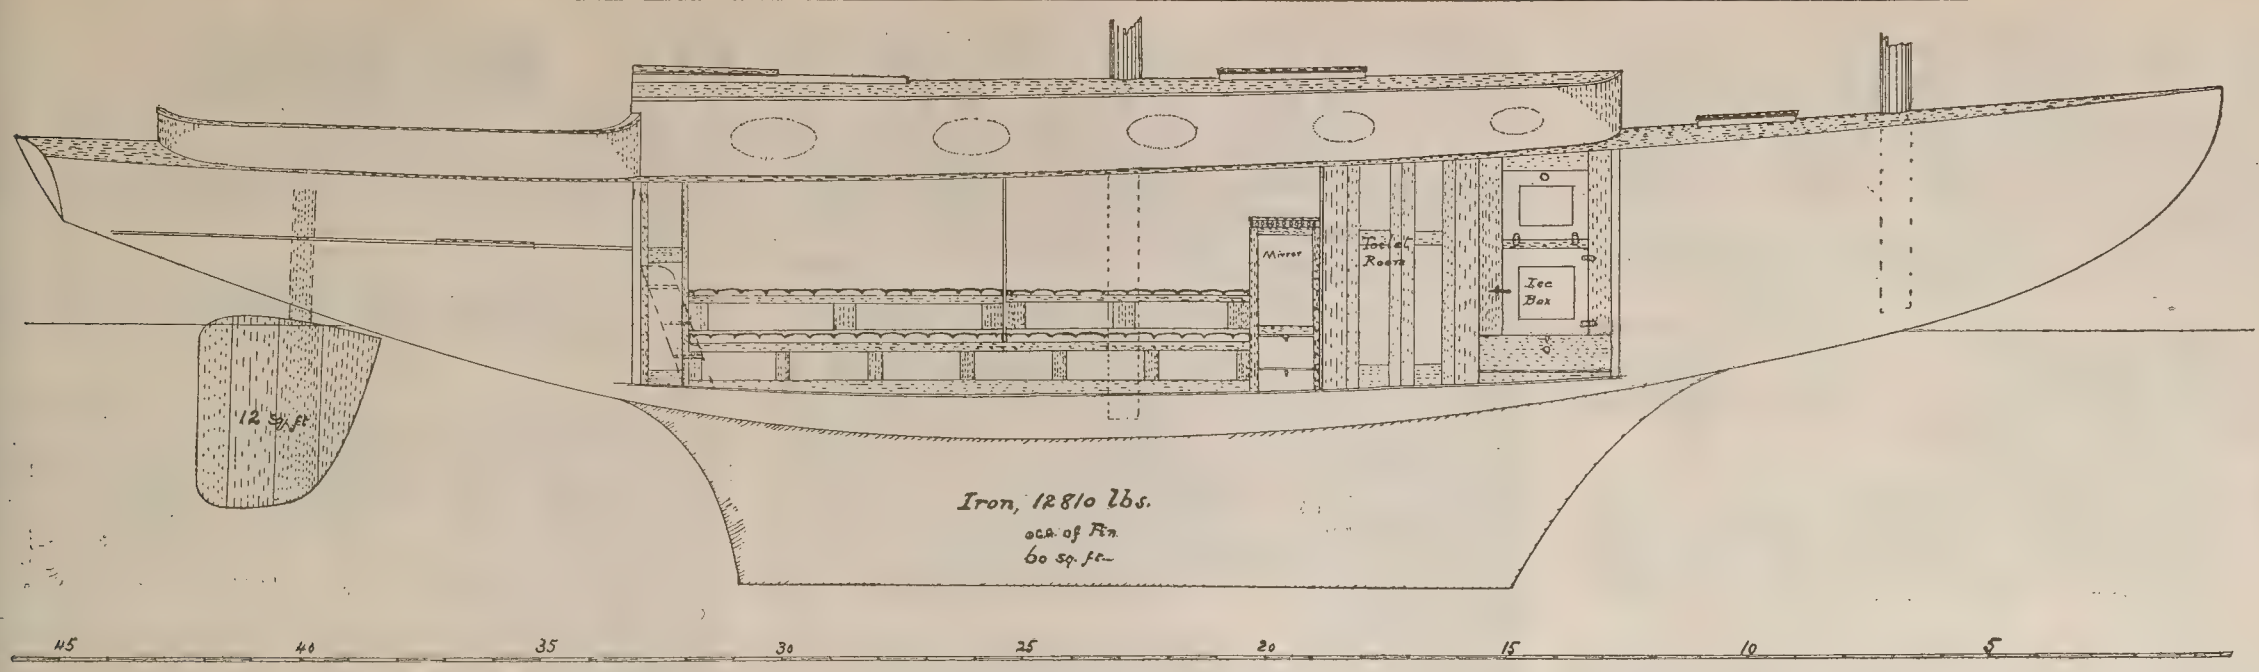
That old Sec. 3 be numbered 4, and the numbers of the following sections be changed to correspond.

The Measurement Rule.

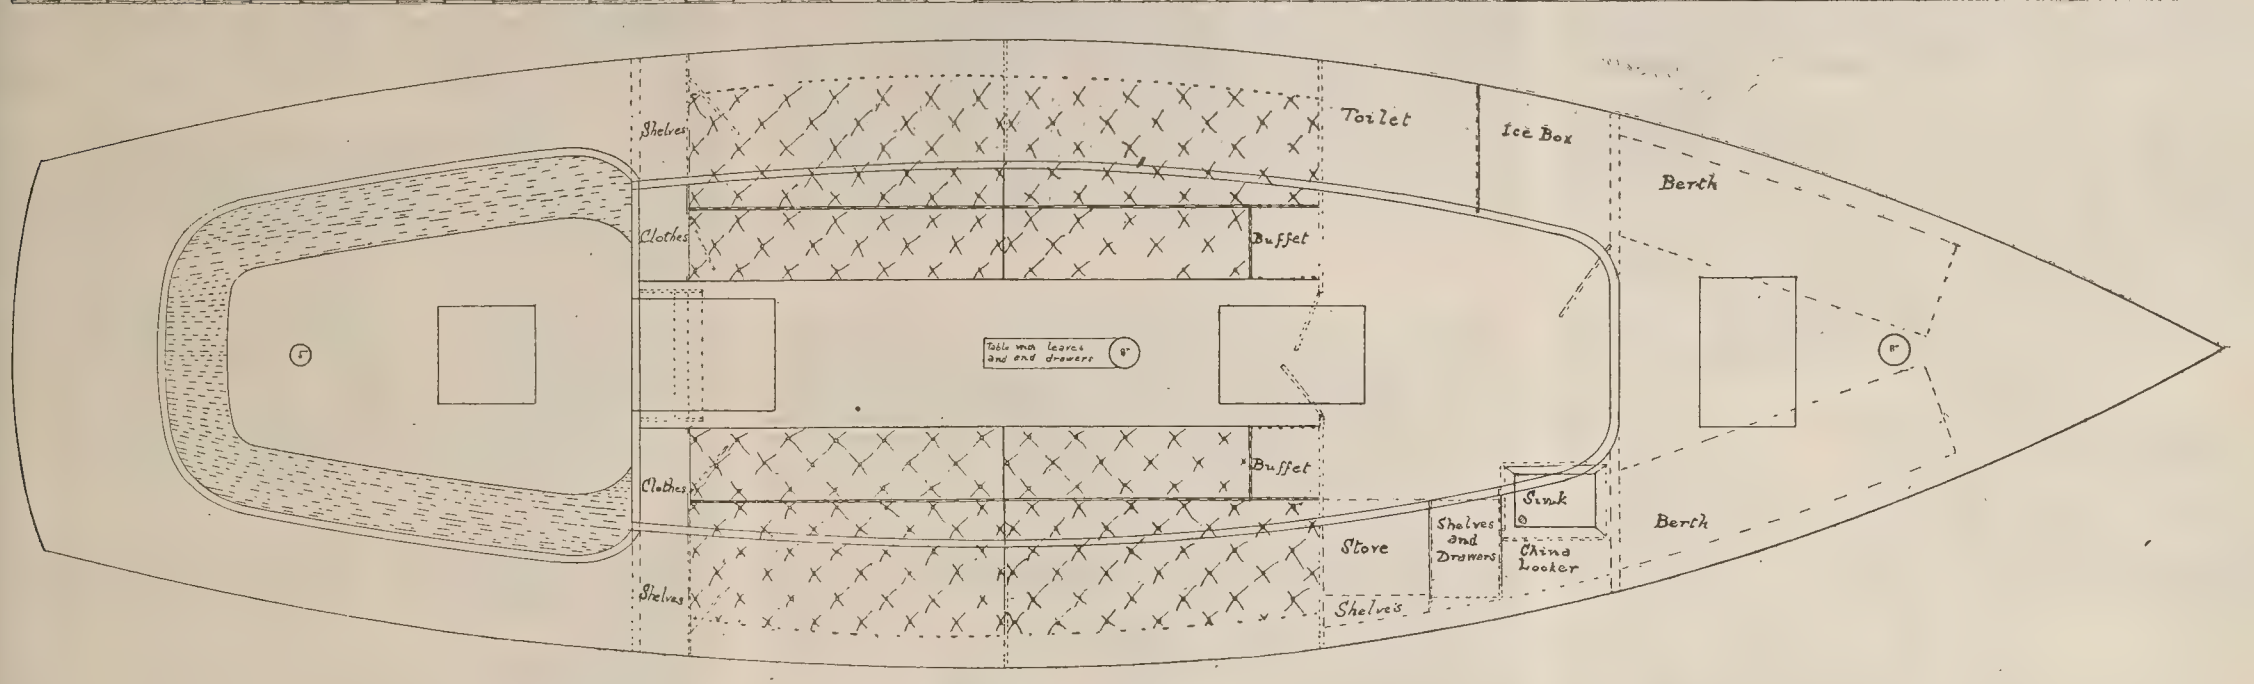
Editor Forest and Stream:

It is obvious that the new measurement formula,

$$\frac{\sqrt[3]{\text{S.} \times \text{L.}^2}}{\text{C. D.}},$$



proposed by Mr. G. R. Lüjegren, will effectually stop the building of light displacement bulb-fins, provided the coefficient of D is large enough; but it is not so apparent that displacement has such a relation to speed as to warrant its insertion in a formula for measuring speed.



Mr. Lüjegren, or any one else who understands these things, will do yachtsmen a favor by making this clear, as well as the principle upon which the size of the constant in the divisor is to be determined, and by explaining the philosophy underlying Mr. Lüjegren's scheme of time allowance.

SEXTANT.

YACHTING NEWS NOTES.

We have received from the Sheathing Propeller Co., of London, a pamphlet descriptive of the peculiar propeller manufactured by the company under the patents of John Ferguson, the shipbuilder of Leith and London. This propeller, which is made in all sizes, from the smallest upward, consists of a central spherical boss and two blades, with a double mechanism, operated from the shaft alley, by which the blades may in the first place be thrown so as to point directly aft; the shaft, boss and blades may then be drawn forward, completely housing the entire propeller within the stern tube. The pitch can also be altered or reversed at will.

FIN-KEEL CRUISING SCHOONER.—INTERIOR PLANS.

FIN-KEEL CRUISING SCHOONER.—SAIL PLAN

Barbara, cutter, C. H. W. Foster, may be altered to a schooner under the direction of W. E. Waterhouse. She was built by Lawley in 1892 from designs by Will Fife, Jr., for the 46ft. class, but was never very successful. Her draft of 10ft. 6in. will be reduced, and she will be used for cruising.

Benjamin Dean, an old Boston yachtsman, and long a member of the Boston Y. C., died last week. Mr. Dean formerly owned the sloop Undine.

The Corinthian Y. C., of Marblehead, a remarkably successful club, is planning a new and much larger house to replace its present comfortable home at Marblehead.

Messrs. Murray & Tregurtha, of South Boston, already well known through their marine engines and boilers, are now devoting their attention to gasoline engines and launches. They have just issued a circular descriptive of this engine, which is made with one or two cylinders. It is cheap, simple and easily operated.

The annual election of the Southern Y. C., Lake Pontchartrain, West End, New Orleans, La., was held on April 1, the following officers being elected: Com., J. Walton Glenny; Vice-Com., N. E. Baumgarden; Rear-Com., George P. Agar; Sec'y, L. D. Sampsell, 840 Canal street; Treas., Joseph Buckley; Fleet Surgeon, J. J. Finrey, M. D.; Meas., W. A. Brunet.

The Chicago Varnish Co., makers of the celebrated Navalite yacht varnish, has issued this year a specially handsome catalogue, illustrated with numerous portraits of yachts and other vessels, and of the leading yacht captains and engineers.

On April 8 Queen Victoria visited the cutter Britannia at Nice and conferred upon Capt. John Carter the medal of the Victorian Order. The honor is well deserved, Capt. Carter having handled the yacht with remarkable success ever since she was built, through four racing seasons.

On April 1 the Missouri Y. C., of St. Louis, Mo., installed the following officers: Com., Louis Hermann; Vice-Com., L. E. Walther; Rear-Com., L. Brueggeman; Fin. Sec'y, W. A. J. Kohrummel; Rec. Sec'y, F. J. Burghoff; Treas., W. G. Walsh; Fleet Capt., John Parker; Meas., B. K. Embree; Executive Board: Thomas Bond, Fred. Hasseldeck, E. S. Platt and Ernest Helfensteller.

Penelope, steam yacht, née Cleopatra, ex-Sapphire II., recently purchased by H. E. Converse, of Boston, sailed on April 7 from that port for Bermuda.

Ituna, steam yacht, Allison V. Armour, is now fitting out at Port Jefferson for a long foreign cruise. Capt. John Crawford, who was in charge of the 40 footer Liris during her racing, has had command of Ituna for several years. The yacht will attend the Kiel celebration and probably cruise in northern waters.

America, schr., still owned by the estate of the late Gen. B. F. Butler, is now fitted out at Chelsea, where she has been laid up since the general's death. Messrs. Paul Butler and Butler Ames will use her this season.

Vergana is the name chosen for the steam yacht designed by Gardner & Cox for F. H. Benedict, and now building at Marvel's yard, Newburgh.

Polly, yawl, Chester W. Chapin, arrived at Tebo's on April 9 from Tampa, Fla., where she was built from designs by A. Cary Smith. She has been in use during the winter in Southern waters, and has just made for the first time the trip up the beach, occupying eighteen days, or eight and one-half days from Miami, Fla., to New York. She is 60ft. over all, 40ft. l.w.l., 16ft. beam and 5ft. 6in. draft. Like all of the other yachts designed by Mr. Smith for Mr. Chapin, from Whim to the big Yampa, she has proved a marked success.

Republic, schr., has been chartered by an English syndicate for a voyage to Central America and she is now fitting out at New London. She will sail for Jacksonville, Fla., and thence to the Mosquito and Venezuelan coasts. Capt. J. A. Loesch is in command.

Daisy, steam launch, N. C. Reynal, has been sold through Tams & Lemoine to Columbia College for use in coaching the crews. Daisy was originally the Henrietta, built by the Herreshoffs in 1886 for the late Norman L. Munro, and she made some very fast runs when she first came out in New York waters. It was with her that Mr. Munro proposed to steam in a dozen loops around the steam launch of the steam yacht Atalanta in going a certain number of miles. Needless to say, the race never came off.

Algonquin, auxiliary steam yacht, formerly Gadabout III., has been sold to W. P. Douglas, former owner of Aida.

Norota, cutter, D. B. Burnham, has been fitted out at Newport by Capt. John Barr, and is now at City Island, where she will be hauled out and finished off in racing shape. Capt. Barr will be in command through the season.

Parthenia, steam yacht, has been sold by Stephen Roach to A. H. McKee, of Pittsburg, Pa.

Vigilant, cutter, Percy Chubb, has been launched at Hawkins' yard, City Island, and towed to J. M. Bayles & Son's yard, Port Jefferson, where her interior will be refitted under the supervision of H. C. Wintringham. Capt. Maskell, with his East Coast crew, formerly in Queen Mab and Ariel under Mr. Chubb's ownership, will be in charge of Vigilant.

Half Moon, naphtha auxiliary, has been sold by A. H. Flint, of Providence, to a New York owner. This yacht is a modern sailing cutter, designed by A. Cary Smith and built in 1890 by the Gas Engine and Power Co., fitted with one of the company's engines.

It is gratifying to know that the new experimental tank at Washington will soon be an accomplished fact; advertisements for bids will be issued very soon and the work commenced as quickly as possible.

The Lake Michigan Yachting Association will hold its annual meeting on April 24 at Racine, Wis. The principal subject of discussion will be the expediency of joining the new Yacht Racing Union of the Great Lakes. It is most probable that the Lake Michigan yachtsmen will decline to join the Union, as they are opposed to its rules on several vital points. They favor the encouragement of the extreme fin-keel, the taxation of overhang measurement without crew, and the employment of professionals in all classes.

Canoeing.

Wide Canoes.

THE London *Field* comments as follows upon the "one-design" wide canoe published in the FOREST AND STREAM of March 30–April 6, 1895, designed by W. P. Stephens:

Judging from reports from the far west, the tendency in respect to sailing canoes now is toward useful size and model, and the racing flying proa is being severely dropped. We have seen some photographs, from different places, which show pretty well what is going forward in British Columbia and on the St. Lawrence. From these it appears that the happy medium between canoe-yawl and racing canoe has been struck in like manner to the Royal C. C.'s "cruising canoe" class. The type in favor in Victoria, B. C., is very similar indeed to the English Solitaire, the cruises of which we published lately; and, but for the extra 6in. of over all length, the Gee-Whiz and her class would be on all fours with our "cruiser" class in England.

The leading dimensions of the Gee-Whiz are: L.O.A.—16ft. 6in., L.W.L.—13ft. 6in., beam 40in., sail area—135sq. ft.; her rating by R. C. C. therefore would be 0.3. She is main and mizzen bafter rigged, in the regular canoe fashion, with about 90ft. in mainsail and 45ft. in mizzen. Comparing this canoe with the main-and-mizzen-rigged cruiser which was exhibited in the Yachting Exhibition at Westminster, the only difference, apart from actual lines of the model, is that the Gee-Whiz is 6in. longer over all and is 2in. less in beam. Her deck and internal arrangements are near about the same as the English craft.

The St. Lawrence sailing canoes are rather longer and narrower, but none the less for general work they are far more comfortable and reasonable than the tight-fit, old-rule sailing canoe, leaving out of the consideration the racing machine. Newcomers to the sport frequently ask: "Why were these larger sized cruisers not thought of and brought out years ago?" Well, they forget, or do not know, that in nearly all cases "canoe type" in the early days of the sport simply followed the examples set by the latest edition, annual and sometimes oftener, of the Nautilus or the Pearl, and as the owners of these canoes were always racing, the canoes naturally were kept within the racing rules, and these rules cramped the beam down to 30in., and at a time limited sail area to 112sq. ft.

Now, however, even for racing, beam has been expanded considerably, and it has become possible to build a canoe within the racing rules just sufficiently large for two to sail in and not too large for one to handle, single-handed, almost anywhere; the result is, or soon will be, that the canoe yawl, except for certain kinds of open water use, will have to give way to the more easily handleable cruising canoe, and possibly also, on the other hand, the racing sailing canoe may find its prize winning career damped by the newcomers, and once its occupation is gone it is of no other use, and so will not be wanted.

New York C. C.

THE New York C. C. station will be opened for the season on May 1. Members wishing to engage rooms for the season, or for a shorter period, at customary rates will please give notice to that effect before April 15. Applications for rooms will be considered in the order in which they are received, and also with the view of accommodating the largest number for the longest time. A new steward and additional help have been engaged, which will insure better service than formerly.

Lockers.—Members having lockers in the club house, who wish to retain them for this season, will kindly remit $1 before May 1; otherwise the lockers will be rented to those applying for them.

In conjunction with the Marine and Field Club, arrangements have about been perfected for a steamboat service between the club and the Battery, New York, every morning and evening.

Rifle Range and Gallery.

Cincinnati Rifle Association.

CINCINNATI, O., April 4.—In to-day's shoot of the Cincinnati Rifle Association Capt. Gindele again distinguished himself by making two more 90s, viz., 93 and 91; his four scores averaged over 90. He shoots in the strictly off-hand position, and we think he could give Van Deusen, Ross and other crack shots a stiff race. Payne won the gold badge to day. Nestler was awarded a silver medal for thirty scores, counting 10. Scores made to-day were as follows:

Conditions: 200yds., off-hand, standard American target, 7-ring black:

First Outdoor Shoot of the Zettlers.

NEW YORK, April 11.—The Zettler Rifle Club, of this city, held its first outdoor shoot for the season of 1897 to-day at Bookman's Cypress Hills Park. The turnout of members was very good, twenty taking part in the shoot. Mike Dorrler added another win to his credit by making the highest total for three strings of 10 shots, and also making the highest 10-shot score. Fred Ross was close after him, with L. P. Hansen and Henry Holges in third and fourth places respectively. In the list of "flags" Dorrler also led, with 5 to his name. Hansen and Holges had 4 each, and Barney Zettler 3. Below are the scores:

	Total.				Total.
M J Dorrler	232	226	221—679	J Bodenstab	204 202 184—590
F C Ross	225	222	221—668	Geb Krauss	200 198 190—588

Revolver Shooting in England.

LONDON, England, April 2.—On March 17, at the North London Rifle Club, the following scores were made in revolver competitions:

Series 1, alternate hands, at 20yds.:

Class 1: Carter 26.

Class 2: Holmes 34, Brading 33, Capt. Evans 33, Tilbury 33, W. Luff 29, Britton 26.

Class 3: T. B. Ledger 26, W. F. Soames 23.

Series 3, disappearing target at 20yds:

Class 2: Capt. Evans 20, W. B. Holmes 26, Brading 25, Britton 19, W. Luff 19, Tilbury 18.

Class 3: Ledger 14, R. Pries 13.

March 24.—Series 4, 20yds., target: E. Howe 23, Lieut. Howard 15. Class 2: Holmes 28, Tilbury 27, Capt. Evans 21, W. Luff 13. Class 3: T. B. Ledger 26, Thompson 14.

The Late P. S. Killam.

WAKEFIELD, Mass.—Mr. Killam had been a bugler for the company for the past ten years. He was a natural born shot, had scores of fine medals that he had won in strong competition, and bore the rank of a distinguished marksman. He was a man whom everybody liked, genial and good-hearted, and his death is keenly felt by his many friends. His age was forty-two.

Trap-Shooting.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for almost a quarter century.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

April 16.—BRIDGEPORT, Conn.—All-day shoot of the Bridgeport Gun Club. Targets. V. A. Blakeslee, Sec'y.

April 17.—NUTLEY, N. J.—All-day shoot of the Yanticaw Gun Club. Targets from a magautrap. Shooting chmmences on arrival of 9:52 train from Chambers street, New York.

April 19.—HINGHAM, Mass.—All-day shoot of the Hingham Gun Club. 100-target handicap. G. O. Henderson, Treasurer.

April 19.—SINGAC, N. J.—Live bird shoot at Bunn's grounds. Handicap at 25 birds, $10, birds extra.

April 20-21.—ROCHESTER, N. Y.—Tournament of the Rochester Rod and Gun Club. Targets.

April 20-23.—LINCOLN, Neb.—Twenty-first annual tournament of the Nebraska State Sportsmen's Association. $1,000 added.

April 21.—HACKENSACK, N. J.—All-day shoot of the Oriana Field Club. Targets.

April 21-23.—SAN ANTONIO, Tex.—Second annual meeting and tournament of the Texas State Sportsmen's Association. O. C. Guessaz, Sec'y.

April 27-29.—BINGHAMTON, N. Y.—Tournament of the Binghamton Gun Club. Two first days, targets; third day, live birds.

April 27-30.—FONDA, Ia.—Tournament under the management of Geo. E. Hughes and C. R. McCord. Live birds. $800 added money.

April 28-29.—RICHMOND, Va.—Tournament of the Interstate Association, under the auspices of the West End Gun Club.

April 28-29.—PERU, Ind.—Tournament under the management of J. L. Head.

May 4-6.—DES MOINES, Ia.—Tournament of the Iowa State Sportsmen's Association. Live birds and targets. F. C. Whitney, Sec'y.

May 5-7.—NEWBURGH, N. Y.—Annual spring tournament of the West Newburgh Gun and Rifle Association. First two days, targets; third day, live birds. $50 average money to three high guns in all programme target events. Open to all.

May 6.—SHERBURNE, N. Y.—Annual tournament of the Sherburne Gun Club. One day at targets. L. D. Brainard, Sec'y-Treas.

May 11-13.—PEEKSKILL, N. Y.—Annual tournament of the Peekskill Gun Club. First two days, targets; last day, live birds.

May 11-14.—WATERLOO, Ia.—Tournament of the Waterloo Gun Club. E. B. Walker Sec'y.

May 12-13.—CONNERSVILLE, Ind.—Tournament of the Connersville Gun Club. Live birds. T. F. Thomas, Sec'y.

May 17-22.—KANSAS CITY, Mo.—Annual tournament of the Missouri State Game and Fish Protective Association. Fred T. Durrant, Sec'y.

May 18.—ALBANY, N. Y.—Annual spring tournament of the West End Gun Club. Horace B. Derby, Sec'y.

May 18-19.—FOREST CITY Ia.—Hill City Gun Club's second annual tournament; $100 added. J. W. Mahoney, Sec'y.

May 19-20.—SAVANNAH, Ga.—Tournament of the Interstate Association under the auspices of the Forest City Gun Club.

May 19-21.—CANTON, S. D.—South Dakota Sportsmen's Association annual. C. S. Seely, Sec'y.

May 20.—GREENVILLE, Pa.—Second tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones, Sec'y.

May 26-29.—EAST ST. LOUIS, Ill.—Annual tournament of the King's Smokeless Gun Club.

May 31.—CANAJOHARIE, N. Y.—Eastern New York Trap-Shooters' League tournament, under the auspices of the Canajoharie Gun Club. Charles Weeks, Sec'y.

May 31.—PORTLAND, Me.—Spring tournament of the Portland Gun Club. Targets. Added money announced later.

June 2-4.—SPRINGFIELD, O.—Annual tournament of the Ohio Trap-Shooters' League, under the auspices of the Springfield Gun Club.

June 7-8.—PARKERSBURG, W. Va.—Tournament of the Mountain State Gun Club. Targets. $350 added. Leon J. Epstein, Sec'y.

June 8-9.—Tournament of the Trap-Shooters' League of Indiana.

June 8-11.—AUBURN, N. Y.—New York State Sportsmen's Association tournament. C. W. Tuttle, Sec'y.

June 9-10.—MONROE, La.—Tournament of the Interstate Association, under the auspices of the Monroe Gun Club.

June 10.—NEWCASTLE, Pa.—Third tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones, Sec'y.

June 15-18.—CLEVELAND, O.—Fourth annual tournament of the Chamberlin Cartridge and Target Company.

June 16-17.—FARGO, N. D.—Third annual tournament of the North Dakota Sportsmen's Association. Targets. W. W. Smith, Sec'y.

June 22-25.—OIL CITY, Pa.—Seventh annual tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Oil City Gun Club. Targets and live birds. Black powder barred. Special event: 25 live birds per man, $25, $1,000 guaranteed. Send entries to H. C. Reeser, Sec'y, Oil City, Pa.

July 14-15.—NEW HAVEN, Conn.—Tournament of the Interstate Association, under the auspices of the New Haven Gun Club. Wm. H. Hazel, Sec'y.

July 20-22.—PINE BLUFF, Ark.—Seventh annual tournament of the Arkansas State Sportsmen's Association. Added money announced later. Paul R. Litzke, Sec'y, Little Rock, Ark.

July 22.—MEADVILLE, Pa.—Fourth tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones, Sec'y.

Aug. 4-5.—LEWISTON, Me.—Tournament of the Interstate Association, under the auspices of the Androscoggin Gun Club.

Aug. 17-19.—TORONTO, Canada.—Tournament of the R. A. McCready Co., Ltd. Targets. $1,000 guaranteed. Open to all. Write for programmes.

Aug. 19.—WARREN, O.—Fifth tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones, Sec'y.

Aug. 25-26.—MONTPELIER, Vt.—Tournament of the Interstate Association, under the auspices of the Montpelier Gun Club.

Sept. 15-16.—PORTSMOUTH, N. H.—Tournament of the Interstate Association, under the auspices of the Portsmouth Gun Club.

Oct. 6-8.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association. First two days, targets; third day, live birds. $50 average money to three high guns in all programme target events. Open to all.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

It is rather late perhaps to say anything about calendars; but late though it is, we must say a few words in commendation of that gotten out by Parker Bros., of Meriden, Conn. The special feature about this calendar is the excellent reproduction of photographs of forty-eight experts who handle and swear by the Parker gun. Milton Hoag, of Seneca Falls, N. Y., described in the calendar as "one of the pioneers of trap-shooting in this country," occupies the place of honor. He is supported on his right by S. A. Tucker and O. R. Dickey, winner of the Grand American in 1896. On Mr. Hoag's left are the popular A. W. du Bray and Charlie Budd. If Mr. Hoag is not satisfied with the quality of his company he must be hard to please. The remaining forty-three portraits are all speaking likenesses, and the whole makes a pleasing souvenir for either smoking-room or gun-room.

W. Fred Quimby seems to be really sore distressed in mind. He gives as the cause of his sorrow his failure to land in first place in the Grand American Handicap. He tells us that on his recent trip out West he expressed himself so confidently to his friends on the road as to his ability to win the "blue ribbon" that they backed him to a man, going to great lengths to raise the wherewithal. Speaking seriously about the manner in which the shoot was run, Fred said that he was more than pleased with it. As he put it: "It was the best run shoot I ever saw."

On Saturday next, April 17, the Yanticaw Gun Club, of Nutley, N. J., will hold an all-day shoot at targets. The targets will be thrown from a magautrap, the Yanticaw Gun Club having been one of the first clubs in the East to put one of these machines on its grounds. The main event on Saturday will be a 50 target handicap, $2 entrance, targets included. All shooters are welcome, and those who do not care to shoot for the money can always shoot along "for the birds." Trains leave New York (Chambers street ferry) at 9:52 and 11:30 A. M. Shooting will commence on the arrival of the 9:52 train.

J. S. S. Remsen has strengthened his hold on the Recreation cup by adding another win to his credit. As there are only four more shoots for this trophy, some stout hustling will have to be done if the cup is not to go to Remsen Hall. Mr. Remsen's win on April 7 was a most highly creditable one. He scored 46 out of each 50, half the race being at known angles and half at unknown angles. His total of 92 tied Greiff's total, and a shoot-off was the result. The pair shot off at 15 known and 15 unknown angles Remsen scored 14 out of 15 at known angles, and then ran 15 straight in the unknowns, a total of 29 out of 30. It is also worth noting that when Remsen went to the score for his last string of 25 unknown angles, he had to break 25 to beat Greiff and 24 to tie his score. He lost his fourth target, but finished with 24, running the last 21 straight. F. Sinnock, the winner of the cup in February last, was clean out of form on April 7, his liver being in bad shape and he himself under the doctor's care. It took grit to stand up under such conditions, but Sinnock supplied the grit and knocked out 46 out of 50 in the first half of the race. Condition told in the last half, and he finished with only 86.

Baltimore and Atchison may be said to open the target season of 1897. From now until late in the fall not a week will pass without some important target tournament being on the list. Although this is not to be a season of large added money tournaments, the number of small tournaments will more than make up for the loss in that respect. The days of "$150 per day profit" for the crackerjacks seem to have gone by. It is now more a case of "small profits and quick returns."

Arthur Bunn, of Singac, N. J., announces that he will hold a live-bird shoot on his grounds on Monday, April 19, at 12 noon sharp. The main event will be a 25-bird sweep, $10 entrance, birds extra. Bunn's birds are always of the very best quality, and it takes good work to score even 10 straight on his grounds. A simple way to get to Singac is to take the Erie R. R. to Paterson, and then take the electric cars from the depot in Paterson to Singac. Trains also leave Chambers street, N. Y. (Erie R. R.), at 10:30 and 12 noon for Little Falls.

Billy Crosby (everybody calls him "Billy" whether they know him well or not) is making quite a stay with us, and is running in double harness with Jack Fanning. This pair sally forth from New York city on the slightest provocation, and turn up at every target or live-bird shoot in the vicinity. Both are as welcome as the day, because New York and New Jersey trap-shooters know good fellows when they fall across them. The new Baker hammer gun handled by Crosby attracts lots of attention for reasons that can easily be guessed.

In looking over the programmes for the Baltimore and Richmond Interstate shoots we can only find one fault with them, and that fault may possibly be only imaginary. We refer to the absence of any average moneys. Average money we look upon as a most interesting feature of any tournament, and in addition to being interesting to the shooters it always gets them out to the grounds early whether it's a case of rain or not. Average moneys (always high guns, not class shooting) are a feature that we like to see in any programme.

We have not heard much from Newburgh, N. Y., in regard to the tournament to be held there May 5–7, but we understand that President Dave Brown intends to make the annual spring tournament even more enjoyable than those of past years. He has good material among the members of his club to draw upon, for the Newburgh boys are skilled entertainers. We understand also that the tournament will be "open to all."

The Iroquois Rifle and Gun Club, of Pittsburg, Pa., holds an all-day shoot at targets on the first Thursday of every month. Shooting commences at 10 A. M. on each of the days above mentioned. The programme prepared by the committee—Jacob Motz, H. L. Born and W. J. Udick—is a popular one, and these shoots should be well attended by trap-shooters of Pittsburg and vicinity. At all these shoots the purses are divided on the Rose system.

Ferd Van Dyke has recently placed two good records to the credit of Laflin & Rand's W-A powder: On April 3 he won the Boiling Springs cup shoot with 49 out of 50, and on April 7 he led the band at the Bergen County Gun Club's grounds, Hackensack, N. J., with a total of 43 out of 100. On the latter occasion he broke 45 out of 50 at known angles, but finished with 48 out of 50 at unknown angles.

H. W. Brown, of Binghamton, N. Y., manager of the Binghamton Gun Club, writes us that his club is getting out an interesting and tasteful programme for its spring shoot on April 27–29. These semi-annual gatherings of the Binghamton boys are always enjoyable affairs, and the spring shoot of 1897 promises to be as pleasant as any of its forerunners. They know how to make visitors feel at home in Binghamton.

Merchandise prizes for the Auburn (N. Y. State) shoot, June 8–11, are rolling up. The management of the Auburn Gun Club has already secured a donation of six first-class guns as prizes, besides a list of other valuable prizes too lengthy for mention. A special feature this year will be "$3-open-to-all" sweeps, as the club wants all the cracks, East, West, North and South, to come and join in the fun. The club will bar nobody.

Mr. Rice's letter anent the trip of the Western delegation to the Grand American Handicap, which appeared in one of our cotemporaries the week after the shoot, seems to have aroused the disapproval of many shooters in the East. Several of them very strongly resent the lack of courtesy attributed to them. In another portion of our trap columns we publish some of the letters we have received on this subject.

Among the New York delegation to the Baltimore shoot this week will be Capt. A. W. Money, Ed. Taylor, Justus von Lengerke, Neaf Apgar, Ferd. Van Dyke, W. Crosby, Jack Fanning and Tom Keller. Most of the above will also be in evidence at the Richmond Interstate of April 28–29. There is material enough for a good squad in the above list.

The Marietta (O.) Gun Club will hold its spring tournament on Wednesday, April 21. The programme consists of twelve 15 target events, $1.50 entrance, unknown angles. All purses will be divided on the Rose system. The shoot will be under the management of P. Schlicher, Jr., and C. E. Verges. Shooting commences at 9 A. M., rain or shine.

Jack Fanning is still in the East and will scarcely see San Francisco until late next fall, when the target-shooting season here is closed, and when we shall have nothing left with which to amuse him. Jack is making lots of new friends for himself, his powder (Gold Dust), and for the Olympic Club, of San Francisco, whose badge he wears over the spot where he says his heart is.

The members of the Knoxville (Tenn.) Gun Club have been working hard during the present session of the State Legislature to secure much-needed legislation on behalf of the game and fish of the State. The success of the club's efforts in this respect should spur on similar organizations to do likewise in their respective districts.

Hon. Tom A. Marshall, the winner of the Grand American Handicap, is not without a handsome souvenir of his victory on March 24–25. His friends in the West have presented him with a fine silver service to commemorate an excellent exhibition of skill and nerve.

The spring tournament of the Portland, Me., Gun Club has been postponed from its original date; it will now take place on Wednesday of this week, April 14. Mr. Chisholm, manager of the club, informs us that a magautrap will be used at this shoot.

Mr. J. H. Richmond, of this city, has sold out his interest in the Walsrode Powder Co. to Oscar Hesse, of Red Bank, N. J., who will hereafter represent the powder company in this country. The agency will, we understand, still remain in the hands of Messrs. Schoverling, Daly & Gales.

A new gun club has been organized at Secaucus, N. J., under the presidency of Mr. Henry Heflich. The new club will commence practicing at once and promises to become a factor in trap-shooting circles in the State of New Jersey.

The Oritani Field Club, of Hackensack, N. J., announces that it will hold an all-day shoot on Wednesday, April 21. All events will be at targets, shooting commencing at 10 A. M.

On May 31 the Portland (Me.) Gun Club will hold its annual spring tournament. The shoot will be at targets, and, to make the tournament attractive, the club will add money to the purses.

The Forester Gun Club, of Newark, N. J., will hold an all day shoot at targets on April 28. The club will welcome all shooters, and will also keep open house on that day.

APRIL 13. EDWARD BANKS.

Arkansas State Sportsmen's Association.

LITTLE ROCK, Ark., April 10.—Please announce that the seventh annual meeting and tournament of the Arkansas State Sportsmen's Association will be held at Pine Bluff, Ark., July 20–22. Added money and other particulars will be announced later. The tournament will be open to all and the Rose system of dividing the purses will be adopted. The Association expects to offer liberal inducements to draw shooters to Arkansas. It will also amply provide for its State shooters. Renewed interest is being displayed in trap shooting all over the State, and altogether the prospects were never more flattering for a successful shoot. The tournament will be under the auspices of the Pine Bluff Gun Club. PAUL R. LITZKE.

The Western Team at Elkwood Park.

BUFFALO, N. Y., April 9.—*Editor Forest and Stream:* I was rather surprised on looking over my FOREST AND STREAM that arrived to-day to find no mention made of the recent letter written by Mr. Rice to your Western contemporary.

After describing the composition of his team, all gentlemen and all rattling good shots, and after describing Elkwood Park, its accommodations, shooting grounds and club house, Mr. Rice makes this remarkable statement: "The management of the Grand American Handicap, notwithstanding predictions to the contrary, was generous in its treatment of the Western party, and should we again visit the East, I think my party will join me in the statement that we shall ask nothing better than what we received at the Handicap of 1897."

Mr. Rice practically closes his letter with the following: " * * * should Chicago be favored in 1898, the winner in the Grand American Handicap shall have to carry home with him a trophy of which he will be proud, and with the feeling that the West in its good-natured and broad liberalism has extended to him—whether a resident East or West of the Ohio River—'the glad hand' with a fellow sportsman's best wishes. This (I regret to say) will be in marked contrast to the treatment accorded by the Eastern shooters to the Western contingent as we concluded our shooting last week. To Mr. Robert Welch, of Philadelphia, we owe the only real courtesy extended to us as winners by our brethren in the East."

Now, Mr Editor, what do you think of this last sentence? What do you think of the whole letter? What were "the predictions to the contrary" that Mr. Rice refers to? What did Mr. Rice and "the Western contingent" expect at the hands of fellow sportsmen that they did not receive? And, lastly, what did "Mr. Robert Welch, of Philadelphia," do to the Western boys that we did not do? I was present at the shoot—as a spectator, it is true—but I never saw more genuine enthusiasm on the part of a body of men than was displayed by the shooters present when the Hon. Thos. A. Marshall landed the chief honor. "The Western contingent," while domiciled at the Elkwood Inn, ate by themselves and kept very much to themselves; an Eastern team taken to Chicago under similar conditions and for a similar purpose would undoubtedly have acted in a precisely similar manner.

It may be the fashion in the West, but I most seriously doubt it, to insinuate all kinds of things; it may also be the fashion in the West, but again I most seriously doubt it, to run down the hospitality and friendship of those whose guests you have been. If it is the fashion to do either of these things, then Mr. Rice's letter is fully up to date in all particulars. 48 GRS.

ANOTHER PROTEST.

PHILADELPHIA, Pa., April 3.—*Editor Forest and Stream:* I would like to protest against the way in which that Western delegation found fault with everything. They found fault with Phil Daly's accommodations, and the price paid for the same; they found fault to a man with the reports in the New York papers, good reports too. They said that if the winner had been an Eastern man he would have had a whole page; and that if the shoot had been held in Chicago better reports and more space would have been given, etc. And now Mr. Rice, in a Western sporting paper, finds fault with the way in which he and his crowd were entertained during the Grand American Handicap.

I don't know that Mr. Rice or any Western man is any different from myself or others. We went to a good square shoot, and when we made a straight we made money. We were furnished with good birds, a splendid club house and comfortable accommodations, and the money was paid to the man that earned it—East, West, North or South—no section was favored. It does not seem right that Mr. Rice should find fault with the best shoot ever held in the world, or that he should claim that we did not extend proper courtesies to him and his men. I am sure Mr. Marshall was warmly enough congratulated on his victory. What more could or ought we to have done?

As for the management of the shoot, it knew no clique nor any part of the country. It looked after everybody and handicapped each shooter on the best information obtainable, regardless of where he came from. The Western delegation was entertained at the Grand American Handicap as well as any Easterner, and I have no kick coming, never having been entertained better in my life. KEYSTONE.

Programme for the Peru (Ind.) Shoot.

MR. J. L. HEAD, promoter of the tournament announced to be held at Peru, Ind., April 28–29, under the management of Jack Parker, has forwarded to us a copy of the programme for that shoot. It is worthy of special mention that a meeting of the Trap-Shooters' League of Indiana will be held at Peru during the progress of this tournament.

In making the following extracts from the reading matter in this programme, we must not be taken as indorsing all the statemens and sentiments contained therein. This is merely another case of many men, many minds, and we give the extracts, as we realize that they will be of interest to our readers:

"Having been requested by a number of shooting acquaintances to open the season of 1897 with a tournament at Peru, the promoter of this event hereby extends a cordial invitation to the sportsmen of this and surrounding States to attend what promises to be one of the largest amateur tournaments ever held in the Middle West.

"Believing it to be unfair to the less expert shooters to make an exorbitant charge for targets to all the contestants, and then add the overcharge to the highest scores for the benefit of the more expert under the guise of 'added money,' there will be no such added (?) money. Believing further that the practice of soliciting merchandise from the local merchants, the majority of whom are not interested in and derive no benefit from trap shooting, and adding the merchandise as prizes serves only to delay the progress of a tournament, while shooting off ties, or engaging in the exciting sport (?) of drawing straws in order to determine the winner of such prizes, which in the main attract no entries, no merchandise will be added.

"Knowing from a wide personal acquaintance with the amateur shooters of this State that all the average amateur wants is an opportunity to enter an event having an equal show with all other contestants to win his entrance and a fair profit as the result of his skill, the promoter of this event is prepared to assure every sportsman who may attend that every courtesy will be extended him, and every opportunity given him to enjoy the manly sport of trap-shooting that a large attendance and good management can provide.

"Believing, however, that some inducement should be held out to the contestants to enter every event, thus keeping up interest, especial attention should be called to the average prizes, mention of which is made on pages 7–11, which is certainly sufficient evidence that this tournament is not given to realize a profit, but to promote the sport of trap-shooting. As to the management, the name of the gentleman who has been secured to manage this tournament is a guarantee that it will be run upon correct lines and in the best possible manner. Mr. Parker will not contest for the purses."

The programme consists of two 10 target events, $1 entrance; five 15-target events, $1 50 entrance; three 20-target events, $2 entrance, and two 25-target events, $2.50 entrance. This gives a total of 205 targets, and an entry fee "for all day" of $20.50. The average prizes referred to above are treated of as follows: "As announced in Rules and Conditions, targets will be thrown at 2 cents each, but believing that a reasonable profit can be made at this price, an average prize of $2 50 per thousand for all targets thrown in programme events will be divided between the two guns making the best general average for all programme events on both days—60 per cent. to first and 40 per cent. to second—thus reducing the price of targets to .¾ cents."

Under the head of "Rules and Regulations" appears the following: "Shooting commences at 9:30 each morning. Manufacturers' experts and black powder barred. No contestant will lose a shot. All purses divided 35, 30, 20 and 15 per cent. All shooting will be from known traps, unknown angles, unless it is clearly demonstrated that too wide a difference exists in the class of shooters, when the less expert will be allowed to shoot from known angles. Guns and shells shipped to J. L. Head will be delivered to the grounds free of charge."

Bison Gun Club, of Buffalo.

BUFFALO, N. Y., April 1.—The Bison Gun Club tried its magautrap to-day and found that it worked satisfactorily. The shoot took place at the Walden avenue grounds and was well attended. Event No 4 was the badge shoot, and in this event Minere won the Class A badge, Siegrist the Class B badge, and Wrench the Class C badge. No. 5 was at 5 pairs. Scores:

ON LONG ISLAND.

WESTMINSTER KENNEL CLUB.

April 8.—An important match was shot to-day on the grounds of the Westminster Kennel Club, Babylon, L. I. The principals were H. B. Gilbert and W. Chauncey Floyd-Jones, the conditions of the match being: 100 birds, Gilbert at 31yds., Floyd-Jones at 30yds., 30yds. boundary. Gilbert was looked after by Capt. Money, G. S. McAloin handling Floyd-Jones. The weather was cloudy, with a light wind from the southwest. The birds, of course, were good ones, the 30yds. boundary being all too short on several occasions. The match throughout was close enough to be quite interesting, but Gilbert finally won with 4 birds to spare. Scores were:

H B Gilbert (31)	2022●12222222211220112222	—22

NEW UTRECHT GUN CLUB.

April 10.—The semi-monthly shoot of the New Utrecht Gun Club was held to-day on the Dyker Meadow grounds. In the club shoot C. W. Dudley was the winner in Class A, C. C. Fleet winning easily in Class B.

Cup shoot, 25 targets, unknown angles:

Trap at Pittsburg.

M'PHERSON DEFEATS WILL KING.

PITTSBURG, Pa., April 7.—W. S. King and Sandy McPherson shot an interesting race to-day on the grounds of the Herron Hill Gun Club at Davis Island. The affair was a handicap, the conditions being as follows: 50 birds per man, King at 31yds., McPherson at 28yds., King also conceding McPherson 3 misses as kills. The odds conceded by King proved too severe, although he shot a very great race, scoring 48 out of 50. McPherson scored 46 out of 50, making his total, with 3 misses as kills, 49. He thus won by 1 bird. Scores:

McPherson (28)	1111111111111111111111111	—25
	1110111111111100111111101	—21—46+3—49
W S King (31)	1111111101111111111111111	—24
	1111111111111110111111111	—24—48

M'PHERSON WINS AGAIN.

April 9.—Will King and Sandy McPherson shot their race of April 7 over again, the conditions being precisely the same on both occasions, with the exception that to-day McPherson received only 2 misses as kills as against 3 in the previous match. McPherson won again and by the same margin—1 bird, the scores standing 46 to 45 in his favor. Scores were as below, second barrel kills being ignored:

McPherson (28)	1111101111111111111111110	—23
	0111111110111101111111101	—21—44+2—46
W S King (30)	1111111111111111111111010	—23
	0111111111110111111011111	—22—45

TEAM RACE AT DAVIS ISLAND.

April 10.—A close and exciting team race was shot at Davis Island to-day between teams captained respectively by C. A. May and W. S. King. The teams were of five men, each man shooting at 25 live birds. King's team won by 107 to 106. Scores:

May's Team:

Trap at Hartford.

HARTFORD, Conn., April 3.—The Colt Gun Club held its regular medal shoot to-day, and twenty-three shooters turned out to compete. Messrs. Willard, Pitkin and Risley each broke 24 out of a possible 25. They will shoot off their tie at the next medal shoot, which is on April 17. The club is well pleased with its new club house and grounds. It has an inclosed pit with a new set of blue rock traps and electric pull. The coming season promises to be very lively. Following are the scores made for the medal at 25 targets:

Willard	24	Mills	20
Pitkin	24	Sexton	20
Risley	24	F Olmsted	18
Bishop	23	Nichols	18
Gisleman	22	Putnam	18
M Cook	21	McGinty	18
Burbidge	21	J Carter	17
O B Treat	21	A Cook	16
W Olmsted	16		
Alger	15		
Lucas	14		
White	11		
Robinson	9		
F Carter	9		
Crane	4		

Cook, Bishop, Pitkin, King and Willey attended the live-bird contest at Elkwood Park, and Mr. Willey, of the club, was a competitor.

M. F. COOK, Sec'y.

IN NEW JERSEY.

CLUB SHOOT AT BOILING SPRINGS.

April 3.—The regular monthly club shoot of the Boiling Springs Gun Club was held to day at Rutherford. The attendance as usual was very good, and a large number of targets was thrown during the afternoon, the total aggregating over 3,000.

The cup shoot (25 known angles and 25 unknown angles) was won by Ferd Van Dyke with 49 out of 50, Van losing his 47th target. Dr. De Wolfe, with an allowance of 5 extras, was second with 47 out of 55. Apgar, Fanning, Brewer and Lewis (15 extras) came next with 46. In the 45 hole were Noel Money, W. H. Huck and G. H. Piercy. Altogether scores ruled high, but this is scarcely to be wondered at, as the background at the Boiling Springs grounds is about as perfect as possible. A glance at the scores made in the sweeps will show that pretty nearly everybody had his eye on the targets. Scores in the cup shoot follow in detail:

FORESTER GUN CLUB, OF NEWARK.

April 10.—The regular monthly shoot of the Forester Gun Club was held to-day. A good delegation from the Bergen County Gun Club, of Hackensack, was with us and helped to make things lively. The Forester Gun Club will have an all day shoot on April 28, to which all are welcome, either to come and break targets or else help to eat the lunch. Targets are thrown at 1 cent each on all occasions by this club. To-day's scores were:

CUP SHOOT AT HACKENSACK.

April 7.—The third contest for the *Recreation* cup was held to-day on the grounds of the Bergen County Gun Club, at Hackensack. There was a good entry list, eighteen shooters taking part in the main event on the card. Of the above number four were not eligible to compete for the cup; these were Ferd Van Dyke, of the W. R. A. Co.; Neaf Apgar, representing the Austin Powder Co.; J. S. Fanning, of the U. S Smokeless (Gold Dust) Powder Co., and W. Crosby, of the Baker Gun Co. To make it interesting, however, for the above four shooters an optional sweep of $1 on each 25 targets was gotten up, while the cash prizes of $5 to the second high gun, and $2 to the third high gun, were thrown open to them.

Considerable interest was evinced in the outcome of this shoot, as both F. Sinnock and J. S. S. Remson, previous winners of the cup, were entered in to-day's race. Sinnock was under the weather and in no condition to do himself justice; the effects of an attack of the grip will be found too in Edwards's total. Gus Greiff was in great form, having changed his gun and found a weapon that evidently suited him well. He shot a great gait all day, scoring in the sweeps shot prior to the 100-target event pretty nearly every target shot at; he held up well too in the main event, his total of 92 being tied by Remsen, and only beaten 1 target by Ferd Van Dyke, who scored the highest total in the race—93 Remsen shot very steadily, making 46 in each 50 and outshooting Greiff when it came to a shoot off.

The weather conditions were not unfavorable for good scores; there being almost no wind. The sky, however, was overcast, and the light nothing extra when targets were thrown low. No. 4 trap was stumbling block to many a shooter, targets being thrown very low from this trap; it is safe to say that a very large percentage of the lost targets were thrown from No. 4 trap. It was not an easy day for perfect refereeing, but the club's referee, Chas. E. Dawson, did his work as satisfactorily as usual. Capt Horton was the club's hustler, of course; in fact, the Bergen County Gun Club does not seem to have anybody else to take much interest in running a shoot. Capt. Horton introduced another feature in to-day's shoot in the shape of some souvenir spoons, three of which were shot off in 15-target events. The first was won by Edwards, who tied on 15 straight with Gus Greiff and Van Dyke; on the shoot-off, miss-and-out, Edwards won in the 13th round. Fanning won No. 2 spoon with 15 straight; while W. H. Huck, of the Boiling Springs Gun Club, won No. 3 spoon with a similar score.

Below are the scores in the cup race in full. Remsen's win to-day making his second for the cup out of three tries. Sinnock has the other win to his credit. There are only four more contests for the cup, so Remsen may be said to have a good chance of ultimately carrying it back to Brooklyn. Scores:

TEAM RACE AT RUTHERFORD.

April 10.—The Boiling Springs Gun Club held an invitation team race to-day on its grounds at Rutherford. The conditions were three men to a team, 50 targets per man, unknown angles, $10 per team, targets included. The day was a delightful one for target shooting, although at times there was enough strength in the northwesterly wind to cause the flight of the targets to be rather erratic.

It was rather a surprise therefore, with such weather conditions, that there were not more than four clubs represented by teams. These four clubs were: Boiling Springs Gun Club, Bergen County Gun Club, of Hackensack; Endeavor Gun Club, of Jersey City, and the Brooklyn Gun Club, of Brooklyn, N. Y. The race was a most interesting one, the home team finally landing in the lead with 136 out of 150. Next came the Bergen County team with 133, the Endeavors with 131, and the Brooklyns with 120.

One of the amusing features of the race was Captain Money's transfer from the Bergen County team to the Boiling Springs team in place of Neaf Apgar, who was unable to be present. The Bergen county club had four representatives present: Van Dyke, Morfey and the two Moneys; it thus became necessary to choose three out of four, and it fell to Captain Money by lot to drop out. In Apgar's absence another man was needed on the Boiling Springs team, so Captain Money was claimed and ably filled the bill by tieing for high score in the team race, and aiding greatly in landing his team at the top of the list.

Among the unattached shooters Dr. De Wolfe was conspicuous with the only 25 straight made during the day. Greiff was again in form, scoring 46 out of his 50; but Huck, who was laboring under the disadvantages of a severe headache, fell 3 or 4 short of the mark that was expected of him. The Bergen county team shot consistently, a 45 and two 44s going to make up the team's total; Tom Morfey had a good chance of 25 straight in the last 25, but fell down on his 50th target. For the Endeavors Edwards scored 47, but Piercy and Carl von Lengerke were both a little off color. The Brooklyn Club deserves credit for entering a team in this race; the club is only a very young one, but it has all the signs of becoming one of the leading clubs in this vicinity before long.

A long list of sweeps and matches were shot during the afternoon, nearly 3,500 targets being thrown, although shooting did not commence until about noon. Scores in all the events are given below, the team race being given in detail:

AT YARDVILLE.

April 8.—A pleasant day's sport was had at Zwirlein's grounds, Yardville, N. J., to-day. Among the shooters present were J. S. Fanning, W. Crosby, Ferd. Van Dyke, J. L. Brewer, Joe Baker, B. Kuser, etc. Several miss-and-outs and three "10-bird-$10" sweeps were shot, the chief winners being Brewer and Van Dyke. Scores were:

	No. 1.	No. 2.	No. 3.	No. 4.
Brewer	2210	22222	212221	1211122222—10

Duble	0222222222— 9	2222222222—10

Chicago and Western Traps.

THE VICTOR AT HOME.

WHEN the Honorable Tom Marshall, Mayor of Keithsburg, winner of the Grand American Handicap and owner of the earth, arrived at his home in Keithsburg, after his little exercise trip in the East, he was met at the depot by a brass band and a triumphal reception such as was wont to be accorded by the *populus Romanus* to an emperor who had swiped a section of Gaul or run a corner in Africa. Tom already owned the town, including the city railway, the electric lights, most of the subdivisions and the City Hall; but any few remaining portions of it were brought to him on a plate by his admiring fellow citizens, and it was announced to him openly and in public that hereafter he was to be considered as the whole thing.

A critical observer says that Powers, Merrill, Williamson, Carver, Bingham, and indeed all the Western contingent shot magnificently, and left no cause for reproach upon the name of the land near the Great Lakes and the big river.

J. L. Winston writes from Washington, Ind., that, contrary to what may possibly be a popular understanding of the matter, he will defend the Du Pont trophy in the match with Mr. Budd at the city of Chicago, the date being May 1.

Cook County League is now in the midst of active preparation of its prize list and shooting arrangements for the ensuing year.

Garden City Gun Club is arranging an attractive list of season prizes, and expects a pleasant and successful year.

Lou Erhardt writes me that he expects his tournament this year to eclipse all his previous efforts. Atchison, Kan., April 14-16, $750 added.

The managers of the Nebraska State Sportsmen's Association add $1,000 to the purses of their shoot at Lincoln, Neb., April 20-23, and claim that theirs will be the "largest tournament that will be held in the West this year."

E. HOUGH.

1.06 BOYCE BUILDING, Chicago.

Answers to Correspondents.

No notice taken of anonymous communications

N. W. P., North Middleboro, Mass.—Kindly prescribe for my foxhounds, two of which have large swellings upon their throats which came after they had distemper. The tonsils in one of them seem to be swollen, and at times seem larger than at others. The other seems to be more like an abscess. There is no soreness. Ans. Apply tincture of iodine to swellings daily till the skin becomes sore. Should any of the swellings be soft like an abscess they should be opened. Give a teaspoonful of syrup of iodide of iron twice a day.

H. W. B., Montclair, N. J.—Early last winter, when traveling over the D., L. & W. R. R., I noticed some rabbits that were being shipped express. My attention was called to them by their being singularly free from blood, and after an examination I found that they had all been snared. Some time after I spoke to a brakeman on this railroad about this, and was told by him that he had seen 50 or 100 shipped at one place, all of which had been snared. Now there is a New Jersey law against snaring, but apparently no law against having snared game in possession; or if there is, no attempt is made to enforce it. Please enlighten me on this subject. Ans. The law specifically forbids possession of "any rabbit after the same has been caught or trapped by means of any snare, snood, net, trap or device of any description whatsoever." Give your information to Chief Warden Charles A. Shriner, Paterson, and he will proceed against violators of the statute.

PUBLISHERS' DEPARTMENT.

A Corner-Stone of Business.

NOWADAYS publicity has come to be such an essential to business success that a man's standing is often judged by his advertising. At the same time good advertising mediums are rare, and judicious selection is of the utmost importance. FOREST AND STREAM is one of the few mediums that reaches the purchasers of fine pleasure boats, engines, yachts and launches. It puts the builder in touch with the buyer, and where the buyer is satisfied a trade is consummated. Occupying this position, FOREST AND STREAM is fittingly characterized as a corner stone of business by Mr. A. W. Stone, vice-president and superintendent of the American Boat Building Co., St. Louis, who in ordering renewal of advertisement writes:

"We are receiving and have been receiving a great many inquiries through our advertisement in your paper. If we should drop our advertisement in your paper it would be like knocking a corner-stone from under our business."

In another line, but in the same tenor, the manufacturer of the Martin automatic reel writes: "Our display at the Madison Square Garden and the small advertisement we are now running in FOREST AND STREAM are giving us more business than we can attend to."—*Adv.*

The Tennessee Centennial and International Exposition,

NASHVILLE, TENN.,

will open May 2 and close Oct. 31, 1897. The Southern Railway, in connection with the Pennsylvania Railroad, is the only line operating a through sleeping car service from New York to Nashville. The route is via Washington, D. C., Asheville and Chattanooga, leaving New York daily at 4:30 P. M., passing through the most interesting section of the South. The Tennessee Centennial is the celebration of the one hundredth anniversary of the admission of their State into the Union. It is a national event of international importance, to which the whole world is cordially invited. The construction of the different buildings and the arranging of exhibits are completed. The management is using every endeavor to bring together the most unique and attractive things procurable. The Southern Railway, with its usual liberality and foresight looking to the advancement of the whole South, has made very low rates for this occasion. For complete information and particulars regarding the great Exposition call on or address the New York Office, 271 Broadway.—*Adv.*

New York Yacht, Launch and Engine Co.

THE New York Yacht, Launch and Engine Company, of Morris Heights, New York City, are building a fine cabin launch for Mr. W. W. Kenyon, a well-known Brooklyn yachtsman. Her dimensions are 31ft. over all, beam 7ft., draft 33in. The cabin is finished in mahogany with Brussels carpet on the floor and plush cushions on the seats lockers under the same and extensions to form berths.

The yacht is built in the most substantial manner, with oak timbers, cedar planking and copper fastened. She is fitted with an H. P. Otto gas engine, which makes her a very safe as well as speedy boat. She will be ready to launch in about four weeks.—*Adv.*

The Utility of Birds.

THE attention of individuals and associations interested in bird protective work is called to Miss Florence A. Merriam's interesting and valuable pamphlet, entitled "How Birds Affect the Farm and Garden," which is published by the Forest and Stream Publishing Co. It is a clear and interesting exposition of the utility of birds to the agriculturist and the importance of preserving them. Price, per single copy, 5 cents; per 100, $2.50; per 1,000, $15.—*Adv.*

The Peters Cartridge Co.

As will be remembered from the report of the rifle tournament the Sportsmen's Exposition, .22cal. cartridges manufactured by the Peters Cartridge Co. won three out of a total of ten prizes competed for. The result is naturally gratifying to the Peters Co., as it proved beyond question the superiority of their ammunition, which in this caliber has only been on the market for about a year.—*Adv.*

"Vena Contracta" Guns.

WE have received a number of requests for descriptive matter relating to the "Vena Contracta" game gun, which we have been unable to fill owing to the non-receipt of the price lists. These requests have been forwarded to Joseph Lang & Son, and will receive due attention.—*Adv.*

ON July 1, when Von Lengerke & Detmold move into their new quarters at 318 Broadway, New York, they will assume the agency for the Humber bicycle—a wheel which is to-day recognized as the standard over a large part of the known world.—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, APRIL 24, 1897.

VOL. XLVIII.—No. 17. No. 346 BROADWAY, NEW YORK.

NOTICE TO SUBSCRIBERS.

ATTENTION is directed to the new form of address labels on the wrappers of subscribers' copies. The label shows the date of the close of the term for which the subscription is paid.

The receipt of the paper with such dated address label constitutes the subscriber's receipt for money sent to us for a new or renewed subscription. Unless specially requested to do so, we do not send separate receipts.

Subscribers are asked to note on the wrapper the date of expiration of subscription; and to remit promptly for renewal, that delays may be avoided.

For prospectus and advertising rates see page iii.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, **$5.**
Forest and Stream *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

Fly-fishing might be styled the poetry of angling. It is as superior to fishing with a squirming, filthy worm as true sculpture is to gravestone-making, or as the work of the artist is above that performed by the man who whitewashes your kitchen ceiling. Any fellow can impale a miserable worm upon a hook, and, by its writhings, entice a fish to nibble at it. But it requires a quick eye, a tranquil nerve, and superior judgment to cast a fly so as to deceive the wary trout. I do not object to taking fish with a worm, for food, if hard pressed, but for sport—never! There is nothing disreputable in fishing with a worm; by no means. But I do not enjoy that sort of thing; therefore never engage in it. Bodines.

WATERS OF THE THOUSAND ISLANDS.

THE New York Legislature has appropriated $30,000 for the purchase of islands and other plots of lands in the St. Lawrence River district known as "the waters of the Thousand Islands," to be held as public possessions, for the convenience of anglers and other pleasure seekers. Owing to the rapid conversion of hitherto wild and unoccupied land into summer homes, the number of available camping spots where the fisherman may go ashore to cook his fish and eat his lunch has so diminished that the lunch problem has become most serious and perplexing.

The Thousand Islands fishing custom is for the angler to be rowed to the fishing grounds by his boatman guide, to fish until the lunch hour, and then to go ashore to the nearest convenient camping ground, build a fire, and have lunch. But of late years, with each recurring season, one has been obliged to go past spots formerly open to all, and to row further and further before a place could be found where to go ashore would not be to trespass on private property. Judiciously expended for suitable sites, the appropriation will in large measure remedy all this, and the convenience and pleasure of angling and boating in these waters will be materially enhanced.

In taking this step, New York is coöperating with the Canadian authorities, who, on their part, have undertaken to reserve for a like public use, certain islands lying on their side of the line. Ultimately the two countries will have an international park, where, by virtue of mutual concessions as to seasons and other conditions, the anglers of the States and of the Provinces may enjoy some of the finest fishing on the continent. As is known, the Ontario authorities have in past seasons exempted this district from the operation of the non-resident angling license law, and the exemption will continue in force this year. For the benefit of Canadian boatmen, who have been accustomed to row American anglers from the American hotels to the fishing grounds, the Anglers' Association of the St. Lawrence River sought to secure an amendment of the alien labor law, so that the Ontario boatmen might not be interfered with. A bill to this effect was introduced in Congress by Hon. Chas. A. Chickering, of Copenhagen, and was passed, but President Cleveland vetoed it. Probably a renewed effort will be made to secure such a modification of the present statute.

THE PAPER GUN.

GREAT are the improvements that have been made in firearms within the past sixty years. From the invention of the percussion lock down to the latest perfection of breechloading and repeating arms, the art of gunmaking has attained such cheapness and excellence that it seems almost impossible to go beyond.

Iron and steel have been worked into all manner of combinations and twisted into all contortions that can give strength and most exquisite figure. Actions and magazines have been perfected till there is nothing left to ask for in ease and celerity of loading and firing, and all at a cost that makes it possible for men of moderate means to own guns of a quality that were once only within the reach of the wealthy. So it has come to pass that every one who cares to own one has a good gun, and if the shooters were equal to their weapons there would be no game left.

But far more effective than any achieved combination of iron, steel and wood is the paper gun, a weapon at the command of every one who can wield a pen; for it is cheaper than the cheapest, though it bears the name of every good maker.

It never misses fire, never its mark. In vain the wiles of the ruffed grouse, in vain the startling upburst of his thundering flight. Of no avail the woodcock's thridding of the alder copse, the snipe's zigzag course over the sedgy lands, the wildfowl's headlong speed before the piping gale—down comes each at the noiseless and smokeless discharge of the paper gun. So falls the bounding deer, the cliff-scaling mountain sheep, so the charging moose and the savage grizzly when his hot breath is almost in the face of the intrepid hunter, and so falls the painted Indian at the moment his tomahawk is lifted to strike his victim.

Notwithstanding the improvements that have been made in the iron gun, it is possible that they may be carried still further. Ramrod and hammer have been eliminated, and so perhaps may be lock, stock and barrel, and ideal proverbial rapidity attained. But there is nothing left to be desired in the paper gun; it has reached perfection. It is infallible, and he who fires it is always an unerring marksman.

A DEER JACKING RECORD.

A SHOWING as suggestive as was ever put on record in official reports relating to shooting is contained on that page of the New York Fish Commission report for 1895 which gives statistics of deer jacking as practiced at Big Moose Lake, in the Adirondacks, for the season of 1893. The figures are contributed by H. H. Covey, who expresses the opinion that if the deer are to be kept up to their present standard and numbers both dogging and jacking must be prohibited. Mr. Covey's record gives the number of shots fired, the number of deer wounded and the number killed. It is shown, for instance, that during the season one man fired nineteen shots, wounded seven deer and actually killed two; that another fired fourteen shots, wounded four, got one; another fired twelve shots, wounded five, killed two; and so on down to the hunter who shot only twice, wounded two and got none. The totals figure up two hundred and nineteen shots fired, one hundred and nine deer wounded, forty-nine killed. Those killed are not to be counted among the wounded; the wounded were in addition to the killed; they "all left blood, but could not be found, as they were shot while floating."

It is not clearly stated that all the two hundred and nineteen shots were shot in floating. If they were, the totals would show that as conducted at Big Moose Lake the practice of deer floating yields a proportion of one hundred and nine wounded to forty-nine killed; or, in other words, that before one deer is killed two others must have been wounded, with ten extra wounded ones in a season for good measure. If some of the forty-nine deer were killed by hounding or still-hunting, the proportion of one hundred and nine wounded in floating to less than forty-nine killed would mean that for every one deer killed in floating more than two must have been wounded.

SNAP SHOTS.

BY the death of Henry Hope Sewell, the sportsmen's fraternity of Quebec has lost a valued and highly esteemed member. He was a sportsman of the first rank, pure in heart and life, a lover of the woods and everything in them, "just such a man," writes one who knew him well, "as FOREST AND STREAM would have its readers to be, and so far as it can helps to make them. An honorable man in every walk of life, the memory of 'Hope Sewell' will long be fresh among his fellows. In a whole family of sportsmen of the highest type he was *facile princeps*, until a mysterious and incurable malady deprived him of the use of the sturdy limbs that had so often carried him to the haunts of the caribou or followed the birds on the banks of the St. Lawrence. 'I like to work for my fish' was an expression he once used, and it gives an idea of his character as a sportsman."

What a forum is the FOREST AND STREAM for the man with old-fashioned and newfangled notions about the many interests of the sportsman's world. It is the intention to make it a free forum, where every one may have his say, if only he be sincere and honest in intent and parliamentary in manner. It might be a very stupid forum if it were held to the expression of any one man's views only, or if both sides of a question were not given scope of expression; or if only those views and suggestions and projects were permitted to be heard which the editorial judgment might indorse as wise and sensible. What would become of that interminable gun talk about the stove of the country store of winter nights if some one oracle knew it all, delivered his say-so and reduced the rest to silence? And where would be the charm of those nights of lounging about the campfire, with the stars peeping down through the pines, if only one were allowed to do the talking? Our ambition—surely a most laudable one—to reflect the sentiment and thought of the sportsman's world, prompts us then to open our columns to all. And so it is that about once in so often, say at recurring periods of eighteen or twenty-four months, we make room for the man who advances the sin argument as applied to snaring partridges. Briefly stated, this is, that to enjoy such means or opportunities as may enable their possessor to hunt grouse for sport is a sin; and to be so poverty-stricken as to be obliged to shoot or snare grouse for sale is righteousness. It then follows that as the righteous shall inherit the earth the grouse are for the market snarer; and if the sportsman contends that he should have some privileges too, this is only a manifestation of his original sin. If anyone shall deem that we misrepresent the position of the defenders of the "poor man" snarer against the "millionaire" sportsman, we beg of him to reread the arguments advanced in recent numbers in defense of the partridge snarer's God-given right to follow his bent.

Our fishing columns contain some extremely interesting statistics of New Hampshire fishcultural stations. The State has eleven hatcheries, which are equivalent, population considered, to more than one hundred for New York. With all her natural supply, and with all her artificial restocking, New Hampshire nevertheless has found it necessary to adopt legislation forbidding trout fishing for market as an industry to be pursued on her streams. The simple truth is that no State fish-stocking machinery can begin to repair the drain made by the market fisher. The sale of wild trout should be prohibited everywhere.

Another industrious individual who ought to be banished by legislation or by public censure, is the fisher for count and brag. Now that the fishing season is coming around again, we may expect to be confronted by the apparition of this creature and his back-load of fish at the country tavern, whose host vainglorioously puts him forth as a living advertisement of the fishing resources of trout and bass waters. In one "virgin wilderness" after another the "trout hog" has flourished, and then the places that knew him know him no more forever, for the good reason that he has wrought their ruin, and they no longer tempt his stupid, unworthy and brutish ambition to score.

The Sportsman Tourist.

LIFE AMONG THE LUMBERMEN.—III.

[Continued from page 246, and from the day when, it will be remembered, G. W. M. and Ernest had plugged a hollow log and holed up in it a mysterious animal.]

Until this night we had not heard nor seen wolves in the vicinity of our camp. We had seen some tracks, though only a few. But now I had scarcely dozed off into my first light sleep when a long-drawn-out howl sounded almost at the camp door, and the cook, Ernest and myself, waking simultaneyusly, sat up and listened to the serenade, that soon became uproarious and lasted for a half hour, with little or no intermission.

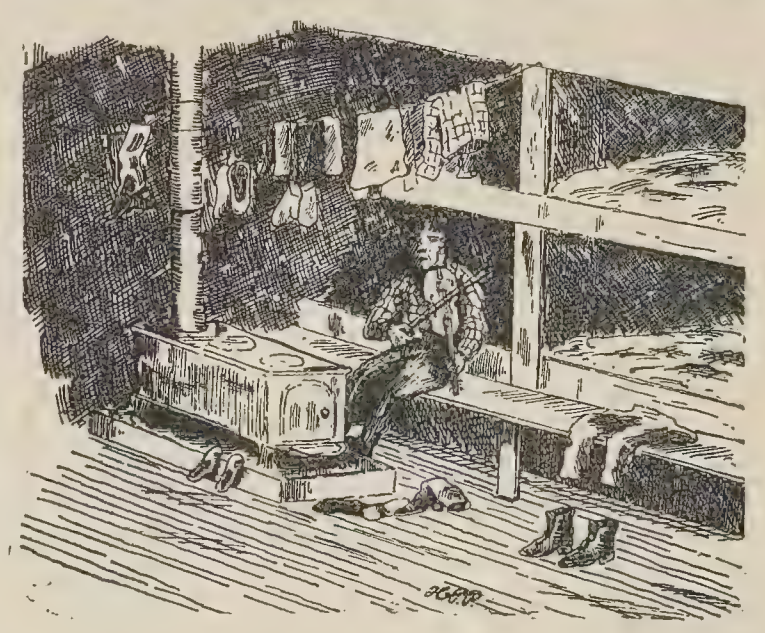
That was the beginning; and from that time until we broke camp on the 8th of April we heard them almost every night. We came to think nothing of it, the only effect of their presence being to make the cook careful to store his provisions safely, and to cause the teamsters to keep their harness securely housed. Any scrap of leather, from a hone strap to a horse collar, was sure to be chewed up if left out over night. Although there must have been many of the wolves—and we had reason to believe they followed us out to the works in the morning and back to camp at night—with the exception of two, which one of the crew succeeded in trapping, we only caught sight of any twice, and then a single individual each time, during the entire winter. Once, when Kronquist, coming in at night, stopped to water his team at a swamp water hole, a single wolf came up from the direction he had come, sat down on his haunches in the middle of the road immediately when he came in sight, and trotted back on the road when Kronquist swung his cap and yelled. At another time, late in March, when the Boss and myself were tramping a road to a thick bunch of timber, a wolf came out to the edge of a little meadow we were crossing and stood watching us. The crust was heavy enough to bear the weight of a man, and the Boss walked up to within a few feet of the wolf, holding his axe ready for a blow. The wolf retreated very slowly, showing little fear and keeping a wicked eye on the man all the time. This wolf was very large and of very dark color. They raided our lunch place every day looking for scraps, as we could tell by finding their tracks thick about the fire on some one of the crew returning after resuming work; and tney visited the rear of the camp every night, where a spout carried the dish water from the cook's sink.

Next morning Kronquist waked me. Having his team to care for, it was his habit to have them fed, groomed and harnessed before breakfast. He had been to the hovel and greeted me with the following: "Aye tank da Buck ox he daie. Aye yust go down hovel; see hem all fall dou lak he daid. Aye com' ba'k queek tell you, maister."

I was dressed in a jiffy, and following Kronquist to the hovel found Old Buck sure enough dead. After looking him over by the dim light of the flickering candle which Kronquist held over the carcass I went back to camp. It was bitter cold, and the wind which had risen during the night swept the little clearing with a howl and shriek, and seemed fairly to snatch the breath out of our nostrils. I found Ernest lacing his buckskin moccasins. "Old Buck is dead," I said. "So! Well, dem Swede feed him too much meal. Da ox he no work, just stand still. Da meal get hot, swell up, bu'st paunch. We save the hide anyway."

Giving the crew instructions to manufacture snow shovels so that we might clear a road as far as possible in the direction from which the tote team was to come, Ernest and myself after breakfast started out to see what it was we had left in the hollow log the night before. The first thump on the log brought a response. Cutting into the tree toward the root from where we had the beast located, we rammed in some sticks to bar his passing in that direction. Then notching in above and jamming in more sticks, we set to work to split out the section between the two scarfs. All this time tne animal had kept up an incessant growling, and when at last I had split and chopped a small opening directly above where we knew him to be, I felt the perspiration streaming down from under my cap rim in spite of the cold. A few more strokes of the axe and we could see a bunch of reddish-gray fur. Another slab was knocked off, and up came two stubby legs with broad feet and wicked claws, which fanned the air with strong, swift strokes. Instantly a thick leather mitten closed around each leg, and Ernest, throwing his whole weight into the task, bent them down over the log. Next up came more legs and claws, and jumping up on the log I could see a pair of ugly-looking eyes. I swung the poll of the axe straight between them. The growling ceased, the legs quivered, jerked spasmodically and our animal was dead. Enlarging the hole toward the root of the tree, we drew forth a lynx, the largest I have ever seen. He was very thin and bony, and had porcupine quills sticking in his nose, mouth, lips and forelegs.

For five days more we hunted and worked and waited. We shoveled out the tote road for a distance of more than three miles. We snared rabbits, and Ernest succeeded in shooting another deer.



On the fourth day our young Swede was taken sick. Returning from work he was seized with a chill, then came fever and the bunk. He required a good deal of attention, the cook looking after him in the daytime, and I myself at night. At times he was delirious, but always gentle. He could not speak English, but thanked us with his eyes for any service rendered.

On the eighth night he seemed better, and was apparently resting, so that I threw myself on my bunk for a few moments' sleep. When I woke it was to hear the music of the old violin played very low, and I found the boy sitting by the heater, with his head propped against the bunk footboard, playing a march over and over again in a subdued, quiet tone, but in perfect time. I sat down on the opposite side of the stove and waited, listening and wondering what this new turn in his sickness meant. After a few moments I thought to replenish the fire, and throwing open the stove door stirred up the glowing interior, and going to the dingle came back with some sticks of fat pine, when I noticed the light fell full on the lad's face. He looked up with a bright smile, and nodded toward the camp door as if there might be something outside which interested him. Throwing the wood on the fire, I stepped outside, and stood for a moment dazed and confused, for it was snowing again. But hark! what sound is that which comes from out the woods, floats past through the open door, and mingles and harmonizes with the strains of the violin within? I listen again. Is it? Yes, it is. It is bells; and whose bells? Why, Jake's, those four strings of which he was always so proud; and now I hear them more distinctly, sounding steadily in time with the march played upon the violin.

A moment more and I have Ernest awake and then the cook. Fire is started in the cook stove, and Ernest and I don our outdoor clothing. Everything is done quietly, but in time—perhaps unconsciously—to that slow, steady tune which never stops and never varies. With cap and mittens adjusted we again open the camp door. The clamor of the bells rushes in and fills and echoes back from every corner of the interior. Then we hear Jake's sonorous "Whoa!" and the four steaming blacks in the lead with the tote team on the pole are at the door, and on either side Ernest and myself are pulling the long lead reins from Jake's cold fingers.

By the time the horses are cared for, supper, or perhaps breakfast, is ready. The Boss tells in a few words of the difficulties encountered and the time lost in getting through with the load of supplies. On learning that we have rustled enough to eat and have kept the crew together he shakes hands all around, which is a lot of that kind of thing for him to do.

I go over to the young Swede's bunk, for he had laid aside the violin and crept into it when the bells ceased ringing. His head is cool, his fever gone, and he is sleeping. Ernest

THE MUSIC OF THE OLD VIOLIN.

comes over, lights his pipe and sits beside me on the deacon seat, gives a few puffs and says: "Ba gosh, we have bean and doughnut on the tab'e to-morrow." The Boss hands me some letters backed in the familiar handwriting of the little sister at home. I light the stub of a candle, read them through, and full of pleasant thoughts stay awake just long enough to hear the cook sing as he gets ready to turn in:

"Then consider a while ere you leave me;
Do not hasten to bid me adieu,
But remember the dear little valley
And the girl that has loved you so true."

G. W. M.

THE CHESTNUT RIDGE AND ALONG ITS FOOT.

The Chestnut Ridge is the westernmost range of Appalachian hills in Pennsylvania. It rises to the north near the center of Indiana county, and extends in a generally southern direction through Indiana, Westmoreland and Fayette counties in Pennsylvania, and on into West Virginia. The southern prolongation of this range is known as the Laurel Ridge. It is of but moderate elevation; its summit rounded; its eastern side rather abrupt; its western slope a long, gradual descent toward the setting sun. This ridge is but a remnant of that lofty mountain system which the geologists assure us once shot up 2,000ft. higher than does the present range, but which has been worn down by the disintegrating influence of the atmosphere to its present dimensions; while the detritus has been borne away and deposited in the river valleys and upon the floor of that vast inland sea which once covered the region now occupied by the prairies of Indiana, Illinois and Iowa. When we consider how little change has been wrought upon the natural features of the earth by atmospheric agencies within the historic period, the length of time required to remove thus hundreds and thousands of feet of rock and soil would seem to be little short of infinite.

"I thank God," says Washington Irving, "I was born on the banks of the Hudson! I think it an invaluable advantage to be born and brought up in the neighborhood of some grand and noble object in nature; a river, a lake or a mountain. We make a friendship with it, we in a manner ally ourselves to it for life." And so I have always been thankful that I was born in sight of the Chestnut Ridge. From my father's door and from the streets of my native village this great upland, blue in the haze of Indian summer, and distinct as a pointed picture in the clearer atmosphere, was ever before my eyes. To my youthful imagination its shady recesses might be the haunts of Pan, the woodland god, whose uncouth form was familiar to me upon the page of Tooke's "Pantheon," a favorite book in my father's small library. Strange how the impressions of childhood remain with us, while many of the more important events of later years are entirely obliterated from the mind!

The slopes of the Ridge were covered with chestnut trees, and great was the pleasure of turning over the yellow leaves after the first frosts of October, in search of the rich brown chestnuts. Here, too, were huckleberries in abundance; the satisfaction of gathering them, however, was somewhat marred by fear of the "rattlers" that were known to lurk among the rocks and bushes. Along the foot of the Ridge were fox grapes and wild plums in profusion, and free to the first comer. In those days notices to "trespassers" were unknown, just as the woods and streams were open to all without restrictions of game laws or of the rights of private ownership.

In my early years the ridge was covered with an almost unbroken forest of chestnut, oak, walnut, beech and hickory trees. But time brings about changes. When I saw the ridge last summer I noticed that havoc had been wrought among the trees. Great bare spots revealed themselves all along the flank and even upon the scalp of this vast upland. The "woodman" had not observed the injunction of the poet, and had not by any means "spared that tree." The work of forest denudation that has been going on in Pennsylvania for 200 years had at length attacked the Chestnut Ridge, and the haunts of Pan and the Satyrs had been laid bare to the light of the sun. I was sorry to see it. The destruction of the forests of our country has been carried on so ruthlessly that not only a scarcity of timber is near at hand, but certain climatic and fluviatile changes have set in that threaten serious consequences in the future. The more intelligent and the more public spirited of our people have taken the alarm, and are making an effort to stay the work of destruction and to repair the damage done as far as possible by systematic tree planting. But, unfortunately, the more intelligent and the more public-spirited part of the community is here, as everywhere else, sadly in the minority; and so long as timber will fetch a price in the market, so long will the work of havoc continue among the trees. A bill, I understand, has recently been introduced into our Legislature to set apart a forest reservation of 120,000 acres—three parks of 40,000 acres each. It is ardently to be hoped that some such bill may become a law before the last forest tree has fallen a victim to the portable sawmill and the rapacious lumberman.

For many of the years immediately following the middle of the last century, the Chestnut Ridge formed a line of demarcation between the savagery of the Western wilds and the civilization of the East. After the fall of Fort Duquesne, in 1758, a few attempts at settlement had been made between Fort Ligonier and Fort Pitt; but the torch and the tomahawk of the savages were ever present to the mind of the pioneer, and only a few brave souls here and there ventured to face the perils of the wilderness.

Not far from the foot of the ridge was fought the fierce battle of Bushy Run, in 1763, the most sanguinary conflict ever waged by the unassisted red man; and not far distant stood Miller's Fort, taken with a large number of pioneers by the Indians in the summer of 1783, and Hounastown, captured and burned by the same band of ruthless marauders, led on by the redoubtable Guyasutha.

The most notable feature of the Chestnut Ridge is the gorge known as the Pack Saddle. This is a notch cut through at a right angle with the Ridge and down to the water level. Through this notch flows the Conemaugh River—a stream which, on May 30, 1889, had scarcely been heard of twenty miles from its banks, but which, two days later, had been named in every civilized country of the globe; through its channel rushed the flood of water that swept Johnstown from the face of the earth as with a besom of destruction.

The earliest mention of the Pack Saddle that I have met with is in the journal of Samuel Maclay, the surveyor, in 1890. Under date of Aug. 25 in that year, he writes: "We proceeded up through the narrows where the river cuts the Chestnut Ridge; these narrows are five miles in length, and the hills come down close to the water's edge, so that we were obliged often to wade the river, and had exceedingly bad waiking, as there was scarcely any beach, and the rocks and laurel come close to high-water mark. We had likewise several heavy showers, so that between the wading the river and the rain we were wet indeed." The history of Maclay's survey of the streams in western Pennsylvania a little over 100 years ago, as recorded in his journal, reads like an exploration of the heart of Africa. His expedition required guides through the wilderness, and the victualling department seem to have taxed their energies to the utmost. On one occasion they were reduced almost to a state of famishment.

The main line of public improvements of Pennsylvania begun about the year 1830, passed through the Pack Saddle, and for many years the wooded heights and sequestered glens echoed to the mellow notes of the boatman's horn. Later, the tracks of the great Pennsylvania Railroad were laid through this gorge, and the boatman's horn gave way to the shrill whistle of the locomotive, as the gaily-painted but slowly-moving canal boat itself had to yield to the noisy, rushing railroad train. Almost the last vestige of the great line of public works has disappeared, and those who can recall the palmy days of the old canal belong to a generation that is fast passing away.

In the early period of the settlement of western Pennsylvania the larger game, such as bears, deer, wolves, foxes and wild turkeys, were common upon the Ridge; in my youth only the smaller game, squirrels, rabbits, raccoons, opossums, quail, and pheasants were to be found. The Conemaugh and its tributaries, the Stony Creek, the Blacklick and the Loyalhanna, abounded in fish of the common varieties, "suckers," catfish, salmon, perch, snowfish, etc. Pike were reported to have been caught of fabulous proportions, 4 or 5ft. in length and weighing 50 or 60lbs. I never heard of a pike that grew any smaller in the hands of its captor. But the game and fish of this region have nearly disappeared before the march of civilization; scarcely more than specimens of the various species remain.

There were shady nooks and sandy beaches all along these streams, where the fisherman could dream his peaceful day dreams while waiting for the expected nibble below. One of the gentle anglers of the olden time comes before me as I write—a thoughtful, pious man, an artist, a musician, almost a poet; a man who could find "books in the running brooks"; who could trace bright pictures in the clouds; who could hear music in the low harmonies of nature by the river side and beneath the shadows of the greenwood trees. Tenderly I write his name here, Alva Riley Chapman, my father, sleeping these forty years and more in his humble grave beside the river he loved. "Sweets to the sweet—farewell!"

A peculiar feature of this part of the Chestnut Ridge, as I remember, was a low, weird, roaring noise heard in our village when the wind was in a certain quarter. We regarded it as a "sign of rain," and supposed it to be caused by the wind blowing among the trees. A later theory is that it was caused by the wind sweeping through the Pack Saddle. The peculiar conformation of this great notch in the mountain range, furnishing as it did a draft for the wind from the west, brought about this effect. The sound I refer to is still sometimes heard, but not so markedly as formerly. The partial clearing away of the forests has greatly modified the effect.

Times change, and we change with them. "The romance of youth is past," says Irving, "that once spread illusions over every scene. I can no longer picture an Arcadia in every green valley, nor a fairy land among the distant mountains, nor a peerless beauty in every villa gleaming among the trees; but though the illusions of youth have faded from the landscape, the recollections of departed years and departed pleasures shed over it the mellow charm of evening sunshine."

T. J. Chapman.

Pittsburg, Pa.

PODGERS'S COMMENTARIES.

California's Bad Legislation.

SAN FRANCISCO, April 5.—Some one has wisely remarked that it was unwise as well as unreliable to indulge in statistics of the chicken business before the chickens have left their shells. I am a victim to misplaced confidence. In some former remarks a few weeks ago I indulged in complimentary reference to the body legislative with which we are inflicted every two years, and the encouragement that body gave of refraining from tinkering with our game laws. Alas! I might have known better than to imagine any Legislature could ever pass through one session without passing some mischievous act in relation to game, and ours has not been an exception. As a concession to the pot hunters and market-shooters it has added three months to the open season, which means annihilation to every feather within two years, and the Governor, who professes to be a sportsman, has signed the bill; in keeping with his present playing to the galleries, with a view to a renomination for a second term. Never was a greater mistake made in political tactics, for there is not a true sportsman in the State who will not turn down the man that signed such a pernicious bill. Our motto will be, "Vote early and often." We had some confidence in the man because he aspired to be a sportsman. His gunning is for votes, and I prophecy that the bag at the next election will be small, very small.

Those Dogs for Alaska.

I see you copy from a Portland (Ore.) paper a paragraph stating that a man was buying up all the big dogs in the city to take to Alaska for packing and sledge purposes. He betrays his ignorance of the uselessness of the big, long-haired animal for such use; for their weight is against them and they soon tire out, and as sledge dogs more particularly they are useless, for no dog has ever been found except the Esquimo that has the endurance. There is one use, however, that these big dogs will probably be put to, and that is of food. I prophecy that that will be their destiny, and instead of their being used to pack provisions the party will pack the dogs—inside. I wish that the dog market of Portland may be exhausted, and that buyers may extend the demand in this direction and contract for four or five big dogs in our neighborhood, which make night hideous with their barking from sunset till daylight, banishing all sleep, with prayers that the pound man or sausage maker may come to our relief. I would not kill a dog myself. I did so once under great provocation, and that dog's ghost haunted me for five years. He was revenged.

Some Dog Stories.

Speaking of dogs, I see there is a discussion in FOREST AND STREAM on the subject of intercommunication of animals I believe in the theory as regards dogs, which "reminds me" of an instance within my own experience. I have always been partial to Gordon setters, and accord to them the most intelligent and gentlemanly characteristics of all the dogs I have ever owned. Most of the old readers of FOREST AND STREAM must remember that old-time sportsman Horace Smith, who carried a gun up to his ninetieth year, and laid it down only a few years ago. Horace imported for me several brace of Gordons direct from the Duke of Gordon's kennels, and of course they were good ones, and I distributed their progeny far and wide among my army friends on the coast. From the last litter I reserved three. Gen. Crook begged one, which died a year after; and Mrs. Crook declared that the General put on mourning for the regulation thirty days. The two I saved, Sport and Juno, were dogs whose acquaintance any man would have been proud to make. On one occasion when going East, as Sport was getting on in years, I concluded to take him along and give him a home for the remainder of his days on the old homestead. It was against the rules of the steamship company to take dogs as passengers, but I smuggled Sport on board, and having a stateroom on the main deck, stowed him under the berth, and only brought him out for exercise on the upper deck after all the passengers were below asleep. One night Sport and I were having a run, when, as luck would have it, just as we were passing Com. Watkins's stateroom on the upper deck, the old man stepped out to take a look at the weather, and Sport ran between his legs, upsetting him. The Commodore was stout and heavy, and came down hard. Getting on his feet, he ripped out some nautical oaths, exclaiming: "Whose dog is that? Who has dared to bring a dog aboard my ship?" Fortunately I was on excellent terms with the Commodore, and confessed that I was the culprit, and explained my desire to get a favorite old dog home. He was very good about it, saying: "Well, keep him out of sight." Thereupon Sport had made a bee line for the stateroom and hid himself in the fartherest corner under the berth, and when I went down he poked his head out and said as plainly as any dog could: "What did the old man say?" I said: "It was a pretty close shave, Sport, and you must keep very shady hereafter." He understood me perfectly, but there was a twinkle in his eye which plainly indicated that he enjoyed the joke

When after crossing the Isthmus and drawing on the northern coast it was bitter cold, and all the bedding we had was half a blanket; and as my room was on deck I verily believe I should have frozen except for the old dog. He lay at my back in the berth with me, with his head on the pillow, and stretched out at full length. The only objection was that he would snore sometimes. Once at home the coming summer we essayed some hunting, but birds were scarce, and one day after a fruitless search I sat down at the foot of a tree with my gun between my knees, when Sport came and sat down before me, and said, "This is not California, is it?" "No, Sport, it is not." But I am indulging in a long prelude to my story.

Our house was some distance from the post office, and Sport was our carrier. He took the letters down, and when he heard the whistle of the train would start off for the mail. On the way down to the post office he had to pass a house where a big dog would rush out and roll him in the dirt. Sport would not let go the mail to fight, and of course got the worst of it. One day, as we sat on the steps, he suddenly rushed off to a farmhouse just up the road, and soon came back with a big bull dog belonging to the farmer, and instead of stopping continued down the road until coming to a stone wall parallel with the street. Here the two stopped and held a consultation, resulting in the big dog jumping over the wall, while Sport continued on down. The dog that had always fought him rushed out as usual, whereat the bull, who had been concealed by the wall, jumped over and joined the scrimmage. It is unnecessary to say that such a drubbing as that other dog got he probably never forgot. At any rate, he never ventured outside the yard whenever Sport passed by; from that day he contented himself with poking his nose through the pickets of the fence and growling. The whole scheme was evidently planned: firstly, Sport's going after the bull dog, then the plan of having him get over the stone wall and following down out of sight until opposite the belligerent dog, and jumping over at the right time and taking part.

I call it a case of intercommunication if there ever was one.

One more dog story and I am done, only I am not as ready to swear to this one. I quote from the Woodland *Democrat*, a neighboring county paper. It says:

"There is a young man in this city who boasts the possession of a wonderful dog. Last week he killed a quail, which the dog retrieved. In returning with the bird he tripped over a log, fell and rolled over on his back. While in that position he pointed another quail, and remained with all four feet pointing in the air until his master flushed the bird and killed the second quail."

This story admits of criticism. Firstly, because dogs don't trip and fall over logs like men. Secondly, the difficulty with which the dog was able to "point" calls for explanation. Thirdly, what business had that young man to be shooting quail in April, a month after the game law forbids it?

Cocus Island Treasure.

I see that the periodical expedition in search of Cocus Island buried treasure is again fitting out, and sails in a few days. This time a woman is at the head of the expedition, the widow of an old ship captain, who on his deathbed confided to his wife the secret of the location of the treasure, with maps and charts which had come into his possession, and he claimed to have visited the spot and obtained a portion of the treasure, all of which he lost by the wrecking of his schooner.

The subject of this buried treasure seems to be a prolific one for deathbed confessions. There is hardly a sailors' hospital in any part of the world that has not supplied its dying sailor with this same dying confession, and always the last man of the piratical crew. It must have been a numerous crew to furnish so many "last men."

The woman in this case is in command of the expedition, and now we will see what luck she may have; but I expect to announce in about three months the return of the vessel without that famous chest of diamonds, pearls and doubloons left by the gentlemen pirates for credulous people to seek. It would be no more than decent for some one of their ghosts to hover around and point out the exact location of the treasure, as a salve to his conscience and a possible relief from purgatory or a warmer place. Cocus Island bids fair to rival Robinson Crusoe Island in reputation, as in case of this expedition some other of the piratical crew will conveniently die and leave a confession to start another expedition, about the sixth that I can remember. PODGERS.

TALES TOLD BY THE CAMP-FIRE.—V.

BY AMATEUR.

(Continued from page 304.)

THE next evening another of our number spoke and said: I have listened with interest to the early history related by those who have spoken, and much of it was new to me. I can't tell you much about those early gunsmiths, but can tell you something about the early powder makers in the region that has been spoken of already.

Isaiah Jones I. came into what is now Greene county, Pa., a few years after Elias Blank. He was a powder maker, and after "prospecting for awhile," as we would say now, set up a manufactory and made powder which went all over the region, and some of it even down into "Kentucky's dark and bloody ground." This powder, "Jones powder," was well known, and had a great reputation; was said to be the "quickest burning powder" that could be got, and was supposed to be less susceptible to dampness than others. He made his own charcoal, and was very careful not to let any of his methods pass out of his possession. Nobody knew where he procured his saltpeter, and many persons believed and still believe that he knew of natural deposits of that material somewhere in the neighborhood of his factory. Old people still say that the Joneses were never known to buy saltpeter, though they did buy large quantities of brimstone and sulphur.

Some time after the Revolutionary War Isaiah Jones I. died, and his son, Isaiah Jones II., continued the business, and was said to make even better powder than his father. Most of their powder was called "rag powder," and was unglazed, but very clean and hard, and of quick ignition. They did make, however, a glazed powder of very fine grain. The test of the rag powder was to pour some of it on a sheet of white paper, and if no black stain was left it was considered good. Another test was to ignite the little heap on the paper, and the smallness of the amount of stain left was thought to indicate the goodness of the powder. I may mention that a favorite test for whisky was to pour about a rifle load of rag powder into a saucer or other convenient vessel, then pour a spoonful, more or less, of the liquor into the saucer, and set the whisky on fire. If the liquor burned without setting off the powder, it was deemed far below proof—too far to drink—and the quickness with which the powder flashed was also deemed an indication of the strength of the liquor.

Isaiah Jones married Bathsheba, the daughter of Elias Blank, sister of Aaron or "Een" Blank, of whom we have heard. He thus became the son-in-law of a very rich man in that day and connected with influential people, and a brother-in-law of Ezra Engle IV. Isaiah Jones II. was a very tall man, at least 6ft. 6in. high. He was a Baptist and a very religious man, though he would drink whisky and occasionally become intoxicated, though the habit did not seem to grow on him with his increasing years.

During the war of 1812 he made and furnished to the United States Government large quantities of powder of different kinds. Much of his powder was used in the navy during that war and vast amounts of it by the army, and for many, many tons of it he was never paid by the Government. He and his wife had one son and only child born to them late in life, at least long after their marriage and long after the death of old Elias Blank. This son was named Isaiah also and went to the Mexican War, and was either killed or died in Mexico.

Isaiah Jones II. died between the years 1850 and 1860, probably in 1854, and was buried at his own request on top of a high, barren hill, on a farm belonging to his brother James, near the mountains in Fayette county, Pa. A plain marble slab marks his grave. His wife survived him a few years only, but at her request she was not buried by the side of her husband, but was interred in the family burial ground of old Elias Blank, by the side of her parents, her brothers and her sisters.

The Joneses were of Welsh parentage, and were very important men to their community in their day. There is no record that Isaiah Jones I. ever had an explosion in his powder factory, but Isaiah II. was not so fortunate, though I am unable to give either the time or the cause of the accident, but it must have been after his marriage a considerable length of time. He never would discuss the subject at all, always saying when approached on the matter: "I have only this to say, that I am a monument of Divine mercy, though I am sure that the time set for me to die had not arrived, else I should have been dead." He was really and at heart as true a fatalist as any follower of Mohammed, and he lived according to his belief.

As to the explosion, all that is known about the matter is that one day a dull, rumbling sound was heard from Isaiah's factory, and a heavy cloud of smoke was seen arising therefrom. People hurried to the spot, and found Jones sitting on the bank of the river, dripping wet, and very much "dazed"—no stick of the factory remained. They took him to his home and sent for his relatives. All the explanation he ever gave was to his wife Bathsheba and to her brother Een Blank; it was, "The mill bu'sted up in fire and smoke, and blowed me into the river; I was at least 50ft. up in the air, don't think I was more, for I thought of all the mean things I ever did in my life before I struck the river, an' there wasn't many of them. When I hit the water I felt as if I was smashed as flat as a pancake, but after I'd floated round a bit I found that I was swimmin' toward the other shore of the river, an' I turned an' swam back, an' came out and sat down under the tree, and pulled off my shoes and socks and wrung the water out of 'em; and then my head and face and eyes began to smart like Beelzebub, and I'd just got my shoes and socks on again when the people came up and took me home"

All the hair was burned off his head and face; his eyebrows and eyelashes were completely destroyed, and his head was left as smooth as a billiard ball. Strange to say, there wasn't a single powder mark on his head, face or hands, though his body was full of powder. The physicians of the country told him his hair would never grow again, but old Nosey, the Indian, told him that if he would wear a cap made of the bladder of an ox on his head all the time, and grease his head, his eyes and his face with an ointment made from the juice or sap of a blue grapevine which had never borne fruit, a quart, and bear's oil a pint, each heated as hot as possible, poured together into a closed vessel made of fresh peeled birch bark and shaken until cold, and then used at night, his hair would grow again. Jones tried it and he had a remarkably heavy head of hair; his beard and eyebrows also were very heavy, and his eyelashes were long and silky.

Jones was not a hunter, and did not shoot; he made his living by trading his powder to hunters.

All these men of the days that were, who made it possible for us to own this country, have passed away, and their very names are forgotten except when recalled on occasions like the present.

[TO BE CONCLUDED NEXT WEEK.]

INCIDENTS OF ADIRONDACK HISTORY.

Editor Forest and Stream:

One of your correspondents in an article relating to the old Adirondack guide, Alvah Dunning, appears to be slightly in error in a few matters of Adirondack history.

We are told that Alvah's father was a noted Indian fighter under Sir William Johnson before and during the Revolutionary War.

Sir William didn't fight Indians before, neither did he fight them during that war, in fact didn't take a hand in the Revolutionary War. Prior to the war he lived on most amicable terms with his red brothers, and at the beginning of the war he died very suddenly by his own hand, as many believe, as he could not determine exactly where he was at. In fact he could not make up his mind to wage war against his old friends and neighbors, neither would he take up arms against his king, from whom he had received so many of the good things of this world, and so he died to get out of the difficulty.

The story of the elder Dunning having killed an Indian with a bundle of traps, and being tried for his life and acquitted, would seem to have been the outcome of these several episodes in Adirondack history. Simms, in his "Trappers of New York," relates that a trapper—Dunning, if I remember right—having killed a moose, sunk the hide in a stream to remove the hair, and near that place set a trap for beaver.

Both the trap and a portion of the moose hide were stolen. Shortly afterward Dunning—I guess it was he—found his trap with several others, tied together with strips of moose hide, in the possession of an Indian. Dunning was taking his trap from the bundle when the Indian objected, whereupon he knocked the redskin down with the bundle of traps, but did not damage him to any great extent. We are told that the trapper brought off his trap triumphantly, but the historian does not say a thing about any murder trial.

So much for story number one, now for number two. Several years after the Revolutionary War, Nick Stoner, a soldier of that war and a noted hunter and trapper, was with a party of friends at a tavern in the village of Johnstown, N. Y., then on the outskirts of the Adirondack woods. Several Indians were present imbibing fire-water, when one of the Indians exhibited a knife with several notches in the handle and boasted that each notch indicated a scalp taken, "and there," said the genial cutthroat, pointing to a notch deeper than the rest, "is the scalp of old Stoner," Nick's father.

Stung to the quick by this cruel boast, Stoner seized an andiron from the blazing hearth and struck the Indian a fearful blow on the back of his neck, knocking him senseless and at the same time burning his own hand severely. A general melee followed between the other Indians and Stoner and his friends, in which the Indians got the worst of it and soon took to the woods, carrying their wounded comrade with them.

Stoner was arrested and lodged in the old jail at Johnstown, but was released a few hours after under the threats of a mob of his friends to tear down the jail if he was not released. Whether or not the Indian died from the effects of Stoner's blow history does not record, but in any event Stoner was not tried for murder.

Story No. 3.—Early in the present century Nat Foster, a

noted hunter and trapper, killed an Indian named Drid on one of the lakes of the Fulton Chain.

The Indian had frequently threatened to kill Nat—in fact, did try to kill him, and once wounded him with a knife. Nat, fearing for his life, waylaid the Indian at a narrow place in one of the Chain lakes and shot him dead, was tried for murder in the village of Herkimer and acquitted, with the usual applause, etc.

Now then, has our friend Mather gotten these three stories mixed, or am I mixed?

By the way, if our friend won't throw bricks and things, I will tell him that his creek below Greenbush, sacred to the memory of Port Tyler, isn't spelled Popskinny; neither is it what the other fellow called it, but it's Papscannee; at least a very old map in my possession says so. S.

TROY, N. Y., April 10.

AFTER DINNER TALK.

FROM the after dinner talk at the Hillsborough County Association, of New Hampshire, the other day, as reported in the Manchester *Mirror*, we take some paragraphs, all suggestive, and which will have an interest outside of New Hampshire.

Law Observance Better than Law Tinkering.

Mayor Wm. C. Clarke.

The present laws are strong and competent, and they ought not to be changed nor interfered with for a number of years. It would be better for the interests of sportsmen to educate our people to a proper understanding of the present laws, and thereby secure a fuller observance of them than to keep making changes from time to time. The laws as they now stand are good enough. They should be let alone.

Trap-Shooting and Field Shooting.

C. M. Starke.

To the beginner, or to the man who is not even a fair wing shot, trap-shooting will be of some assistance. A beginner usually handles a gun rather awkwardly. Practice at the traps will overcome it. He will learn how to handle a gun quickly and also where to hold. To become a fair wing shot on game he must learn where to hold on birds flying in various directions. A partridge on the wing is a good-sized mark to shoot at, but as compared to the space around it, it is very small. Watching an expert trap shot will give some good points, seeing how quickly and apparently without effort he handles his gun, how nearly every target seems to land in the center of the charge of shot.

To make good scores at the trap when standing at the regular distance a close-shooting gun is required. Such a gun is not suitable for our cover shooting unless very late in the season. Therefore, when trap-shooting for the purpose of getting accustomed to handling and using an open shooting gun, it is well to stand quite close to the trap.

Twenty-five or thirty years ago there was not more than one good wing shot where to-day there are fifty. Years ago trap-shooting was confined to live pigeons and gun clubs were not very numerous Pigeons were expensive and often hard to get. With the advent of the cheap artificial targets, gun clubs have sprung up all over the country, and I think they have had a great deal to do with developing the large number of good wing shots of to-day. A good wing shot on game will, as a rule, learn quickly to shoot well at the traps, and so I think will the good trap-shot take to game shooting.

Our principal game bird in New Hampshire is the partridge. In this part of the State it is hard for the best of us to shoot, and it is well that it is so, or there would be very few left. Where they are not hunted they are very tame. I have shot a good many when hunting large game, that were so tame that I could easily shoot their heads off with a .45 rifle bullet. One day while in Nova Scotia moose hunting I heard a partridge drum quite close to our camp. Taking a shotgun and five cartridges I went after him and in less than ten minutes I shot him, and, without moving from my tracks, four more which I saw standing around. If our partridges were as tame as those they would be almost as scarce as black foxes by the end of next season.

As I have said, the expert wing shot knows enough already, but the man who seldom can kill a woodcock or partridge on the wing had better try practicing at the traps. It may be of great benefit to him; it is not likely to do him any harm.

Fishing at Newfound Lake.

Col. F. G. Noyes..

For many years I have made, in April and May, an annual pilgrimage to Newfound Lake. The waters of the lake teem with that king of inland-water fish, the land-locked salmon, and in my judgment they are increasing. The lake trout are also taken in goodly numbers as yet, but our accomplished Fish and Game Commissioners, as well as broad and fair-minded men who live near the lake and who take great interest in and give much time to the subject, and who have watched this matter closely fer several years, are by no means sure that these fine fish are not decreasing in these waters.

It seems to me also proper to say that to the angler of moderate skill and good stock of patience and persistence, the reward of land-locked salmon and lake trout from these waters awaits him. When an 8 or 10lb. land-locked salmon strikes one's lure at the end of a 7oz. rod and 50yds. of small silk line, one thinks that a cyclone has broke loose and has somehow got tangled up with his tackle. When I say there is nothing like it, I am not talking "thro' my hat."

I know of no waters within 100 miles of here that promise so good sport to the average angler for land-locked salmon as the waters of Newfound Lake. Lake trout are taken more numerously in some other lakes, but in none of them are the fish so well fed and delicious. The "lunge" of Lake Memphemagog and Willoughby Lake, the trout of Winnipesaukee are caught more freely, but for game qualities and delicious flavor they are, in my judgment, inferior to the "lakers" that the angler kills with rod and reel in the cold waters of Newfound Lake. And when he takes one, compensation comes.

Nitro Powder.

Hon. W. H. Beasom.

My gun, being made by the oldest manufacturers of breech-loading shotguns in America, I considered it perfectly safe with either load, and my mind was at ease. In an evil moment I wrote the manufacturers of the gun about some method of lessening the recoil when using 3dr. As an afterthought I also asked them if they considered these loads excessive for the gun. They replied that they not only thought these loads excessive for this gun, but they did not guarantee any of their guns to withstand nitro powder, saying that all who use nitro do it at their own risk, so far as their guns are concerned.

The worst part of it is that these barrels do not burst at any particular time, but often occur after years of use, and with a charge that has always been used successfully. When an accident happens we wag our heads and say, "Some obstruction in the barrel." Don't you think this obstruction theory is getting overworked—something akin to "heart failure" diagnoses among physicians? Isn't it rather, in many cases, at least, that the powder is either variable in bursting pressure or else the barrels of the gun are too weak, as scientists tell us the variation in gas pressure observed in standard nitres is not sufficient to cause the bursting of a sound, well made barrel with a proper load? Isn't the fault, therefore, fully as apt to lie in the gun as in the powder?

We, most of us, remember that day when we were hesitating about trying new fangled stuff. When, late in November, after a hard freeze, there came a day of Indian summer, we took the old dog to try and find a belated woodcock. Our chance now is beside the spring in the hillside, that trickles down between the roots of leafless birch and alders, to join the brook at the bottom of the run. An hour passes without sign of scent; we cross the run and start to work back on the upper edge. Suddenly the pointer lifts his head and draws slowly on—one rod, two rods, then firmly points. We step in ahead, when from under a low clump of hazel bushes the strong, full-fledged bird whirls up; a hurried snap shot with the right barrel turns sunshine into shade, and somewhere beyond the murky cloud that settles upon us, shutting out a second shot, we hear the defiant twitter of the escaping bird. The last shot of the season is missed by devotion to "soft coal," and we resolve then and there, no matter what the risk, to quit its use forever.

Fishing in the North Country.

R. H. Cheney.

Fishing in any country and under almost any circumstances is simply heavenly pastime indulged in upon earth. The barefooted, light-hearted, though possibly sinful, boy, who gets out of school at intermission on an excuse forged by the kind-hearted hired man, and scuds away across the daisy-covered fields with mud worms in his pocket and a big string of fish in his head; the older boy who writes his own excuses and can work an oar and get his fly out of the boat without snapping out an eye; and we old fellows who have come to look on our June fishing as one of the steady lamps hung out by heaven to guide us across the Saharas and through the pestilential vapors hovering over the mires and marshes of the year, all find it so. Surely I need not tell any one present how to bend or bait a hook—how to tie or cast a fly—for that is the particular inspirational wisdom of which you boast. It takes intuitive ideas, art and good tackle to make a fisherman who can fill a basket with square-tailed trout. Fishing is like milking. Go up on the wrong side of a cow, thump her in the ribs with the milking stool and command her to stand over and hoist, she won't give down her milk; but let the maid who has done the milking before come along on the milking side with soft words and gentle pats, and there is no trouble in filling the pail. Thus does nature yield to all who know and treat her kindly.

The North Country—and I draw the line wherever the waves of thoughtless and fashion-serving humanity register their high water mark—the North Country of New England and Canada is a land toward which the man of clean heart and liquidated obligations may set his face and feel that he is climbing toward heaven. In it there yet remain some of God Almighty's soul-lifting hills whose virgin robes have not been torn or soiled by lustful lumber kings; some of His streams that in their seaward tumblings, unchoked by sawdust or the wash of towns, utter divine truths in liquid notes. There every hillside is an ever-shifting canvas of delight, and every vale and virgin wood a matchless and incomparable temple. I cannot paint it, gentlemen. Before the eye its landscapes blossom forth in all their wild, unsullied beauty, jeweled at morning's dawn and evening's glow by lake and stream; the ear is ravished by the blended harmonies of tuneful winds and white-capped waves; the intellect, awed and subdued, re asks its never-answered questions, but the tongue is dumb. It matters little if the knee bend not in gilded temple with the throng, if here the soul can feel and own the overshadowing law, and the heart in simple worship, washed of all bitterness and evil, learns the true thou shalt and thou shalt not. And, gentlemen, of such are they, mainly, who do the fishing in the North Country. They are men of character, men of force, men of humane impulses and all sweet charities; right-minded, tender, loving and approachable; and yet, rugged as the unchiseled granite that forms the understructure of New Hampshire.

Always and everywhere I have found the men who love the forests and the streams, the mountains and the lakes, among the wisest and the best; doubting neither God nor his purposes, seeking no angels in the mud and strewing no dust and ashes in the highway which connects the two eternities. God bless them! They are saved already, and their sunny lives tinge with brighter colors the web at which all humanity weaves. However little their souls may be weighted with dollars, they are making this world pay fair dividends, and in the next they will be millionaires. And if you are putting these things down, put it down also that the man who does not love the glorious North Country in all its purity and freshness, has ice around his heart and murder in it.

Osprey, Fishhook and Sinker.

ASBURY PARK, N. J., April 13.—While perch fishing on Deal Lake one day recently my attention was attracted to an osprey circling high in air and emitting cries plainly indicative of something out of the ordinary.

Soon after it lowered its flight and passed near to the point where I was standing. In its talons was a fish of good size—evidently a pickerel—and swinging from which was a section of line with sinker attached. This was plainly the cause of worry, and the worry was soon shared by the bird's mate. After making several circuits of the lake, they alighted upon a dead tree and held what seemed a consultation over the case. After the lapse of perhaps an hour, judge of my surprise to see the line of flight again taken up. The fish had disappered, but the line and sinker were hanging from the mouth of one of the birds, which in partaking of its repast had evidently gorged the hook and committed unintentional suicide. LEONARD HULIT.

Natural History.

A YEAR WITH THE BIRDS.

I.—"In Lenten Time, when Leaves wax Green."

"In the budding hedge the robin cock sings,
For the sun is merry and bright,
And he joyfully hops and flutters his wings,
For his heart is all full of delight."

TO THE student of birds spring is the hopeful season of the year, for with it come the absent and loved "guests of summer." After the long, dreary interval of frost, cold and storm, how one's heart thrills when he hears for the first time the sweet, plaintive song of that little harbinger of spring, not the festive cuckoo of England, but our own little, plain dressed song sparrow; or when near the top of some high tree the ruddy breast of an early robin appears, seemingly bright now, not only because it has been "lost awhile," but also from the fact that the redbreast of March turns to a dingy orange by August.

"In the spring a fuller crimson comes upon the robin's breast,
In the spring the wanton lapwing gets himself another crest,
In the spring a livelier iris changes on the burnished dove,
In the spring a young man's fancy lightly turns to thoughts of love."

These oft quoted lines, written by Tennyson when he was a young man, show that he knew the ways of birds, or he never could so poetically have expressed their change of attire. He was a naturalist. What a difference there is between the robin of March and the robin of August, reminding one of the fabulous Gulliver; at first in Lilliputia he is a giant among pigmies; everybody admires and looks up to him only, because he is the first typical summer bird that comes back to us (the song sparrow is often here in winter), and for that reason is warmly welcomed, and much is made of him too. The first robin this year (Feb. 23) as he strutted about the lawn seemed to say, "Behold! I am here, a newcomer from the balmy breezes and sunny climes of the South; scorn me if you dare." But by August it is quite the reverse. Little attention is paid to him then; like Gulliver, he too is in Brobdignag

The song sparrow, with his plain, somber coat, becomes noticable about the last of February. It is then that his song is first heard and he is bodily visible. Though with the robin he is termed a "permanent resident" by naturalists, they are both really only summer birds, for there is never a robin seen here in winter, and only a few song sparrows; the latter being very reticent, keeping concealed. About the middle of February or later, as the case may be, the song sparrows appear, hopping about on bushes or small trees near fences, trying to sing. The song is then very feeble or weak, as if the bird's vocal organs had not been thawed out yet, or as if after the long season of silence he was out of practice. All over North America this sparrow is the most abundant, locally distributed, and best known of the sparrow family. Like many other birds, there are "variations." Our own song sparrow (*Melospiza fasciata*) is found all along the eastern seaboard from Florida to Maine. In other parts we have different varieties. In the Western States we have the mountain song sparrow; in Mexico, New Mexico, Arizona and other arid spots the desert song sparrow, and many others; but there is very little difference between them; the song sparrow we know so well is the same as that litte chap that lives on the faraway Aleutian Islands. A noticeable fact about birds is that they never sing when on the ground; they have to be elevated, no matter if it is only a grass stem a few inches high; the higher they fly the better they seem to sing; a strange custom perhaps, but it seems as if they must first enter into what may be called their "realm of song."

On examining my note book for the present and previous records I find this is the earliest spring I have ever known; the grass is green, leaves budding, along the water courses violet plants and others are in flourishing stages of growth; snakes are often seen, while from the neighboring ponds comes the shrill piping of the frogs; all signs of an early spring, not to mention the birds. On Feb. 23 I noted my first robin, on March 1 my second, by March 15 they became common and in song, while at present (March 24) they are as abundant as ever in summer. Feb. 25 three red-winged blackbirds were seen high in air; March 2 a large flock noted, becoming abundant March 21, and in song also. Feb. 25 four fox sparrows were seen, but none since then.

These birds are the largest and finest of the sparrow family, about a size smaller than the thrush, having a beautiful russet-brown plumage, and a white breast spotted with the same. Our weather does not suit them, so they are with us only a little while, and by the end of March they have passed northward to their Arctic homes. A peculiar habit this sparrow has is of scratching for food. It does not scratch like a hen with one foot first, then with the other, but with both feet at once, which it does with funny little spasmodic jerks. I once heard its song, which was clear and pleasing, and thought what a singer he must be in his native home. This occurrence was rather unusual, for it is not often that these migratory birds give us "a song in passing."

On March 4 my old friends, the purple grackles, returned a few at a time, but by yesterday they were very abundant and made themselves known, as noisy as ever. They breed numerously in the hemlocks of the town and have done so for years, always coming back at the same time each spring. They are handsome birds, having a coat of glossy iridescent black, with large yellow eyes. Later on another grackle (here a migrant) appears, so much like the purple one as to be indistinguishable, but it is called the bronzed grackle. Recently there was a debate among the members of the Linnæan Society as to the difference between these two birds; one member stating that the bronzed grackles have white eyes, the purple grackles having yellow ones; but it was shown that the white-eyed grackles were only young male purple grackles, there being really no distinguishable difference between the two species.

On March 8 I observed a chipping sparrow, an unusually early date for this bird, for he is never supposed to get here before the middle of April. And the bluebirds, they are common once more, and I am glad to hear their sweet notes again. The cowbirds, meadow larks, flickers, phœbes, chipping, swamp and field sparrows have been arriving in large numbers for the last three days, and without a doubt,

"Sweet daughter of a rough and stormy sire,
Hoar winter's blooming child, delightful spring,"

is come at last, and indeed, if thoughts are not enough, this

STONE'S MOUNTAIN SHEEP.

STONE'S SHEEP

MOUNTAIN SHEEP.

ast record will prove it true, for on the morning of March 23 I observed in the orchard a small and active bird which looked like an infant phœbe, but as I watched him a moment catching flies I knew he was the least of all the great fly-catcher family, and even as I watched him his characteristic and merry call *che*-bec, *che*-bec, fell upon my ear, filling my heart with gladness, for I knew that spring was truly here.

EDWIN IRVINE HAINES.

A NEW SPECIES OF MOUNTAIN SHEEP.

(*Ovis stonei*, ALLEN.)

AT the Sportsmen's Exposition, held last month, there was shown a group of three mounted bighorn or mountain sheep, which attracted much attention from persons familiar with this animal. The specimens in this group were of different ages, one being apparently a yearling, one three or four years old and one perhaps six. They were remarkable to the eye for their small size, for the slenderness of their horns and for their color, which was very dark, the hairs, which in the summer coat of the ordinary mountain sheep are wood brown, being black. As a label stated that these specimens came from Alaska, a number of individuals, recognizing that these were not the common mountain sheep, jumped to the conclusion that they were Dall's mountain sheep—an Alaska form—in its summer coat. The original description of Dall's mountain sheep speaks of it as being of a "nearly uniform dirty white color," but, if the type specimens were winter skins, this might not give any clue to the summer pelage, as it is well known that in the late winter all mountain sheep become extremely pale in color.

In an article of Volume IX., of the Bulletin of the American Museum of Natural History, Dr. J. A. Allen describes these three specimens as representatives of a new species of mountain sheep which he called *Ovis stonei*, after Mr. A. J. Stone, of Montana, the collector of these specimens and the one who brought them to public notice. Dr. Allen's description of the oldest of these sheep is given below, and a comparison of this description with that of an adult mountain sheep (*Ovis cervina*) taken in summer will clearly show the points of difference. The description is as follows:

Ovis stonei—Allen.

Male Adult.—Above gray, formed by an intimate mixture of whitish and blackish brown; face, ears and sides of neck lighter and more whitish, being much less varied with blackish brown; whole posterior area and lower parts from hinder part of back downward and forward, covering the posterior aspect of thighs, and the abdomen, white, the white area narrowing anteriorly and terminating in a V-shaped point on the middle of the chest; also a broad, sharply-defined band of white on the posterior surface of both fore and hind limbs, extending from the body to the hoofs, and proximally including also the inner surface; front of neck, from base of lower jaw posteriorly to the white of the ventral surface, including the breast and greater part of the chest, and thence along the sides to the thighs, nearly black; the lateral extension along the flanks becomes narrower posteriorly, and the neck is somewhat grizzled with white; outer surface of both fore and hind limbs blackish brown, either uniform or in some specimens varied with a slight mixture of whitish; back of head with a broad area of black, narrowing posteriorly and continuing to the tail as a well-defined blackish dorsal stripe; tail wholly deep black, except a few white hairs on the middle of its lower surface; a narrow, blackish chin bar, varying in breadth and distinctness in different individuals; hoofs black; horns light brown.

Measurements (of type, ♂ ad.).—(Measurements from mounted specimens, taken with a tapeline and following the curvatures of the parts measured.) Tip of nose to base of tail, 1676mm.; tail vertebræ, 89; tail to end of hairs, 121; tip of nose to eye, 197; tip of nose to base of ear, 305; length of horn (over convexity), 762; distance between points of horns, 552; circumference of horn at base, 324; circumference of horn at middle, 216; circumference of front hoof at base, 190.

As a resident of Montana Mr. Stone is no doubt well acquainted with the ordinary form of mountain sheep found there, and he states to Mr. Allen that he is familiar also with *Ovis dalli*, which he reports as occurring some 250 miles north of the locality where he obtained the specimens here described.

Dr. Allen gives the following observations on the habits of *Ovis stonei*, as observed by the collector:

"The three animals were killed in the Che-on-nee Mountains, British Northwest Territory. These mountains are a part of the interior of the Coast Range, drained by the headwaters of the Stickeen River, and not far from Alaska Territory.

"The timber line in this country extends only to a height of about 2,500ft., giving the mountain ranges the appearance of being quite high, but in reality there are no high mountains in this section of the Coast Range.

"The only specimens of this sheep I had the opportunity of studying were the males, which I found during the months of August and September in the most rugged parts of the mountains, entirely above timber line. I often found them singly, and at no time did I discover more than five in one bunch, though one of my party reported having seen eleven together. I saw perhaps fifty head, and secured twelve specimens. I was very careful in my study of these interesting animals, and I found them to be very uniformly marked, both in color and general characteristics.

"The youngest of the three, now in the Museum, was secured Aug. 8, 1896, in a very deep and rocky cañon just at the base of one of the highest peaks in this part of the mountains. At the time I discovered him he was all alone, carefully making his way down the cañon, and from what I afterward learned I am very much inclined to believe he was then in quest of the ewes, lambs and yearlings in the edge of the timber further down the mountain side, and it is quite likely that he had not yet regularly taken up the company of the older rams.

"The two older specimens were taken Aug. 10, about five miles distant from the first, and were the only ones in the bunch. I watched them an entire afternoon before killing them. They passed the time alternately nibbling at tiny bits of grass occasionally seen peeping from crevices in the rocks, and playing or lying down on patches of snow and ice. They were very fat.

"Specimens taken two months later possessed the same markings, but were somewhat darker."

We are indebted to the American Museum of Natural History for the accompanying cuts, which illustrate Dr. Allen's description of this species. The heads of *O. stonei* and *O. cervina* are photographed to the same scale, so that a direct comparison of the size of parts may be made.

Disappearance Extraordinary.

THE following account, given me by Leroy Newman, a veteran of unimpeachable veracity, with whom I have been acquainted for many years, I send to the FOREST AND STREAM with the assurance that very few occurrences are more phenomenal than that related by my venerable friend. As near as possible I report it in his own words:

"I was living in Wayne county on Beech Fork. One day I was out in the field standing near a tree that had been blown over. Quite close to the branches of the tree was a hole in the ground, apparently having been made by some wild animal. It was nearly perpendicular and of considerable size, say large enough for a woodchuck to enter. I heard a rushing sound, and looking up saw a hawk pursuing a quail with astonishing velocity, the birds making an almost perpendicular descent.

"It seems the hawk was so near his prey and so intense the terror of the quail that the bird sought the first object, however unusual, for refuge from his merciless pursuer. With a sound like that of a stone thrown heavily on the ground, both quail and hawk, like lightning, plunged into the hole I have mentioned. I was wonder-stricken. Fright seemed to have rendered the quail insane, so to speak, and the eagerness of the pursuer, with his eye only upon the prize, precluded a suspicion of danger to himself. I looked into the hole, expecting to find the birds dead or dying, but both had disappeared in its dark depths. I worked for an hour with a forked stick to twist them out, but could neither feel nor see a trace of them."

N. D. ELTING.

WEST VIRGINIA.

Anent the Adirondack Moose, the Panther and the Wolf.

IT is said that Gov. Seymour shot the last moose known to exist in the Adirondacks. In his celebrated address to the Auburn prison, he said that he had made eighteen sad mistakes in his life—the killing of the moose I have ever believed to be included as one of them.

The panther is well-nigh extinct, yet there may be a pair or two in hiding in the Oswegatchie end of the Wilderness.

Brother Higby's statement in your issue of the 17th in relation to wolves, is truthful and to the point. He thinks there may be fifteen yet on the warpath in the grand old Garden of Eden. I think there are more—at least twenty-five or thirty. Two years ago there was surely a band of six to ten in that part of the Wilderness surrounding First Lake, on the north branch of Moose River. The surest and most effectual way to put an end to them is to treat them as often as possible to a dose of strychnine, for they are prolific breeders, bringing forth twice a year sometimes six to ten pups at a litter.

Something like forty years ago, Ed Arnold, one of the best known guides who ever tramped the trails of New York's grand old Highlands, shot the most magnificent panther ever cornered on John Brown's track. When mounted by Mr. Hurst, one of the best taxidermists on earth, I bought the specimen, and for years and years it was the admiration of all who beheld it. I sold it for $25 to a furrier in Utica, always much regretting the sale. This most ferocious beast was driven with Arnold's pack of deer-hounds, into a ledge of rock in that territory known to the woodsmen as "Hell Hollow," the low lands abounding in cliffs and rocks only about two or three miles from Fulton Chain station. When the monster was brought to bay Ed must have been on his best nerve, for he put a rifle ball as near the center of his skull as it could be located with a compass. I now have the remnant of a wolfskin, which one of the Arnold boys gave me, the inner fur from which I use in building up the bodies of salmon flies. JOHN B. MCHARG.

Carnivorous Squirrels and Duck Eggs.

NEW YORK, April 14.—*Editor Forest and Stream:* In your last issue appeared a letter from that prince among sporting writers, Jacobstaff, in which he expresses a doubt about squirrels ever being carnivorous, and points to the teeth as an argument in his favor. Did Jacobstaff ever hear of rats and mice, which have teeth somewhat like the squirrels, eating meat?

In point of fact the common red squirrel is a persistent robber of the nests of small birds, a favorite dainty with him being a young bird before its feathers have sprouted. I have shot squirrels when they were in the act of eating young birds.

The last wounded squirrel I picked up was a black fellow, and if he wasn't carnivorous (with a big K) I'd hate to be bitten by a carnivorous animal!

Concerning the alleged destruction of duck eggs in the North: I have shot over northern Canada as far as the Pacific Coast, and have yet to meet the man who has any personal knowledge of the wholesale destruction of eggs. During my several years' connection with the C. P Ry. I never heard of traffic in duck eggs. EDWIN W. SANDYS.

News of Mr. Ferdinand's Robin.

DR. J. S. NIVEN sends us this from the London, Ont., *Free Press* of April 10: One day lately a student of the Waterford High School caught a robin which had a piece of paper tied on its leg, and on which was written the following query: "Where will this robin build its nest in the coming spring?" The note was signed by N. Jules Ferdinand, Box 415, Tampa, Fla. The student immediately wrote to Florida announcing the capture of the bird.

Game Bag and Gun.

A DAY WITH THE ARIZONA QUAIL.

BY T. S. VAN DYKE.

WHILE attending the Irrigation Congress, at Phœnix, Ariz., in December last, I took a run with some of the local "cracks" after that lively bird the Arizona quail or Gambel's partridge. I had hunted them before in Sonora, and on the Mojave River, in California, on which some are found as far west as Barstow. But those were birds that knew little or nothing about the gun and I was anxious to see some of the educated chaps.

Quail have been so thinned out in the Salt River valley by trapping that it is now necessary to go several miles from Phœnix to find many. Good shooting still remains for those who understand them. For those who love shooting not too easy this bird takes the lead. I like to hunt something that can get away, and this quail can do it. The sportsman raised upon Bob White, or any other bird that lies well to the dog, feels only unbounded disgust when he first tries any of the running quail, as all the blue or plumed quail that I have found in the United States or Mexico are. But with better acquaintance this feeling passes away, giving place in the soul of many to a feeling of unbounded respect. While never willing to admit that the shooting is equal to that upon Bob White, the mere sight of whom is almost reward enough for considerable travel, any one used to the management of the running quail will still say that they are every inch a game bird and worthy of any one's steel. No lazy folks or duffers need apply. Even a good shot wants to be in practice to make a creditable score, and even the best shot in the best practice wants to be careful how he attempts to show off before a friend. For all these birds with persecution have become the smartest of their race. And none of them are so thoroughly up to date on the range of guns and the length of man's legs than this little partridge of the chestnut cap, blue back, cinnamon sides and black shirt front on a vest of mottled white.

The lovely winter climate of Salt River Valley was on parade, as usual. It has little else to do and rarely bothers one by being "exceptional." It is the ideal for fast hunting, being like the loveliest October day imaginable in New York, but with a far clearer air and sky than is ever seen there. My companions had not been out this year in the direction we took, so that we went past birds that we found on our return, and drove some ten miles before attempting to hunt. The valley was broad and flat for miles, with the timber of the river bottom yellowing on the one side and on the other side slopes rough with the huge candelabra cactus, whip cactus, cat-claw mesquite and other delectable features led away up with ever increasing boulders and decreasing vegetation into dry, ragged mountains.

The walking was of the very best, the ground flat and hard, with openings large enough over the greater part to travel in comfort among the green clumps of greasewood, the bright verdure of the palo verde and the screw-pod mesquite, all of which formed the cover for the slippery little sinners we had come to convert. Before I had been on the ground ten minutes I concluded that instead of legs and gun I needed an old-time horse pistol loaded with shot and my bicycle. The average number of ounces of bird per man-mile might be about as great as on foot, with the fun considerably more. The only doubt is about even the wheel being fast enough to hold the birds down.

As on most of the quail grounds in California, the trouble of finding a flock is not great. The trouble is in keeping them in sight when once found. We had not far to go before through the low green brush, shaped much like tumble-weeds in the East, a dark line sped into sight just long enough to identify, and then whipped around a little dark green ironwood. There were four of us in the party, but none shot at it, not because we were ashamed to, for he who thinks it pot shooting to fire at this lively little scrap of blue when running had better try a few shots some day when he is sure no one is looking. There is nothing in the whole range of hunting that can make a good shot feel so cheap as a shot at these quail when dodging around singly among the bushes.

Four guns were too many and dangerous, so we formed a line, and spreading about 100yds. apart took after the birds at a four-and-a-half-mile-an-hour gait. My companions were all young men, but I am myself younger than I was twenty years ago, and knowing what was ahead I was dressed for the occasion in light buckskin moccasins, overalls and shirt, while the rest were loaded down with regulation garments, fashionable sudorifics, heavy leggings and ponderous sole leather. These held them down to a pace that I could keep, and away we went. A large flock of quail was running ahead of us, we could hear them calling, and occasionally one hopped into short flight above the brush, as if to take a look to see where we were, but always too far out of shot to reach.

Our pace soon began to tell on them, and one rose at about 50yds. The man in line with that bird stopped so suddenly that he almost fell over, and by the time the gun came to his shoulder the bird was 70yds away He fired, however, in hope of scaring the rest of the flock and making them lie sooner. But they were too old hands at the business. A few rose above the bushes to be sure they were not running away from duffers, and a few more, sizing up the respectability of our party, sped away behind some clumps of large mesquite and went we knew not where. But most of them, concluding we were a lot of chumps notwithstanding the tone of nitro from the first gun, kept the ground and held the pace in great shape.

Suddenly two became over-confident and lagged a bit. Right in line with me they sprung at about 30yds. I was shooting a borrowed gun, a fine Greener of the closest choke, but it was a little long in the stock, and I had no chance to try it. So the first barrel tore the brush some 4ft. below the first bird. What was the matter with that? It might as well have been there as anywhere. There was no time to be particular where you wasted shot. In spite of the fact that I had shot nothing but a rifle for a year past, I got in the second barrel on the second bird without waiting to see the result of the first venture, and over went the blue ball of feathers at about 45yds. like a wet rag. I have heard often about guns shooting too close, but always contended that I never saw one This was the closest shooting gun I ever tried, and the result was the same as it had always been with me. The dead killing of long shots outweighs in the long run all the misses at short range caused by over-confidence or nervousness, which make you pull before you have the center fairly on the bird. Of course I never had a chance to try such a gun in my young days, when I used to shoot almost entirely in brush; but I am satisfied the rule would work quite well there, and although some birds would be cut too much near by, more would be secured at the outer range that with an open gun would go away crippled, or be lost in the dense cover without your suspecting you had killed them. The closer the gun's work the deader I kill what birds I do kill, and the fewer get away crippled or with only a few feathers on the air. The best gun seems far more merciful than the scattering gun, unless you try absurdly long shots, which one is not apt to do. But with a scattering gun you are more apt to be trying shots just a little out of the gun's true range.

Having scored first blood, and found the fallen bird without difficulty, I trotted along with the line about a couple of hundred yards before anything rose. Then half a dozen broke cover at one end of the line, and one of them went gyrating to earth. If one of these birds can wiggle at all, the chances are he is gone. Nothing but dead-killing will do unless you have a very extra retriever. One of the party had a fine-blooded cocker spaniel along that was a good retriever, but he was too fat, and was already blown with the rapid pace in the warm, dry air, and this bird slipped away from him as neatly as a deer can slip out of the other side of a windfall, leaving you standing on some big log and wondering why the deuce you can't see something in the line of venison after so much work. Dogs are considered of little use for these birds, though good salamanders held strictly at heel until wanted could do very effective work after the birds are well scattered. And many a bird that could be saved by a good dog is hopelessly lost to a man on foot. But most hunters use up the dog by letting him tear around in the heat and dry air too much, as well as by using him too much to retrieve birds they can as well pick up themselves. When you see a bird fall stone dead it is folly to send the dog to retrieve it until you find you cannot do so yourself. Especially is this the case when the bird has fallen on the very course on which you are going. If he is dead, he is there; if only crippled, he is not there, and the dog's nose will be better for finding him if he is kept cool and walked up to that spot than if he is constantly heated by jumping over brush and dodging around bushes at full speed. With this care a good dog can be used to great advantage on all the blue quail I have ever seen, and after they begin to lie well the prettiest kind of work may be had with them. But very few keep the dogs in any condition for the work, so that about the time they should be hunting birds they are apt to be hunting shade. And it is almost impossible to carry water enough to overcome this overheating in air that carries almost the minimum of moisture.

Two hundred yards more with half a dozen birds rising out of shot were covered, when there was a sudden roar at the right of the line, and a new flock of several hundred arose out of shot and settled in ahead of us right in the course of the ones we were running. We quickened our pace and very soon there was a whiz and buzz of wings with blue lines spinning right and left over the brush. Two went down at long shots from the sides, the reports raising more from the center, one of which I caught at almost 50yds., while all the rest were out of reach of the other gun.

On we went and still the game kept rising wild. The day was warm and still, just such a day as ought to make birds lie by this time. But they evidently wanted to test our legs, and they did. Suddenly one broke from a bush not 20yds. ahead of one of the party and over he went. Then another sprung at about 30yds. in front of another and over he went. Another followed from the same bush at the report of the gun and over he went—over a distant row of mesquites without leaving a feather. They were beginning to lie a little, just the time they select for fooling blockheads They send back a few to make you believe they are beginning to lie. Those detailed for the work seem to submit to their fate without a murmur, that is when fate overtakes them at all. I believe the rascals rather like the job on account of the glory involved. It is certain that the next one did, for he jumped up in front of me at about 20yds, while I was carrying the gun on my shoulder, and whipped around a big green ironwood that would stop half a sack of shot with a keg of dynamite behind it, just as I succeeded in checking the high speed at which I was traveling. And he whizzed away, rejoicing on the other side as my load of shot tore into the dense green on a line with where the bird should have been, but was not

On the right of the line was a broad patch of ground that had just been irrigated, and on much of it the water still stood in a thin sheet, while all the rest of the ground was very sticky. Two of the party thought they had "a snap" on the birds in this for in the distance we could see them walking across it. Down they went upon it, while I stayed on dry ground. I had seen quail travel on the irrigated ground in Durango years ago, and last year on some muddy flats along the bottoms of the lower Colorado. If any man tells you their feet get stuck in the mud so that they cannot run, send him to Phœnix. One of the pursuers swears they had snowshoes on, while the other did not see any of them long enough to tell whether they were shod with lightning or plain wind. All the same, they turned out to be another big flock, and they drove them right into the course of the others.

By this time there must have been 1,000 birds not over 200yds. ahead of us, and all still trusting to their feet instead of their wings. And what better reliance could they have? What puzzles me most about this quail is to know why he ever flies at all? A thousand birds within 200yds. does not mean 1,000 in your pocket, as you will quickly learn when you get behind them. Nor does it mean anything like 1,000 shots. But with plenty of work and knowledge of your game it means some very fine shooting. But there is no time to lag. There is nothing to do but keep after them at top speed, taking such long shots as you can get until they begin to lie. Exactly when this will be is not yet written in the book of quail, but sooner or later the knowledge is bound to come to those who have the patience—and (incidentally) the legs.

On we pressed for some 300yds., with scarcely a bird rising. The tyro would have said:

"They have beaten us! Oh, that I had back the leg energy I have wasted!"

But not so with our party. Thus far we had averaged about 1oz. of bird per man-mile, but we knew the tide might turn at any moment, and that is one of the great sources of pleasure in the pursuit of this little scamp.

On we pushed another 100yds., when suddenly *b-b-b-b-b b* went one almost from under my feet. His long black plume was bent back with speed over his rich chestnut cap, and the swift wings made a blue haze on each side as he sped over the greasewood about waist high ahead of me. *B-b-b-b-b-b* went another from the second bush, over which the first one passed, and his mottled breast shone in the bright sun as he wheeled around and upward. By good luck the gun came up on the center of the first as I raised it, and as I pulled the trigger a puff of feathers followed the light crack of the nitro, and the bird whirled to rest in the top of a bush. Never does this quail look more pretty than when he wheels in the sun as the second one did with his long jaunty plume clear-cut against the sky; and never does he make a more pretty mark than just as he describes that mysterious arc, the proper end of which you can so easily fail to locate along the gun. But he was almost in line with one of my companions, and I could only watch him speed on his winding way, his rapid wings fanning his rich brown sides and the big dark patch on his breast seeming to vibrate in the haze he made around him.

Meanwhile there was a *b-b-b-b-b-b-b-b b-b* from a bush a few yards ahead of a companion, and over went a whirl of blue. Then *b b-b b-b b* went another roaring out of a mesquite some 25yds. away, and over he didn't go, though two barrels barked fierce thunder at him. *B b-b-b b-b-b-b-b-b* went half a dozen out of the same place at the report of the guns, and as two more barrels rent some feathers from them four or five birds burst from the cover within 10ft. as the guns were open. I snapped the gun shut in time to pull down one stone dead at about 50yds. and make a clean miss on another that rose almost from under my feet at the report. You cannot help getting rattled with these birds, especially when out of practice. You get mad at yourself for shooting long shots when there are so many more birds close to you, yet you are liable always to get left if you do not, because you never know where the little vagrants are. This minute they may be whizzing out around your feet, and the next the close shooting may stop as quickly as a real estate boom, leaving you holding the empty sack. But when you do take long shots and other birds break cover beside you when the gun is empty, you cannot help feeling mad, especially when you have to go so far to retrieve the fallen bird that you have forgotten where it fell—a little matter quite liable to happen to the best quail hunters when out of practice.

But now the game was lying close—that is, some of it, for some birds are always plying their legs for safety. *B-b-b-b-b b* went a bird not 3ft. from me and I whirled it over with a quick snap shot into the top of a low ironwood Reaching down into it to pick it up, another burst out almost in my face, wheeled over my head, rose 15ft. in air and then shot away downward, leaving my charge of hastily aimed shot just far enough behind to save the meat on his tail and only cost him a few feathers.

For ten or fifteen minutes the shooting was quite lively, but many of the best chances were lost by birds going toward one or another of the party. Four were too many, and we could not afford to take any chances on an accident. The rascals would wheel around in the direction of somebody and then wheel off before going close enough for him to shoot at. So we had to wait on a good many shots to be sure there was no danger. By that time there generally was none—for the quail. This period—when the birds first begin to lie—is one of the most lively in all field experience. Nothing except an old fashioned evening flight of ducks around some Western lake can equal it.

Yet it often stops with wonderful suddenness. The birds seem suddenly to decide to lie very close, to run off on the sides or to rise out of fair shot. The latter two they have been doing all the time, so that part of the play is simple. The rest then lie about as close as any quail on earth, and even seem to hold their scent. Now is the time when a good dog, kept fresh, would often be as valuable as anywhere on earth. Such was the game these quail played us. Dozens and scores were hidden in every acre of the cover, yet our most diligent tramping would start nothing close enough for a fair shot. And yet every minute or two a quail would whiz out of a bush behind or on the side that some one of us had lately passed and perhaps kicked. But the bird took good care to see that we were well out of shot by the time it rose. The spaniel was so blown that he was of no use to flush any birds. Quail would rise out of shot from the very bush around which he had wheezed and snorted and snuffled and barked but a few seconds before. Every once in a while a bird would miscalculate the range of a gun and there were several that had not heard of the arrival in the valley of the gun I was carrying; so we still had shooting, though not what it might have been. But on the whole I have rarely enjoyed a day more with the shotgun, though one not used to birds of this feather would have felt quite otherwise.

Though quail have been trapped so much here that they are quite scarce in comparison with the numbers of former years, they are still plenty, as plenty would be understood in the East. I could go over that country almost any day with one companion and bag a hundred or over. But I would take a light open wagon, fast team and a good driver, with one good dog that could be kept quiet in the wagon until wanted. Stay in the wagon until you see quail and then drive them with the wagon as long as you can. Then take them afoot as above described and do not use the dog until they lie close. Even then keep the dog as quiet as possible and do not exhaust him by allowing him to retrieve birds you can as well pick up yourself, or by letting him run or jump to pick up anything, unless a cripple. By driving in this way one day to Tempe, a fine settlement at the upper end of the Salt River Valley, staying over night and driving back the next day, two men who are good shots and good travelers could bag 250 birds But even with a run out from Phœnix, as we had, one can get all the shooting one has any business to want, besides having a fine drive in a most luxurious climate, lunching on tables spread with the pottery of the oldest civilization of America and drinking from canals that carried water to thrifty fields before the great-grandfather of Columbus decided to get born.

A Stray Shinplaster

Comes to us once in a while for a copy of "Game Laws in Brief;" but shinplasters nowadays are scarcer than Moose in New York; and 25 cents in postage stamps will do just as well.

IN FLORIDA QUAIL FIELDS.

The morning was bright and chilly, with a fresh westerly breeze exhilarating to man and beast. The ground was wet and cool, the undergrowth and foliage were sparkling still with rain drops. It was the first day, in fact, since Nov. 1, that the dogs could run for more than two hours without being overheated and exhausted. The Alderman and the Captain expecting such a day after the rain, were ready for it, and by 6:30 A. M. had breakfasted and had loaded into the light hunting wagon the dogs, the guns (which were set in a box gun rack, with springs to take the jar and with irons to hang over the dashboard), the indispensable lunch basket and shell box, and themselves, and had said "let's go" to faithful Maude, a little black mare born and raised in Florida, but of the Lorillard strain, which gave her a more distinguished air than ordinary native horses She likes our shooting trips, is indifferent to gun fire, and has delightful naps and dreams of ground oats, corn and wheat, while those men are following up birds.

The three dogs were Ned, a black setter; Left, lemon and white pointer, fifteen months old, from the Bar Harbor Kennels; and Jess, a lemon and white setter, ten months old.

About a mile from town, between Mariner's Lake and Bream Pond, Ned struck a trail, which Jess took up too. Ned worked the trail for 200yds., then swung down wind and came up to a beautiful point near the edge of Bream Pond; Jess came up and backed. (Left was tied.)

The first bird rose alone on the right, the Captain's side, who shoots left-handed, and was killed. Six rose to fire. Alderman missed, as did Captain with remaining shell. Two more rose, Captain and Alderman crossed one and the other got away. Then two more rose; not shot at.

Ned went in to retrieve and two snipe jumped from shore of pond; Captain dropped one at 50yds. with the long left barrel.

Round the pond to two marked birds Ned trailed and pointed, Jess backing again. Alderman killed his bird. On a little, Captain hit his bird, which went down again further round. Ned pointed him; it ran 10yds. and flew up, but Captain stopped him for good.

On the ridge beyond the pond Ned pointed. The Alderman killed his, but Captain missed his and another that rose to fire. Going back to the wagon and around the other side of the pond, we saw the other snipe get up on Captain's side, but it did not go far. The record now was five quail and two snipe.

Driving on a little way, we tied up again, leaving Jess with the wagon. On the south side of Black Pond Ned found and pointed, and Left came down ahead of Ned, flushing two birds, but holding her ground steady.

A very large bevy rose. The Alderman, somewhat bothered in controlling the young dog, killed only one; the Captain killed two with each barrel. The second bird with left barrel was a scratch, for it flew into the shot 30ft. ahead of the bird pulled on, which was a pretty long shot itself.

The birds turned to the right after flying through some thick oaks, and we missed them at first by keeping straight on; but Left, hunting wide to right, pointed and flushed a bird that the Captain stopped as it was going by in a hurry.

Turning to the right, Ned found and pointed in some waist high titi bushes. The Captain missed the first bird, and they kept getting up. The Alderman killed two, Captain missed another. The Alderman killed again, Captain killed a pine tree as a bird flew behind it, and the Alderman killed the bird. We went to marked bird which Ned pointed in some palmettoes, and the Alderman killed. The Alderman missed two back in the titi bushes. Going back, Left pointed a single that flushed wild. Captain let go a long shot, the bird flew 200yds. and turned sharp to right. We went up, Ned pointed dead bird and retrieved. Out of this bevy we had ten quail—a total of fifteen.

The third bevy was found, after driving half a mile, at the head of a thicket, into which they flew at once. We shot one down on rise, but failed to retrieve. Then the Alderman killed one in thicket, and Captain crippled one; but there was no satisfaction wading knee deep in water, through briers and saplings and bushes. The one quail from this bevy made our total sixteen.

Coming out on the other side of the thicket, we crossed a flat to another lake. Here Jess pointed the fourth bevy. Captain called to Alderman, who was working Ned to left, and as he was stepping round to get behind and keep her steady the birds flushed under his feet. He killed right and left, though the first bird flew as far as the edge of the bushes before going down, and Ned retrieved it when we went in to hunt the scattered birds.

Jess pointed the first single in bushes at the edge of the water. The Captain killed that bird and missed one that rose to fire in a thicket. Ned pointed to left on edge of bushes; the Alderman made a quick kill over some briers. Ned roaded a runner a long way through bushes, briers and palmettoes and a wire fence, and finally got him up. The Alderman hit him very hard and Ned retrieved about 100yds. on. These five quail made our score twenty-one.

Ned found the fifth bevy, which flushed just as the Captain came up from quite a distance off. Alderman killed one and Captain one by a long shot. There were only four in all, and the other two separated while hunting for one that flew toward some palmettoes on shore of a lake (which lies half a mile north of the last one we were on). Another bevy, the sixth, flushed to our left rather wild. We must have walked within 15ft. of them, but the dogs went outside of them. We marked them down without firing.

Then we had some pretty, old-fashioned shooting in thick palmettoes not over knee high; the birds were within a yard or two of each other, but lay like stones and had to be kicked up or stepped upon. Ned pointed first and Jess backed. The Alderman killed neatly straightaway, and Captain killed one that rose to fire and flew back. Jess pointed while Ned was retrieving. We put up a pair and each killed our bird. Then Jess and Ned pointed together. Captain missed a straightaway, but killed a sharp twister to right over the water, Ned retrieving. Jess pointed a bird with which the Alderman failed to connect, but the Captain stopped him. Captain missed a bird that twisted back over the water and seemed to try how fast it could fly. The Captain and the Alderman crossed on one bird, with two out of the fifth bevy and six out of the sixth; the score was now twenty nine.

The seventh bevy flushed in the road to get out of the way of the wagon. Jess pointed to flush to the right. They flew into a swamp. We crossed on a bird on the edge and Captain killed one in the swamp. With two out of the seventh bevy we now had thirty-one.

We drove three or four miles nearly in a circle between bevy No. 6 and No. 7, and also ate our lunch; and it was now about 3 P. M. We found a very large bevy, the eighth, about one-fourth mile beyond No. 7 on the road home. The birds were sprinters, and had ten acres of ground hot with scent. Ned worked up and down; Jess displayed good nose by locating them, but flushed them while roading in some palmettoes. She came in looking so sorry we could not punish her. Jess is an extraordinary puppy for a nondescript; she will not flush intentionally, nor chase under any circumstances, not even a rabbit, nor break shot. Her principal fault is slowness, which she will outgrow with more experience. On our going to the marked birds, two or three flushed wild in palmettoes and were marked down. Then two rose to the right of Captain, who made a right and left, and missed a third. The Alderman then killed three straight in his tracks and Captain went to a marked single which Jess pointed and which did not get away. The Alderman killed his fourth bird. We crossed on one, and going back to where they first rose, some birds having flown back there, Captain shot one down that got away in a thicket. The Alderman shot another down, and Captain killed one that rose to fire and flew behind him. Ned retrieved Captain's bird; then when he was trailing Alderman's cripple in some very thick palmettoes, another bird rose a long way ahead. Alderman knocked it down with the left barrel of his new Parker about 75yds. off; Ned then lost the first cripple, and began trailing the last. The poor dog skinned his nose on the palmetto roots, grabbed a mouthful or two of sand and trash, and once caught a mouthful of tail feathers as the bird dodged under a root; but finally he gave it up with a most expressive bark of extreme disgust. Ned is lovable, faithful and industrious; though there are many cleverer dogs, there are very few more satisfactory. The eighth bevy yielded eight quail; total, thirty-nine.

The ninth bevy was found by Jess at dusk, but Left ran in and stole the point and held steady. Captain missed and Alderman killed one, making the score: Alderman, eighteen quail; the Captain, twenty-two quail and two snipe; total, forty quail and two snipe.

All the misses may not be noted, but the Alderman and the Captain shoot about alike; and average, day in and day out, about half their birds. If the writer could flank this tale with some of the fat birds on toast, he would fear lest it would prove too dry reading.

Captain.

CHICAGO AND THE WEST.

"The Story of a Book."

Chicago, Ill., April 9.—In the issue of Forest and Stream of Feb. 27 last I had somewhat to say in regard to the wonderful book, "The Great West." I spoke of the influence which that book had probably exerted upon my own life, mentioning the longings it stirred in my boyish breast to see the men who made its heroes, to visit the lands which were once their theater. I recalled that to my youthful mind the character of Fremont was the one heroic figure. If only I could have been with Fremont when he crossed the Rockies in the winter!

I wonder if it is not true that one always accomplishes whatever he wishes to do, attains whatever end his heart actually desires? This same thought came to my mind one day in the spring of 1886, when I found myself riding over the Panhandle of Texas in search of the buffalo which I had always longed to kill, and which I really did kill, although the buffalo were then supposed to be extinct. To-day I am just back from the Rocky Mountains. I could not go with Fremont, but I have seen the Rockies in the winter time, and have walked over their very summit on the snow. I have been with men who live up against the main Divide, and have seen and done many things which surpassed even the ambitions of my boyish dreams. All this may be part of the fulfillment of the legacy of this book, and I say it not so much with exultation as with wonder, believing that perhaps all things come true if we have but faith.

On my desk, at my return, I find a great heap of letters, and among them all there are none which touch me so nearly as those called out by the mention made of this book, "The Great West." As I believe these to be legitimately within the province of Forest and Stream, I offer among others the following, in the hope that they may possess for the readers of Forest and Stream something of the interest they offer me. They come from all over the country, and in part show well the hold that Forest and Stream has upon the people of America.

St. Louis, Mo., Feb. 27.—Your graceful acknowledgement by letter of my poor gift was more than it deserved, and I was quite unprepared for the mention of my name in connection with your touching tribute to the book in this week's Forest and Stream. Believe me, I am more than glad to have been your humble messenger to the fairies.

Horace Kephart.

Pittsburg, Pa.—I wish to thank you for your article in Forest and Stream of Feb. 27 concerning the book of your youth, "The Great West." I was fortunate enough to get a copy. It is in first-class condition, and newly rebound. It is one of the fiftieth thousand of "The Great West."

John Fetter.

Fort Dodge, Ia.—I was very much pleased with your article on that book so dear to my memory, "The Great We t." I read this book about thirty years ago the first time. The last time was last Sunday, after reading your article in Forest and Stream, for I am fortunate enough to have the identical volume which so greatly interested me when a boy. The book was one of the chief treasures of my father, who, as regularly as the season approached when the leaves fall, would get out "The Great West" and read the article which treats of hunting among the pioneers. When he had finished he would say, "That is as true as gospel. I feel just that way myself." This remark was always followed by an inspection of his rifle and hunting accouterments, and soon after that by an excursion to the woods.

Soon after my father's death my mother came to visit me and brought me the book. One cover was gone, but the book is all there except seven pages, missing from the articles on "The Great American Wilderness" and the "Earthquake at New Madrid." What memories that book awakened! Again, as in boyhood days, I scouted with Kenton and Whetzel. I hunted with Boone, and with Fremont explored the unknown regions of the Rockies. The oak openings across the road from my father's house (I was raised in Michigan) was "the dark and bloody ground" of Kentucky. The brook, long since gone dry, was the Ohio across which we pursued the retreating redskins, and on finding ourselves in a dark and gloomy tamarack swamp retreated ourselves, fearing ambuscade, in our minds, but really afraid of the gloomy shadows of the close tamaracks.

The line of snow banks, which in winter filled the lane reading to the lower fields and wood lot, were the snow-capped peaks over which we toiled with Fremont, frozen and starved, our boats and mittens filled with snow and an aching void in our stomachs until, descending the last peak, we found ourselves in reach of succor. For were we not then in the barnyard? No, this was Bent's Fort, and the log house was the hospitable trading post, where we soon forgot our trials, thawed our frozen cowhide boots and filled the aforesaid void with apples and doughnuts. Why can't we have such times now? Why, don't doughnuts and apples taste just as they did then? Last Christmas I ate apples from the same trees and doughnuts which my mother fried, but somehow they did not touch the spot as they did thirty-five years ago.

I started to tell you I was glad that one whom I have known, through Forest and Stream, since he failed to slay the Phantom Buck of Baxter's Peak, had been able once more to read the treasured pages of "The Great West." It gives me almost as much pleasure to know that the longing of a kindred spirit for that book of books has been gratified as it did to have the book put in my hands and know it was mine, and above all I rejoice to know that "The Great West" still abides among men who treasure it as it deserves. My copy goes to the binder to-day, a binder in our town too, mind you. This book don't go out of town. It will get new covers and be securely fastened, for it is not right that a good thing should perish from the earth.

C. A. Bryant.

Jamestown, O.—In Forest and Stream of Feb. 27 you write of a book that you read when a boy, and of your search for the book since that time. I have the book, and have read it many a time when a boy; for it was my father's, but now belongs to me. The stout leather backs have been sewed on it more than once.

Marion Harness.

Tacoma, Wash.—Your letter of Feb. 12 in Forest and Stream, entitled "The Story of a Book," was very interesting to me. It moves me to write you personally. I have a copy of "The Great West," Vol. I., 1852, and at the top of the title page are the words "Twentieth thousand." There is much of that letter that fits my case. The reference to McGuffy's readers and the number of times you read the book are just the experiences that I went through. Although not a subscriber, I have read the Forest and Stream for a number of years. Have often wished that I had the ability to put my thoughts on paper in a readable shape. But it does not take much ability, just common sense, to express the following sentiment: I believe in stopping the sale of game. I saw the chickens and quail exterminated (perhaps that is a little strong) in eastern Iowa to supply the Chicago market. Last fall there was an article in Forest and Stream about "the old-time chicken dog." Although I do not know how old a man the writer is, it really seems to me that he shot over Duke, a dog that my father, brothers and myself hunted with in eastern Iowa twenty years ago, he describes his faults and qualities so accurately.

If you know of some "still-hunter" who can describe a successful or unsuccessful hunt as fully as some fishermen describe the capture of a trout or salmon, just get him to write up a trip or two for the Forest and Stream. I can hear the reel humming when I read some of their letters. My boyhood hunting and fishing days were spent on the Wapsiepinicon, in eastern Iowa, the favorite hunting ground of a small tribe of Indians called Musquawkies.

Musquawkie.

Tacoma, Wash.

[Here we go again! The Musquawkies also used to trap muskrats all over the old Skunk River bottoms, where my father and my brothers and I used to hunt and fish in Iowa!]

Cleveland, O.—Have noted with interest your research for the "Great West" book, and also your final success in obtaining it. I have identically the same publication, with exception that mine is number "fifty-fifth thousand," and published in 1855. Covers have gone, and in fact I had almost forgotten its existence until your recent "Chicago and the West" article struck me so forcibly. If you wish a mate to your "Yellow Indian" please let me know if convenient, and I will be pleased to forward it to you and "say nothing."

Robert Nichols.

Carteret, N. J., March 18.—I have read with interest your article, "The Story of a Book," in Forest and Stream. I have in my possession a book entitled "The Great West," enlarged edition of 576 pages, by Henry Howe, published in 1858. I see that Mr Kephart, in his letter to you dated Feb. 1, makes no mention of this edition. From your description my book is the same as yours, with some additions.

My book is in perfect condition, except that most of the pages are somewhat stained by age.

In the preface it is stated by the author that there have been over 80,000 copies of this work sold; so, from that vast number, it seems strange that so few have been heard from. No doubt, in giving this book such great publicity through Forest and Stream, you will receive many letters similar to this.

Hoping it will give you some pleasure to know that there is another of these books in existence, I remain

C. A. Wehrly.

The Public Library of the City of Boston, Feb. 26.—You may be pleased to learn that this library possesses two editions—1851 and 1857—of Henry Howe's "Historical Collections of the Great West," which you describe with so much enthusiasm in your interesting letter to Forest and Stream of this week.

John Murdoch.

Manchester, N. H., March 2.—After reading your very interesting account of "Collections of the Great West," I visited the bookstore under the Old South Church in Boston and got a good copy of the book (thirty-fourth thousand) for a $1 bill, and found it in the first store where I inquired after it, which was certainly "Forest and Stream luck."

As you show such interest in the book I feel sure you would like to know more of its compiler, and if you will write to Mr. Robert O'Brien, 604 East Capitol street, Washington, D. C., I think you may draw out some interesting reminiscences of Mr. Howe. Mr. O'Brien is now well on toward ninety years of age, but is still able to write very interesting letters, as his correspondence with my father proves.

Mr. O'Brien and Mr. Howe, the compiler of your book, were great friends many years ago, and I think it more than likely that Mr. O'Brien engraved most of the illustrations in your book, as he was one of the best wood engravers of his day. If you write Mr. O'Brien tell him that your correspondent is a son of Henry W. Herrick, and you will be sure of a reply.

Henry A. Herrick.

P. S.—I see that O'Brien engraved the frontispiece. You will find his name at the lower right hand corner.

H. A. H.

East Hampton, L. I., N. Y., Feb. 29.—In the last number of the Forest and Stream I notice an article entitled "The Story of a Book." You begun by saying, "When I was a boy I had a book. It was the first book I ever really and truly read." I read your article—the whole of it—and reread it—the whole of it—and experienced the same feelings over again that I did when I first read the same book over thirty years ago, and which I now have in my possession, within reach of my hand at present writing. When I read your story I felt a friend had been found, though never seen by

me. The illustrations came into my mind faster than you penned them: The yellow Indian, the prairie schooner and dogs, the woman with an axe killing Injuns, the hunting stories, the man on the cover with rifle beside an ox team and wagon, and a colored picture of the "Treachery of Pontiac Discovered."

Everything else in connection with this book was suddenly impressed into my memory years ago, to be refreshed by your allusion to it in the manner mentioned. It was the most wonderful book to me. There seemed to be in it a continually flowing stream of satisfaction. I longed to be a hunter, to shoot Indians, kill buffalo, trap beaver, and scalp somebody, and after reading some of those stories about bowies and scalping knives as manipulated by Lewis Whetzel, we—that is, a boy about my own age, called C., and myself—would proceed to sharpen up our case knives, put them in our own belt with our hatchets, and at once be on the hunt and lookout for Indians.

This boy friend in after years became one of the most expert hunters in the Indian Territory and the West, and was the owner of quite an estate in this same bleeding Kansas of which he read when a boy; and he is now living in this village, as fond as ever of his annual hunt, a crack rifle shot, a complete Leatherstocking, having led a checkered yet successful life up to the present time. He is now two years under fifty. There is no question that he was better prepared for what befell him in after years, and that he was better fitted to work his way among hostile tribes of Indians, as he actually did, by the reading of this book. Although it is years since he has seen the "Great West" book, frequent references are made by him to it when we meet, showing that at least three people were wonderfully influenced by it in earlier years.

This friend and myself were born with the natural instinct of hunters, and we both have gratified ourselves in that line, although in different ways, he preferring buffalo, moose and deer to the feathered tribe. This feeling of hunting was cultivated by the constant perusal of this book, and many is the time I would ask to take it home, and mother would say yes. Bless her heart, she is now eighty-three, and thinks we are yet boys! She made two happy. Two things I had—a glorious book and the best of mothers.

But pardon me for wandering from the center line. There are so many things in connection with this book, branching out in so many different directions, that it is impossible for me to think of it except in line with the past. It is of the past I am writing.

Although I am not an antediluvian, I feel that I have probably had better shooting than I shall ever have again, and may the time come when we may meet and feel thankful for the good things given us, among them "The Great West."

HIRAM SHERRILL.

I should like to express my personal thanks to the writers of the above kind and interesting letters.

Illinois Warden Matters.

CHICAGO, Ill., April 17.—There is a very hot campaign on hand in the matter of the Illinois State wardenship this year, probably the most warmly contested one we have ever known. It is difficult to see why men seek so ardently for this undesirable eminence, but the fact remains that the office appears to be a coveted one, possibly by reason of the fact that in politics any office at all is better than no office at all. And it is without doubt true that the appointment of the Illinois State warden is purely a political matter. There is no rhyme nor reason to it, and the valued sheepskin goes to the man who can put up the strongest front in regard to his push or pull. The present Illinois Legislature is one which is becoming rapidly famous or infamous for its transactions in shady legislation. The State press openly charges bribery and corruption against many members in regard to the passage of important bills affecting city franchises. However this may be, it is without doubt true that not for a long time has there been a session of the Illinois Legislature in which the South Water street lobby has had such absolute swing. It is alleged that the merchants of South Water street are hand-in-hand with the forces of the street car and other corporation magnates, who are railroading the above-mentioned undesirable bills through both branches of the Legislature. At this date there has been no legislation on game matters, and one may as well say openly that there is not going to be any action in this Legislature which will not be entirely to the pleasure of the South Water street interests. The gentle art of politics will have a merry time with the sportsmen of this State in the year 1897.

Among the different candidates for State warden, Emmet Haight, of Chicago, was indorsed by the Illinois State Sportsmen's Association, the proper communications going to the Governor over the signatures of the president and executive committee of that body. As an alternate to Mr. Haight came Mr. West, of Elgin, whose claims were strongly advocated by Vice-President Dole, of the Association, whose residence is at Elgin. Mr. West had a fair show, but this week Representative Hunter, who has been handling the sportsmen's interests, says that he hardly thinks it wise to press the claims of Mr. West. Mr. Harry Loveday, of Chicago, has been put forward by a number of friends for the office, as was stated in last week's FOREST AND STREAM. Meantime there appears on the track a dark horse by the name of Mr. Albert L. Adam, of whom nobody ever heard before. Mr. Adam is a hardware dealer. The sportsmen do not know anything for or against Mr. Adam at this date, as he did not come before them as a candidate. He is said to have a good pull through such men as Jimmy Reddick, Henry Hertz, Billy Lorrimer, Doc Jamieson, etc., who are of prominence in the present administration of State affairs, and if this be the case he is very likely to get the nomination for warden. Should this be true, let us hope that he will prove to be a good one, and that his efforts will help the sportsmen where they most need aid. Mr. Adam's campaign seems to have been of the entirely silent sort, which often is the most successful. There may be still others in the field who have not yet been heard from.

Politics and Sports.

Mr. R. B. Organ, of the State Sportsmen's Association executive committee, went to Mr. Fred Blount, West Side Park Commissioner of this city, and a politician of influence of this administration, seeking to advance the interests of the sportsmen's candidate for warden. Mr. Blount naively told Mr. Organ that he could not help him any, as he had already promised Mr. George Sloan that he would support his man for warden. Mr. Sloan has been earlier mentioned as the present reigning king of South Water street.

Senator Campbell, of Chicago, chairman of the Senate committee on fish and game, to-day said to Mr. R. B. Organ, of the executive committee of the Illinois State Sportsmen's Association, that he had recently been offered $500 for the appointment as State warden. This offer came from a West Side man whose name I cannot give.

It would seem that there is money in the office of State warden in the city of Chicago. It would take some time, one would think, to make $500 in the collection of fines under the law, but there is not wanting at least one man who openly thinks he can make the office pay a living over and above $500 a year. This Chinese system of buying an office for the sake of its emoluments has perhaps never before come more openly into evidence.

Meantime the game bird must take its chances with the warden, the shooters, the politicians and the game dealers.

Illinois Game and Fish Protective Association.

An attendance of twenty-five turned out at the second meeting for the organization of the Illinois Game and Fish Protective Association, at the Sherman House, April 17, the above name being formally adopted by those present as the title of the new Association. The body of sportsmen thus formed expresses the hope of extending its membership beyond the limits of Chicago, and sets out with the avowed purpose of doing all in its power to enforce the laws and to protect the game and fish of the State, nothing further than this being contemplated in its constitution.

Col. M. H. Alberger, of Chicago, was in the chair, and gave a very pretty example of railroad presiding, no motion getting so far along as to have the negative side of the question put at all. "The ayes have it," was the Chair's invariable decision, without any useless delay. Thus the meeting was able to adjourn at the early hour of 10:30, after adopting constitution and by-laws and electing officers, with the other usual routine work of organization, a record certainly not without its merits. Secretary Harry A. Sullivan was equally expeditious in his work, and the proceedings were rapid.

It was decided under the by-laws to have a Board of Managers consisting of fifteen members, and to hold the annual meeting on the second Tuesday of each January, with the ordinary order of business as to committee reports, election of officers, etc. Provision was made for the calling of special and other meetings by the president by mailed notices five days in advance. The initiation fee was made $1, the annual dues also $1. Any man was declared eligible to membership in the Association who has the instincts of a sportsman and a wish to protect the game.

The following officers were elected: Pres., Col. M. H. Alberger, of Chicago; First Vice-Pres., Fish Commissioner S. R. Bartlett, of Quincy; Second Vice-Pres., laid over till next meeting; Sec'y, Harry A. Sullivan, of Chicago; Treas., J. V. Clark, of Chicago. It was agreed that the Chair should appoint eight of the fifteen members of the Board of Managers, he then to confer with these in regard to appointing the remainder, these to be chosen outside of Chicago as much as possible. The president reported the following names as members of the Board: Hon. Alex. A. White, Rev. Edward A. Kelly, Gen. John McNulty, Messrs. C. D. Gammon, J. E. Isgrigg, H. D. Nicholls and Thos. W. Saunders, all of Chicago; Mr. Tom N. Donnelly, of Lake county; and Hon. Geo. Lyon, of Waukegan.

The meeting with formal motion indorsed Harry W. Loveday, of Chicago, as its candidate for State game warden, and the secretary was instructed to so advise the Governor.

The Spring Shooting Season.

The Illinois spring duck shooting season closed day before yesterday, and was above the average in abundance of wildfowl killed. At Hennepin Club, on the Illinois River, the shooting was for some days very fine, though it died out during the last few days of ths season. At Fox Lake, Illinois, several good bags of bluebills were made, one bag of seventy-six to two guns. Along the Kankakee River the shooting was also good. Dick Turtle got sixty-one ducks at Water Valley in one day, and made one or two smaller bags. At Calumet Heights Club Mr. A. C. Paterson was out several times, and made bags ranging from half a dozen to a dozen and a half. He was lucky enough also to kill a fine large Canada goose, Mr. Gillespie, however, having a hand in the undoing of this honker. Other bags of ducks of a dozen or two to the gun have been reported. It is stated that many of the birds, especially the bluebills, were in good order this spring.

The jacksnipe season is now at hand, and before these lines are in print the birds will probably be in all over this part of the country in great numbers. At Kouts, Ind., Mr. O. von Lengerke bagged thirty odd birds over a week ago. At Water Valley, Ind., Mr. F. R. Bissell bagged thirty-one jacksnipe, yellowlegs and grass plover.

On Tuesday the snipe were coming in very fast on the Kankakee bottoms near Shelby, Ind., the edge of the marsh near Skunk Knob already showing pretty fair shooting. Shooters can stop at Zea's farm there, a mile north of Shelby, on the Monon, and get good shooting. The Fuller's Island country is reported as having too much water.

Mr. W. L. Wells, of this city, joins a camping party of snipe shooters who will spend a week or more on the Kankakee bottoms above Momence. They go into camp Monday, and expect to have a very enjoyable time. Mr. W. P. Mussey left yesterday for the Maksawba Club, on the Kankakee, where he should find good snipe shooting this coming week. I have not yet heard from the prairie sloughs near Wheaton, and other points near at hand to the west of Chicago; but should expect to hear of some shooting in there before long.

Spring Shooting Killed in Minnesota.

Mr. John W. G. Dunn, of the Title Insurance and Trust Co., of St. Paul, Minn., called at this office two days ago, long enough to bring the first news of the passage in the Minnesota Legislature of a law prohibiting spring shooting in that State. Senator Hansen backed the measure, which was opposed by Senator Keller.

Personal.

Col. A. G. Courtney, who was for some fourteen years connected with the LeFever Arms Co., and is widely known among the shooters of America, will on May 1 sever his connection with that firm and enter into the employ of Hartley & Graham, of New York city. He will henceforth explain the merits of the Remington shotgun on the trap circuit and elsewhere.

Mr. W. M. Durham, lately banker and boss bass fisherman of Momence, Ill., has moved to Chicago, where he will get more banking and less fishing.

Dr. Z. T. Daniel, lately of Carlisle Indian School, has been stationed as assistant physician at the Blackfoot Agency, Montana. Dr. Daniel is not new in that country, as he has made a successful big-game hunt or two in the mountains near the reservation in earlier years.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

MY FIRST BREECHLOADER.

WHAT rich stores of reminiscences long dormant in memory's vague and misty cells must have been recalled to life by the exhibition of antiquated firearms at the Sportmen's Exposition in those old fellows who love the gun and the pleasure its use affords.

In retrospection the curtains of memory are parted, and my thoughts travel down the vista of years to the days when, about twelve years old, I became the proud possessor of my first breechloading gun. I already owned a muzzleloading gun, and considered it perfection until one day there came to the village where my boyhood days were passed an old trapper and hunter, with whom I soon scraped an acquaintance, and who possessed among the rest of his arms a 20-gauge breechloading Remington single-barrel shotgun, which no sooner had I seen than my whole aim and ambition in life were summed up in the desire to become the owner of this triumph of the gunmaker's art.

My friend, seeing how intent I was on securing the gun, consented to sell it to me for the princely sum of $3, and to keep it for me until I was able to procure the necessary funds, more to relieve himself from my ceaseless importunities than for any other reason. My father was not blessed with an over-abundance of this world's goods, and had he been would have considered it an unnecessary extravagance to invest in a gun when I already had one, so the task of raising the money devolved on me entirely.

Boyhood's resources are many, however, and before many days had passed I had made a bargain with a neighboring junkman to buy from me all the old iron and bones I could obtain at ½ cent per pound. Nothing daunted at the thought of the 600lbs of merchandise, I started to collect, and soon had a good-sized pile, which was materially augmented—I blush to say—by a surreptitious expedition one dark night in company with another boy to a farmer's barnyard, where we denuded an old oxcart of what iron could be removed with the aid of a wrench—no compunctions of conscience attending the operation, as this farmer considered all boys his enemies, and the boys heartily reciprocated the sentiment.

I finally had the requisite amount of material, and one red-letter day I trudged home bearing in triumph my well-earned gun, envied by my less fortunate companions.

Every spare moment of time was utilized thereafter to scour the woods and fields in the vicinity with powder-flask, shot-pouch, newspaper for wadding and a reloading tool in my pockets; for I had but ten brass shells, and when these had been fired I was compelled to reload them.

One day I had fired my ten shots, and reloading the shells proceeded on my way, when on reaching home I discovered that the reloading tool had been left on my improvised loading bench, a flat stone in the woods about two miles from home. Now here was a quandary. It was dark, and I was afraid to go through the woods alone; but there was that tool, suddenly grown to be the dearest object in my possession, and the thoughts of the bones and iron necessary to procure another decided me, and in fear and trembling I started on my quest, gradually becoming more frightened as I progressed, until I finally had possession of the reloader.

Starting homeward, the sighing of the winds in the tree tops sounding like the moaning of lost spirits, oppressed by a thousand nameless fears, my inflamed imagination peopling each bush with a lurking foe, a night bird sounded his note close at hand, and my courage forsook me entirely. Pursued by the unknown terrors of the darkness, I precipitately fled over fallen logs, across ditches, through the fields for two miles, until more dead than alive I stumbled into the house, happy once more in the possession of my full equipment.

The picture grows dim and fades. Present reality greets me with the sight of my Parker hammerless hanging in its place with my other up to date arms, but who will say its possession will ever thrill me with the pleasure experienced in the proprietorship of that old 20-gauge, with its ten shells and the unalloyed delight its use afforded?

A. B. C.

THE NEW YORK ASSOCIATION.

To all who are Interested in Protecting the Fish and Game of New York State:

Something like thirty years ago the New York State Association for the Protection of Fish and Game was organized, having as its object the fish and game protective interests of this State, and the improvement and advancement in trap-shooting. For a time the Association was active in protective matters, but this object began to be overlooked, and the Association came to devote its entire attention and energies to trap-shooting.

In 1892 several clubs, members of the State Association, feeling the necessity for active work on the part of the organization in the effort to preserve the fish and game interests of this great commonwealth, assembled in Syracuse and perfected plans of organization, under which arrangement winter meetings of the Association were provided for, having as their object the furtherance of fish and game protection.

Under the revised constitution, the annual dues entitling clubs to representation at these meetings is $5, and a further provision allows individuals to become associate members upon the payment of 25 cents annual dues.

We want all clubs, whether now members of the Association or not, who feel an interest in protecting the fish and game of the State, and all individuals who are thus interested, to join us in our work.

It is the policy of the State Association to simplify the present fish and game laws, remedying if possible the many evils that now exist, eliminating unjust local legislation and rendering to protective associations aid in the enforcement of the laws. It is the medium through which all right-minded organizations should seek and give counsel. Every county in the State should have a strong fish and game protective association, thus carrying to the Legislature a voice of power working for a common interest and an honest purpose.

The sportsmen of this State are requested to carefully consider this matter, to the end that they may identify themselves and the clubs or associations to which they belong with us. Success will be dependent entirely upon the forces we can muster.

The object of this appeal is to place the State Association upon a sound basis, having a large, enthusiastic enrollment of members, true sportsmen, willing to serve the organization faithfully in its work.

The cause is a worthy one, requiring hearty coöperation on the part of all true lovers of legitimate sport with rod and gun.

W. S. GAVITT, President.

LYONS, N. Y.

Some Great Dodging.

Editor Forest and Stream:

I have often thought I would write you the facts contained in this letter, but the doubts expressed by persons I have told the stories to has made me fear the columns of Forest and Stream. I only told one man who didn't doubt me, and he told me the following story; and as I have always found him perfectly truthful in every way I believe him.

He was squirrel hunting, and was once walking slowly around a tree when, glancing down, he saw a rattlesnake within a few feet of him, ready to strike. He said, "I stepped back about 30ft. and fired at his head, and it did not seem to me to have moved. I reloaded as quickly as possible and tried again, with the same result. I fired several times at his head, but still he held it motionless. I had heard that a snake could dodge a rifle ball, so I finally aimed about 6in. down his body and shattered his head."

This was done with a muzzleloader and I suppose about twenty years ago

The following happened in 1890 on the Woodburn Farm, at Taylorstown, Pa.:

A friend and I were out after ground hogs. I had a Winchester .22-15; he, my Ithaca shotgun. We saw what we thought was a chipmunk, with its head out of a knot hole in a log, and he fired at it. When we got to the log I saw something run and also found a dead weasel. Dunkle began poking in the log and a weasel stuck its head out of the knot hole and I fired at it from I should think about 20ft. Dunkle called, "You never touched him." I tried several times with the same result, the weasel always disappearing into a hole in the log right where his head had been. Finally Dunkle moved while I was taking aim, and the weasel turned its head and I killed it. We got five, four of which I killed with the rifle, but I did not kill one with its eyes turned toward me. One got out in the bark of the log and a small hole afforded a fine peep hole for it. I put three bullets in that hole, which was hardly large enough to let the weasel's head out, but never touched him.

The same year I fired at a weasel on a rail fence, and when I went to pick him up he dropped from the far side of the rail and scurried away. The shot had gone into the very place where he had sat when I fired.

The next year I was out once with rifle and box of cartridges, and shot fully thirty times at a weasel in a tree top and never touched him. I then took the small target that was in the box and shot several times at it, and put every bullet in a space you could cover with a silver dollar—distance, 30ft.

I believe a weasel can dodge a rifle ball, and would thank the readers to tell of any similar experience, so that I won't hesitate about telling of the artful dodger in the future.

I read a short time since of a man shooting several times at a snake lying along an old root, and how he finally dispatched the snake with a club and found every bullet under where the snake's head had been. If people can believe that, my story is safe. Jim Pierce.

That Confiscated Moose Head.

I.

From the New Bedford (Mass.) Mercury.

It will be remembered that Harry M. Church, of this city, shot a buck moose down in New Brunswick some months ago. The moose was one of the finest specimens ever killed in that section, and Mr. Church left the head in Fredericton, N. B., to be dressed and mounted.

It turned out that the head was the finest one ever mounted, and Mr. Church makes the claim that the man who was mounting the head tried to obtain it from him by improper methods. Considerable trouble arose over the head which Mr. Church owned, and the services of several lawyers were engaged in trying to secure it. So much stir was made that finally the Government at New Brunswick took hold of the matter, and, finding that the moose's head was the finest one ever seen there, inquired into the subject, and alleging that it was shot illegally confiscated it.

The head was placed in one of the Government buildings at Fredericton, N. B., and Mr. Church has just received notice of the fact.

Mr. Church will write a sketch about the moose for Forest and Stream, in which he will warn all American sportsmen from going down to New Brunswick, where he claims a sportsman is not treated squarely.

The moose killed by Mr. Church was a bull moose and was the largest shot within the memory of man in New Brunswick. It weighed close to 1,600lbs., and its withers were nearly or quite 7ft. from the ground; and its antlers, tipping the scales at not far from a hundredweight, spread more than 5ft. and numbered twenty prongs. Mr. Church at the time refused an offer of $75 for the antlers. Mr. Church killed the animal with four shots.

II.

From the St. John (N. B.) Gazette.

The fact that Mr. Church shot a moose in New Brunswick and did not get it is being telegraphed by the Associated Press all over the United States. It would not make so much difference if the statement of Mr. Church was true, but it is not. The facts are that last autumn Mr. Church came to this Province from somewhere in the United States and went up to Canaan, Queens county. There he fell in with another person named Ryder and they went moose hunting together.

Church was informed that, being a non-resident of the Province, he would be obliged to take out a license, and would have to pay the sum of $20. He told the game warden who gave him this information that he did not intend to go hunting, therefore did not require a license. Ryder had a resident license, but it is generally believed that he is a non resident, and if that is the case the license is valueless. His brother, however, resides in the Province, and it was with this brother that both he and Church were staying. The statements of Ryder and Church disagree as to the killing of the moose, both of them claiming the honor of killing this very fine specimen. The story is that, as they were going through the woods, they came upon two bulls fighting, and before the animals could get away one of them had been shot.

Both Church and Ryder claim in their affidavits to have shot the moose. If Church shot the moose, he was liable to a penalty for shooting without a license and to another penality as well. The moose head, although a very fine specimen, is not the largest in the Province by any means, the one in the Crown Lands Office measuring 10½in. more across the antlers than the new acquisition which was shot by Church or Ryder. After shooting the moose the head was left with Ryder's brother to be prepared and sent on. While it was there the game warden learned of the killing of the animal, but in the meantime Church had departed to the United States or he would have been prosecuted. All that was done therefore was to seize the head, which has been hung in the Crown Lands Office, and forms part of the collection of local game in that department.

If Mr. Church had obeyed the law he would not have had any difficulty in getting the head of the moose, if he shot the animal. He did not, and therefore it was seized.

Shooting Privileges and Trespass.

Editor Forest and Stream:

In your issue of April 10 Mr. Tappan Adney, commenting upon the growing tendency on the part of land owners to exercise the rights of proprietors upon their own land, says: "The moment they do, where will the fellow come in who has a gun and loves to hunt as well as the land owner?" It seems to me he will be in exactly the position everybody is in, the gratification of whose tastes requires the use of some one else's property. The man who enjoys theatricals pays for his hour or two in a theater. The book lover does not expect to have the use of his neighbor's library unless the owner is good-natured enough to give his consent. Those who dance expect to pay the piper and to pay some one for the use of a floor to dance upon.

"The fellow with a gun who has proven his right to live by earning his own living," as Mr. Adney puts it (though I fail to see what bearing that has upon the matter), belongs to the only class which claims a God-given right to use the property of others whenever one of its number wants to enjoy himself at his favorite amusement, or "to earn his own living" by killing the game on another man's land.

The owner has paid in hard cash for the "right of exclusive control," and the State requires him to pay each year in the form of taxes for the continued right; but Mr. Adney seems to think that "the fellow with a gun" has the same rights as the owner to roam over the fields and kill the game.

It never occurs to some people that the land owner who has a few coveys of quail upon his place may have a fancy for shooting them himself, or possibly has some friend with a sportsman's tastes to whom he would like to give the pleasure, rather than to some one who to him is only "a fellow with a gun."

I for one rejoice to see the additional farms which are every year being posted, for therein lies the secret of game protection. By all means let land owners realize they have absolute control over their own acres. Lexden.

Dearth of Ducks in Long Island Waters.

New York, April 12.—*Editor Forest and Stream:* The decrease in the number of wildfowl frequenting the western end of Long Island Sound appears to have reached a climax this season. For the past three years as each spring and autumn have come around the flocks of coots, old squaws, etc., have grown smaller and smaller until now, when on a day last week there were by actual count less than 100 birds on feeding grounds, which until recently supported many thousands. In the vicinity of Captain's Island, Matinnecock Point and the adjacent coves the birds could always be found in enormous rafts at this season of the year; and the fact that there are not any this spring would seem to indicate that they do not exist in anything like the numbers which formerly migrated up and down our coast.

The cause must be sought in the raids made upon the breeding grounds by egg hunters, as the birds are protected by the laws in a more effective way than ever before, and as they are of little value in market the number killed by gunners must be a small proportion of the whole. That the merry call of the "south-southerly" is now so seldom heard is a matter of regret to many who have watched for their coming to our waters each returning season as one of the many pleasures afforded by that placid arm of the sea.

Long Islander.

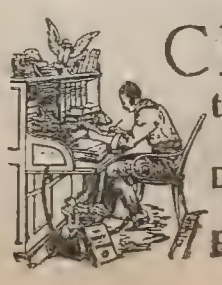
Spring on the Eastern Shore.

Weather warm and as fine as silk, pleasant as Florida in winter. The gull has come to furnish her annual supply of rich and palatable eggs. Our coast is her breeding grounds. The marsh hen is dropping from the clouds each night—as the story goes—doing her share of cackling and will, too, do her share in giving fine eggs; the "marshy" is an honest layer, and so long as her nest is robbed she will again fill it, though our legislators, by recent enactments, have put a stop to the business of robbing nests. The bee martin has come to let us know that winter is gone and to drive the hawks from the poultry yards, while robin redbreast is busy mixing mortar.

Atlantic Coast birds have not yet reached our meadows, but a few days hence and they will be on hand no doubt. Snipe are here in limited numbers. Doctor French generally gets a clever bunch when out.

Messrs. Gordon Fisher, of Pittsburg, and Brown Caldwell, of Chicago, members of Revels Island Club, came by to-day's train, and repaired at once to their club building on the island. T. G. E.

Keller, Va., April 15.



Elephant: Hello! there comes a party of hunters; we'd better run for our lives before they see us.

Giraffe: Gracious goodness, you're right! I guess I'm a goner.

Elephant: Why so?.

Giraffe: Don't you see I'm spotted?—*New York Times.*

Our readers are invited to send us for these columns notes of the game supply, shooting resorts, and their experience in the field.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in Forest and Stream.

ANGLING NOTES.

Wings of Artificial Flies.

Some ten or fifteen years ago there was given to me a white miller fly, dressed to order for Dr. W. C. Prime, the the author of "I Go A-Fishing." The wings of this fly were entirely different from any that I had ever seen on a fly at that time, and I may add that I have never seen anything like that since, and I have always kept the fly as a curiosity, and it is on my desk as I write.

In fact, did anyone ever see but one style of wings, as a rule, on a trout fly? They may stand up at right angles to the direction of the shank of hook, as is the case with "upright-winged" dry flies, or the points of the wings may droop a little toward the bend of the hook, which is the case of the orthodox artificial fly the world over. The wings usually stand close together, back to back, as it were, and to all intents and purposes the two wings are one and inseparable. In some of the modern eyed-hook flies and May flies the wings curve away from each other at an acute angle; but practically the wings of our trout and bass flies are fashioned in the same mold. Perhaps this is as they should be; anyway I never questioned it until I saw the Prime white miller, and that made me think that possibly there was room for improvement in fashioning the wings of trout flies. I do not forget that a fresh fly just from the hands of the fly dresser is quite a different object from the same fly after it has been dragged a dozen times on the surface or beneath the surface of the water, and I know that there are advocates of form and advocates of color in trout flies who believe in one and not in the other; but if the advocates of form dress flies to imitate a natural insect, why are the wings all alike? There is a question that I asked myself when the Prime fly first reminded me that all artificial flies were made with wings practically on the same model, while the insects supposed to be imitated carried their wings quite differently. The wings of the Prime fly are made of three feathers, and they are put on not so much to imitate the wings of a white miller as to cover the hook. Two of the feathers are put on alongside of the hook, the planes meeting at an angle above the shank as the hook is held point down, and the third feather simply extends horizontally along the top of the shank and over the other feather. It is not a pretty fly, although said to be a "killer" when white millers are out. Now an English angler writes to the *Gazette* that he proposes to inaugurate a reform in fly dressing, and dress flies on three models instead of one. First, he will have wings to imitate the May fly, March-brown, spinner, etc., the planes nearly vertical to the body, diverging a little upward. Second, wings on each side of the body, like the alder and sand fly, the planes meeting at their upper margins and diverging downward; and third, wings in a horizontal plane, like the wings of the house fly. It may be said that the wings of all flies when in motion are very like the wings of the conventional artificial fly, but a drowned fly, as in wet fly-fishing, is not supposed to be flying. The subject is one that will admit of argument from various points of view, but it is to be hoped that Mr. Charles Walker will give us the results of his experiments with flies dressed as he proposes, and that will be of greater benefit than pages of theorizing. If trout and other fish can distinguish between shades of color, why not between changes in form?

Mr. Rowland Ward.

In a previous note I mentioned that Mr. Rowland Ward, the eminent taxidermist, of London, was on his way to this country from England, for the purpose of fishing for tarpon in Florida. Upon his arrival he remained but a few hours in New York city, as he writes me, but long enough to visit the American Natural History Museum, where he saw Audubon's birds. His particular interest in our great naturalist comes from the fact that Mr. Henry Ward, his father, was Audubon's companion and visited Florida with him sixty years ago on a collecting tour, and he wonders if his father saw or attempted to catch the tarpon in his day. Mr. Ward says that he has mounted many tarpon during the past few years, and that the first tarpon scales were sent to him sixteen years ago. Now he proposes to go over at least part of the ground where Audubon and his father tramped and journeyed together, and catch tarpon on his own account. Later we hope to give something of the results of Mr. Ward's fishing, as he came for that and nothing else, and will return to London the last of May.

Pike and Young Ducks.

Spoons, gangs, snap-tackle, live bait (minnows), frogs, etc., have been lures for pike (the fish we in New York continue to call pickerel when we do not mean pickerel) since time out of mind and probably long before, but an English angler has departed from the regular and customary baits, and drags an imitation of a young duck on the water and through the weeds where the pike hide, and as a result of the dragging the imitation young duck with a stuffing of hooks brings large pike to his bag. I have seen pretty much everything that swims or flies, and some things that walk or run on land only, imitated to lure fish; but an imitation duckling is a notch or two above me and savors of an imitation baby to catch crocodiles.

Pike have often been charged with capturing young water fowl, but I have always believed such instances exceptional if they were true; but Mr. T. R. Sachs, of London, leaves no room for doubt on the subject, for he says the angler fishing with him caught larger pike with the imitation duckling of his own creation than he, Mr. Sachs, did with snap-tackle. He says further: "Once fishing a back water on the Thames, I caught a pike of 6lbs. Having occasion to procure a fresh bait from the well (of the boat) soon after, I was surprised to see seven small moor hens floating in the water which had been disgorged by my captured pike. This fellow had evidently snapped up the brood one after another. At Lough Conn, in Ireland, I once saw a big pike seize one of a flock, which I was told was not uncommon, and that the wild ducks had a bad time of it there." I think I understand now why I never

had any particular use for pike as a game fish. Young puppies, and snakes, and lizards, and kittens, and ducklings may be excellent baits in their way, but as a rule an artificial fly is good enough for me, although if anyone has a hankering to catch big pike with imitation ducklings, I have given the tip as I found it. I do not know but I might, if I were starving, bait a hook with a young mouse to catch a big trout, but it would be after everything else had failed. A trout that will take a live young mouse will take something else, and why not fish with something else, and the same with the pike? I have no such feeling about crayfish for bait, but my friend Mr. W. D. Cleveland has. We were at Brant Lake fishing for black bass, and soon after our respective boats had left the landing I heard an argument in the boat between him and his guide. It seems that the only baits they had provided were crayfish and minnows. Mr. Cleveland wished to use crayfish and would not touch them himself, nor would the guide, and at once there was trouble, and we had to change guides. That is not a parallel case, however, to the other baits I have mentioned, for crayfish are natural baits and the other things I have mentioned are unnatural as I look at them.

An Adirondack Lake in Spring.

If this were a theater programme it would probably read, "Two days are supposed to elapse between the last note and this one." I wrote "the last of May" very late one night and the next day I was going by express train up into the Adirondack region. Now, as I am again writing late at night, with all the windows lowered, as a warm rain falls outside, I can scarcely realize that only yesterday, with a fur coat enveloping me, I was walking on snow 4ft. deep, and that the beautiful trout lake I visited was covered with ice 12in. thick and firm enough to bear a pair of horses and a loaded sleigh. When I left the railroad it was a fairly warm spring day and dust was flying in clouds. The next morning it was, if anything, warmer, and when the horses came to the door it did not seem possible that a fur overcoat would be comfortable before night, for I had been casting with a fly over on that lawn only the evening before. The road was dusty as it led up into the mountains, then it became moist and finally muddy. Patches of snow appeared behind the rocks and on the north sides of the hills, and the mud became deeper and water from melting snow was running beside the road where there are no brooks in summer. Finally great banks of snow were encountered by the side of the road, and at last the road was found drifted full of snow and we had to go through a fence into a field to get around the drift, for the horses could not make their way through it; but the road was clear again and the horses drew us up higher and higher until the lake was reached and they could go no further, for there was snow all around, even in the road that led around the lake that indicated plainly "No thoroughfare."

Last fall the trout had spawned in large numbers just at the outlet of the lake, and the question was: Would the high water and swift current at the outlet send the young fish as they hatched down the outlet stream, or could they be retained in the lake to show the effects of fish planting in the lake? The water was very high, and there was snow enough to make it much higher without any assistance from possible rains. In two hours' time that lake was being drawn down, gradually but surely, to something like its normal condition, and there was a gentle flow at the outlet that would not harm even a young trout just hatched, and tempt it to stray away down stream from the observation of men who wished simply to see how fast it would grow, and who had no desire to cut short its growth by catching it; for there are other trout to catch and kill in other lakes. A few trout were seen just at the outlet of the lake, where current and sun together had worn away the ice, but it is evident that a spawning bed will have to be manufactured for the trout further away from the outlet.

Smelts for Trout and Salmon.

Last season I arranged with Fish Commissioners in New England to obtain some eggs of the landlocked smelt this spring, to plant the fish and establish them in some of the New York lakes, where they will serve as food for trout and landlocked salmon, and from which they can be transplanted to other New York waters. All experiments show that wherever the smelt can be established the salmon will thrive, and in that way salmon waters can be determined beyond a doubt, judging from the experiments in New England lakes.

Commissioner Stanley, of Maine, writes me: "I think I can obtain the smelt eggs for you this spring, and I have a large number of ponds in Maine that I must stock with smelts. I have also promised eggs to the New Jersey Fish Commission and the State of Connecticut.

"I have made arrangements to have men on the grounds with boxes all ready for packing, and if we have the usual run of smelts there will be no trouble about getting the eggs. At the place where we take them we get eggs from two varieties of smelts, one large and the other small. The small one is about 4in. long, the large one 10 to 14in.—larger than the salt-water smelt. There is some danger in transporting the eggs, especially in warm weather on long distances, but we have no trouble in Maine, and have hardly failed in a single instance.

"Moosehead and the Rangeleys are now full of smelts, and all the work done in six years. Since the smelt appeared the salmon have improved wonderfully in size and condition. They scarcely look like the same fish, and the trout are also better in the same respects. I think to get the best results with the salmon it is very necessary to have the smelt. With the smelt, I believe the salmon can be raised in any deep-water pond where trout cannot live on account of high temperature. * * * There are only a few days during which smelt eggs can be obtained: the last of April and the first week in May—probably. You of course know how to handle the eggs. You put them in a gentle current at the bottom of a brook flowing into a lake it is desired to stock, and near the mouth of the brook. They all disappear in a few days, so I think they hatch in two or three weeks. If you look sharp you will see the young fish gathered in schools near the mouth of the brook, but they are so small that it is difficult to see them. In Maine I find the same smelts vary much in size. In some lakes they are too small for live bait, while in another lake close by they attain a growth of 10 to 12in."

As there is but one species of smelt, the size of the adults must be regulated by the quantity of food the fish obtain. That spawning smelts of two different sizes are taken, one of 4in. and the other up to 10 or 12in., is explained in my mind by the possibility that the small fish may be two-year-old fish spawning for the first time and the larger fish are adult smelts. I say the possibility because last fall I picked up smelts on the shore of Sunapee Lake, N. H., that had been thrown up on the sand by the high winds. There were three sizes of smelts: First, the hatch of the previous spring, as near as I can measure them in a bottle on my desk, 2½in. long; second, smelts 3½in. long, which were hatched the spring of the year before; these fish had undeveloped spawn and would cast their spawn this spring, when they would be two years old and about 4in. or a little more in length; third, adult smelts, 8, 9 or 10in. long. There were comparatively few of the larger smelts thrown up on the beach, as they were stronger than the others and could work off shore in a blow. The New Hampshire Commissioners place twigs cut for the purpose in the streams where the smelts spawn, and when the eggs are deposited naturally and adhere to the twigs the twigs and eggs are packed in moss and shipped. At Cold Spring Harbor, a station of the Fisheries, Game and Forest Commission, salt-water smelts are hatched in the hatchery. The adult fish are caught when they run up stream at night to spawn (the only time they do run for this purpose) and are placed in an ordinary trough covered over to exclude the light, and there the fish spawn naturally. The impregnated eggs are then gathered from the bottom of the trough and passed through a fine sieve to separate them, as they are held together by a fine thread so that they make a mass without being what are called glutinous eggs. After separation, although they may have to be passed through the meshes of the sieve more than once, and the treatment does them no harm, the eggs are placed in a McDonald jar and they hatch in about thirty days. In the hatchery the eggs must be secluded from the sunlight or they will die, but in the brooks the eggs are deposited where the sunlight must strike them.

Mr. Stanley's statement that landlocked salmon can be made to thrive in waters with a temperature too high for brook trout will be read with more than ordinary interest, for at first thought it seems almost revolutionary, but he is an authority on the subject and what he says cannot be questioned.

Smelts seek the coldest water to be found in the New Hampshire lakes, where I have caught them colder than the water in which trout are found, but they may also bear warmer water, as Mr. Stanley intimates.

Fly-Casting Records.

It is not well to be hypercritical in matters relating to sport, and in what I shall say I do not mean to be; but in reviewing the fly-casting tournament in Madison Square Garden a writer in a sportsman's publication says: "Another necessity is a tank large enough to accommodate a record cast. It is perhaps not too much to say that Thomas Mills lost his record of 110ft. 9½in. by reason of the shortness of the tank. He cast beyond the flight of steps at the end of the tank and into the space occupied by an exhibit of taxidermy. What happened to the fly when it struck the flooring is not known, if it was on then, but it was not on the leader when the judges got to it."

My sympathy is wholly with Mr. Mills, for no one except Mr. Mills himself could have desired more earnestly that the cast should have remained a record than the writer of this note, but I do not believe that Mr. Mills will accept this explanation of his failure to score his great cast, which would have been a world's record. My idea is that it was not the shortness of the tank which operated against a record cast so much as it was the lack of room behind the caster for the back cast, for the caster stood on a movable box on the platform which could have been adjusted to suit the tank in a record cast of 110ft. had there been room behind it. But that is not the point I wish to make. The writer I have quoted says: "What happened to the fly when it struck the flooring is not known, if it was on then." I maintain that the fly in that cast did not strike the flooring; if it had done so it would have been on when the "judges got to it." Flies are not lost on the forward cast, but on the back cast, and I think Mr. Mills will admit that his fly was off before he completed his forward cast. If the fly had struck the flooring, attached to the leader, it would have made a record, for the very fact that the fly struck the flooring would have constituted the record, no matter what became of the fly afterward, for when the fly struck the cast was complete. The rule says that "the fly and leader in each contest must be intact at the time of record by the judges." For the time being the flooring took the place of the water in the tank, and usually the judges do not "get to the fly" after it has fallen, for they are there to note where it falls before it can be withdrawn for a new cast, which may be in an instant of time. Mr. J. J. Hardy, of England, who was two years ago the world's champion, has already written to me for particulars of the tournament, and other foreign anglers and fly-casters are interested in what was done over here, and to my mind what I have quoted gives the impression that our tournaments may not be conducted as they have been heretofore, if there is any doubt in the minds of the spectators what has become of the fly at the end of a cast, or whether it was on or not, when it proves to be missing at the time the judges saunter up to examine it.

The tournaments are conducted in the same old way, and flies snap off on the back cast just as they have had a habit of doing ever since there were flies and back casts. If there is any mystery about the business it is that more flies are not lost at the tournaments when such great casts are made.

The Big Trout of the Show.

One morning during the Exposition the editor of this journal asked me to look at a mounted trout in the Loan Collection and tell him what it was. I did look at it, but I cannot now find the memorandum I made, and am not sure as to what the legend over the fish read. It may have been "A Brook Trout," "A Big Brook Trout," or something of that sort; anyway it gave me to understand that the fish was exhibited as a brook trout, and by brook trout I understand a fish to mean a *Salvelinus fontinalis* and nothing else. Later I told the editor that I could not tell him what the fish really was, but it was *not* a brook trout (*fontinalis*), and I also told him that I thought I had seen the fish before. Of course about having seen it previously I was not positive, but I thought if I had seen it before it was in a case and marked 13½lbs. At the last show it was not it a case—provided it was the same fish—and it had a fresh coat of paint apparently, and the markings were those of the *fontinalis*—that is, the markings made with paint.

The scales and the teeth were plainly telling the paint that it was mistaken, and as nature made the teeth and the scales they seemed to have the best of the man who put on the paint in the form of spots, etc., like the *fontinalis*. I afterward saw a real *fontinalis* skin mounted in a Broadway store, and the owner and I drifted, in our conversation, to the big trout in the Loan Collection. I told him I thought it was our old friend at the first show of 13½lbs., and that reminded him that he had seen a trout of about that size in Chicago during the World's Fair. It was fresh then on the ice in a market, and was called a brook trout and so pronounced by a medical man and well-known angling writer, until his attention was called to certain peculiarities not possessed by the brook trout. Then the label was changed to read "Montana Trout." I asked Dr. Bean if he would go to the Garden and examine the fish and say what he thought about it. He did so, and writes me: "You ask me about the big trout skin at the Sportsmen's Exposition. I examined it as carefully as I could under the circumstances and still believe it to be a Dolly Varden (*S. malma*). You know how difficult it is to identify mounted trout; I could not find teeth at the root of the tongue because that part of the fish was removed, but all the other characteristics of *malma* are present. The size is above the average of Dolly Varden, except in northern waters where it has easy access to marine pastures." I ought to explain that in discussing the fish with Dr. Bean before he saw it I suggested that it might be a *purpuratus*, red-throat trout, but he inclined to the belief that it was more likely to be a Dolly Varden, with which I am not at all familiar. Dr. Bean has seen them a-plenty in the West and in Alaska, and for one I accept his statement as the correct identification of the fish, and that is all I can say about the brook trout which is not a brook trout.

Gut.

It is not so many years ago that I intimated very plainly in an article in FOREST AND STREAM that our friends across the sea had the first whack at the gut crop, and consequently we on this side rarely found in our markets the very highest grade of gut, either as to length or thickness. At the same time, I said the reason for this was that there was no demand over here for the very heavy or the extra long and fine gut. This did not please a gut dealer in England, and he assured me in this journal that he had furnished some very good gut to an American dealer, and printed a letter of the American dealer to prove it. As the information conveyed in the two letters had nothing whatever to do with what I had stated, for all our tackle dealers are constantly importing very good gut, I do not know what was proven by the two letters in question, as they asserted what any one would admit, and did not show that we had any of the gut I had specially mentioned.

At the Fisheries Exhibition at the Royal Aquarium, England, there was shown last month some gut at $12.50 per 100 strands, and it would lift a dead weight of 18lbs. Another dealer exhibited some fine gut, the strands being *over 40in. in length*. "Equal in quality to that of the finest ordinary gut."

This gut was obtained "by specially cultivating the finest 'Grecia' silk worms, and making the gut from the largest specimens thus obtained." Just as a matter of curiosity I would like to know how much gut is sold in this country the strands of which are over 3ft. 4in. long, and how much gut at $12.50 per 100 strands that will lift 18lbs. dead weight.

The gut that I particularly wrote about when my English friend sent over the certificate that he had sold some good gut in this country, cost, so Mr. Cholmondeley-Pennell said, $25 to $35 per hundred strands at wholesale. I never have seen much of this gut over here, but if there was a demand for it doubtless the gut would be forthcoming.

Walton's Chest.

It was generally believed, I think, that everything relating to the life of Izaak Walton had been printed in one or another of the hundred and more editions of the "Complete Angler," and that all his belongings that existed had been traced to their resting place; but it remained for the editor of the 121st edition of Walton's book to bring out something new, although it was discovered by the artist who illustrated the book. The 121st edition of Walton was edited by Mr. Richard Le Gallienne, and illustrated by Edmund H. New. The book contains an illustration of Walton's marriage chest, which bears the following inscription:

IZAAK WALTON—RACHEL FLOUD.

JOYNED TOGETHER IN YE HOLIE BONDE OF WEDLOCKE ON YE 27TH DAIE OF DECEMBRE, A. 16:6 D.

We once were two, we two made one;
We no more two, through life be one.

This attracted the attention of that very genial gentleman and charming writer, Mr. Edward Marston, father of Mr. R. B. Marston, who edited the sumptuous 100th edition of "Walton." He had heard of the old clock, which makes no other claim to have been Izaak Walton's than that it bears somewhere on it the initials "I. W.," but in the chest, which he assumed to be the "trunk of linen" left by Walton in his will to his son Izaak, he fancied a real discovery had been made and wrote to the artist asking about it, and received the following reply: "The finding of Walton's marriage chest was an accident. A cousin of mine was sketching sometime ago at Warwick Castle, and the housekeeper took her over the private rooms to see the old furniture, pictures, etc. The chest stood in rather a dark passage, but she happened to catch the name *Walton* on it as she passed, and knowing I was illustrating 'The Compleat Angler,' she told me of it. Last autumn I wrote to Lord Warwick asking for permission to see the chest, and make a drawing of it; it seemed really genuine. He replied that he was unaware that he had such a chest, but I was quite at liberty to draw it if I could find it."

Judging from the reproduction, the chest appears to be beautifully carved and paneled. The center panel in front represents (I judge) Adam and Eve in the Garden of Eden, and the inscriptions I have quoted are above and below

the panels. For a long time it was not known that Walton had married twice, but it was finally discovered that he had married for his first wife Rachel Floud on the date given on the recently discovered chest. The reviewers have received this last edition of Walton with praise on both sides of the Atlantic, and particular emphasis is given to the illustrations.

At the end of the volume is an angler's calendar, compiled by Mr. Hi Regan. Mr. Marston thinks this calendar should be revised, because in it the lamented Charles Kingsley is killed off in 1860, when he was alive for fifteen years after, and a reviewer on this side objects to the calendar simply because the immortal George Washington has Jan. 11 assigned to him as a birthday instead of Feb. 22, which day we celebrate in America as his birthday.

A. N. Cheney.

NEW HAMPSHIRE HATCHERIES.

From an address before the Hillsborough County Association, by Commissioner F. L. Hughes.

The State is operating at the present time eleven hatcheries, located, one each, as follows: Colebrook, Livermore Falls, Ashland, Meredith, Newfound Lake, Laconia, Conway, New Durham, Manchester, Keene and Sunapee Lake.

At the Colebrook hatchery about 400,000 brook trout eggs were laid down from the parent trout, located on the plant, which are hatching out finely. This hatchery, located as it is, is very convenient about stocking the northern part of the State.

The Livermore Falls hatchery contains about 200,000 brook trout and 20,000 Loch Leven trout. After purchasing Massachusetts's interest in this hatchery last year we made some necessary repairs about the tanks and ponds, in which we were obliged to move the parent trout from one place to another, and for that reason the trout did not give us the usual amount of eggs. This plant is very much run down. During the past two years of joint ownership neither party felt like expending much time or money in making needed repairs. It is situated on leased land, and if suitable arrangements can not be made with the owners as to rental, an attempt will be made by the Commissioners, through the Governor and Council, to condemn the land, under an act passed by the last session of the Legislature.

The Ashland hatchery contains 150,000 lake trout, 50,000 brook trout and 10,000 landlocked salmon, which will be placed in Squam lakes and local streams.

Meredith hatchery contains 50,000 brook trout and 150,000 lake trout. This is a fine plant, and with small expense could be arranged so as to rear fingerlings, as it has one of the finest spring streams of water in the State, which would maintain quite a large number of parent brook trout.

At Newfound Lake we have the best arranged and most commodious hatchery in the State. The building was built last fall at an expense of about $2,000. We laid down at this hatchery last fall 1,800,000 lake trout eggs, 150,000 salmon eggs, all taken from the waters of this lake. We have transferred from this plant to others in the State about one-half the eyed eggs to be distributed over the State. By this arrangement we were enabled to bring the eggs forward to the eyed state, and not be obliged to keep five other plants in operation during the winter, thereby saving the State several hundred dollars.

The Laconia hatchery contains about 700,000 lake trout, 100,000 salmon, 250,000 brook trout and 50,000 rainbow trout. This is the best point for distribution in the whole system, being, as it is, only five minutes' walk from the station, and has a never-failing water supply.

The New Durham and Conway hatcheries contain each 150,000 lake trout and 100,000 brook trout.

The Keene hatchery contains 150,000 lake trout and 175,000 brook trout.

The Sunapee station contains about 60,000 salmon, 100,000 aureolus and 75,000 brook trout eggs.

As will be seen, the hatcheries are well distributed over the State, and greatly aid us in the transportation of fry to different points in the sections in which they are located. No doubt the work might be done in a much less number of hatcheries and save some expense, but as long as the plants are in existence no one in the locality in which they are situated wants them abandoned, and for the better accommodation of the Commissioners in making the distributton we have kept them all in operation a part of the season.

The Commissioners are of the opinion that one-fourth of the fry kept till they were fingerlings and then planted would be worth many times more than the whole amount planted as fry, and with this end in view have decided to try and rear some during the coming season, if suitable arrangements can be made before the fry have to be planted; if not, we shall provide such feeding stations during the coming season and stock them from next year's supply of fry. It is the experience of those who studied the results that this is the best way by far for stocking lake and pond waters, but with the limited funds at our command we have not felt justified in making the outlay necessary for such an undertaking.

The State has hatched millions of fry in the past ten years, and many waters where they have been placed show good results, while in others the show is not as good, particularly so in Newfound and Squam lakes. In the former, at a low estimate, during the past eight years 4,000,000 fry have been planted, and the results are far from satisfactory, and for such waters we are strongly of the opinion that fingerlings would show much better results.

The hatcheries are all in good condition and a credit to the State, and if filled to anywhere near their capacity would furnish all the lake and brook trout fry we would want; and we are in hopes in the near future to be able to furnish more of that best and gamest fish, the landlocked salmon. This last variety is not plenty yet by any means, but is largely on the increase at Newfound Lake. We applied to the United States Commission for 100,000 landlocked salmon and got 5,000, which was all they could spare us. United States Commissioner Titcomb told us he did not think the United States Commission had 100,000 salmon eggs on hand Dec. 1, 1896

The question is how to get the best results with our fry. We know that we have plenty of hatcheries, and that they produce large quantities of fry, and that they have been well and judiciously planted, and, as I said before, in some waters show good results; for example, within the past five years lake trout have been introduced into Stinson Lake, and in the past two winters it is considered only a fair day's work to take fifteen to twenty-five trout for one man, while some have taken double that number in a single day. In both cases the planting of the fry at Stinson and Newfound lakes was the same.

The subject of fishculture is one of continual interest and importance. All measures pertaining to it were most carefully looked after during the recent session of the Legislature, and it is a matter of congratulation that not an act asked for in protection of fish and game was denied us, but, on the contrary, nearly all seemed to take that deep interest which the subject demanded and promptly passed such bills as the committees on fish and game reported, so that we were enabled to get our laws into shape and have them printed and distributed on the floor of the House before adjournment.

CANADIAN ANGLING NOTES.

Editor Forest and Stream:

I know from the number of letters that I have received from friends and fellow fishermen in the United States within the last few days that any number of American anglers are interested in the early disappearance of the now rapidly-decreasing banks of snow in Canadian forests, and in the subsidence of much of the snow water from our inland lakes, and the streams which form their outlets. I confess to a kindred sentiment myself, and hope that none of my correspondents will believe me unsympathetic or lacking in a disposition to oblige because I have not yet replied to their inquiries as to the probable date of the opening of the trout fishing season in Canada. I am neither a prophet nor the son of a prophet, and the indications are not yet forthcoming that justify the tendering of any advice as to the earliest fishing that this season will offer in the northern part of the Province of Quebec. We have a light snowstorm in progress as I write, and though wheels have made their appearance upon a few of our most used city streets, there are still more sleighs than carriages in use in town, and in the country the snow roads are pretty good. From Lake St. John I hear that the roads across the ice are still good, though in the neighborhood of Quebec the ice on the streams is quite rotten, and crossing in vehicles quite dangerous. On reference to my last year's diary I find that the season is now about as far advanced as it was a year ago, and unless the weather for the next fortnight or three weeks should prove unusually backward, the trout ought to be rising by the 20th and perhaps by the 15th of May. On this point I hope to be able to speak more definitely a week or two later.

Among the clubs that will be represented in the Lake St. John district about as soon as the spring fishing is announced are the Metabetchouan, the Springfield, the Tourilli, the Triton and the Nonamtum. Mr. Geo. E. Hart, of Waterbury, who is usually one of the earliest anglers on Lac des Commissaires, will probably cast his first flies this season away from Connecticut, on the Triton Club tract. This club has had a remarkably large accession to its membership of late, especially since it has leased the whole of the hunting rights on its territory, as well as the fishing.

Mr. J. P. Elton, of Waterbury, has sold out of the Nonamtum Club and purchased a share of the St Marguerite Salmon Club. Salmon waters cost money in Canada now. The fishing rights of the Moisie were recently purchased by Messrs. Hope, of Montreal, and Veasey Boswell, of Quebec. Report places the price paid therefor at $30,000.

Many inquiries are made here for salmon fishing privileges, and some recent purchases are admitted to be as much for speculation as for anything else; and a pretty safe speculation it seems to be. I learn that several lessees of fishing rights from the Provincial Government, apprehensive of keen competition at the general sale of all these privileges, which will take place in a year or two, for another term of ten years, are making private arrangements for the extension of their leases. This has already been effected by some of the larger clubs, but only on the condition insisted upon by the Government of a substantial advance upon the amount of present leases.

Mr. Elton expects to have another tussle with ouananiche this year, and another gentleman who is looking forward to the same sport is Mr. William A. Macleod, of Boston, a member of the Megantic Fish and Game Club, who was here this week on business connected with the Department of Fish and Game. The feature of the ouananiche season this year is likely, from the number of inquiries received, to be the presence at Lake St. John of an increased number of English anglers.

The new English "Encyclopedia of Sport" has ordered an article on ouananiche fishing from my friend and fellow angler Lieut.-Col. Andrew C. P. Haggard, D. S. O., whose contributions on the sport in the columns of the London *Field* have done much to familiarize it to English sportsmen.

E. T. D. Chambers.

Quebec, Canada, April 10.

NEW HAMPSHIRE FISH AND GAME INTERESTS.

Charlestown, N. H., April 13.—*Editor Forest and Stream:* When I sent you for the *Game Laws in Brief* a few days since the last revised edition of the New Hampshire laws, I had not time to call your attention to the changes made by the last Legislature, nor to the manner in which they were made; and as they may give some useful hints to the lawmakers of other States, I will now comment upon them.

In the first place, the people wisely elected two of the members of the Fish and Game Commission to the State Legislature; in the second, the presiding officers of the two bodies composing it made these Commissioners chairmen of the respective committees on fish and game legislation, so that Commissioner Wentworth was chairman of that body in the Senate, and Commissioner Hughes in the House. This insured us against any unwise laws, and secured some very wise amendments to the old code. To begin with the game, the open season for all upland shooting begins Sept. 15. It closes for deer on Dec. 15, and for ruffed grouse, woodcock, squirrels and all game, except hares and rabbits, on Jan. 1. Hares, rabbits and muskrats may be shot until April 1.

Killing of moose and caribou is entirely prohibited until 1901, and also of deer, except in the three upper counties of Carroll, Grafton and Coos.

Jacking, snaring, trapping or hounding deer are strictly prohibited in the whole State.

These amendments do away with summer shooting and give the young birds and squirrels a chance to get their full growth. It has been a long fight to get it, but we hope it will stay now.

The open season for lake trout and "winninish" is from April 15 to Sept. 15; that for brook trout, from May 1 until Sept. 1, except that they may be taken in the lakes of the above three named counties until Sept. 15, the same as the lake trout, and as the two species are found in the same waters it would be very difficult to have two close seasons.

The close season on black bass is from April 30 June 15; that on pike and pickerel, from April 1 to June 1. Catching brook trout *for sale* is prohibited under a penalty of $200.

Many lakes and waters in different parts of the State which have been stocked with trout, bass or "winninish" have been closed against "fishing through the ice," and the Commissioners have been empowered to close any other such waters against such fishing for a period of not over five years on reasonable petition of the inhabitants of the towns in which such waters may be situated. These make the principal changes, and appear to leave our game laws in such form that they will need no further changes for many years.

I am happy to say that I believe that respect for and observance of the laws increases annually, and that the heavy penalty imposed on market fishing may frighten such fellows as the one who was caught robbing the hatching brooks at Sunapee Lake to sell the trout to a Lowell restaurant. He was a fit companion for the man who killed the bison in the Yellowstone Park. The civilized world has no use for such people, and would be the better if they could be shut up in prison.

Von W.

Editor Forest and Stream:

The legislative session of 1897 has been a grand one in promoting the interests of fish and game in New Hampshire, and it is due largely to the sportsmen being organized.

In the late fall the Fish and Game Commissioners invited delegates from each of the fish and game protective associations in the State (and there is one in about every county) to meet them at Concord and decide upon what legislation to ask for. They were well represented in both the House and Senate, and through the untiring efforts of Commissioner Wentworth, chairman of the Fish and Game Committee of the Senate, and Commissioner Hughes, chairman of the House Committee, and the never-failing assistance of Frank Battles, of Concord, they were able to secure all legislation mapped out by the conference. As Mayor Clarke, of Manchester, remarked at the Hillsborough County Fish and Game Protective Association banquet the other day, "We ought not to ask for any more fish and game legislation for six years at least." It is just as important to have representative men there to prevent legislation that we do not want as to secure what we do want.

W., Jr.

MASSACHUSETTS AND MAINE.

Boston, April 17.—Monday, the 19th, is a legal holiday in this State, and many of the trout fishermen will again try the pools and bog brooks on the Cape. Yesterday was Good Friday, and the Chamber of Commerce adjourned over, leaving a chance for some of the boys to try the trout streams and preserves. At Byfield, Tarbox and Bailey were out the other day, but the water was high and they took only two or three trout. E. H. Wakefield, Jr., and R. O. Harding were down to Wakefield's preserve again, over Saturday and Sunday. They got a snowstorm on Sunday and could not fish at all. But early Monday the weather cleared and they got a dozen trout before leaving for home.

At this writing the ice has not left Sebago Lake, and the salmon fishermen here are some of them disappointed, because they had intended to spend the holiday there. The ice is still in Lake Auburn, while in trout lakes further north the ice is as solid as it has been any time for the winter. The trout fishermen will have to be patient awhile longer. The guides estimate that the ice will leave Moosehead about the middle of May. Estimates are various as to the clearing of the Rangeleys. They almost always clear a couple of days later than Moosehead.

The Rangeley lakes have cleared of ice on the following dates during the past seventeen years. The figures are all from a record kept by me, and published year by year in the Forest and Stream. About all the Maine papers are now claiming the item, but their files will show. One paper claiming the item had never made mention of it up to five years ago.

1880	May 7	1889	April 30
1881	May 9	1890	May 9
1882	May 12	1891	May 10
1883	May 14	1892	May 4
1884	May 13	1893	May 20
1885	May 15	1894	May 3
1886	May 3	1895	May 6
1887	May 16	1896	May 7
1888	May 21	1897	

If reports in the daily papers are true, the Maine Fish and Game Commissioners are not very sanguine concerning the new code of fish and game laws. A Lewiston, Me., special to the Boston *Herald* says that the Hon. L. T. Carlton said: "That he feared that the Maine Game and Fish Commissioners, of which board he is chairman, will experience much trouble on account of a blunder in the game laws made in the last hours of the Legislature by the engrossing clerk. It was the original intention of the game commissioners to have the open season on moose begin Oct. 15. Through the efforts of counsel employed by the guides, and for no other reason except to please them, it was decided to have the open season on moose begin Oct. 1. This was done to pacify the guides, who say that moose cannot be called after Oct. 15. The bill, with this change, passed the House and Senate, and then the blunder mentioned was made by the engrossing clerk, changing the open season from Oct. 1 to the 15th of that month."

The guides are greatly incensed over what they consider a trick, and this, in conjunction with the registration law, has served to put them in a high heat. They say that they will not register. I know of one or two letters from well-known guides to sportsmen here in Boston, telling their patrons to come down the same as ever; that they shall not register; that they shall guide the same as ever, and will make out no returns. In the Rangeley and Dead River regions, the guides are down on registration. The report mentioned above says that more than 100 guides in the Moosehead Lake region have organized themselves and taken an oath that they will not register.

I have a letter from a guide, asking me what to do about registering. The letter is written in the interest of one or two other guides, as well as the writer. I shall advise them to register—to comply with the law. If it is obnoxious and unreasonable, as I now think it is, look out that it is repealed at the next session of the Legislature of that State.

Special.

Dead River Region Trout.

Dead River, Me., April 14.—Who says there is not good trout fishing in the Dead River Region? A party of three on April 13, at Otter Pond, near the Ledge House and cabins, Dead River, caught in four hours' fishing 380 trout.

J. G. H.

THE IOWA U. S. HATCHERY.

Editor Forest and Stream:

A drive of thirty minutes from the pretty city of Manchester, Ia., brings one to the site of the new United States fishcultural station recently erected at Spring Branch, a favorite summer resort abounding in good trout fishing and wild and picturesque scenery—just the place a summer tourist would select to camp out, and a spot much frequented by picnicker and "snap shot" artist.

Early in 1895 an appropriation of $23,000 was made for the erection of an institution of this kind, and immediately several cities and towns in the State offered locations, foremost among which was Manchester. A civil engineer was sent out by the Government to make a careful survey of the different grounds, and after noting the many advantages and the excellent water supply it was decided that that city should secure the much-sought for prize. The site is one of the most picturesque places in all Iowa. Lying in a valley, with huge bluffs on either side, one cannot see the buildings until he enters the gate at the Government park. The grounds are covered with an excellent growth of timber and include an area of twenty-four acres, which was presented to Uncle Sam by the energetic and industrious citizens of Manchester.

The water supply is obtained from three natural springs, which have a combined flow of 3,400 gallons per minute. At the present writing only one of these springs is used, the largest, from which flow 1,800 gallons per minute. The surplus water empties into the trout stream and is carried away by the Maquoketa River. As the main building of the fishery is situated on a lower level than the springs, no force is necessary to conduct the water through the mains into the hatching troughs. The water is as clear as crystal and of the highest quality.

The main building is 65½×49ft, L-shaped, and the interior is finished in oiled pine. The floor is of cement, and large double windows on either side furnish ample light. In parallel rows at either side of the room are arranged the hatching troughs, and through these, it is estimated, about 400 gallons of water flow every minute. The water is conducted into the building at the north end, and after passing through the troughs is conducted into the artificial ponds, which lie immediately south of the main building. In all there are forty-seven of these ponds, all surrounded by macadam walks, and so arranged that visitors can view the different species of fish here propagated. Three ponds cover three acres in extent each, thirty six are 16×22ft., and eight 25×75ft. Situated also in the south end of the main building are Superintendent Johnson's neat and commodious office and the laboratory.

Passing from the main building through a door looking east, one is confronted by the mess house and a pretty building used for storage. Directly to the north are the ice houses and barns, and to the west, situated on the crest of a high bluff, is the modern home of Superintendent Johnson. From here he can command a view of the entire park and buildings.

Altogether the site is one that could hardly be bettered, and the place will possess a peculiar interest to the enthusiastic angler throughout the season. The fish from this station will be used to stock the streams of the Dakotas, Nebraska and Iowa, and we believe one shipment has already been made. Several hundred thousand eggs have already been received, and a recent visit to the hatchery found the many troughs filled with minnows, consisting mainly of lake and rainbow trout, and many eggs still in the hatching process.

Freaks of nature—that is, finny ones—occur quite frequently here, and in consequence the gentlemanly attendants have designated one of the troughs by the name of "fish hospital," and the curiosities are herein placed and given a chance to recover from their physical deformities before being cast aside as worthless. Twins here are an every-day occurrence—Siamese twins, of course—generally joined together simply by the egg sac, but in some cases grown together. Then there are some afflicted with curvature of the spine that can only swim in a circle, and others can barely move. But the great majority are perfectly formed and in good health, and only need a few years of growth to be ready for the hook and line.

Another appropriation of several hundred dollars has lately been added to help the good work, and it is to be hoped that our Uncle Sam will keep on adding until we see all of the Western streams well stocked, and it is safe to say that too much capital cannot be expended on undertakings of this kind. Hundreds of thousands of fish will be shipped from here in a single year, and the establishment of the enterprise will prove of invaluable worth to the Western States. As it is now the State hatcheries are small concerns, and we hardly believe them capable of producing enough fish in a year's time to stock more than a few small streams. Undoubtedly the larger portion of fish from this station will be used to stock Iowa streams just now, and the movement will prove a great boon to the lucky Iowan who delights in the fishing rod.

LOUIS FRED BORT.

THE DESTRUCTIVE LAMPREY.

ITHACA, N. Y.—*Editor Forest and Stream:* The Ithaca *Journal* of the 27th ult. contains an article over the signature of Mr. H. A. Surfuce, of Cornell University, in which public attention is directed to the depredations being committed by the lake lamprey upon the fish supply of central New York waters, and particularly upon the fish supply of Cayuga Lake.

The trained investigators of Cornell, headed by Profs. Gage and Wilder, have devoted a great deal of work to the lampreys of this region, and the conclusion that the lake lamprey preys upon the fish supply is based upon carefully accumulated evidence.

Mr. Surfuce, in his article, states that the lamprey attaches itself to its victim by suction and quietly adheres to it, "sucking blood when it is hungry, and occasionally rasping away at its raw flesh, making the hole deeper and deeper until finally the abdominal wall is completely perforated and the body cavity penetrated. Often the intestines and other organs of the fish are attacked and cut to pieces, but more frequently the lamprey fastens itself at another place if its victim has any blood left, or if not it hunts up another fish. The intestines protruding and the blood escaping from the deserted wound in a great many cases sooner or later cause the death of the fish." Lake herring, pickerel, carp, catfish and suckers have recently been found bearing the fatal mark of the lamprey. Many of our best food fish, Mr. Surfuce declares, are injured fatally or otherwise by the remorseless lamprey. It attacks whitefish, pike, pickerel, muscalonge, bass, lake trout, shad, salmon, wall-eyed pike and other species of both game and food fish. The lamprey is said to be a particularly aggressive enemy of the sturgeon of the Great Lake region. A Cayuga Lake sturgeon has been caught to which no less than six lampreys were attached.

In reference to the removal of the lampreys from the central New York lakes, Mr. Surfuce quotes Prof. Gage as follows:

"It has a single very weak point, viz.: leaving the lake and running up the tributaries to spawn. This seems to be the only weak point at which the lamprey can be attacked with a hope of exterminating it. This point is rendered still weaker from the fact that in Cayuga Lake and in Seneca Lake, so far as explored (during several seasons), the lampreys run up the inlet at the head of the lake only, and do not spawn in the tributaries entering the lake at intervals on each side.

"The lampreys must be destroyed before spawning if they are to be exterminated. Nothing would be easier than to do this. A dam with a fish-way, the fish way leading into an isolated inclosure where the lampreys could be easily removed and disposed of, or a weir of some kind could be constructed at slight expense. If this could be continued for three or four years in all the lakes and in the Oswego River, the race could be extinguished and the lakes wholly freed from their devastations. * * * It seems to the writer that from every economical standpoint it would be advantageous to rid the world entirely of the lampreys. It would certainly be greatly to the advantage of the fisheries of the State of New York if all were destroyed."

Agreeable to the suggestions contained in the above extract, a bill has been introduced by Senator Stewart in the Legislature, as an item in the General Supply bill, appropriating $500 for the placing and manipulation of a weir in the Cayuga Lake Inlet above the limit of navigation and below the lowest place where the lampreys spawn. As to the work involved in the guardianship of the proposed weir, Mr Surfuce makes the subjoined proposals:

"Two watchmen may be employed to alternate in watching this weir constantly, day and night, during the 'running' season; and empowered as deputy sheriff, the watchman will be able to arrest any trespassers who might otherwise seriously interfere with the success of the experiment.

"A specialist from Cornell University will visit the weir every morning and evening at perfectly regular intervals, and with a shallow dip net will remove the lampreys and help over the good fish and let them go on their way rejoicing. A strict count and record will be made of the kinds seen and of the number of each—their condition, development, habits, and such other points as will be of economic or scientific interest and help to give correct answers to the questions above asked. By conscientiously performing this work it is also possible to determine what percentage of each species migrates in the daytime and what at night.

"The specialist who will have charge of this work is under written pledge, signed by himself and Prof. Gage and Dr. Wilder, that no fish captured in this weir will be used for any other purpose than for strictly scientific investigations, and careful records and reports will be made of the number of each kind thus taken and used. A bond to this effect will be furnished if required, but fortunately the members of the State Commission appreciate the true significance of a statement signed by the above-named persons, and now in the hands of Chief Game Protector Pond."

Should the desired appropriation be forthcoming, the public, and especially that part of it interested in fish and fishing, will watch the execution of the proposed work with vigilant concern.

M. CHILL.

Salt-Water Bait-Casting Contest.

THE first casting contest of the Liberty Island Rod and Gun Club was held Saturday, April 17, at Liberty Island, in New York Harbor. About 200 entered. Five prizes were offered for striped bass casting, sea-coast style.

First prize, gold medal, Dr. E. H. Merritt; 127ft. 1in.

Second prize, silver medal, James T. Reithel; 120ft. 2in.

Third prize, Liberty statuette, G. P. Morosini; 94ft. 11in.

Fourth prize, red spool bass line, W. C. Birdsall; 92ft. 2½in.

Fifth prize, year's subscription *American Angler*, Howard Housman, 10ft. 5in.

Special prizes were offered for members of the club under the rules of heavy bass casting, James T. Reithel was first with 127ft. 7in., Albert H. Baer was second with 93ft. 1in.

For striped bass casting, New York Bay style, there were three prizes, won as follows: First, Wallace C. Birdsall, 73ft. 2in.; second, Dr. E. H. Merritt, 67ft.; third, James T. Reithel, 43ft. 7in.

Judges: W. H. Wood and A. F. Meisselbach; Referee, W. C. Harris. President Baer awarded the prizes.

Can the Pickerel Change his Spots?

I WISH you could correct your correspondents for calling pike "pickerel," which are only little pike. In your "Answers to Correspondents" the other day you spoke of a "pickerel" weighing 15lbs., which is not a very little one. When our English ancestors found the small *Esox reticulatus* in our Eastern streams they called him a "pickerel," but he very seldom reaches 5lbs., and is "quite another story" from the real pike of the country west of Lake Champlain, who is no more a pickerel than the Southern bass is a trout.

VON W.

New York Legislature.

ALBANY, April 19.—The Governor has signed: Assemblyman Benham, authorizing fishing for white fish, eels and other fish in Canandaigua Lake with net lines from the shore, no person to operate more than two of such lines; Assemblyman Eldridge, relative to fishing in certain waters in Warren county; Senator Davis, relative to the forest preserve in Ulster county; Assemblyman Clark, appropriating $30,000 for the St. Lawrence State reservation; Assemblyman Rounds, permitting fishing through the ice in certain parts of Owasco Lake.

The Senate has ordered these bills to a third reading: 1008, Senator Nussbaum, close season for black bass in Crystal Lake, Albany county; printed No. 2322, Assemblyman Miles, relating to the prevention of forest fires; printed No. 2155, Assemblyman Benham, dogs running at large where deer inhabit; 1122, Senator Stewart, fishing in Fall Creek, Ithaca; printed No. 1950, Assemblyman Coughlin, amending the game code; the Senate has passed: 1209, Senator Parsons, relative to disseminating knowledge concerning birds and wild animals; 1163, Senator Sullivan, digging of sand and other worms in Queens and Suffolk counties; 980, Senator Krum, shad in the Hudson River.

In the Assembly, Assemblyman Harrison's amendment was amended and ordered reprinted. It provides that Justices of the Peace may issue warrants for the arrest of game law violators. The amendment which which was inserted provides that a person arrested for violating the game laws must be tried in the town in which he is arrested or an adjoining town.

The Assembly has passed these bills (introductory numbers): 1,710, Assemblyman Sears, relating to the possession of venison; 1,556, Assemblyman Palmer, close season for black bass in Crystal Lake, Albany county; 897, Assemblyman Pierce, new fish hatchery for food or commercial fishes in Schroon, Essex county; printed No. 2,651, Senator Krum, relative to black and gray squirrels, hares and rabbits; 1,686, Assemblyman Auds, squirrels, hares and rabbits in the counties of Chautauqua, Chenango, Ontario, Tioga and Schoharie; 1,798, Assemblyman Leonard, digging of sand and other worms in Queens and Suffolk counties.

The Assembly ordered to a third reading Assemblyman Hobbie's bill, prepared by the Fish Commission, which provides that hand nets only shall be used in shad fishing in the Hudson, and that they shall be taken up Friday instead of Saturday night, and shall not be replaced until Monday morning. Mr. Whritner tried to kill the bill by an amendment, but was voted down—ayes 25, noes 37. MATHER.

"Angling Talks."

WE have a very few copies of George Dawson's "Angling Talks," a series of chapters of entertaining chat about men, fishermen, fish, fishing and fishing places. Cloth, 50 cents. Forest and Stream Publishing Co.

Jan. 10.—U. S. F. T. Club's winter trials, West Point, Miss.
Jan. 17.—Continental F. T. Club's trials, New Albany, Miss.

BLENDED ODORS.

Editor Forest and Stream:

May I suggest that the above title is a misdescription of the case of a dog, after getting a nose of skunk, pointing a bird. Is it not the fact that the odors were not blended, although present at one time? If odors "blend" the result would be a new odor, and it seems probable that while many odors may be present at one time, each is distinct in itself, and the nose has no more difficulty in distinguishing them apart than the ear has in distinguishing a whistle on a key in a nail factory.

In your footnote on T. B. A.'s letter you say that such instances occur rarely. Is it not more the case that they are reported rarely? Or that it is rare that a dog gets skunked just before being in a position to point a bird?

I really believe that any keen-nosed dog can get the worst sort of skunking and be just as fit to trail as before the malodorous calamity. Most certainly I know that foxhounds have done it within my own observation, and I remember distinctly Dr. Hill's Ginger getting horribly skunked and within ten minutes picking up a fox trail that half a dozen other hounds had passed over; and in this particular instance I perfectly remember that the old hunters did not think it was anything peculiar, saying "Any good hound will do that." I have been told by a man in whose word I have implicit confidence that when some wolves broke out from Hoy's Wilderness (West Virginia and Pennsylvania) into the settlements, the staunchest foxhounds did not recognize the trail as game, distinguishing between fox and wolf scent. The most reliable foxhound that ever was whelped will take a deer trail even when running a hot fox trail, and I believe your bird dogs know enough not to point rabbits.

But why should it be considered strange that an animal depending on its "nose" as much as the dog does should be able to distinguish one scent from another, when mankind can do the same to fully as delicate a degree? A friend of mine told me he could lean over a kettle of boiling glue stock (horribly smelling stuff) and distinguish any perfume from any other on a hankerchief. Julia Brace (deaf-blind) could assort the clothing of her fellow pupils after coming from the wash by smelling it. Linnie Haguewood (another deaf-blind girl) knows every dish on the table on coming into the room. James Mitchell (a deaf-blind man who died about 1330) recognized his friends by their smell, and even formed his likes or dislikes of strangers by that means. Rev. M. B. Wynne wrote me that his young brother-in-law could always tell whether a rabbit was in its burrow by smelling at the opening. The deaf-blind always display this extreme delicacy of scenting powers (except of course in such cases as Laura Bridgeman, Ragnhild Kaata, Willie Caton, etc., where the senses of taste and smell were destroyed by the disease which ruined their sight and hearing), and it would seem that they only appreciate distinctions which those in possession of all their senses neglect. I know that doctors will say that the organ of smell is but vestigial in man, while fully developed in dogs; but no trained man-tracking hound ever displayed more delicate "nose" than Julia Brace did, and a stubborn fact like that counts strong, regardless of what anatomy says.

W. WADE.

American Dachshund Club.

Editor Forest and Stream:

The American Dachshund Club will hold its next meeting May 6, 8 P. M., at O'Connor's, Ashland Block, Chicago, to transact its regular business and elect officers for the ensuing year. Votes for officers and delegate to the A. K. C. should be sent to the secretary by mail, by those who are not able to be present at the meeting.

It would be to the advantage of the club to have all the officers reside in one city, as close together as possible, so all important business could be attended to at short notice. The delegate to the A. K. C. should be a resident of New York.

Any suggestion made in the interest of the club and our breed will be thankfully received and considered at our next meeting.

A. FROEMBLING, Sec'y.

218 STATE STREET, Chicago, Ill.

Continental Field Trial Club.

PITTSBURG, Pa., April 15.—*Editor Forest and Stream:* The Continental Field Trial Club's third annual trials will be run on chickens at Morris, Man., on Sept. 1, 1897.

The Continental Field Trial Club's third annual trials will be run on quail at New Albany, Miss., on Jan. 17, 1898.

W. S. BELL, Sec'y.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

REASON IN A MOUSE AND IN A DOG.

Rossville, S. I., N. Y.—*Editor Forest and Stream:* In his very interesting remarks on "Instinct and Reason" in the Natural History department of Forest and Stream (April 3, 1897), Von W. says: "The opinions of the Rev. Charles Josiah Adams are especially interesting as coming from a source from which we usually look for nothing but opposition to scientific research."

I know that in this remark he does not refer to Charles Josiah Adams, but to the Reverend gentleman of that name. It is true that too many clergymen condemn "scientific research." There is a "science so-called" in which there is nothing beneficial to be found in this day as in the day of St. Paul. It is simply an attitude of mind. It is a pretense of knowing where nothing can be known. It is in the picturesque language of the street being "stuck on one's self." That was the trouble with the old Gnostics against whom St. Paul militated. That is the trouble with many a modern clergyman. It is also the trouble with many a modern scientist. The truth is that neither any man nor any school (to borrow from the vocabulary of the street again) "knows it all." It seems to me just as true that there is neither man nor school who (or which) does not know something—symbolize, stand for, some truth or some phase of truth.

The scientist knows those things which are cognized by the external senses, and the generalizations based upon those cognitions. The clergyman knows those things which are cognized by the inner senses—imagination, "faith, hope, charity"; which, I submit, have as certainly sensory quality, as touch, taste, smell, hearing, sight.

So far as I am personally concerned, I have always claimed the right to use both external and internal senses—to be pleased and benefited by the facts which come to me through either, and to pass, with tongue and pen, the pleasure and benefit on to others. I have occasionally found a scientist foolish enough to say that I should not use my "faith, hope, charity," as I have once in a while found a clergyman who was foolish enough to say that I should not use my eyes and ears. At each I have simply smiled and gone on using the senses which correlate me to matter and those which correlate me to spirit. It seems to me that any man who does not do so—well, there are idiots complete, and idiots partial.

For a good many years now I have been a scientific psychologist. The result is that I hold more and more firmly those things which I mean by biophilism; all animals (man and the lower) are essentially one in sense and in faculty. It is the plain duty of all sentient beings to "love one another." Man being the highest of all sentient beings it is plainly his duty to do the most loving. There being no way of avoiding his taking the life and the service of his humbler fellow creature, he is bound in the nature of things to do so as mercifully as possible, or suffer the consequences. Immortality being something natural to man it must be also something natural to the lower animal.

Both man and the lower animal are instinctive in their actions. They are both also rational in their actions. Some time ago I published an account of how two rats stole eggs. One of them lay on its back and held the egg with its paws on its breast and abdomen, while the other dragged it by the tail to, and into, their hole. I vouch for the accuracy of this observation, which is not the less to be accepted because La Fontaine records a similar action by rats 200 years ago. I refer to this observation here only that I may tell a mouse story, which I hope may go as widely over the world as did the rat story. The mouse story I have not published before. It was told me on a steamer on Arthur Kill a few days ago by a lady, who began with an appreciative laugh at my rat story, which she had read somewhere. She said that she and her mother had both been laid up with la grippe. They were living in a flat. They kept some food in an old-fashioned washstand, in the room to which they were mostly confined. The mice got at the food. They wondered how. They could find no hole through which a mouse could possibly get into the compartment in which the food was kept. But the mystery was explained. The narrator sat one day alone in the room painting. A little mouse came from somewhere. It approached the stand. The compartment which contained the food was closed by folding doors—to one of which was attached a cleat to cover the crack between the two. Not being at all afraid of the mouse—which evidences her to be a woman of exceptionally firm mind—the lady kept on painting with an eye on the intruder to see what it would do. It evidently knew where the food was—through the sense of smell no doubt, though some other mouse might have informed it. It sat upon its haunches and looked up. The bottom of the doors was considerably above it, for the stand was raised some three inches from the floor by feet. It seemed to deliberate. Then it made a leap, and struck the doors at the bottom at the place of their touching on the cleat, at the very point where a blow would be most likely to jar them open. This action was repeated three times. The last time one little paw went back of the cleat, which had been jarred out somewhat, and the other succeeded in catching so as to support the mouse's body. The result? The door was pulled and pushed open as rationally as a human hand could have done it. The lady could not allow her food to be spoiled, of course. The mouse was scared away, but the lady must have regretted the necessity of preventing its enjoying what it had come at by rational procedure—as certainly rational as was ever human procedure.

The time is gone by when we should see such expressions as this in literature—from Dumas's (père) "The Man in the Iron Mask": "Only, in addition to the instinct of the animal, Grimaud subjoined the reasoning faculties of man." The truth is that every sentient being is governed by at least two things—instinct and reason. Man is, should be, or may be, governed more by reason than by instinct, but every man is governed more or less by instinct. Every lower animal is governed more by instinct than by reason, but every lower animal may be, and on occasion is, governed by reason. My new dog, Bumper, without teaching, when only three months old opened a door which swung toward him by placing his paw in the crack, not more than an inch wide, by which the door stood ajar, making the crack wide enough for the insertion of his nose, standing aside, and making the crack wide enough for the passage of his body. What is done by direction may be done from simple impulse or instinct. What is done by indirection can only be done by reason.

What is instinct? The fashion is to answer, as "Von W" does, "inherited experience." I think that it is more. The first mouse, dog, man, the first sentient being that ever found itself on earth acted instinctively. But back of it there was no "experience" of any one of its kind (or his kind) to inherit. The truth, it seems to me, is that through which the great author (whom the Christian calls God; and I know of no better name) takes care of His creature. What is reason? That through which the creature takes care (or tries to take care) of itself.

Through instinct God takes care of me. And He just as certainly takes care of the mouse and of the dog in the same way. The more instinctive I am the more I know the mind of nature, the more I am sure of immortality. May not the mouse and the dog know more about subjective things than I do? It seems to me that the highest province of reason is in the positive, not in the negative. It seems to me that my duty is to love the truth—to let the facts come to me from where they may, and through, indifferently, my internal or external senses. The man who does so is the true scientist.

Charles Josiah Adams.

Rossville, Staten Island, N. Y.

American Pet Dog Club.

Mr. and Mrs. C. Frederick Spaulding, of Prospect street, East Orange, graciously took it upon themselves to entertain the members of the American Pet Dog Club at the Essex County Club on Wednesday last.

The day was a delightful one, and all the out-of-town members were met at the Orange Station at 1:37 P. M., and conveyed in carriages to the club house in Hutton Park.

The club is a national organization, and has members in many States, which brought out many persons from afar, some coming from as far as Atlanta, Ga. The objects of the club are to encourage the breeding of small dogs to the highest standard of perfection, and advance a general knowledge of the proper care and treatment of household pet or toy dogs.

There is no more enthusiastic member, and few have done more for the club than the charming hostess of Wednesday's entertainment, and outings of this kind do more toward bringing such organizations into popular favor than almost anything else can. The membership turned out in great force, and amongst others the following were present. Mrs. Walter Stanton, New York, President of the club; Mrs. C. Frederick Spaulding, E. Orange; Mrs. Robert J. Lowry, Atlanta, Ga.; Vice-Presidents. Mrs. R. K. Pritchard, Brooklyn; Miss Roselle, New York; Mrs. Blakeley Hale, New York; Mrs. Thomas Barr, E. Orange; Mrs. and Miss Barth, St. Louis; Mr. W. E. Taylor, New York; Capt. Robert J. Lowry, Atlanta, Ga.; Mr. Edward F. Murphy, New York; Mr. T. Farren Rackham, Secretary, E. Orange; Mr. E. H. Morris, Nordorf; Mr. C. Frederick Spaulding, Mr. W. Fryer, New York; Mr. W. Burkehart, Brooklyn, and others.

Immediately after the arrival of the members at the club house luncheon was called, after which the business of the club was put through as speedily as possible and the members were invited to spend the afternoon with friends of Mr. and Mrs. Spaulding, most of whom came from New York and the Oranges, and numbered fully 150.

The afternoon reception was a most enjoyable one; the fact that it was Lent kept few persons away, and the vast number of gentlemen who were present was a frequent topic of conversation. Most of the receiving party were New York ladies, who ably performed their duties. The refreshments were presided over and served by Mrs. Wallace Blackford, of Brooklyn, in a most dignified manner. Miss Ada Blackford poured chocolate charmingly; and the above were most ably assisted by Mrs. Frank Norton, Mrs. Augustus Meeker, Mrs. Thomas Barr, Miss Grace Norton, Mrs. Irving Smith and Mrs. E. K. Rhodes.

Isler's orchestra was in attendance. At about 5:30 the guests began to depart, but an invitation was extended to a few favored ones to remain and participate in a supper, which was greatly enjoyed, and afterward short but witty speeches brought forth much laughter. Vocal and instrumental music concluded the enjoyable entertainment.

T. Farrer Rackham.

Pointer Club of America.

The board of governors of the Pointer Club of America held a meeting on April 16, at the room of the American Kennel Club. Present: Messrs. Webster, Mortimer, Jarvis, Brush and Lewis. The minutes of the last meeting were read and accepted.

It was resolved that the *American Field* Pointer Cup, which was competed for at the Westminster Kennel Club's show, shall be awarded to Mr. W. Gould Brokaw's pointer dog Sir Walter (reserve), on the ground that the Glen Rock Kennel, the owner of Molton Banner, was not a member of the Pointer Club.

It was resolved that the president of the Pointer Club shall be the custodian of the *American Field* Pointer Cup until the conditions are complied with by the winner, which accompany it.

It was resolved that the special prize offered by the Pointer Club at St. Louis bench show for the best pointer dog in the show, which was awarded to the Glen Rock Kennel, shall revert to the club, on the ground that the Glen Rock Kennel is not a member of the Pointer Club.

It was resolved that the special prize awarded at the Westminster Kennel Club's bench show to Alice Leslie shall be paid to her owner, Mr. E. M. Beale.

The question of establishing for competition a trophy to be known as the Breeders' Trophy Cup was freely discussed, and it was resolved that the secretary shall send to each of the members in form a series of questions covering the subject in detail.

The meeting adjourned.

International Fox Terrier Club.

Port Huron, April 15.—*Editor Forest and Stream:* The International Fox Terrier Club will hold its first show here May 24 and 25, made up with the following classes for smooth and wire dogs and bitches. Classes divided as follows: Open to all dogs and bitches respectively. Winners' class, that have won five firsts. Limit class, that have won three firsts. Novice class, that never won first under A. K. C. or C. K. C. rules. Puppy class, under twelve months.

J. J. Lynn, Sec'y-Treas.

POINTS AND FLUSHES.

Vol. XIII. of the American Kennel Club Stud Book, containing the registrations of 1896, is now in book form It is neatly printed and bound. The numbers are from 39,078 to 42,589. Besides the registrations, it contains lists of officers, active members, associate members; kennel names, prefixes and affixes; field trial winnings, 1896; bench shows and judges, 1896; bench show winners, 1896; cancellations, corrections, etc. As a record, it is invaluable to all owners and fanciers of dogs. Address Mr. A. P. Vredenburgh, Secretary, A. K. C., 55 Liberty street, New York.

We have some inquiries concerning the old strains of English setters, and in particular the one bred by the late Ethan Allin, Pomfret Center, Conn. His dogs were famous in New England shooting up to the time of his death. We will be obliged to any of our readers who will give us the names and addresses of owners of the native strains mentioned.

Mr. George Keller, under date of April 15, informs us that he lost his blue belton setter three weeks ago. His address is 11 Park Terrace, Hartford, Conn., and his name and address are on her collar. He describes her as being a bluish or grayish-black haired dog, with a sprinkling of white hair under the belly and on the feathering of the legs and tail. He will give a suitable reward for her return.

The twenty-second field trial spring meeting of the Kennel Club, took place on the estate of Capt. Pretyman, Trimley, England. The Derby had twenty-six starters. The winners were: First, Mr. C. Austin's Irish setter dog Sam Sullivan; Second, Mr. R. Ll. Purcell Llewellin's blue belton setter bitch Kitty Wind'em; Third, Mr. Elias Bishop's liver and white pointer dog Prince Pedro; equal fourth, Mr. R. Ll. Purcell Llewellin's black white and tan setter bitch Gem Corbet and Mr. W. L. Nicholson's liver and white pointer bitch Drayton Belle; equal fifth, Sir H. F. de Trafford's Irish setter dog Barton Punch and Mr. H. Drory's liver and white pointer dog Roy of Meirelbeke. The winners in the All-Age Stakes were: First, Mon A. Morren's pointer dog Bendigo of Brussels; Second, Mr. F. C. Lowe's setter bitch Mabel of Kippen; Third, Mr. H. W. Wilson's Irish setter dog Bonny Pat of Coldhill; Fourth, Mr. B. J. Warwick's liver and white pointer bitch Dolly of Budhill.

The daily press reports the death of Owney, the dog which had won so much notoriety by his peregrinations through the country with the postal service. He had become old and ill-tempered, and was shot for attempting to bite a postal clerk.

Mr. L. O. Seidel, Sharpsburg, Pa., Secretary of the Central Beagle Club, informs us that the club's annual field trials will be held on Nov. 9 to 11.

Wheeling.

Communications for this department are requested. Anything on the bicycle in its relation to the sportsman is particularly desirable.

WHEELING NOTES.

Very light weight bicycles are desirable under certain conditions, but they should never be selected by inexperienced riders. The factor of safety in the average bicycle approaches very closely to bed rock, being estimated at 1.25, which means that if any part fails in strength by only as much as one-quarter what is expected of it the bicycle may be crippled. In the very light wheels this factor of safety is still further reduced, and though a skillful wheelman may ride such a bicycle with perfect safety it is not wise for any other rider to attempt it.

The experienced rider knows exactly how to humor the wheel so as to spare it undue strain. When the surface is not of the smoothest he throws a part of his weight in the handle bars, thus distributing the stress evenly between the two wheels; and at times he helps the machine over bad places by changing his weight backward, forward or to the pedals. If the rider sits like a dead weight in the saddle the wheel will go to pieces with him in a very short time. He must be in thorough sympathy with it, and always in readiness to ease that part of the machine which is subjected to a sudden shock. Light wheels will never stand coasting, for with feet up it is impossible to sit otherwise than as a dead weight.

The safest plan for the novice is to begin with a strong wheel, even though it is heavy. Afterward many riders will prefer to keep such wheels, both as wearing better and also as conducing to their peace of mind.

We have all seen the fact stated that the so-called "factor of safety" is lower in the bicycle than in almost any other mechanical product. In high pressure guns, for instance, the factor of safety is said to be often as great as 20, meaning that the guns are made twenty times as strong as is theoretically necessary for the strain they must bear. In ordinary guns the factor of safety is 12, in boilers it is about 6, in bridges usually 5, and so on.

After these figures it is rather startling to be told that in bicycles the factor af safety has been reduced to 1¼.

Nervous people are apt to hastily jump at the conclusion that a slightly additional weight to that of the rider would break the bicycle down and result in a catastrophe; but as a matter of fact any high grade bicycle will easily support and carry over a good surface a weight of a ton, or more than thirteen times the weight of the average rider.

It is only when running at the highest rate of speed, and encountering the maximum of rough surface, that the factor of safety is ever approached. It is for such occasions that the high grade bicycle is constructed of the toughest and strongest materials ever put in a similar mechanism, and it is then that the difference between the real bicycle and the dry goods article becomes apparent.

Members of the Century Wheelmen, of Philadelphia, have adopted a plan of insuring their bicycles against theft which has many points to commend it to other wheeling clubs. The members have formed among themselves a "mutual insurance club, which, in consideration of an initiation fee of $1 and assessments of 25 cents paid whenever wheels are stolen, guarantees the sum of $50 to the loser of a bicycle.

One of the cleverest bicycle advertisements seen in the trade papers begins with Longfellow's lines:

"In the elder days of art
Builders wrought with greatest care
Each minute and unseen part,
For the gods see everywhere."

Convince us that the modern builder of bicycles follows this rule and we will all buy his wheels.

The art of bicycle construction seems to have practically reached its limit, and the current models are the strongest confirmation of this assertion. Mr. A. H. Overman, who is a bicycle manufacturer of ripe experience, in an interview published in a Buffalo newspaper is quoted as saying:

"The improvements of 1897 are in the refinement of the wheel. They consist in taking out a quarter of an ounce in one place without weakening the wheel, and putting in a sixteenth of an ounce in another place, where it will strengthen it."

Mr. Overman has an idea which, if it could be carried out, would do much to raise the standard of bicycle con-

struction. He believes that the makers of bicycles should be compelled by law to furnish with each wheel a bill of particulars regarding the materials which enter into its construction. Of course, there would be a penalty for falsifying, as there is in many States when a man sells oleomargarine for butter; and we can well imagine that the people who afflict the trade with wheels just strong enough to hold together while being carried out of the salesroom would have their ingenuity taxed to the utmost in inventing high-sounding names for the flimsy materials which enter so largely into their product. As Mr. Overman remarks, "Riders have a right to know what goes into their wheels. The handle bar should be as good as the bone in the arm which steers it. When a man goes down a hill on a bicycle he should know that there is the best of everything in the vital parts of the wheel beneath him, and that his life is not hazarded by some maker who believes that the stuff in it is good enough."

According to the newspapers, Johnson Brown, a mighty Nimrod living near Garner, Iowa, is having a bicycle built with a shotgun mounted across the handle bar, on the principle of the swivel guns used in punt shooting. The contrivance is said to be intended for wildfowl shooting, but the dispatch fails to state where Mr. Brown has found good roads in connection with the "flocks of geese and brant" that figure in the reporter's imagination. If it had been a bicycle boat the case would have been different and more plausible.

The Pennsylvania Railroad Company announces that hereafter bicycles will be checked by baggage agents and carried in the baggage cars of the company when accompanied on the same train by the owners, free of cost, provided the passenger presenting a bicycle has no baggage; otherwise the bicycle will be charged for at regular rates. This arrangement applies to all the lines of the Pennsylvania Railroad system east of Pittsburg and Erie. Between Pittsburg and Chicago the Pennsylvania lines have carried bicycles as baggage for the past year.

A lady who spent a season cycling in Algeria tells of an incident which shows that human nature and the love of the bicycle is pretty much the same the world over. In company with her brothers she was wheeling to an oasis in the desert of Sahara. She writes:

"Before one reaches El Kantara the road descends in a series of loops, a range of barren, yellow hills, and it was at this point that we met a Bedouin caravan coming from the desert. The camels stopped at our approach and sniffed the air as if the presence of bicycles was not to their liking, and the caravan came to a halt, the women clambering down from their coops on the camels' backs to join the men in their inspection of the bicycles. These Bedouin women were charmed with our wheels. They wanted to ride them at once, and their tattooed faces expressed the greatest eagerness to mount the wheels. We were therefore just about to give them a first lesson in bicycle riding when my brother, charmed with the picturesqueness of these Bedouins in their gayly-colored garments and barbarous jewelry, thought it an opportune moment for his camera. Alas! at the sight of this instrument, much feared by the Arabs, the whole caravan took flight."

Cycling accidents have been divided into two classes—those which happen to men who ride without brakes and those which happen to women who lose their heads. It is a fact that in a large percentage of cases the men are killed or injured by losing control of their wheels going down hill; the women, by losing control not of the machine, but of themselves.

Women, of course, have brakes and are naturally cautious; men, on the other hand, are apt to be reckless, discarding brakes and taking unnecessary risks.

That the fashion of riding without brakes is pernicious is proved by these accidents. The man argues that he can retard his speed by back pedaling sufficiently for practical purposes on most hills, and that in case of emergency he always has in reserve the possibility of checking his speed by pressing his foot against the tire of his front wheel.

These expedients are generally successful, but not always. On a bad hill the rider may strike a rough place that throws him off his balance and makes it impossible to brake with his foot, or the necessity of stopping may be so immediate that nothing short of a quickly worked brake will answer. Results from such contingencies are to be found in the columns of every newspaper during the cycling season, and the total of these accidents is never fully reported.

The women here have a better case than the men. They lose their heads through inexperience, inherent and congenital, and the accident results not because of any fault of theirs that foresight could correct, as is the case with the men.

We blame others most justly for lack of common sense and prudence, and not for deficiencies which they cannot remedy.

Brakes of a proper type should be attached to all bicycles, even though they may never be used. There seems good reason for believing that in the near future the use of brakes will be made imperative by legal enactment.

Yachting.

YACHT DESIGNING.—XVIII.

BY W. P. STEPHENS.

(*Continued from page 296.*)

THE selection of a practical working outfit of drafting instruments is a matter that the experienced draftsman may well puzzle over, while to the amateur or beginner it is almost a hopeless task. The complete and elaborate catalogues published by the leading instrument makers are intended as guides in such a selection, and fill that end as well as it can possibly be done in such a way; but only a long, practical experience can enable a man to select from the extended list of costly tools the comparatively small number that are essential. When the question of cost comes in, as it usually does, the difficulties of the situation are vastly increased. It may ease the mind of the intending purchaser to learn at the start that the very large stock displayed in the stores and listed in the catalogues may be divided into three classes:

Indispensable.
Convenient.
Superfluous.

The first class may be confined to very narrow limits, including a *straightedge*, a *T-square*, two or three *triangles*, a few *pencils*, a *right line pen* or *drafting pen*, one pair of *dividers*, one pair of *compasses* with movable legs, and a triangular *scale* or half a dozen flat scales. With this outfit all ordinary mechanical or architectural drawing can be executed accurately and neatly, but at some loss of time. The marine draftsman will find it necessary to add half a dozen *set curves*, as many *splines* or *battens*, and some *spline weights*.

The second class includes mainly the same instruments in a greater variety of sizes, several lengths of *straightedges* and *T squares*, a larger assortment of *pencils*, several *pens*, the small *bowspring dividers*, *hairspring dividers*, more *scales* and a *beam compass* and *section liner*. In the matter of *set curves* the collection may be extended almost indefinitely. An outfit of this kind adds greatly to the speed of the work. It is not necessary to handle large *triangles*, *straightedges*, etc , on small work or *vice versa*, *dividers* may be set for certain measurements that are to be frequently repeated and left so until the drawing is completed; a dull *pen* may be laid aside for a sharp one without taking time to coax it into shape.

The third class is a very large one and may be subdivided into two parts; first, a small number of instruments that are useful for certain special work, as, for instance, the large metal *protractors* with arms and verniers; and second, various instruments, such as the *wholes-and-halves dividers*, *three-legged dividers*, and some forms of *drafting pens*, that are, either through faulty principle or poor construction, of no practical utility. An excellent example of this class is the *adjustable curve ruler*, various combinations of rubber, steel spring and lead rod, intended to take the place of the *spline* and *weights* in drawing curved lines, or for taking off the curves of a surface and transferring them to paper; for both of which purposes it is absolutely useless.

Those instruments which, as absolutely indispensable to the draftsman, we are called upon to examine carefully, may be divided according to their uses into four classes:

Ruling instruments.
Measuring.
Marking.
Calculating.

Instruments of the first class are used for guiding the *pencil* or *pen* in drawing straight and curved lines; they are mostly thin forms of wood, metal or other material, lying flat upon the paper. The cheapest of these instruments are made of a single wood, usually pearwood, a hard wood with a close, straight grain, and of a yellowish color. The most costly are made of steel or German silver, for *straightedges*, *T squares* and *triangles*. The best material for such instruments as small *straightedges*, *triangles* and *set curves* is hard rubber. A comparatively new material is celluloid, which is now used for all classes of instruments; it has the advantage of being transparent, and thus permitting the lines beneath it to be seen; its disadvantage is a possible liability to shrinkage and change of form that will, by destroying the truth of the instrument to even a slight degree, make it practically worthless. This applies particularly to large *triangles* and similar instruments, but is of less importance in the curves and sweeps.

In *straightedges* and *triangles* of wood, a single piece should never be used, owing to the liability to warp, but the working edges should be faced with narrow strips of hard wood glued to the main body of the instrument; ebony is used for the edges and mahogany or satinwood for the centers of the better grades of *straightedges*, *triangles*, etc. Celluloid is now used as a facing for *straightedges*, strips about ¼in. wide being glued to a wood center, making a rigid and durable tool.

The *straightedge* is simply a ruler, and it is used for drawing straight lines. It is made with both edges parallel and perfectly straight, and one at least must fulfill this latter requirement or the tool is useless. It is impossible to fair up a drawing properly unless the ground lines are perfectly straight and either parallel or perpendicular, as the case may be. The steel *straightedges* are more reliable than those of other materials, as, once made true, they are independent of atmospheric changes, and do not warp or twist. They are, however, much more costly. They are made from 2 to 3in. in width for the larger sizes, and from $\frac{1}{16}$in. to ¼in. thick, the latter having one edge beveled to about $\frac{1}{16}$in. The thicker ones have the advantage that they will stay where they are placed, through their weight; and once in position both hands are free. On the other hand, they are more difficult to adjust, and in moving them very short distances the fingers soil the paper.

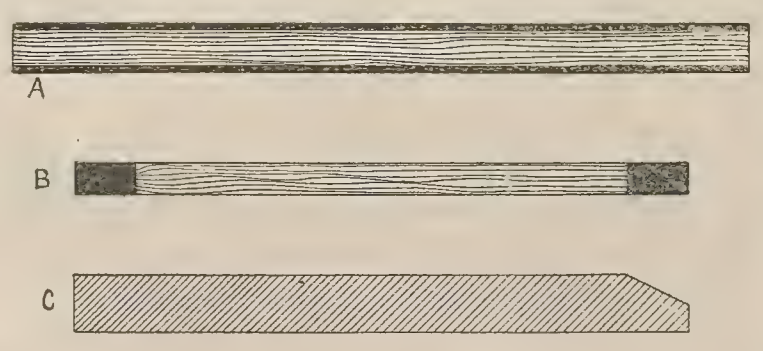

FIG. 32.

A—Straightedge with hardwood edge.
B—Section of same, full size.
C—Section of steel straightedge, full size.

If made true originally and carefully kept in that condition, the wooden *straightedges* are quite as good as the steel, and very much cheaper. They are light and easily handled, but of course will not keep their places on the paper of their own weight. A pair of lead weights, each 6in. long, 2in wide and 1in. thick, will serve to hold them, however, while a line is being drawn, or two of the spline weights described further on will serve the same purpose. The mahogany *straightedges* with edges of ebony are as durable and reliable as any, and the wood faced with celluloid are also very good. The longer ones should be not less than ¼in. thick on the working edge; to draw a long line requires a large pen well-filled with ink, and this can be most easily operated with a thick edge to work against The short *straightedges*, as well as the *triangles* and *set curves*, are about $\frac{1}{16}$in. thick on the edges; a smaller pen may be used with them, or at least the pen is not filled so full of ink. The flat *straightedge* with square edges may be tested by drawing a very fine line along one edge and then turning the *straightedge* over so that the other side rests on the paper and adjusting the two ends to the line; if perfectly straight, the edge in its new position will coincide with the line; if a second line be now drawn it will show double the amount of error. If there is any doubt as to the truth of the instrument, the same edge should be used all the time without turning or reversing it; then, though the lines may not be exactly straight, they will all be parallel, which is of even more importance.

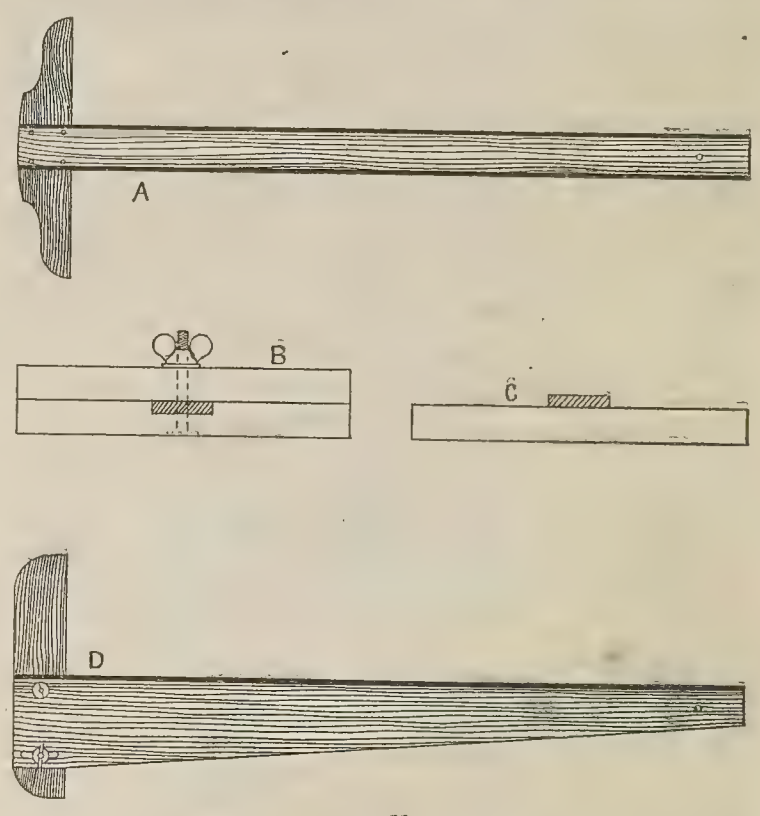

FIG. 33.

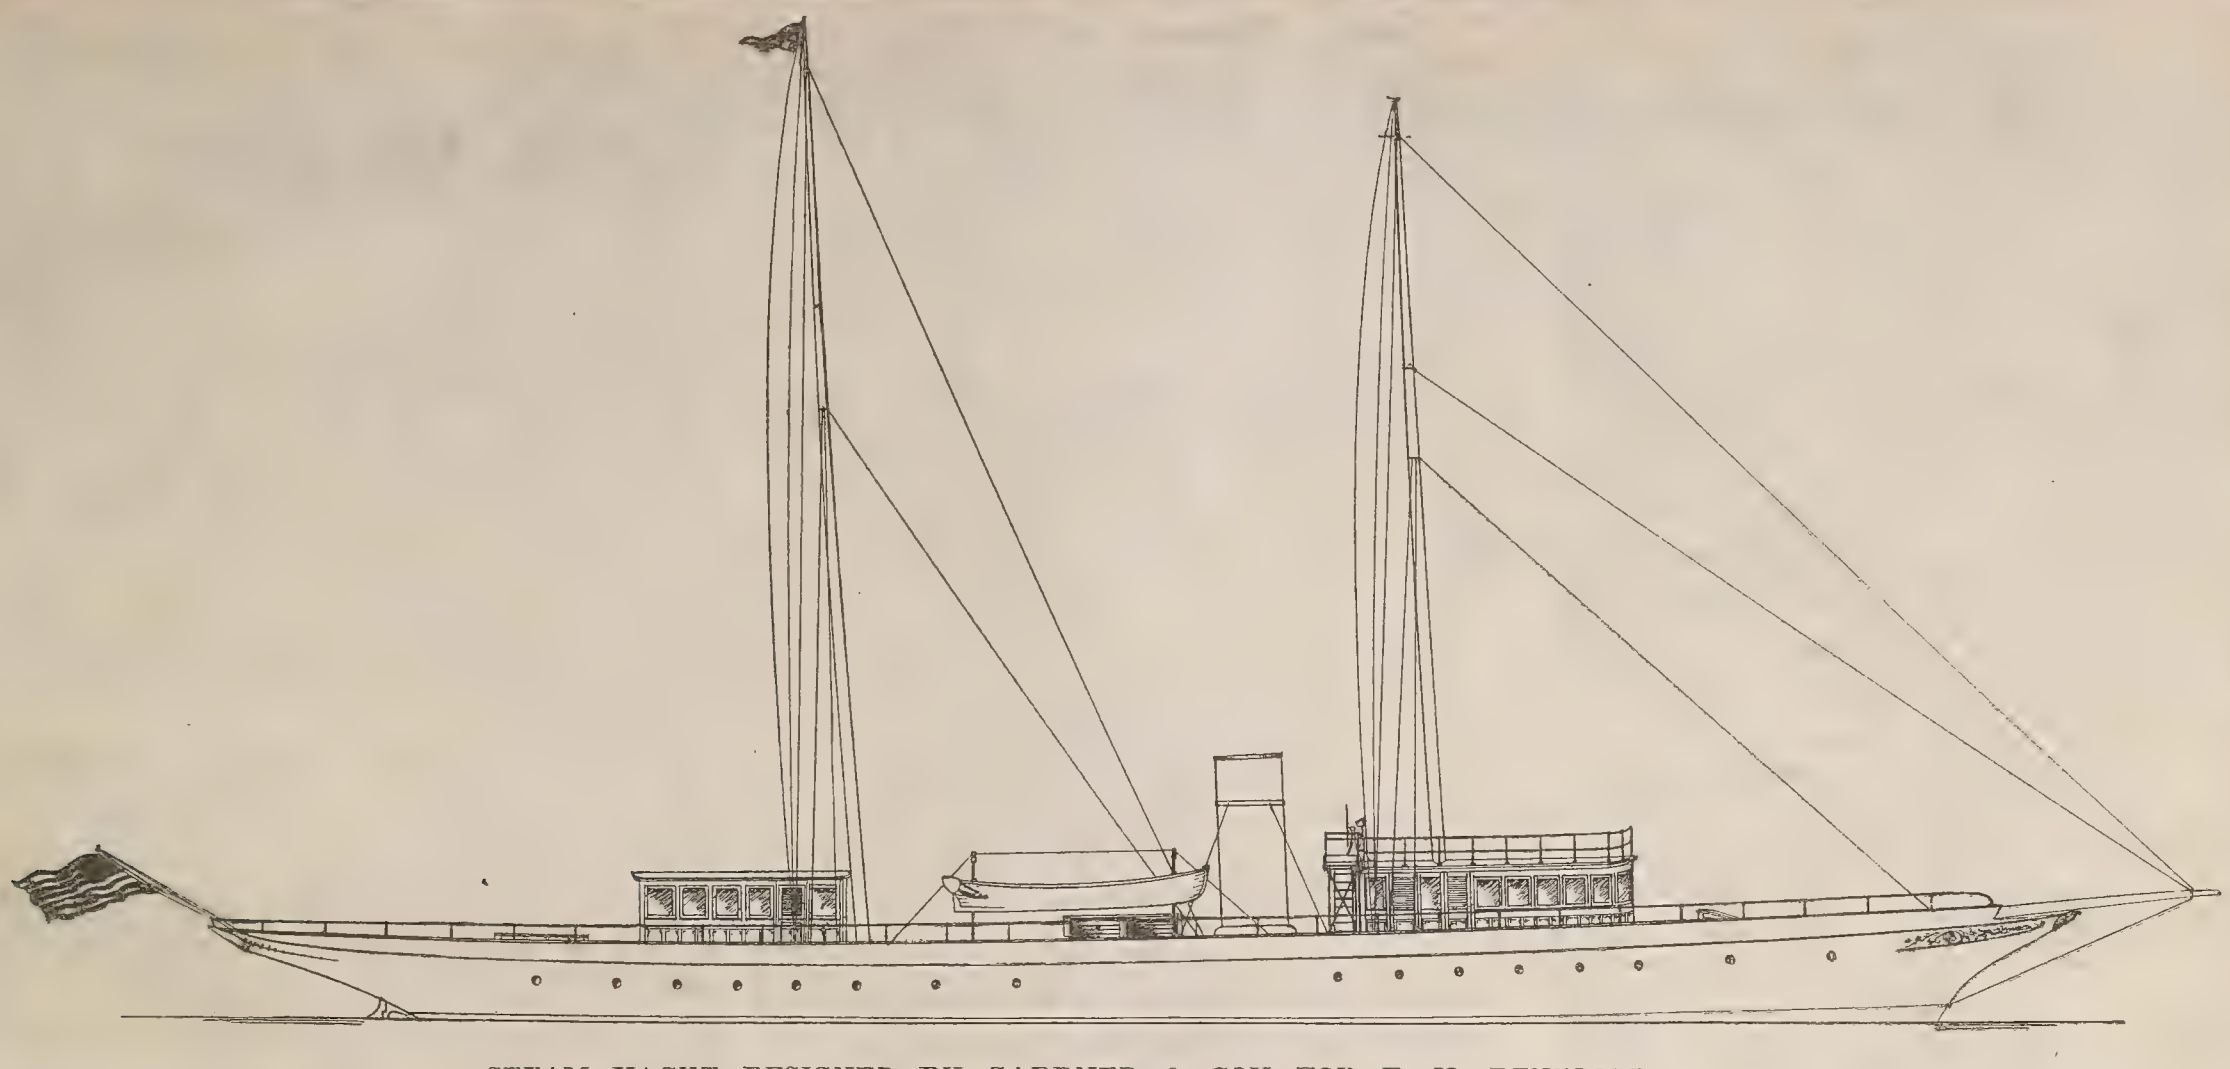
A—T-square with fixed head, usual form.
B—T-square with double head.
C—T square with fixed head, correct construction.
D—Improved T-square.

The *T square*, mentioned in the previous chapter, is simply a pair of *straightedges*, a long and a short one, one end of the former being fixed to the middle of the latter. This short *straightedge* slides along the edge of the drawing board and serves as a guide to the long one, keeping it always at the same angle with the edge of the board. The long *straightedge* is known as the *blade* and the short one as the *head;* and the latter may be either fixed or movable, or a combination of both. The *T square* is used both as a plain straightedge for drawing lines in any direction or for drawing lines parallel to each other, and, by using the adjoining edge of the board, a second series of lines perpendicular to the first. As far as the dimensions and construction of the *blade* are concerned, what has already been said about the *straightedge* applies to it.



The most important point about the *head* is that it shall not project above the surface of the drawing board, thus allowing the *triangles* to slide freely over it. In one form of poor construction, with a fixed *head*, the *blade* is set down into the head, so that the upper surfaces of both are flush, the *head* thus projecting above the board. In another equally bad form this same construction is supplemented by a second half to the *head*, a movable piece with a *pivot* and *clamp* by which it may be set to any angle. (B) Used with the fixed half of the *head* downward, the *blade* is at right-angles to the edge of the board, but when the *T square* is reversed, the movable *head* being downward, the *blade* may be set to any angle. There is little or no necessity for the fixed *head*, or for the *blade* being at any time exactly square to the *head;* supposing it to be a little out of square, all lines drawn with it in contact with the left-hand edge of the board, where it is always used, will be parallel, and if it be transferred to the lower edge of the board, other parallel lines will be drawn which are necessarily perpendicular to the first series. The movable *head* is a necessity, as a drawing must sometimes be fixed to the board with no assurance that it is quite parallel to either edge, the *blade* of the *T square*, however, may be adjusted to the principal lines of the drawing and then used from either edge.

We have already discussed the use of the *T square* in marine drawing. If it is to be used on any drawing of more than 36in. long, it should be of special construction, designed to secure absolute rigidity of the *blade* to the extreme end. The *blade* should be at least $\frac{3}{16}$in. thick for the longer sizes, 3 to 4ft., the edge being beveled to about ⅛in.; the width of the *blade* where it joins the *head* should be 5 to 6in., the *blade* then tapering to 2½in at the right-hand end. The extra weight of such a tool is an advantage rather than otherwise, and it has a solidity which is missing in the ordinary *T squares*. To provide for adjustment to old drawings that are pinned down a little obliquely on the board, the head and blade may be pivoted and fitted with a clamp that will permit a certain amount of angular motion. All that is necessary in the *T square* is that the working edges of *blade* and *head* shall be straight. This much assumed, the truth of the drawing board may be tested by applying the *T square* first to the left hand edge and drawing a line, then to the lower edge and drawing a second line, presumably at right angles to the first. With the point of intersection as a center, a circle of large diameter is described, and with the dividers the distances between the four points where the lines cut the circle are measured, being, of course, equal, if the two lines are at right angles.

A *straightedge* of the full length of the drawing board is an absolute necessity, but this may be either a plain *straightedge* or in the form of a *T square;* for all large drawings the latter may well be dispensed with, but one of medium size is always convenient for details of construction and similar work. One or two smaller *straightedges*, one as long as the width of the board, will be found convenient for the shorter lines, being more quickly handled than the large one. As this latter is the foundation of accurate work in marine drafting, every care should be taken to secure one absolutely straight edge and to keep it so.

The New Benedict Steam Yacht.

THE accompanying illustration shows the new steam yacht now nearly ready for launching at Marvel's yard, Newburgh, N. Y., where she has been built for F. H. Benedict, son of E. C. Benedict, from the designs of Gardner & Cox. She is a handsome craft of 147ft. over all, 117ft. l.w.l., 18ft. 6in. beam, and 7ft. 9in. draft. Her triple compound engines are 9, 16 and 25×16, with two Almy boilers.

STEAM YACHT DESIGNED BY GARDNER & COX FOR F. H. BENEDICT, 1897.

The Season's Fixtures.

THE racing season that will open in a few weeks offers nothing whatever of a novel or sensational nature. The principal event of the year will be the contest between the Royal St. Lawrence Y. C. and the Seawanhaka Corinthian Y. C. for the international challenge cup held by the former, and the most exciting part of this contest—the final races—will be sailed in Canadian waters. Apart from this, there are no international events, nor in fact any home racing of more than local interest. At the same time we confidently look for one of the liveliest years that yachting has yet known in this country, and one that will be of the greatest possible benefit to the sport. It is an established fact that great international contests, such as those for the America's Cup, do not help as much as they hinder popular yachting, in all classes and in all localities. In a season when such a match is on, the interest and attention of yachtsmen generally is centered on the few great racers, to the appreciable detriment of local racing and the many smaller classes that constitute the bulk of the tonnage of the racing fleet. In the following season there is too often a general reaction; the larger racers are not fitted out, nor do the next smaller classes recover from the complete eclipse of the year before.

At the present time, as in the past season, yacht racing is suffering from the effects of the contests of 1893-5, the big 90-footers built in those years are so nearly useless for any other purpose than international racing on the open sea, that they no longer figure in the usual club events, even if in commission, while the smaller classes—70ft., 51ft. and 43ft.—have been allowed to die out almost entirely.

The one bright spot in this unsatisfactory state of affairs is found in the yachts from 43ft. downward, and in the many smaller rather than the few larger clubs. Here we find bustle and activity on every hand, about New York and Long Island Sound, about Boston and the Eastern racing centers, on the Great Lakes, on the many small lakes of the middle West, and far away on the Pacific Coast. All that we hear brings promise of a lively and exciting season, and of a renewed interest in the personal ownership and racing of yachts, small and of medium size. Much of this new interest is due directly to the recent rapid growth of local associations, such as the Long Island Sound Y. R. U., the Massachusetts Y. R. A., and the Yacht Racing Union of the Great Lakes. The influence of these bodies in establishing uniform classes, in bringing order out of chaos, and in reducing the building and racing of yachts to a system instead of a matter of whim or chance, is seen plainly to-day in the programme of races as compared with those of previous years, and will be still more apparent in a season or so more.

The following list of fixtures includes most of the clubs in the East and some inland, but is not complete. We shall be glad to receive news of additions or corrections through the season. The official list of the Sound Y. R. U. up to date is as follows:

May 15, Saturday—Huguenot Y. C. special race for 20ft. class of sloops and all classes of catboats.

May 22, Saturday—New Rochelle Y. C., special race for 20ft. class of sloops and 25 and 20ft. classes of catboats.

May 29, Saturday—Seawanhaka Cor. Y. C., special race for 20 and 15ft. classes of sloops.

May 31, Monday (Decoration Day)—Harlem Y. C., annual regatta, for all classes 51ft. and under, except 20 and 15ft. classes of open sloops.

May 31, Monday—Corinthian Fleet, special race for 20ft. class of sloops.

June 1, Tuesday—Yale Cor. Y. C., annual regatta for all classes 43ft. and under.

June 3, Saturday—Knickerbocker Y. C., annual regatta, for all classes.

June 9, Wednesday—Riverside Y. C., special race for 51, 30, 20 and 15ft. classes of sloops.

June 12, Saturday—Douglaston, Y. C., annual regatta, for all classes 36ft. and under.

June 21, Monday—New Haven Y. C., annual regatta for 65ft. class of schooners, 43, 36, 30 and 25ft. classes of sloops; 30, 25 and 20ft. classes of catboats, and special class of yawls.

RACING CIRCUIT.

June 26, Saturday—Seawanhaka Cor. Y. C., annual race, for all classes.

June 28, Monday—Stamford Y. C., annual regatta, for all classes.

June 29, Tuesday—Indian Harbor Y. C., special race for all classes of sloops and cabin catboats 30ft. and under, and special class of yawls.

June 30, Wednesday—Corinthian fleet, annual regatta for 65ft. class of schooners and all classes 51ft. and under.

July 1, Thursday—Horseshoe Harbor Y. C., special race for all classes 36ft. and under.

July 2, Friday—Sea Cliff Y. C., annual regatta, for all classes 51ft. and under.

July 3, Saturday—New Rochelle Y. C., annual regatta, for all classes.

July 6, Tuesday—American Y. C., annual regatta, for all classes.

July 7, Wednesday—Riverside Y. C., annual race for schooners and all classes of sloops 30ft. and over.

The racing circuit ends with the Riverside's regatta on July 7.

ANNUAL REGATTAS AND SPECIAL RACES.

July 10, Saturday—Riverside Y. C., annual race for 25, 20 and 15ft. classes of sloops and all classes of catboats.

July 12, Monday, to July 16, Friday—Seawanhaka Corinthian Y. C., trial races for 20ft. class of sloops.

July 28, Wednesday—Stamford Y. C., special race for 51, 30 and 20ft. classes of sloops.

July 31, Saturday—Indian Harbor Y. C., annual regatta for all classes except cabin catboats.

Sea Cliff Y. C., special race for 30 and 25ft. classes of cabin catboats.

Aug. 4, Wednesday—New Rochelle Y. C., special race for all classes, 43ft. and under.

Aug. 7, Saturday—Hempstead Harbor Club, annual regatta for all classes, 43ft. and under.

Aug. 14, Saturday—Horseshoe Harbor Club, annual regatta for all classes, 36ft. and under.

Aug. 18, Wednesday—American Y. C., special race for all classes, 43ft. and under.

Aug. 21, Saturday—Huguenot Y. C., annual regatta for all classes, 43ft. and under.

Aug. 25, Wednesday—Corinthian Fleet, special race for 51, 30 and 20ft. classes of sloops.

Aug. 28, Saturday—Huntington Y. C., annual regatta for all classes, 51ft. and under.

Sept. 4, Saturday—Seawanhaka Corinthian Y. C., fall race for schooners and 43, 36, 25, 20 and 15ft. classes of sloops.

Sept. 6, Monday (Labor Day)—Norwalk Y. C., annual regatta for all classes of catboats.

Sept. 11, Saturday—Riverside Y. C., fall race for 43, 36, 30 and 25ft. classes of sloops and 30 and 25ft. classes of cabin catboats.

Sept. 18, Saturday—American Y. C., fall regatta for all classes.

MASSACHUSETTS Y. R. A.

Official List Compiled by A. T Bliss.

May 31 (Memorial Day), Monday—South Boston Y. C., off Marine Park.

June 17, Thursday—Massachusetts Y. C., off Nahant.

June 19, Saturday—Dorchester Y. C., Dorchester Bay.

July 3, Saturday—Jeffries Y. C., off Jeffries Point, East Boston.

July 5, Monday—City of Boston's regatta off Marine Park, which will probably be followed by a series of races to be given by the South Boston, Columbia, Mosquito Fleet and other clubs off City Point during the balance of the week.

July 17, Saturday—Winthrop Y. C., off Winthrop.

July 19, 20, 21, 22 and 23, Monday, Tuesday, Wednesday, Thursday and Friday—Manchester Y. C. series, off Manchester.

July 31, Saturday—Revere Y. C., Lynn Bay.

Aug. 2, Monday—Burgess Y. C., off Marblehead.

Aug. 3, Tuesday—Beverly Y. C., off Marblehead.

Aug. 4, 5 and 6, Wednesday, Thursday and Friday—Corinthian Y. C.'s midsummer invitation series, off Marblehead.

Aug. 7, Saturday—Corinthian Y. C., off Marblehead.

Aug. 13, Friday—East Gloucester Y. C., Gloucester Harbor.

Aug. 14, Saturday—Squam Y. C., off Annisquam.

Aug. 17, Tuesday—American Y. C., off Newburyport.

Aug. 19, 20 and 21, Thursday, Friday and Saturday—Quincy Y. C.'s series, Hull Bay.

Aug. 26, Thursday—Duxbury Y. C., Plymouth Bay.

Aug. 27, Friday—Kingston Y. C., Plymouth Bay.

Aug. 28, Saturday—Plymouth Y. C., Plymouth Bay.

Aug. 30, Monday—Cape Cod Y. C., Provincetown Harbor.

Aug. 31, Tuesday—Wellfleet Y. C., Wellfleet Harbor.

Sept. 2, 3 and 4, Thursday, Friday and Saturday—Duxbury Y. C., "Davenport cup," special races for second class, Plymouth Bay.

Sept. 4, Saturday—Savin Hill Y. C., off Savin Hill.

Sept. 6 (Labor Day), Monday—Lynn Y. C., Lynn Bay.

Sept. 11, Saturday—Chelsea Y. C.

Sept. 11, Saturday, Y. R. A. rendezvous, Hull.

Entries for races sailed under the rules of the Yacht Racing Association of Massachusetts must be made to A. T. Bliss, secretary, 111 Milk street, Boston.

WINTHROP Y. C. FIXTURES.

May 22, Saturday—Club race.

June 5, Saturday—First championship.

June 13, Sunday—Cruise to Strawberry Hill

June 19, Saturday—Ladies' day, sail to Dorchester Bay, Dorchester Y. C. open race.

June 26, Saturday—Evening race.

July 13, Tuesday—Moonlight sail.

July 17, Saturday—Open regatta.

July 24, Saturday—Evening race.

July 25, Sunday—Cruise to Nahant.

Aug. 7 and 8, Saturday and Sunday—Cruise to Marblehead.

Aug. 10, Tuesday—Evening race.

Aug. 14, Saturday—Second championship.

Aug. 19, Sunday—Cruise to Weymouth.

Aug. 28, Saturday—Third championship.

Sept. 11, Saturday—Club race.

Immediately after Sept. 11 race the fleet will sail for Hull to take part in the Y. R. A. rendezvous.

The following fixtures cover the clubs not connected with the various associations, with the exception of the Buffalo Y. C., which is a member of the Y. R. U. of the Great Lakes:

MAY.

29-30-31. Buffalo, opening cruise, Port Colborn.
31. Minnetonka, open race, Lake Minnetonka.
31. Cor. Baltimore, club, Chesapeake Bay.
31. Atlantic, opening sail, New York Bay
31. New Jersey, opening sail, New York Bay.
31. Brooklyn, opening sail, New York Bay.
31. Fall River, open, Mount Hope Bay.

JUNE.

5. Atlantic, Adams cups, New York Bay.
5. Buffalo, opening cruise, small classes, Port Albino.
12. Brooklyn, annual, New York Bay.
12. Atlantic, special, New York Bay.
12. Buffalo, pennant, Lake Erie.
12. Gravesend Bay, annual, New York Bay.
15. Atlantic, annual.
17. Corinthian Marblehead, club, Massachusetts Bay.
19. Marine and Field, open, New York Bay.
19. Columbia, annual, Hudson River.
26. Buffalo, ladies' day, Lake Erie.
26. Gravesend Bay, cruise, New York Bay.
26 Atlantic, Adams cups, New York Bay.
26. Brooklyn, first special, New York Bay.

JULY.

4. Larchmont, annual, Long Island Sound.
3-4-5. Buffalo.
5. Cor. Marblehead, club, Massachusetts Bay.
8-10. Brooklyn, annual cruise, Long Island Sound.
Atlantic, annual cruise, Long Island Sound
8. Rendezvous at Riverside; sail to Morris Cove.
9. Morris Cove to New London.
10. New London to Shelter Island.
11. At Anchor, Shelter Island.
13. Fall River, ladies' day, Mount Hope Bay.
17. Cor. Marblehead, 1st cham., Massachusetts Bay.
24. Brooklyn, special, New York Bay.
31. Gravesend Bay, cruise, New York Bay.

AUGUST

4-5-6 Cor. Marblehead, midsummer series, Massachusetts Bay.
7. Cor. Marblehead, open, Massachusetts Bay.
7. Buffalo, club, Lake Erie.
—. New York Y. C. cruise.
14. Cor. Marblehead, 2d cham., Massachusetts Bay.
14. Brooklyn, special, New York Bay.
24. Minnetonka, Inter-Lake races, Lake Minnetonka.
25. Fall River, open, Mount Hope Bay.
28. Cor Marblehead, 3d cham., Massachusetts Bay.
28. Buffalo, 27ft. and smaller classes, Lake Erie.
28. Gravesend Bay, cruise, New York Bay.
28. Brooklyn, special, New York Bay.

SEPTEMBER.

4-5-6. Buffalo, cruise, Lake Erie.
6. New York, Y R. A annual, New York Bay.
6. Fall River, club, Mount Hope Bay.
6. Cor. Marblehead, cruise, Massachusetts Bay.
6. Gravesend Bay, special, New York Bay.
9. Pacific Y. C, annual, San Francisco Bay.
11. Brooklyn, sail-off, New York Bay.
11 Buffalo, ladies' day, Lake Erie.
25. Buffalo, closing cruise, Lake Erie.

The New York Conference.

IT is expected that the following yacht clubs will be represented at the conference in New York on Saturday, May 1:

Through the Yacht Racing Union of Long Island Sound—Seawanhaka Corinthian, American, Riverside, Yale Corinthian, Horseshoe Harbor, New York Athletic, Stamford, Indian Harbor, New Rochelle, Knickerbocker, Huguenot Bridgeport, Corinthian Fleet, Harlem, New Haven, Douglaston, Sea Cliff, Huntington, Park City, Hempstead Harbor Norwalk, Stamford Corinthian.

Through the Yacht Racing Association of Massachusetts—Massachusetts, Hull, Boston, Dorchester, Quincy, Winthrop, South Boston, Savern Hill, Americans of Newburyport, Commonwealth, Chelsea, Jeffries, Manchester, Atlantic of Boston, Cape Cod, Duxbury, Lynn, Cohasset, Columbia of Boston, Revere, Squantum, West Lynn, Wellfleet, Old Colony, Mosquito Fleet, Plymouth, Kingston.

Through the New York Yacht Racing Association—Pavonia, Yonkers Corinthian, Columbia, Jersey City, Gravesend Bay, Newark, Kill Von Kull, Ossining, Hudson River, Audubon, Tappan Zee, Bayonne City, Tower Ridge, Yonkers, Greenville, New Jersey Athletic, Newark Boat Club.

Through the Yacht Racing Union of the Great Lakes—Bay of Quinte, Buffalo, Kingston, Oswego, Rochester, Queen City, Royal Canadian, Royal Hamilton, Victoria, Citizens, Cleveland, Put in Bay, Sandusky, Toledo, West End.

Through Separate Representation—Atlantic, Larchmont, Marine and Field, Corinthian of Philadelphia, Carolina, Royal St. Lawrence, Great South Bay.

Surf Running.

From the Yachting World.

A COMPARATIVELY unknown sport, except on some parts of the Northumberland coast, is the running of boats through the surf. And yet it is one of the most exciting amusements that can possibly be devised. Not only is there involved considerable excitement and exhilaration as the boat rushes on, with the water foaming around her stern and flying from her bows, but a large amount of bodily and mental exercise, for there is no time to stand still or hesitate. Moreover, a practical knowledge of the handling of a boat in surf or broken water may at any time prove invaluable.

Briefly, the game consists in working a boat through the outer edge of the surf, and, after putting her about before the sea, she is made to shoot back to the shore upon a single wave. As regards the boat, one built for the purpose is naturally the best. Long, narrow and fine boats, low in the bows and stern, and such as have curved keels, are inappropriate; the former because they cannot be brought round before a sea, the latter because they are very apt to broach to before a sea, owing to the insufficient grip they have on the water aft. The length compared to the beam should be in the ratio of 5 to 1, and the keel should be straight but not deep. The bows should be bluff to prevent the boat from putting her nose under too readily, or running off too quickly in front of a sea, and high with a sheer to throw off water. The sides should tumble in, so as to allow the boat to lie well over, and the quarters and stern should be raised to diminish the chance of pooping. The rudder should be broad and efficient, not projecting below the keel, lest it be torn off in beaching. It should be worked by a tiller and made fast to the stern by a line rove through a ringbolt, as it is liable to jump off. For the same reason the oars or sculls should work on long tholepins, not in rowlocks, and should also be secured by lines. No weight should be carried forward, or the boat would certainly broach to; but a little ballast aft is often of advantage.

The best beach for practicing is low, level and sandy. On such a beach the waves break far out, and die before reaching the shore. If the water be very shallow inshore, the dying wavelets may be taken broadside on, the boat being listed to leeward to stave off the spray; but if there be body in the water, the waves must always be met directly head on. Further out, or in deeper water near the shore, a sharp lookout must be kept for any broken water.

It is frequently possible to dodge the rough places and get out at once, but more often it is necessary to face them. If a collision with a wave on the point of breaking is inevitable, and especially if the wave be large, the boat must be driven against it as rapidly as possible. On no account when a boat is meeting a breaking wave should she be allowed to quite lose way, or she will certainly be started off stern first and capsize, or be thrown bows over stern. On the other hand, when a boat is stern-on to such a wave, she should be eased off before it as it strikes her, and held firmly back the moment it has struck.

Having gone out as far as is desirable, the boat should be brought round as rapidly as possible between the seas and put straight before them. When a sea approaches, three or four sharp strokes should be given, and the helm kept steady. As the stern rises the boat will start off and rush on in front of the wave right to the shore. If the boat be not kept perfectly straight before the wave—especially at the moment of breaking—she is very likely to broach to.

Should she tend to twist round, the rudder may be assisted by holding the boat strongly with the lee oar and by canting her to the weather. When, however, a broach-to before a breaking sea is inevitable, as much weight as possible must be thrown on the weather side, in order to keep the weather gunwale well down. The boat may then fill a little, but she will not—at all events if she is at all beamy—capsize.

The sport of surf running is, of course, only really practicable where there is a stretch of level sand, and where, therefore, with ordinary precautions, nothing more than a wetting need be dreaded.

Launch of the Hiawatha II.

FOLLOWING its peculiar custom, the combined firm of C. L. Seabury & Co. and the Gas Engine & Power Co. launched the largest of their new yachts of the year at night, on Saturday, April 17. The weather was perfect—a clear night, with the moon at the full. The yard was brilliantly illuminated and decorated in honor of the first large launch of the combined firms. The yacht left the ways at 10 P. M., being christened by Miss Winifred Kaltenbach, a young lady of nine, daughter of a partner of the owner. The name has been transferred from the first Hiawatha, designed and built last year by Seabury & Co., for Charles Fleischman, of Cincinnati. The first craft proved too small, and so gave place to the present one, a steel hull 170ft. over all, 138ft. l.w.l., 21ft. beam and 8ft. deep. She is schooner rigged, and her triple expansion engines with the Seabury boiler, built at the Nyack shops of the company, will give a speed of 18 miles. She is a handsome craft, similar in appearance to the first boat. After the launch Mr. Fleischman provided a supper for the entire working force of the yards.

Ellide.

THE steam yacht Ellide, designed by C. D. Mosher and built by Samuel Ayers & Son for E. B. Warren, of Philadelphia, was launched on April 17 at Nyack, where she has been under construction for a year. She is intended for use on Lake George, and a very high speed is confidently expected. The construction is very light, and the work on the hull, engines and boilers has been carried out with great care. The dimensions are 80ft. over all, with plumb stern, 8ft. 4in. beam and 3ft. 6in. draft. The framework is of steel, with a double skin of mahogany. The engines and boilers were specially designed by Mr. Mosher for this boat, the quadruple expansion engine having cylinders 9, 13, 18 and 24 × 10in. Immediately after launching the yacht was tried under steam, reaching a high speed on the first trip.

Cruising on the Florida West Coast.

BIG MAREO, Fla., April 9.—*Editor Forest and Stream:* Kingfisher arrived at this port this morning. All hands well, but very tired, for we have been fighting head winds for a week.

We are out for a little cruise. Left Tarpon Springs three weeks ago. We met the main crowd of tarpon fishermen at Captiva Pass, Charlotte Harbor. They were having fair success.

There were six yachts in all. Among them I noticed White Cloud, of Pittsburg, and the old Tarpon, belonging to Mrs. Stagg. We go from here to Panther Key to see old John Gamey. Will write you later. TARPON.

The Yacht Racing Union.

A MEETING of the Council of the Yacht Racing Union was held at the Seawanhaka C. Y. C. house on April 12, at which the racing programme was completed. The Stamford Corinthian and Bridgeport clubs were admitted to membership. The Union desires to call the attention of yacht owners to the necessity for the remeasurement of yachts in the 25ft. classes, owing to the requirement of crew on board, under the new rules; also, to the regulation, which will be strictly enforced, that any yacht starting in a race without a measurement certificate will be disqualified. It was decided to accept the special regulations adopted by the Seawanhaka C. Y. C. for the 15ft. and 20ft. classes.

YACHTING NEWS NOTES.

The Royal Alfred Y. C., of Dublin, is considering the establishment of a one-design class similar to that which we described last week of the Belfast Lough fleet of the Bangor Corinthian Y. C. The dimensions are the same, 37ft. over all, 25ft. l.w.l., 8ft. 7½in. beam, 6ft. 6in. draft. The price will be about £230 to £250 ($1,150 to $1,250).

The keel schooner now building at Harlan & Hollingsworth's from the designs of Mr. A. S. Cheesebrough, as announced last week, is for George W. Weld, of Brookline, Mass., former owner of Wanderer, schooner. Mr. Weld is an old yachtsman, and has done a good deal of off-shore cruising.

The *Field* is just a little mixed in its geography and topography, as it states that a steel steam yacht is now building for Archibald Watt, of the American Y. C., of Massachusetts, at Coney Island. The sandy shores of Coney Island are hardly adapted for the launching of large vessels.

Fleur de Lys, schr., George Lord Day, has been laid up since last season at Southampton, England. Her new crew, sailed from New York on April 21 to fit her out and bring her to New York. Before sailing she will be docked at Fay & Co.'s yard for recaulking and new copper.

Sultana, steam yacht, J. R. Drexel, arrived at New York on April 14 with her owner, J. R. Drexel and wife aboard, after a voyage of just two months to the West Indies. Sailing on Feb. 15 from New York the yacht called at Old Point Comfort for her owner and friends and then sailed for New Orleans, encountering very severe weather on the way. After a stop of a week for the Carnival the party steamed away for Kingston, Jamaica, then for Curacoa, La Guayra, Trinidad, Barbadoes, St. Thomas and finally Bermuda.

The Harvard Y. C. has issued a challenge to the Yale Corinthian Y. C. for a race to be sailed off Newport at the end of June. The challenge is still under consideration by the Yale C. Y. C.

At Huntington's yard, New Rochelle, a 15-footer, somewhat similar to Paprika, has been completed, to the order of a Western yachtsman who will race her in the West; and a racing 20-footer is also under way.

The Bay Shore Y. C. has elected the following officers: Com., John R. Howell; Vice-Com., Carl E. Brewster; Rear-Com.; Samuel C. Hulse; Sec'y, Edwin Synn Moore, M. D.; Treas., Leander G. Homan; Meas., Edgar S. Reybert. Regatta Committee: Josiah Robbins, Lorenzo R. Garrett, Lelah T. Clock. House Committee: William A. Hulse, M. D.; Ned Dominy, Isaac Schwab. Auditing Committee: Com. John R. Howell, Carl Brewster, Samuel C. Hulse.

The annual meeting of the Lincoln Park Y. C. was held on April 13 at the Sherman House. Officers for the present year were elected as follows: Com., George Warrington; Vice-Com., Dwight Lawrence; Rear-Com., Shelley B. Ford; Sec'y, C. O. Andrews; Treas., W. S. Granger. E. C. Berriman, the retiring commodore, was tendered a hearty vote of thanks for his efficient administration, and especially for his efforts in connection with the international race. Com. Warrington in accepting the position expressed the hope that before the season was closed the club would have a home of its own, where the members could meet, the absence of such accommodation being a long-felt want. Ex-Com. Berriman was appointed as delegate to the Lake Michigan Yachting Association, which will be held at Racine on April 24. As the question of joining the Lake Yacht Racing Union will be one of the main issues, a discussion ensued as to what action the club should take. The general opinion appeared to be that as the majority of the lake clubs were in favor of the "midship area rule" and the "abolition of the tax on overhang," that the Michigan clubs should bow to the will of the majority and not adopt a "we won't play" attitude. The majority of those present favored giving the rules a trial, and the delegate to the Lake Michigan Yachting Association was instructed accordingly. Several suggestions were made in regard to the Fourth of July regatta, and, while no definite arrangements were made, a proposal to hold the meeting in Milwaukee and a later one about September in Chicago seemed to meet with general favor.—*Chicago Times-Herald.*

The Crosby Yacht Building Co., of Forty-fifth street, South Brooklyn, has its new shops well filled with the winter crop of catboats and sloops of the modern Cape Cod type, for which it is noted. The first yacht launched this season—on April 13—is of a different type from most of those built by the firm, being a fin-keel cruiser. She was designed by her owner, George Hill, measurer of the Atlantic Y. C., owner of the Crosby boat Step Lively, now Dorothy, for his own use. She is 50ft. over all, 30ft. l.w.l., 10ft. 3in. beam and 6ft. draft, including a cast iron fin and bulb of 3 tons weight. With the aid of a high side and considerable crown to the cabin house, there is a full 6ft. of head room over the floor, which is very wide, and the yacht will be remarkably roomy. The rig will include a leg o'-mutton mainsail and one jib, about 1,200sq. ft. all told. The mast is rectangular in section, the long axis fore and aft, and the rigging will include a number of novel devices. The yacht is named Akiesta. Dorothy is now on the sale list.

A special meeting of the Seawanhaka Corinthian Y. C. was held on April 7, at which the following amendment to the by-laws was adopted: "With respect to the payment of an entrance fee and the amount of the annual subscription, members shall be classified according to their age, as follows, namely: Class 'A' shall consist of all who are thirty years of age or over, and Class 'B' of all who are under thirty years of age. The annual subscription shall be $50 for all members in Class 'A', and for all members in Class 'B', shall be $15. A member-elect in Class 'A' shall pay the sum of $50 as an entrance fee, and a subscription for the current year as follows: If elected between Jan. 1 and April 1, $50; if elected between April 1 and July, $37.50; if elected between July 1 and Oct. 1, $25; if elected between Oct. 1 and Jan. 1, $12.50. A member-elect in Class 'B' shall be exempt from the payment of an entrance fee, and shall pay a subscription for the current year of $15. If the payment provided for in this section is not made by a member-elect within thirty days after notification thereof, his election shall be void."

The Brooklyn Y. C. announce the following programme for the season: May 31, Decoration Day, opening sail. June 12, annual regatta, open. Saturday, June 26, first special for all cabin and open cats. Saturday, July 3-10, annual cruise, Long Island Sound. Saturday, July 24, first special for all sloops and cutters. Saturday, Aug. 14, second special for all cabin and open cats. Saturday, Aug. 28, second special for sloop and cutters. Saturday, Sept. 11, Deciding races for all classes, special. Mr. Louis Wunder is chairman of them regatta committee.

The sport had last season by Cohasset owners of the "one-design" 15-footers of the Scarecrow model, as designed by W. P. Stephens and built by McIntyre, promises to be more than duplicated the coming season. There is an increased interest in the class this year, and at least one boat will be added. Ralph B. Williams, well known as the owner of the racing catboat In It, has purchased the boat sailed last season by A. H. McIntyre as the X-Ray, and has renamed her the Delta. She is from the same molds as the others, and will be given the same sail. The annual meeting and dinner of the association of Cohasset Y. C. members, which control the racing of this class, was held last Tuesday evening at the United States Hotel. A schedule of races for the season was arranged—principally for Saturday afternoons—together with courses, etc. The boats of the class will be given new sails of a very fine quality of material, and are expected to be a shade faster than last year.—*Boston Globe.*

The annual meeting of the Pacific Interclub Yacht Association was held on March 31, the following officers being elected: Pres., R. R. l'Hommedieu; Vice-Pres., Alexander Sauson; Sec'y, Allen M. Clay; Treas., Will Brooks. Delegates to the regatta committee were chosen as follows: Alexander Swanson, Pacifics; J. H. Hopp, Corinthians; C. L. Tisdale, Encinals; C. P. Moore, Californias; L. Somicksen, South Bays. The date of the annual cruise of the Association will be set by the Association. Sept. 9 was chosen for the annual regatta. A. M. Clay, George B. Edgar, J. H. Hopps and L. Somicksen were appointed a committee to draft a set of signals and code for the use of the yacht clubs in general. The Association is in favor of joining such a national association as may be formed in the East.

The annual meeting of the Minnetonka Y. C. was held on April 6, the following officers being elected: Com., L. R. Brooks; Vice-Com., H. W. Commons; Directors, to serve for a term of three years, C. B. Eustis and T. B. Janney; for a term of two years, F. B. Long and W. W. Bartlett. The following new members were admitted: H. F. Douglas, George H. Daggett, Fred Hubbard, J. F. Whalon. The club has a membership of 227.

The Cohasset Y. C. has elected the following officers: Com., Lyman D. Williams; Vice-Com., Frederick H. Pratt; Treas., Charles H. Cousens; Sec'y, Charles W. Gammons; Meas., Arthur O. Higgins; Regatta Committee: Daniel N. Tower, Alanson Bigelow, Jr., Arthur O. Higgins, Hugh D. Montgomery, Ralph B. Williams and the commodore and vice-commodore.

The Royal Toronto Sailing Club has elected the following officers: Com., H. M. Pellatt; Vice-Com., H. Kitely; Rear-Com., E. Marshall; Capt., T. Cuff; Hon. Sec'y, R. Lovell; Hon. Treas., B. Saulter; Hon. Meas., R. J. Livingston; Asst. Meas., W. Roberts; Executive Committee: Messrs. H. Cuff, J. McBride, T. World, E. Webb; Sailing Committee: H. Fensom, H. World, E. Charters.

At the annual meeting of the West End Y. C., of Detroit, April 1, the following officers were elected: Com., W. A. Jones, yacht Crescent; Vice-Com., Robert Guest, Ariel; Rear Com., S. H. Ives, Surprise; Fleet Captain, Col. J. H. Beattie, Alborak; Fleet Surgeon, Dr. W. T. Lambert; Sec'y, D. H. Petheric; Treas., Otto F. Barthel; Meas., Chas. Steinbrecher; Historian, Geo. Guest.

The first annual exhibition of models of the New York Model Y. C. was held in the club rooms, Sixty-third street and Central Park, West, on April 14. A prize was given by Com. F J. Sweeney for the finest finished model. Com. J. H. Lane and Treas. G. N. Townley, of the American Model Y. C., acted as judges, and awarded the prize to the cutter Inspector, Mr. Wm. Ogle, owner. The club will hold its first race of the season on April 18, at Flushing Bay.

Canoeing.

Capsizing in Canoe Races.

THE Royal C. C. has taken a radical step in the direction of penalizing the extreme racing machine, as told in the following extract from the *Field*. Just what the result may be it is impossible to foretell. It is late in the day to remedy the vast amount of harm that has been done to canoeing and canoe racing by the revolving bath tub; and even though this type be abolished, we doubt whether a new and more useful type will take its place.

A very timely innovation has been made by the senior canoe club of the world in regard to frivolous, if not dangerous, canoe sailing—that is, where the frivolity of one man endangers others and their craft. The committee of the Royal C. C. has decided that a penalty shall be imposed on those who capsize in a race. At first sight it may naturally be thought that a man who capsizes is himself loser enough by the accident, but there are other technical views to be taken of the monstrosity which is in the habit of capsizing. Such canoes generally are fitted with a very sharp-pointed dagger centerplate; and, apart from any burden to other competitors to go to the assistance of the capsized, there is the danger, when sailing hard in close company, especially when rounding the turning marks, that a canoe capsizing at a moment's notice often is in such position that closely following canoes cannot get out of the way, and must run over her sails and spars on one side, and the other canoe coming by to windward may be clean cut all along her bilge by the dagger plate of the capsized canoe.

This sub-acrobatic nuisance has now been penalized by the R. C. C. in that "any canoe capsizing in a race shall be penalized one minute in the next race for each such capsize." The penalty may not of itself stop the sailing of capsizeable canoes, but it should have the effect of providing that better attention is paid to stability and more care to handling. Assume, for instance, that early in a race the crack racing canoe, costing some £60, and intended for the coming important quasi-international race, before she can get clear of the ruck, is ripped open by the centerplate of some acrobatic duffer capsizing under her lee bow. The capsizer will say it was an unavoidable accident; possibly so with him and his craft. But is he to be allowed to thus mar sport, if not the fame of the club and of the expert who has spent a season in producing a costly craft to do battle in the club's cause?

We remember a couple of years ago seeing the Yankee sail on a puffy day at Teddington. She simply capsized to nearly every puff of wind, but was hove upright again by her skipper standing out on her bilge and heaving her up by her long slide seat, used as a lever. She at these times monopolized some 19ft. or 20ft. of waterway, lying flat on the water with her spars to leeward and her sharp centerplate to windward—no mean derelict danger or obstruction this to the crowded fleet of canoes which might have been in close company astern had it been a race. We would put the tax a great deal higher, but hope that the low amount of one minute per capsize may act its part as a warning that true canoemen look down upon the aquatic acrobat as out of place in, and detrimental to, the sport of sailing.

This capsizing penalty does not extend to the racing at Burnham at present; it certainly ought to do so, seeing that the hardship on the fair sailor is greater the nearer the collision is to the cup races. We do not, of course, suggest that it is necessary to go to the extent of making canoes absolutely uncapsizeable under sail; it can be done, and some owners will do it; but such gain of stability can only be obtained by the use of a bulb or weighted keel, and there is certainly a racing disadvantage in the extra displacement thus required when the competition admits the acrobat-balanced skimmer on even terms. The bulb keel, of course, is not a fixture, and can be left at home when the canoe is used as a cruiser. An accidental capsize, of course, may happen to any one, even to the most expert, but the habitual capsizer is a common danger, and a very bad advertisement of the sport of canoe sailing.

A. C. A. Membership.

APPLICATIONS for membership may be made to the purser of the division in which the applicant resides on blanks furnished by purser, the applicant becoming a member provided no objection be made within fourteen days after his name has been officially published in the FOREST AND STREAM.

Rifle Range and Gallery.

Middlesex Rifle Club.

Lowell, Mass., April 9.—The annual meeting of the Middlesex Rifle Club was held Wednesday, April 7, at Zimmer's gun store, at which the following officers were elected: William H. Kimball, President; W. H. Wheeler, Secretary; S. B. Sylvester, Treasurer; William J. Burbeck, Charles F. Morse, E. L. Hartford and O. Zimmer, committeemen, these with the three officers form the executive committee. Ex-president W. H. Ramsdell, official scorer.

The club's shooting season opens on Patriot's Day, April 19. Among other events of the day, a prize presented to the club by Mr. Frank Coburn, will be contested for by the members.

The reports of the secretary and treasurer were very encouraging, so that the club will open the 1897 season with brightest prospects in its history. W. H. Wheeler, Sec'y.

Trap-Shooting.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for almost a quarter century.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

April 27-29.—Binghamton, N. Y.—Tournament of the Binghamton Gun Club. Two first days, targets; third day, live birds.

April 27-30.—Fonda, Ia.—Tournament under the management of Geo. E. Hughes and C. R. McCord. Live birds. $800 added money.

April 28.—Newark, N. J.—All-day shoot of the Forester Gun Club. H. W. Wambold, Cor.-Sec'y.

April 28-29.—Richmond, Va.—Tournament of the Interstate Association, under the auspices of the West End Gun Club.

April 28-29.—Peru, Ind.—Tournament under the management of J. L Head.

May 4-6.—Des Moines, Ia.—Tournament of the Iowa State Sportsmen's Association. Live birds and targets. F. C. Whitney, Sec'y.

May 5-7.—Newburgh, N. Y.—Annual spring tournament of the West Newburgh Gun and Rifle Association. First two days, targets; third day, live birds. $50 average money to three high guns in all programme target events. Open to all.

May 6.—Sherburne, N. Y.—Annual tournament of the Sherburne Gun Club. One day at targets. L D. Brainard, Sec'y-Treas.

May 11-13.—Peekskill, N. Y.—Annual tournament of the Peekskill Gun Club. First two days, targets; last day, live birds.

May 11-14.—Waterloo, Ia.—Tournament of the Waterloo Gun Club. E. B. Walker Sec'y.

May 12-13.—Connersville, Ind.—Tournament of the Connersville Gun Club. Live birds, T. F. Thomas, Sec'y.

May 17-22.—Kansas City, Mo.—Annual tournament of the Missouri State Game and Fish Protective Association, Fred T. Durrant, Sec'y.

May 18.—Albany, N. Y.—Annual spring tournament of the West End Gun Club. Horace B. Derby, Sec'y.

May 18.—Rutherfurd, N. J.—All-day shoot of the Boiling Springs Gun Club. 100 target race, $5, targets extra. Open to all; no handicap. W. H. Huck, Sec'y.

May 18-19.—Forest City Ia.—Hill City Gun Club's second annual tournament; $100 added. J. W. Mahoney, Sec'y.

May 19-20.—Savannah, Ga.—Tournament of the Interstate Association under the auspices of the Forest City Gun Club.

May 19-21.—Canton, S. D.—South Dakota Sportsmen's Association annual.: C. S. Seely, Sec'y.

May 20.—Greenville, Pa.—Second tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones, Sec'y.

May 25-27.—Marlin, Texas.—Tournament of the Marlin Gun Club. E. K Herrings, Sec'y.

May 26-29.—East St. Louis, Ill.—Annual tournament of the King's Smokeless Gun Club.

May 31.—Canajoharie, N. Y.—Eastern New York Trap-Shooters' League tournament, under the auspices of the Canajoharie Gun Club. Charles Weeks, Sec'y.

May 31.—Portland, Me.—Spring tournament of the Portland Gun Club. Targets. Added money announced later.

June 2-4.—Springfield, O.—Annual tournament of the Ohio Trap-Shooters' League, under the auspices of the Springfield Gun Club.

June 7-8.—Parkersburg, W. Va.—Tournament of the Mountain State Gun Club Targets. $350 added. Leon J. Epstein, Sec'y.

June 8-9.—Tournament of the Trap-Shooters' League of Indiana.

June 8-11.—Auburn, N. Y.—New York State Sportsmen's Association tournament. C. W. Tuttle, Sec'y.

June 9-10.—Monroe, La.—Tournament of the Interstate Association, under the auspices of the Monroe Gun Club.

June 10.—Newcastle, Pa.—Third tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones. Sec'y.

June 15-18.—Cleveland, O.—Fourth annual tournament of the Chamberlin Cartridge and Target Company.

June 16-17.—Fargo, N. D.—Third annual tournament of the North Dakota Sportsmen's Association. Targets. W. W. Smith, Sec'y.

June 22-25.—Oil City, Pa.—Seventh annual tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Oil City Gun Club. Targets and live birds. Black powder barred. Special event: 25 live birds per man. $25, $1,000 guaranteed. Send entries toH. C. Reeser, Sec'y, Oil City, Pa.

July 14-15.—New Haven, Conn.—Tournament of the Interstate Association, under the auspices of the New Haven Gun Club. Wm. H. Hazel, Sec'y.

July 20-22.—Pine Bluff, Ark.—Seventh annual tournament of the Arkansas State Sportsmen's Association. Added money announced later. Paul R. Litzke, Sec'y, Little Rock, Ark.

July 22.—Meadville, Pa.—Fourth tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones, Sec'y.

Aug. 4-5.—Lewiston, Me.—Tournament of the Interstate Association, under the auspices of the Androscoggin Gun Club.

Aug. 17-19.—Toronto, Canada.—Tournament of the R. A. McCready Co., Ltd. Targets. $1,000 guaranteed. Open to all. Write for programmes.

Aug. 19.—Warren, O.—Fifth tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones, Sec'y.

Aug. 25-26.—Montpelier, Vt.—Tournament of the Interstate Association, under the auspices of the Montpelier Gun Club.

Sept. 15-16.—Portsmouth, N. H.—Tournament of the Interstate Association, under the auspices of the Portsmouth Gun Club.

Oct. 6-8.—Newburgh, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association. First two days, targets; third day, live birds. $50 average money to three high guns in all programme target events. Open to all.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

On Tuesday, of last week, April 13, we had the pleasure of meeting Mr. John A. Wilson, of Franklin, Pa., who was passing through this city *en route* for England, where he will remain for a week or two. It is to Mr. Wilson's services at Harrisburg, last September that Oil City owes the honor of having the Keystone State shoot of 1897 held on its grounds. In connection with this shoot, which will be held the week following the Cleveland tournament, Mr. Wilson stated that the club would adopt in its 25-live-bird race, $1,000 guaranteed, precisely the same system of dividing the moneys that prevailed in this year's Grand American Handicap. The programme for the State shoot will depart this year somewhat from the conditions that have prevailed in the past; there will be only two days at targets, the other two days being devoted to live birds.

The New Utrecht Gun Club will hold a live bird shoot at its Woodlawn grounds next Saturday, April 24. The main event will be the Spring Handicap, handicaps 27-31yds., 15 birds, $10, birds included, Rose system; 10 per cent. to the club for expenses. The club will present a handsome cup to the winner. Ties for the cup will be shot off miss-and-out. This shoot is open to members of all Long Island clubs. The handicap will commence at 1:39 sharp, traps ready at 2:30. Woodlawn can best be reached by the Brooklyn Elevated R. R.. Trains leave the Bridge (Brooklyn side) at 12:07, 1:07, and hourly thereafter, stopping at all "L" stations. Stage will meet all trains at Washington station.

We have had our attention called to a statement made by A. R. Rose, of Salida, Col., in a letter to our Philadelphia cotemporary on the Rose system at the recent Cobweb Gun Club's tournament. The statement runs as follows: "They were all champions and ex-champions with national reputations, yet they continued to shoot out the events, class shooting, like a lot of novices. The management gave them the privilege on the second day of deciding by a majority vote of those present how the prizes should be divided. If they were so blooded, why didn't they vote for a high gun-division of the purses, which would have been more in keeping with such a class of shooters? But no, they decided to make the events for that day all class shooting, four moneys, 40, 30, 20 and 10 per cent. Did they shoot off the ties or divide? They divided, of course. When they get caught in such hot company, they are just as anxious to divide as any other class of shooters." Mr. Rose evidently wrote the above under a misapprehension of the facts of the case, or else the case presented to him was faulty. The facts are these: On the second day the management, as per announcement in the programme, gave the shooters the option of voting whether they would shoot under the Rose system or under the old system; there was no option in the matter; it was to be class shooting one way or the other. The vote was taken by secret ballot, but with such a gathering there was no question as to how the vote would go, for it was a gathering of the salt of the trap-shooters of the country. Mr. Rose's "varied entry fee" system, referred to by him in the same letter, is nothing actually new, but is merely an application to target shooting of the "optional" entrance fee idea, often used at the crack amateur live bird clubs in this country and Europe.

The first tournament of the Connecticut Trap-Shooting Association will be held, as previously announced, upon the grounds of the Parker Gun Club, of Meriden, Conn. Besides the above-named club, there are four other clubs members of the Association: Bridgeport Gun Club, Colt Gun Club, of Hartford; Windsor Locks Gun Club and the New Haven Gun Club. The main event on the programme will be a six-men team race between teams representing each of the above clubs, each man on the respective teams shooting at 20 known and 20 unknown angles. With five teams of six men each guaranteed upon the grounds, there is sure to be lots of shooting and plenty of sport. Shooting commences at 9:30 A. M., and any one who wishes to do so can enter "for birds only." This last provision in such an organization is, we think, a very wise one, as it encourages the weaker shots to come out and try what they can do on the same kind of targets and under the same conditions as their more expert brethren. The Association was only organized on Feb. 22 last, if we remember rightly, but it has started out right and should be a factor in the trap-shooting circles of the Nutmeg State.

Many readers of our trap columns will be sorry to learn that our good old friend and fellow sportsman, John T. Mascroft, of Worcester, Mass., is unable at present to take up his gun, walk to the score, call "Pull," and of course break the target. Mr. Mascroft's lameness, from which he has suffered in the past, has come upon him with greater force and rendered him physically incapable of doing any trap-shooting. All who know Mr. Mascroft will realize what this means to him, and will sympatize with him in being thus deprived of his favorite sport. In a personal letter to us, in answer to one of ours, Mr. Mascroft writes: "I am hoping that I shall be able to go to Newburgh to see the boys, but not to shoot. Be sure and tell all the boys how I would like to see them. I could name over a good list of those whom I have met at different places and who are friends that I prize very dearly: Rolla, Van, Capt. Money, T. K., Jim Elliott, Charlie Budd, Dutchy Smith, J. A. H. Dressel, Neaf Apgar, Gus Greiff, and scores of others, while McMurchy is one of the best of them."

The Audubon Gun Club is, we believe, the first club to reduce the price of targets at its weekly practice shoots to ½ a cent each. The extreme lowness of the above price will astonish many shooters and will set the officers of several other clubs figuring. The Audubon club has about 100 members in good standing, and its weekly club shoots, held every Saturday afternoon, have had an average attendance of somewhere in the neighborhood of thirty. The yearly dues were only $2, and it was found that almost all the expenses of the club were being paid by the thirty or more who attended these shoots. Accordingly it was determined this year to try another plan, viz.: to increase the yearly dues to $5 and reduce the price of targets to ½ a cent. We understand that the increase in the amount of yearly dues has had no effect on the membership roll, while the reduction in the cost of targets has had a beneficial result on the attendance at the weekly practice shoots.

It is really not so many years since Forest and Stream first introduced the system of tabulating scores and running percentage columns of scores made at shoots. The system is the only intelligible one, and they have all got to come to it. The old eye-aching system of "running in" totals and names, and the other space-devouring system of giving the 1s and 0s in all events, are too tedious if one wants to follow a man's score for a whole day's shoot. Many daily papers all over the country have copied the system, thereby showing that they are wideawake. The Interstate Association has also made a change, and now no manifold copies of scores are kept, save in the cashier's office, where the assistant cashier tabulates in manifold the scores as fast as the pads are brought in. Those who like to see at a glance how a man shot through a programme owe a vote of thanks to Forest and Stream for having introduced a system at once so simple and yet so plain.

At the Baltimore Interstate last week Elmer Shaner was presented by some of his New York friends with a Japanese sun helmet to replace the one which he wore last year, and which was so ruthlessly destroyed at the Marion, N. J., shoot at the close of the season. It is only right to say that the assailants on that occasion were the donors on this. The helmet that Elmer now possesses, and which he will wear around the circuit, is artistic as well as useful. It has been painted white, and bears the following inscriptions in red letters: On the front is the legend, "It's me," perhaps bad grammar, but effective; on the rear portion appears the old adage, "I'm it," also appropriate. The presentation of this helmet was intrusted to Mr. H. P. Collins; and the trust was not misplaced, for the presentation speech simply bristled with witticisms from beginning to end, and was loudly applauded by the assembled shooters.

Messrs. Alfred and Geo. W. Clay, of Austerlitz, Ky., have sent us a circular announcing that a shoot at targets and sparrows would be held on the grounds of the Hill Top Gun Club on April 22. The targets will be thrown from a magautrap, and the sparrows shot from five ground traps, one man up, the five traps down. The circular contains the following note: "Sparrows will not be allowed retrieved, as when a bird once touches the ground inside the boundary it shall be scored dead, even then if it should take wing and fly out, after the shooter has used both barrels." We sincerely hope that the above is not an actual statement of what will be done at this shoot of the Hill Top Gun Club. Anything more absolutely cruel and more thoroughly unsportsmanlike than leaving wounded birds to suffer, as stated above, we have never heard of. We trust that there is some error in the wording of the circular.

The following notice has been mailed us by Mr. H. W. Wambold, corresponding secretary of the Forester Gun Club, of Newark, N. J.: "The Forester Gun Club, of Newark, N. J., has arranged for an all-day shoot at targets Wednesday, April 28 Sweepstake shooting to begin at 10 A. M., the principal feature of the day's programme being a 50-target handicap shoot, known traps and unknown angles, $2 entrance, Rose system, targets at 1 cent each deducted from entrance money; handicap to begin at 2 P. M. sharp. F. E. Sinnock, one of the Forester's members, has devised a new system of handicapping, which he is sure will take with the shooters, as it gives the amateur the same chance of making a possible as it does the expert. Lunch will be served on the grounds gratis. The grounds can be reached by taking the Elizabeth trolley car to Frelinghuysen avenue and Peddie street, and walking one block east to Pennsylvania R. R. Loaded shells for sale on the grounds."

Mr. W. D. Kenyon, secretary of the Omaha, Neb., Gun Club, sends us the following note: "At the annual meeting of the Omaha Gun Club, held April 13, the following gentlemen were elected officers for the year 1897: W. H. S. Hughes, President; George W. Loomis, Vice-President; W. D. Kenyon, Secretary; G. F. Brucker, Treasurer Board of Managers: J. C. Read, F. W. Carmichael, J. P. Smead. Charles E. Johannes, Captain. Programme of season's shooting later, as the committee having the matter in charge have not yet reported."

The Star Gun Club, of Dayton, O., will hold an all-day open to-all shoot at targets on April 28. The programme consists of five 10-target events, $1, and five 15 target events, $1.50. As there is a good roof over the score, there will be no postponement on account of weather. Martin Dobb is secretary of the Star Gun Club; Wm. Stark is president.

A Richmond, Va., correspondent writes us as follows under date of April 17: "The boys are preparing to give the shooters who visit us a grand time during the coming Interstate tournament, which takes place here on the 28th and 29th of April. We will have on hand enough live birds to accommodate all who wish to shoot them, and there are several of the boys here who are not ashamed to face the traps with anyone."

The Marlin Fire Arms Co., of New Haven, Conn., write us under date of April 12, as follows: "A carrier pigeon came into our yard this morning utterly exhausted and starving. One of our men has been taking care of the same and it now seems all right, but shows no disposition to move. It appears completely lost. Marked on its leg band: '4, T. H. R., 95.' The owner may communicate with us."

We regret that the programme for the Nebraska State shoot at Lincoln, April 20-23, was received too late for us to make any extended notice of the same. On this point we would urge upon secretaries of gun clubs, who wish us to give any notice of forthcoming events in this column, that all such matter should reach us not later than first mail on Monday mornings to insure insertion. We would also remind our trap correspondents that the editor of this department is not always exactly "chained to business," and that it would be wiser to address all news matter to Forest and Stream Publishing Company if prompt attention is required.

J. G. Lindzey won the Brooklyn Gun Club's monthly cup shoot on Saturday last, April 17, with 44 out of 55. The total is not a high one, but Lindzey shot well, particularly in his last 27 targets, breaking 25 of them. The wind was blowing very strongly, and the targets from the magautrap were extremely hard to locate, particularly those that went off to the right, down wind and down hill.

On the second Saturday in the months of May, June and July, the Brooklyn Gun Club will hold a 50 target handicap race for a splendid stein, presented for competition by the president of the club, J. S. S. Remsen. If a shooter wins the cup twice it becomes his possession; but if three shooters tie for it with one win each, the tie will be shot off as previously arranged by the club.

The Enterprise Gun Club, of Reynoldton, Pa., held its annual meeting on Saturday, April 17, and elected officers for the coming twelve months as follows: President, Fred Stysham; Vice-President, John Owens; Secretary, Geo. W. Mains; Treasurer, Geo. Watson. All the above are residents of Reynoldton. The captain of the club is Wm. Crouch, of McKeesport, Pa.

The Boiling Springs Gun Club, of Rutherford, N. J., will have a 100 target scratch race, $5 entrance, targets extra, open to all, on May 18. The date originally chosen was May 19, but it has now been changed to May 18, so as not to conflict with the meeting for the proposed reorganization of the New Jersey State Sportsmen's Association, called for May 19.

Elsewhere we make a note of the proposed effort to reorganize the slumbering State Sportsmen's Association, of New Jersey. It seems a positive shame that such a trap-shooting State as New Jersey should be without any representative organization of shooters, and we hope that the efforts now being made will effect the desired result.

If Mr. A. R. Rose, of Salida, Col., could hear all the nice things said by the crackerjacks about the system of dividing purses at tournaments invented by him, he might feel a little sore, but he'd have the consciousness of knowing that he must have struck something that helps novices.

The East Lincoln and the Old Lincoln Gun Clubs, of Lincoln, Neb., have come together, and now form a new club called the New Lincoln Gun Club, with officers as follows: Pres., Wm. D. Bain; Vice-Pres., J. E Simpkins; Sec'y, Robert Malone; Treas., John Mocket.

U. M. C. Thomas tells us that the announcement made in his company's advertisement, as it appeared in Forest and Stream, that a sample of the kind of shell used by Hon. T. A. Marshall would be sent on application, has borne remarkable fruit. The number of requests for samples has astonished the company.

The Bergen County Gun Club is making arrangements to celebrate its first anniversary by holding a two-days' shoot early in June, most probably on June 3-4. Next Saturday, April 24, is the E. C. cup day at this club's grounds; it is a 50-target handicap race.

From what we heard at Baltimore last week, the next interstate shoot, which will be held at Richmond, Va., April 28-29, will have quite a large entry list. A good delegation will be present from New York and New Jersey.

The Endeavor Gun Club, of Jersey City, N. J., will hold a shoot at its Marion grounds on Thursday of this week, April 22, shooting commencing at 1 P. M. George Piercy promises some special attractions.

On Saturday, April 24, the main attraction at Elkwood Park will be the Spring Handicap, 15 birds, $15, handicaps 25 to 32yds., high guns.

We have received a copy of the Newburgh and Binghamton Gun clubs' programmes, and make a note elsewhere of their contents.

April 20. Edward Banks.

The Western Team at Elkwood Park.

Chicago, April 17.—*Editor Forest and Stream:* Under the caption "The Western Team at Elkwood Park" I find in last issue of your valued paper two letters, one by 48 Grs., Buffalo, N. Y., a second by Keystone, Philadelphia, both evidently with a foot in a bear trap, and neither will be able to bring about a controversy in which I shall take any particular part.

What I said in a letter recently published I stand by, and if 48 Grs. or Keystone, or anyone else desires to hear further in the same strain, they will doubtless be accommodated by some one of the fifteen who accompanied me, and who I believe agree with me to a man in all that I have said touching our experience at Elkwood Park, N. J.

48 Grs. says that he was a "spectator." If he was a spectator, I said nothing to him or about him. If especially interested in the results brought about by the Western shooters (therefore possibly a little sore), I can understand his desire to criticise.

To Keystone I would say that, having paid our bills at the Elkwood Inn, we had a perfect right to criticise; and whether or not we exercised our prerogative should not be a concern of Keystone's, who is altogether too generous in attributing a fault-finding disposition when he asserts that we "found fault to a man."

Considerable was said about a team shoot before we arrived at Elkwood, and we were asked many questions about an alleged or suggested team contest. We expressed a willingness to meet a team of Eastern shots, ten, twelve or fourteen in number, to shoot at any number of birds per man satisfactory to the Eastern gentlemen, and for any sum of money that it pleased our Eastern brethren to name; and notwithstanding Eastern newspapers and newspaper men had indulged in team-race talk prior to our arrival, not a word could we get in retraction or in acknowledgment of our expressed willingness to consider a challenge.

In conclusion let me say that I had no intention of stirring up "long ears" of the East when mildly stating a fact, and yet 48 Grs. as well as Keystone seems to have been hit.

To 48 Grs. let me say, your "penetration" is somewhat shy; your "velocity" may do in your section; that another exhibition of "long ears," and your friends will have no trouble in giving name to your "pattern." E S. Rice.

Binghamton Gun Club.

Binghamton, N. Y., April 10.—With the advent of true spring weather, and the near approach of the dates for our spring tournament, the boys turned out in goodly numbers at to-day's club shoot. Three strings of 25 targets each were shot, and ten 10-target sweeps, $1 entrance, were also decided, with the following results:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13
Kendall	21	19	20	9	8	7	9	8	10	7	8	10	8

H. W. B.

Pawtuxet Gun Club.

Pawtuxet, R. I., April 10.—The shoot to-day was for the silver souvenir keg of Laflin & Rand's W-A powder, donated to the club through A. Harris & Co., of Providence. The powder being divided into five equal parts and to go to five highest scores of to-day's shoot. The silver keg has to be won three times to become personal property, to-day's shoot counting one win.

The attendance was very small although the day was quite pleasant. The scarcity of shooters was partly due to quite a number of the boys being out after trout.

The club will hold regular shoots every Saturday now until October, and any stray gentleman trap-shooter will be made welcome. Targets at 1 cent.

W. H. Sheldon.

The Atchison Tournament.

ATCHISON, Kan., April 16.—That Lou Erhardt's popularity is by no means on the wane, and that his tournaments are a feature of the Western circuit, has once more been attested. While he has made no new records in the way of entries, and in fact did not reach the high figures of last year, one thing must be borne in mind—that this was strictly a shoot for money, with no merchandise, "nothing but cash" being the motto. The largest number of entries in any open event last year was 72, while 63 was the top number this year, only 9 less, but there was no perceptible falling off after the first day, and the entries ran very uniformly.

As is always the case the largest number were present on the first day. Collectively the class of shooters was faster than last year. With the exception of the second day, when the wind was vainly endeavoring to blow the crest off the knoll on which the shooting grounds were located, straights were always in order and at times quite numerous. This is borne out by the evidence that on the first day Sexton had an average of 92.5, and yet this did not land him among the five high guns. Again, on the last day 90 per cent. failed to get any of the high gun money.

THE MANAGEMENT.

In planning this shoot Lou Erhardt had not forgotten that a good manager is a very essential factor in the success of a shoot. Jack Parker had previously served him in this capacity, and had given the utmost satisfaction. He has also become decidedly popular among Western shooters It followed, therefore, that Lou would again have him at the helm, and in this respect he made no mistake, as Jack never handled a shoot better in his life.

The smoothness with which the shoot was handled was a matter of considerable comment. Lou was the recipient of many well-deserved compliments on the success of it. The working force, too, was of the best, and most of this had seen service before. The office force consisted of C. H. Wallingford, of De Kalb, Mo., and W. A. Starks, of Leavenworth, Kan.; both of these young men have frequently acted in the same capacity at tournaments, and are therefore thoroughly familiar with all the details of the office. The squad hustlers were T. P. Courtney, Walter Wills and L. O. Keirth, all of whom were experienced, and, above all, ever attentive to duty.

GROUNDS AND ARRANGEMENT.

The park where the tournament was held was a great improvement over that of last year. Being much more accessible and also having an excellent background, there being nothing to obstruct the view of the shooter. Electric cars took one right to the ground in short order.

Three sets of traps were in position. These were arranged in a manner devised by W. G Sergeant. This system was explained in the programme, but for the benefit of those who have not read it, we will again explain it here. Three traps constitute a set, and these are set about 3ft. apart. The shooters' score is arranged in the segment of a circle with 3yds. between each man. The shooting is done in squads of five. In a 20-bird race each shooter shot 4 targets from each position. The shooter at No. 1 score gets a bird from No. 1 trap; but in case this bird is broken or the trap fails to work, he immediately points his gun over No. 2 trap and calls "Pull." Thus there is never any delay, as it is not necessary to wait for a trap to be loaded, but to just swing your gun from one trap or the other and call "Pull." The traps being so close together the distance from any one score is but a fraction over the usual 16yds. Another feature in favor of this 3-trap system is the facility with which events can be shot-off, and the small expense of trapping. On two sets of traps the programme was shot off on the first day from 9 A. M. to about 4 P. M. It required something over 10,000 targets for this, and all of these were thrown at an expense of $6 for trappers, or something less than 60 cents a thousand. Six thousand or 7,000 targets can easily be thrown in a day from one set of traps arranged in this manner.

PERSONAL.

There were perhaps as many as 100 shooters present at different times during this shoot. Several cities had strong delegations present, of which Kansas City had the largest. The following is a list of those that composed it: C. C. Herman, Walter Howe, Thomas Hearn, Dave Elliott, Robert Ostertag, James Miles, J. J. Cornett, Gus Rickmers, Chris S. Gottlieb, Charles Schmelzer and J. J. Durkee. Then came Leavenworth with five representatives: G. W. Lindzy, J. W. Sexton, H. W. Koohler, G. W. Goff and H. L. McElroy. Four represented Lincoln: Tom Clyde, R. M Welch, George Rogers and J. C. Ray. Then there was W. G. Sergeant and G. W. Stevenson from Joplin, Mo.; C. M. Sumner, Galena, Kans.; Taylor Cox, the one-armed shooter from Karl Junction, Mo.; D. M. Edwards, Severance, Kans.; W. S Duer, Hastings, Neb.; D. K. Douthett, Oceola, Ia.; G. W. Jenkins, Wamego, Kans.; C. F. Reust, J. M. Rhodes and B. T. Rice, Frankfort, Kans.; D. D. Bray, Syracuse, Neb.; C. D. Linderman, Adams, Neb.; C. D. Hagerman, Wymore, Neb.; J. W. Den, Arrapahoe, Neb., and a host of others.

TRADE REPRESENTATIVES.

R. O. Heikes, Dayton, O., and J. A. R. Elliott, Kansas City, taking care of the Winchester interest; Herbert Taylor, St. Louis, Mo., representing the Du Pont and Hazard powders; C. E. Willard, Hartford, Conn., representing the Colt Arms Co.; Fred Gilbert, Spirit Lake, Ia., and C. M. Grimm, Clear Lake, Ia., both shooting Du Pont; Charles Budd, Des Moines, Ia., winning high average with Hazard's Blue Ribbon; Frank S. Parmelee, Omaha, Neb., now shooting a Remington ejector and talking Remington goods; Jack Parker, Detroit, Mich., shooting King's Smokeless to the front and explaining the merits of the new Victor shell; J. W. Barre, of Louisiana, Mo., shooting Austin and talking it, too. Then there was Thos. A. Marshall, of Keithsburg, Ill., not to be forgotten, but who had nothing to boom.

AVERAGES.

The programme each day consisted of eight 20-target races, $2 entrance. $15 added. An additional $50 given each day for the five guns. The purses were divided into five equal moneys, 20 per cent. to each. This was not altogether satisfactory, as sometimes the 16 got more money than the straights. The daily averages are shown in the table below, and for general information I have compiled the general averages of the ten high men.

This shows Budd first with 94 3; Heikes second, 92.4; Grimm third, 89.7; Duer fourth, 89 1; Parmelee fifth, 88.1; Rogers sixth, 87.9; Sergeant seventh, 87.7; Parker eighth, 87.2; Gilberth ninth, 87.1; Marshall and Den tenth, 86.8 each.

The daily standings are shown in the respective tables below.

No record is kept of the extra events, which varied from 10 to 25 targets each, singles and doubles and all kinds of shooting.

During the shoot 31,585 targets were shot; 15,130 the first day; second day 11,830, and 6,665 on the last day.

First Day, April 14.

With ideal weather, a large attendance and every one in the best of spirits, good scores are naturally to be expected; so the big scores put up by a number of the shooters are easily accounted for.

It will be gratifying to Jack Parker's numerous friends all over the country to see his name at the head of the list with the excellent percentage of 95.6. True, Charley Budd tied him, but in addition to Jack's good shooting in the regular events, he shot even better in the extra events. In them he lost only 4 out of 105, bringing his average for all events up to 95.8. Budd tied with Parker in the regular events, and this is due to his great finish; 97 out of his last 100 is what landed him in the place of honor. Then comes Sergeant—that irrepressible shooter from Joplin, this time shooting a new Parker—with 93 7, just one more break to his credit than those two fast ones, Heikes and Parmelee. Den, too, gets in for part of the five high-gun money, as he is tied with Heikes and Parmelee. These three divided $20, while those occupying the first three positions got $10 apiece.

The position in which each respective shooter finished is given in the table below. Seventy shooters took part in the different events. Of this number, 48 shot in all the programme events. The names of those who shot through appear first in the order of merit; after which come the names of those who shot only in part of the events and made an average of 70 per cent. or better.

SCORES OF APRIL 14.

Events:	1	2	3	4	5	6	7	8	Shot at.	Broke.	Av.

Gardner	12	16	11	16	..	..	17	16	120	88	73 3

The others who participated in one or two events, and also those who failed to make an average of 70 per cent., are as follows: Johnson, Shaw, Jacobson, Lytle, Hearn, Howe, Redman, Sutlieff, Bruce, Dare, Cable, McElroy, Boltinghouse and Erhardt (not Airy Lou).

Second Day, April 15.

The weather to-day was quite a contrast from that of yesterday. It was cloudy part of the day and at one time quite threatening. A cold, raw wind was also blowing a gale, so it is not very hard to see why the averages were so low. It will be readily understood that the conditions must be very trying when only one of such a fast lot of shooters could reach an average of 90. This again proved to Charley Budd, who is shooting in magnificent form; 92.5 per cent. is grand work under such conditions as those of to-day. Heikes also pulled up a notch or two, as he was second with 89.3. Then comes Duer and Grimm, with 86.8, while Marshall follows with 85.6. These were the five high guns, and they of course took the $50 average money. Duer's run of over 40 straight was one of the features of the day. Barre would have doubtless been one of the five high guns, but he did not shoot in the first event.

The entries held up very well, as 62 shooters took part in the different events of the day. Of this number 37 shot the programme out. Quite a number of events were shot on the extra set of traps. Marshall being well to the front at this game. The Indian squad shot very strongly, as three of its members got part of the high gun money.

A glance at the appended table will show the respective positions each shooter occupied when the programme was finished. Those who failed to make an average of 60 per cent., or who shot only in one or two events are as usual omitted.

The following also took part during the day, but only shot in one event or failed to make an average of 60 per cent.: Gardner, Boltinghouse, Edwards, Ruggles, Dare, Johnson, Taylor, Dix, Gregg, Ostertag, Allen, Lytle and Erhardt.

Third Day, April 16.

As is always the case on the last day of a tournament, the entries fell off considerably, just 39 shooters being the sum total. Of this number 29 shot the programme through, and also kept the extra set of traps quite busy. Budd maintained his fast gait and was again on top, though Heikes, who evidently thought it was time for him to assume the lead, tied with him. Budd made four straights and in this respect also led all the others. Young Duer once more landed some of the high gun money, being third with 93 1. Then came Gilbert, who for the first time during the shoot was shooting in something like his old form. In the extras too he shot well, getting a 25 straight and 17 out of 10 pair; in each of these events he and Heikes cut up the first money Grimm and Barre get part of the high gun money, but had to divide the last $10 between them. The weather to day was clear, though the wind still blew very strongly.

SCORES OF APRIL 16.

Budd	19	20	20	17	20	19	17	20	160	152	95

Gregg	13	12	..	..	..	..	..	..	40	25	62.5

NOTES.

Chris Gottlieb missed two chances to capture first alone. In the first event on the second day, with no 20s or 19s, he ran 18 straight, and then slipped up on his last ones. Then, again, later he had 19 straight, and once more lost his last one, when it meant first all alone. Each of these targets ducked just as he shot. Such misses are, to a certain extent, excusable.

Roll Heikes did not win first average either day, but he collected the usual $10 each night for being one of the five high guns. Each day he was close to the top.

From the form that Charley Budd displayed one would believe that this is his second time on earth. Never did he shoot better than he is shooting now.

The Indian squad put up a great score of 96 out of 100. This is great shooting for a team of 5 men.

Dave Elliott duplicated his feat of last year of again beating out his big brother Jim. This gives Jim little concern, however, as every one knows that pigeons are his forte.

Douthett won a "first alone" on the last day.

PAUL R. LITZKE.

New Jersey State Sportsmen's Association.

AN effort is being made to reorganize the State Sportsmen's Association of New Jersey, an organization once active enough, but now and for some years past a dead letter in the world of trap-shooting.

When the Association went to sleep it was possessed of a president, a secretary, two trophies and some cash in hand. The individual live-bird championship trophy is held by W. Fred. Quimby, and Fred has generously offered to hand over the trophy to any properly constituted State organization.

For more than a year past there has been desultory talk about getting the Jersey shooters together and reorganizing the State Association, but nothing was actually done until recently, when a committee of three was nominated at a monthly meeting of the Boiling Springs Gun Club to test the feeling of the trap shooters of New Jersey on the matter, and to call a meeting of delegates from the various clubs in the State for the purpose of effecting a reorganization of the old Association. This committee, acting under the authority given it at that meeting, has issued the following circular to the gun clubs of the State:

"NEW YORK, April 13.—Dear Sir: It has been decided to attempt the re-organization of the New Jersey State Sportsmen's Association, and for that purpose a committee has been appointed to call a meeting. This committee is constituted as follows: Colin R. Wise, of the Passaic City Gun Club; W. H. Huck, of the Boiling Springs Gun Club, and Edward Banks, of the Endeavor Gun Club.

"The committee has received assurances from several clubs that they will gladly coöperate in the work of re-organization, and it also asks your support in this matter. With this end in view it asks you to lay this matter before your club at the earliest possible opportunity, requesting it to nominate one or two delegates to represent your club at a meeting to be held on May 19, 1897. The meeting will be held in the rooms of the Sportsmen's Association, Room 1,009, No. 377–379 Broadway, New York city, which have been courteously loaned by the Association for that purpose.

"Each club is entitled to two votes, and delegates should be careful to bring credentials with them.

"Kindly inform the committee as soon as possible just what action your club has taken in the matter. Yours truly,

"EDWARD BANKS, Secretary Committee."

The circular has been sent to the following clubs: Forester Gun Club, of Newark; South Side Gun Club, of Newark; Oritani Field Club, of Hackensack; Bergen County Gun Club, of Hackensack; Central Gun Club, of Long Branch; Riverside Gun Club, of Red Bank; Trenton Gun Club; Brunswick Gun Club, of New Brunswick; Freehold Gun Club; Atlantic Highlands Gun Club; Monmouth Gun Club; South Orange Field Club; Climax Gun Club; Yanticaw Gun Club, of Nutley; Union Gun Club, of Springfield; Dunellen Gun Club; East Side Gun Club of Newark; Newark Gun Club; Boiling Springs Gun Club; Passaic City Gun Club; Endeavor Gun Club, of Jersey City; Westfield Gun Club; Closter Gun Club; Flemington Gun Club; Hackettstown Gun Club; Arlington Shooting Association; Elizabeth Gun Club; Paterson Gun Club; New Germantown Gun Club; Maplewood Gun Club; Bound Brook Gun Club; Keyport Gun Club; Perth Amboy Gun Club; Crescent Wheelmen, of Plainfield; Country Club, of Elizabeth; Rahway Gun Club; Hudson Gun Club; Atlantic City Gun Club.

There are other gun clubs in the State to whom the circular will be sent this week, but the committee has experienced some difficulty in obtaining the addresses of officers of such clubs. It is hoped, however, that any club that has been accidentally overlooked by the committee will take into consideration the fact that the meeting is "open to all," and that every club in the State is invited to send delegates to the meeting on May 19. The hour for the meeting has not been set but will be announced later, in plenty of time for all to learn it. If the old association cannot be re-organized, a new one should be started.

Programmes for Coming Tournaments.

BINGHAMTON GUN CLUB.

THE annual spring tournament of the Binghamton, N. Y., Gun Club will be held April 27–29. This year the club has gotten out quite a catchy programme, and has evidently done its best to please all comers.

For the first two days targets will be used, and empire targets will be thrown from a set of expert bluerock traps. The programme is precisely the same on each day, viz: four 10-target events, $1 entrance; eight 15-target events, $2 entrance. All purses will be divided into four moneys under the "straight out" (Rose) system. Targets will be deducted from the entrance fees at 2 cents each. On the third day, April 29, there are four events scheduled, and all events will be handicaps, the handicaps ranging from 27 to 31yds. No. 1 is 5 birds, $5, three moneys, price of birds deducted; No. 2, 7 birds, $7, birds included; No. 3, 10 birds, $10, birds extra, four moneys; No. 4, $2 miss-and-out.

The shoot will take place rain or shine, shooting commencing at 9:30 A. M. All guns or shells shipped to the Arlington Hotel, headquarters for shooters, will be delivered at the grounds. The following note also occurs in the "Rules, remarks and regulations:" "The management reserves the right to put to the vote of the shooters on the morning of the second day, as to which system of dividing purses is their choice."

WEST NEWBURGH GUN AND RIFLE ASSOCIATION.

The annual spring tournament of the West Newburgh Gun Rifle Association is set for May 5–7. First two days at targets; third day at live birds. It is unnecessary to say much in regard to the location of the club's grounds, or of the background, for target shooting; neither is it necessary to say much in regard to the fare furnished by Jake Gedney in his hotel, adjacent to the grounds. All are excellent, and all are well known to shooters in this section.

Last fall the club tried an "amateurs' tournament," and was far from pleased at the result of its efforts to help out the "amateurs." This spring it has gone back to its first love, and now announces an "open-to-all, professionals-not-barred" tournament.

As is customary nowadays, the programme on each target day is precisely the same. It calls for 185 targets, and $18.50 entrance for all day. The events are three 15-target events, $1.50, and seven 20-target events, $2. All targets will be thrown at unknown angles. The Rose system will be used in dividing purses. Average moneys will be given as follows: "$50 will be divided as follows: $18, $11, $8, $7, $6 and $5 to the shooters making the best average on both days on targets. Ties divided unless otherwise agreed." All targets thrown will be empires.

On the live bird day, May 7, there will be 3 events: No. 1, 5 birds, $5; No. 2, 7 birds, $7.50; No. 3, 10, $10.

Among the "Remarks," occur the following: "All guns will shoot from the same distance. Targets 2 cents each, to be deducted from purse. Shoot begins at 9 o'clock sharp each day. The live bird boundary will be an 18in. wire fence, 65yds. No deviation will be made from the programme, rain or shine. A good hotel adjoins the grounds (about 200yds. from the traps). Terms, $1.50 per day, including room. Stages starting from end of trolley line will run to and from the grounds. Fare, 25 cents round trip."

Marlin Gun Club.

MARLIN, Tex., April 14.—The Marlin Gun Club met to-day in pursuance to a call of the president, Chester Haile acting as secretary. It was decided to hold a three-days' tournament, beginning May 25.

The following committees were appointed: Advertising and Soliciting—Chester Haile, J. G. Oltorf and R. B. Lonis. Programme—L. S. Ross, Jr., W. W. Turner and E. K. Herring. Transportation—E. R. Emery. Arrangements—H. G. Rush, W. W. Turner, C. J. Bartlett and A. Stammbach. Also a reception committee, consisting of each member of the club.

E. K. HERRING, Sec'y.

Baltimore's Interstate.

The target season of 1897 has been opened, and opened successfully at Baltimore, Md., with the first target tournament on the Interstate Association's circuit for the year. This tournament has attracted more than ordinary attention, as Baltimore, although a great trap-shooting center, has done more in the live-bird line than in that of targets in recent years. The programme of events too, was a generous one as such things go now. The club added $450 in cash to the purses, $150 on each of the three days—April 14-16—of the tournament. This amount of money and the absence, or rather scarcity of large tournaments in the list of fixtures for the year, made it more than likely that Baltimore's entry list would be quite large.

A SATISFACTORY ENTRY LIST.

As a matter of fact the entry list on each of the target days was thoroughly satisfactory. On April 14 the average number of entries in each of the ten programme events was exactly 34. On the second day, April 15, the extremely bad weather of the opening hours of the day had its effect on the entries, the average for the programme events being just a fraction under 28. Old tournament-goers will realize more readily than others that the above averages mean a pleasant shoot, with lots of shooting, fair purses and no long, tedious waits. Live-bird day, April 16, was somewhat disappointing. The entries ruled low; the Maryland Handicap, 25 birds, $20, birds included, five moneys, high guns, which was the main event on the programme, had only 20 entries. It is probable that had this event been "class shooting, four moneys," the entry list would have been more than doubled; five high guns in a 25-bird event is rather a steep game to go up against. We are firm believers, however, in high guns for all live bird events, and think that the Baltimore Shooting Association did wisely in following the principle adopted by the Interstate Association at its Grand American Handicap tournament of March last. Live-bird shooting under the old system of class shooting may be all right for club shoots, but "high guns" will surely become the popular thing at large tournaments.

EVERYTHING RAN SMOOTHLY.

Practice makes perfect, and Elmer Shaner has had practice enough in the way of running tournaments to make him about as nearly perfect as we ever hope to see him. The tournament from beginning to end ran as smoothly as possible. The expert traps worked well, and the magautrap performed her (is it a she?) work admirably. The latter machine needs more than passing mention. The last time (and, by the way, the first time) we shot over a magautrap was last June at Cleveland. In our report of that shoot we spoke favorably of the working of the magautrap, and yet the machine at that time was a crude article to what it is now, with its electric pull, etc. "Maggie," as the boys call the trap is puzzling, it is true, and the variety of flights one gets from one of these traps is rather surprising. The result is, therefore, impaired averages even under favorable conditions as to weather, background, etc. Just give "Maggie" a sloping hillside like she had at Baltimore, with a dark background of trees to the left, and almost a gale of wind like that which blew on the second day, and averages will not be simply impaired - they'll be knocked "galley west." Under such circumstances the magautrap is a severe combination; but she certainly furnishes good material for practice and makes the shooting anything but mechanical.

With the magautrap to take the place of one set of traps, Manager Shaner placed the Interstate's set of expert bluerock traps in position for the second set of traps. And this set of traps has a history of its own—a history that might be studied with benefit by every secretary of a gun club using those traps. This is their third season, and it is safe to say that over 200,000 targets have been thrown by those five traps, and yet they are practically as good as when Elmer first used them. More than half the credit for their condition must be given to Mr. Shaner, for he has tended them with a fatherly care. Each trap may be said to have thrown 40,000 targets, and yet Paul North tells us that for every 6,000 or 7,000 targets that his company manufactures and puts on the market, it sells one trap. He assures us that this has been the ratio for some years, and therefore he figures that the average life of a trap is about that number of targets. He attributes the long life of Elmer's set of traps to the care and judicious oiling that they get at his hands—something that other traps seldom or never get. It is a fact that Mr. Shaner was only called to attend to these traps once during the entire tournament, and the cause of the trouble then was the combination of "a wire out," and a boy who didn't know what to do under the circumstances.

HOW THE EVENTS WERE SHOT.

The shooting on the afternoon of "preparation day" had proved so hard owing to the wind that blew, that though several 15-target events were shot over the magautrap, only two straights were made in the afternoon. Jack Fanning was responsible for one and E. D. Fulford for the other. Under these circumstances Manager Shaner thought it would be best to start the 15-target events on the magautrap and the 20-target events over the regulation traps. This was the method pursued on April 14 and it worked well in some respect; but the 15s were disposed of proportionately much faster on the magautrap than were the 20s on the other traps. This, however, caused very little actual delay and the programme was shot out about 3:30 P. M., even with an interval of about one and one-half hours for luncheon.

On the second day the 15s were shot on the regulation traps and the 20s on the magautrap. This kept both sets busy all the time, and although a start was not made until nearly 11 o'clock, the programme was shot out a little after 3 o'clock with an hour out for lunch. Six extras, all 15-target events, were disposed of this afternoon before the boys would quit shooting and go to their hotels. Altogether 13,000 targets were thrown during the two days of the shoot. As will be noticed on reference to the scores made on the second day, there was a vast difference between the totals made on the magautrap and on the other set of traps. When the wind came up strongly it brought whole bunches of ciphers with it. To men accustomed to straight scores under other conditions, there was something more than exasperating in the manner in which target after target would dip, jump, scoot and curve out of the charge of shoot; but we don't think there was a shooter present who didn't enjoy that style of shooting.

FAMILIAR NAMES.

Among those who were present were some whose names are by this time very familiar to trap shooters generally: Ferd Van Dyke, of the Winchester Repeating Arms Co.; J. S. Fanning, of the U. S. (Gold Dust) Powder Co., of San Francisco; W. Crosby, of the Baker Gun Co., of Batavia, N. Y.; Capt. A. W. Money, of the American E. C. Powder Co; Paul North, of the Cleveland Target Co.; H. P. Du Pont Collins, representative in Baltimore of the Du Pont and Hazard powder companies; U. M. C. Thomas, of the U. M. C. Co., of Bridgeport, Conn.; Ralph Trimble, of Covington, Ky., representing the Hazard and Du Pont companies; Ed Taylor, New York, of the Laflin & Rand W-A Powder Co.; A. W. du Bray, of Dayton, Ky., representing the Parker Gun Co., and one of the most popular men in the business. Then came the pair from northern New York: Sim Glover, of Rochester, shooting the Parker gun and Schultze powder, and E. D. Fulford, of Utica, with his combination of Francotte gun and Schultze powder.

Others who were there were: F. D. Alkire, Woodlyn, O.; M. M. Mayhew, Utica, N. Y.; H. M. Stewart, Rochester, N. Y; H. C. Bridgers, Tarboro, N. C., a rattling good shot who conceals his identity under the name of Tarheel; Hughes (otherwise Dr. P. H. Mason), Peekskill, N. Y.; E. C. Mattingley and Billy Wagner, Washington, D. C.; York (otherwise H. W. Burnham), York, Pa., ex-champion of the State of Pennsylvania at targets; John L. Brewer, New York city; W. H. Wolstencroft, Harry Thurman and R. A. Welch, Philadelphia, Pa.; E. C. Burkhardt, Buffalo, N. Y.; W. Mitchell, son of Senator J. L. Mitchell, Milwaukee, Wis., the youngest shooter on the grounds, but one who stuck to his work and shot the programme through on each of the two target days.

The home club was well represented by Hood Waters (who took third place in the general averages); Chas. A. Macalester, better known as one of the best live-bird shots in the country; Hawkins, a good man on either live birds or inanimates; Dr. Lupus, Bond, Ed Coe, Smith, Brooks, Hall, Malone, White, etc. In short the home crowd was out strongly, and staved to the finish, more than one of them doing yeoman service for the club.

THE OFFICIALS.

The Baltimore Shooting Association is well fixed for helpers when it comes to running a tournament. The referees were both of them painstaking and capable; Dr. S. O. Heiskell officiated in all events shot on the magautrap, while Hamilton Cassard judged on the other set. It is of course utterly impossible that a referee can give satisfaction to everybody, but we must state in all fairness that the decisions of the above-mentioned two gentlemen were received with less complaints than we have heard under similar circumstances for many moons. The scoring, too, was above par, and very few "ball-ups" occurred in this branch of the shoot. Where the shooting is rapid fire, and when a quick firing squad is at the score, it takes more than ordinary quickness of apprehension to accurately mark down the correct score. N. Walker was the scorer at the magautrap, Bob Scarf at the other set. The pullers were: magautrap, R. Cantler; other traps, R. Merefield.

In the cashier's office Dr. Samuel J. Fort, of Ellicott City, Md., was chief, with R. H. Burton, the representative of the Baltimore *Herald*, as his assistant. This part of the management of the tournament was handled as satisfactorily as the other branches. Altogether, it may be said that Manager Shaner was fortunate in his help.

GUNS, POWDERS AND SHELLS.

A canvass of a large majority of the shooters on the grounds showed the following guns, powders and shells in use:

Guns: L. C. Smith 13, Parker 11, Winchester 7, Greener 3, Francotte 2, Baker 1, Colt 1, Lefever 1.

Powders: Du Pont 13, E. C. 11, Schultze 6, W-A 3, Hazard 2, Gold Dust 1, Du Pont & Hazard 1, Austin 1, King's 1.

Shells: U. M. C. (Trap, Smokeless and Nitro) 24, Winchester (Leader, Repeater) 11, Peters's Victor 1, U. M. C. & Winchester 3.

With the above list we must bring our account of this tournament to a close, leaving it to a review of the scores made and the averages recorded in the tables given below to tell the rest of the story.

GENERAL AVERAGES.

Although no average prizes were offered by the club there was perhaps almost as much rivalry for places in the "general average" list as if such solid cash inducements had been promised to the high men. If no other proof of the success of the Baltimore tournament could be adduced, it would be sufficient to simply state the fact that eighteen men shot through the entire programme on both days, while a round dozen or thereabouts missed only one or two events.

The weather conditions of the two days were exactly opposites. As has been stated, on April 14, there was warmth enough to make a regular "shirt-sleeve shoo"; what little breeze there was, too, played no tricks with the targets; while the bright light and moderate background seemed to warrant big scores. On April 15 it was entirely different: A heavy soaking rain fell until about 10 o'clock; a wind sprang up then from the southwest and drifted the clouds away, the sun coming out brightly before noon. But with the sun came a squally wind that almost reached the dignity of a gale at times, while at others it fairly died away. This fickleness of the breeze made good shooting much a matter of luck, but still there was no keeping the good shots down. Glover and Fulford headed the lists on both days, and their names will be found in the following table of general averages at the top of the heap. Hood Waters, a Baltimorean, honestly deserved his position as third on the list, while Van Dyke's good work on the first day, and Fanning's Garrison finish on the second day, landed them a tie for fourth and fifth places. Brewer, Alkire and Trimble, all closely bunched, came next in order named.

A reference to the table below will tell the rest of the story:

	First day.	Second day.	Total.	Average.
S Glover	164	162	326	93.1
E D Fulford	162	157	319	91.1
Hood	155	151	306	87.4
F Van Dyke	159	144	303	86.5
J S Fanning	148	155	303	86.5
J L Brewer	150	151	301	86
F D Alkire	152	147	299	85.4
R Trimble	142	155	297	84.8
F S Edwards	151	145	296	84.5
W Crosby	154	137	291	83.1
Tarheel	149	142	291	83.1
Capt Money	140	143	283	80.8
H M Stewart	150	132	282	80.5
M M Mayhew	133	140	273	78
York	131	125	256	73
U M C	135	119	254	72.5
Mitchell	130	122	252	72
H P Collins	114	99	213	60.8

First Day, April 14.

With a magautrap and a set of bluerock expert traps in position, and with only a matter of forty-three shooters to handle, Elmer Shaner was in no hurry to start, not a gun being fired until about 10:15. Once a start was made, everything went along so rapidly and smoothly that the boys were all shot out before 4:30. The programme called for 175 targets, and three extra 15 target events were also shot. Thus some idea of the work done can easily be figured out. Over 7,000 targets were thrown, a large number, when the total of shooters is taken into consideration.

A list of forty-three shooters does not sound large compared with the totals in the old days of "$2,000 (or $3,000) added," but it is really a large number to get together nowadays, and any tournament which, like this one, can boast of twenty-five entries "for all day" must be classed among the successes of the season of 1897. It must not be overlooked also that a large tournament took place at Atchison, Kansas, on the same dates as those of the Baltimore Interstate.

The list of entries in each event on the programme shows that the boys started in to shoot at the beginning, and stayed until the last event. The following gives the list of entries in each event: No. 1, 30; No. 2, 35; No. 3, 35; No. 4, 33; No. 5, 32; No 6, 31; No. 7, 39; No. 8, 37; No 9, 37; No. 10, 31. This gives an average entry for the ten events of 34.

Glover started off like a race horse, only losing two targets out of the first 85 shot at. With such a start, and shooting as he always does a most regular gait, it is no cause for astonishment that he finished in the lead with the high average of 93.7. He did not win first honors, however, without a struggle, as Fulford, who started badly, finished very strongly with 120 breaks out of the last 125 targets shot at, averaging for the 175 shot at in the programme events just 92.5 per cent. Van Dyke, who was scarcely shooting his regular gait, being erratic in some events, landed third place with 90.8. Hood was fourth, Crosby fifth and Alkire sixth.

On this day Manager Shaner ran off the 15-target events on the magautraps, and the 20-target events on the expert traps. This naturally made some pauses between the events as the programme wore on, the 15-target events being shot out proportionately faster than the others, owing to the saving of time in shooting over a magautrap when a target breaks in the trap. Shaner, however, felt that it was rather a stiff game to run novices up against if they were set to shoot against the crackerjacks, for only four places in the 20-target events over the magautrap; the work of the "preparation afternoon" referred to above had given some of the boys quite a scare.

Below are the scores made in the 10 programme events:

SCORES OF APRIL 14

Events:	1	2	3	4	5	6	7	8	9	10			
Targets:	15	20	15	20	15	20	15	20	15	20	Shot at	Broke.	Av.
Glover	15	19	15	20	14	17	14	19	14	17	175	164	93.7
Fulford	13	16	13	19	14	19	15	19	15	19	175	162	92.5

Second Day, April 15.

A more disheartening kind of an outlook for the second day could scarcely have been provided than that which greeted the shooters when they came down to breakfast at the Carrollton Hotel on April 15. The rain was pouring down in sheets from a lot of leaden clouds that spread over the city of Baltimore; and not a breath of air was stirring to give promise of something better in store. With no average money to fight for, it is not to be wondered at that the boys hung around the hotel office and discussed the state of the money market and the prospects of war between Greece and Turkey until well on to 10 o'clock. Then a break came in the sky and the clouds began to move off a little. By the time the grounds were reached (and it's a long ride to Halsted's Hotel) only a slight drizzle was falling; and before the first two events were finished, the sun was out good and strong; and out to stay.

And such shooting as it was during the greater part of the day! Glover and Fulford held up well; Fanning and Trimble, and Hood and Brewer also shot well. But the rest were scarcely anywhere. Whether it was a case of funk, luck or lack of condition, there was something radically wrong with the rest of us. The 15s were shot today on the expert set of traps and some fair averages were made in them. But when it came to the 20s and the "Maggie," then there was fun and lots of cyphers. Right-quarterers curved off down hill and dipped and scooted to beat the band; left-quarterers slid up the hill and into the ground after a fashion that left nothing to be desired in the way of variety of angles or styles of shooting.

There were consequently some curiosities in the way of scores. With only 4 moneys in the 20-target events, 15 was not necessarily out of the money. In event No. 6 there was only one 20—Fulford; not a single 19; only two 18s—Glover and Brewer; and not a single 17! In No 8, Fulford, Trimble and Brewer were high with 18; Van Dyke and Hawkins were the solitary 17s!

EXTRAS ON THE "MAGGIE."

In addition to the ten programme events, six extra 15-target events were also shot off on the "Maggie," and in one of these with twenty-five entries, Fanning took first money alone on 14, and, if we remember right, there were only two 13s. In the sixth extra, with twelve entries, 13 was high and took first money alone, while the solitary 12 captured second money. In these extra events the "old system" of dividing purses was given a chance, with the usual results.

There were thirty-eight shooters on the ground to-day, but the average entry list in the programme events was much smaller than on the first day. The average to-day was good enough in all conscience, the figures showing 27.7 in each event as follows: No. 1, 29; No. 2, 28; No. 3, 28; No. 4, 29; No. 5, 23; No. 6, 27; No. 7, 27; No. 8, 23; No. 9, 31; No. 10, 27. The above shows that the boys stuck the game out, and we claim that it was owing to the system of dividing moneys.

The scores in the programme events were as below:

SCORES OF APRIL 15.

Events:	1	2	3	4	5	6	7	8	9	10			
Targets:	15	20	15	20	15	20	15	20	15	20	Shot at.	Broke.	Av.
Glover	15	20	15	18	12	18	15	16	14	19	175	162	92.5
Fulford	13	18	13	18	15	20	12	18	12	18	175	157	89.7
Fanning	13	18	14	19	14	16	12	16	13	20	175	155	88.5
Trimble	14	18	11	18	12	16	14	18	14	20	175	155	88.5
Hood	14	17	15	17	11	16	15	16	15	15	175	151	86.2

Thurman	14	15	13	12	12	14	9	..	9	16	155	114	73.5
North	12	12	14	16	9	12	9	..	..	..	120	84	70
Brooks	13	..	10	13	..	10	9	11	..	..	105	66	62.8
Coe	10	13	10	11	9	..	..	..	7	12	120	72	60
White	..	..	..	..	..	..	..	..	9	10	..	35	19	54.2

In addition to the above 38 shooters, 6 others took part in the shooting, entering in one event, as follows:

Kiefer in No. 1, breaking 8; Wright broke 9 in No. 4; in No. 9, Cantler broke 10, Malone 12, Du Bray 10.

Third Day, April 16.

This was a bright, sunshiny day, with little or no wind in the morning. Shortly after noon a breeze sprung up, and before the Maryland Handicap was finished there was a good breeze blowing. The birds as a whole were very good, being mostly quick to start and strong on the wing.

Two sets of traps were used, the referees being J. Merryweather and Ed. Coe. The handicaps were awarded by Messrs. Park, Starr and Malone. Brewer, from the 32yds. mark, killed his birds in good form and won strictly on his merits. Crosby's retrieve of his 25th bird close to the wire was a clever one, and elicitated lots of applause. He needed the bird too, and his 25 straight was one for which he deserved and received congratulations. Fulford, Alkire and Hawkins were the three 24s and helped to divide up the pot.

Some miss and-outs were also shot of which we kept no record, but the balance of the scores, as well as the results in the Maryland Handicap, are given below:

Maryland Handicap:

Brewer (32)	2222222222222122?222 22 22	—25
Crosby (30)	1221222 ?1222?21?2223222222	—25
Fulford (30)	21221 22111 ?22?1121212?22	—24

EDWARD BANKS.

Remington Gun Club.

The Remington Gun Club, of Ilion, N. Y., was organized Saturday night, April 10, with sixty members, and elected the following officers: Wilfrid Hartley, President; H. W. Bradley, Vice-President; W. H. Grimshaw, Secretary and Treasurer; M. Hepburn, Captain. Directors: F. A. Armstrong, Geo. Humphrey, L. N. Walker, A. D. Richardson, Henry Chismore, Jos. Loy, M. H. Sterling, B. B. Ross.

Committees were appointed on grounds, buildings, etc., also on constitution and by-laws. The meeting was well attended, and a very enthusiastic feeling was manifested by the members present, which bids fair for the new club. The meeting was adjourned subject to the call of the chair. Anyone wishing to join should see that their names are handed in to the Secretary.

ON LONG ISLAND.

ERIE GUN CLUB.

April 14.—Twelve members of the Erie Gun Club took part to-day in the regular monthly prize shoot of the club at Dexter Park. The scores made were as below:

Class AA, 23yds.

C Plate	2112112—7	J Plate	100•012—3
H Dohrmann	222•121—7		

Class A, 28yds.

H Muller	1011212—6	J F Schmadecke	0001200—2
H Blackley	1022000—3		

Class B, 27yds.

F Graef	1101012—5	W M Roberts	2012001—4
A H Luhressen	2002101—4	G Fuchs	101120•—4
D J Lynch	2102010—4		

Class C, 26yds.

J H Pate	0012211—5

Sweepstakes, 3 birds, three moneys, class shooting: Graef 3, J. H. Pate 3, C. Pate 2, Schmadecke 2, John Plate 2, Blackley 2, Fuchs 2, Lynch 2, Dohrmann 2, Luhressen 2, Roberts 1, Tiedemann 1; Graef and Plate divided first money; Roberts and Tiedemann divided third money.

Shoot-off for second money, miss and-out: J. Plate 5, Schmadecke 4, Blackley 3, Luhressen 2, Dohrmann 1, Charles Plate 0, Fuchs 0, Lynch 0.

SWEEPSTAKES AT DEXTER PARK.

April 15.—Several sweepstakes at live birds were shot to-day at Dexter Park, some good scores being made by those present. Scores:

No. 1, 5 birds, handicap: H. S. Lemon (28) 5, John R. Littlejohn (25) 5, F. I. Ibert (27) 4, Clay Boyd (31) 1, John R. Daniels (21) 0.

No. 2, same: C. Boyd 5, J. R. Daniels 5, J. R. Littlejohn 4, F. I. Ibert 3, H. S. Lemon 2.

No. 3, same: H. S. Lemon 5, F. I. Ibert 5, J. R. Littlejohn 5, Clay Boyd 5, J. R. Daniels 5.

Shoot-off, miss-and-out: H. S. Lemon 8, C. Boyd 7, J. R. Littlejohn 5, F. I. Ibert 2, J. R. Daniels 0.

FOUNTAIN GUN CLUB.

April 15.—Only two members of the Fountain Gun Club were on hand to-day at Dexter Park for the club's regular monthly live bird shoot. The club shoot is at 10 live birds for yearly prizes. Following are the scores made:

Class A—30yds.		Class B—28yds.	
W Lair	11211•••02—6	Adfur Eddy	2111•11110—8

NEW UTRECHT GUN CLUB.

April 17.—The semi-monthly live-bird shoot of the New Utrecht Gun Club, at Woodlawn, L. I., was attended by ten members. C. Furgueson was the winner in Class A; Conny Furgueson in Class B, and D. Lohman in Class C. Dr. Shepard was tied with Conny Furgueson in Class B, but forfeited instead of shooting off. Scores were:

Club shoot:

Class A.

C Furgueson (30)	2022222222—9	J Gaughen (28)	0222020w
C M Meyer (30)	2202220•22—7		

Class B.

Conny Furgueson (27)	2222•20222—8	J N Meyer (28)	•2012221•—6
Dr Shepard (27)	1222100122—8	F A Thompson (29)	1010220010—5

Class C.

D Lohman (25)	•2223022•2—6	E G Frost (27)	2020000000—2
E Lohman (27)	0•01•1221•—5		

Sweeps were also shot, as below: Nos. 1, 2, 3 and 4 were 5 birds; No. 5 was a match at 10 birds for the price of the birds; No. 6 was a similar race at 5 birds. Scores:

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6

							E Lohman (27)	..	..	2	..	..	..

BROOKLYN GUN CLUB.

April 17.—The monthly handicap cup shoot of the Brooklyn Gun Club was held on the club's grounds, Liberty avenue and Enfield street, Brooklyn, this afternoon. The attendance was good, and there was plenty of shooting. The magautrap worked well, but the high wind made good scores an impossibility. The cup was won by J. G. Lindzey, with 44 out of 55 shot at. The scores in this event were as follows (the allowance of extra targets to be shot at being shown in brackets), the race being at 50 targets, handicap allowance:

Lindzey (5) 44, Edwards (0) 41, Remsen (1) 40, Baron (6) 37, Billings (15) 37, G. Piercy (3) 35, A. A. Hegeman (10) 26, L. Piercy (5) 35, Williams (5) 31, Swan (15) 26, Wright (15) 22.

Several practice sweeps were shot as follows:

Events:	1	2	3	4	5	6	7	8	Events:	1	2	3	4	5	6	7	8
Targets:	10	10	10	15	15	15	10	10	Targets:	10	10	10	15	15	15	10	10

Williams	4	4	6	12	10	10	8	..	Wakeman	..	..	..	..	3	8	..	..
Swan	7	4	4	5	..	..	..	..									

The Lake Side Rod and Gun Club.

BURLINGTON, Vt., April 9.—A six-men team race was shot to-day on the grounds of the Lake Side Rod and Gun Club, of this city. The contest was for the team championship of the State and a gold badge donated by the home club. The weather was very disagreeable, as rain fell, with a little snow thrown in at times. The air also was very cold, and chilled the shooters so thoroughly that just as soon as they had shot out their strings they would make a break for the club house and huddle round the stove until called out to shoot again. Considering the weather conditions, the scores were as good as could be expected.

The teams from Montpelier and Barre are as fine a lot of shooters and gentlemen as we ever hope to meet. They shot out their scores without a hitch or a kick of any kind. It is just such behavior as this that makes shoots of this sort a success, and we wish to express the thanks of the Lake Side Rod and Gun Club through the medium of your columns for the pleasant time we enjoyed with our guests.

As you will see from the scores, Montpelier won the badge with 446 out of 600. Barre broke 414, leading Burlington by just 6 breaks. The conditions of the team shoot were 75 known and 25 unknown angles. Both before and after the shoot several practice sweeps were shot. Owing to the weather only about 125 spectators were on hand. Scores were:

Montpelier Gun Club.		Barre Gun Club.	
Barrett	22 20 23 24—88	Abbey	18 17 21 15—71
Standish	19 20 16 15—70	Griffin	17 19 15 19—70

BISON GUN CLUB.

April 8.—To-day's weekly shoot of the Bison Gun Club was full of interest, it being the last practice shoot prior to the two days' tournament next week. No 4 was the badge event. In this contest the winners were: Class A, Werlin; Class B, Danser; Class C, Buehling. Scores were:

Events:	1	2	3	4	5	6	7	8	9	10	11
Targets:	10	15	15	25	10	10	15	15	10	10	10

Trap at Pittsburg.

TEAM RACE AT DAVIS ISLAND.

PITTSBURG, Pa., April 16.—There was an exceedingly interesting live-bird team race at the Herron Hill Gun Club grounds to-day. Messrs. C. A. May and Rickey competed against Fargo and Strong. Each man shot at 100 live birds and their scores were as follows: Rickey, 44 out of his first 50 and 40 out of his second, a total of 84; C. A. May, 46 out of his first 50 and 40 out of his second, a total of 86, or a grand total of 170 for the two men. Fargo killed 42 out of his first 50 and 41 out of his second, a total of 83; Strong killed 46 out of his first 50 and 45 out of his second, a total of 91, or a grand total of 174. Fargo and Strong thus won by 4 birds.

HAZELWOOD GUN CLUB.

April 16.—The Hazelwood Gun Club had a pleasant shoot to day at its grounds in Calhoun Park. The first two events were at 10 targets, all the others at 15 targets. The weather was bad when shooting commenced, but was all right toward the finish. Scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12
Mack	8	7	8	13	9	11	10	12	14	12	11	11

Cobweb Gun Club.

NEW YORK, April 8.—The regular monthly live-bird shoot of the Cobweb Gun Club was held to-day at Baychester. The day was a beautiful one and there was a good attendance and some good shooting, particularly among the members of Class A, in which McKeon beat out his old opponent, Grant Nicholls, and won the badge. Scores:

	No. 1.	Tie.	No. 2.	No. 3.	No. 4.

The silver canister of W A powder, donated by the Laflin & Rand Powder Co., will be shot for on April 16.

Answers to Correspondents.

No notice taken of anonymous communications

J. H. S., Santiago, Chile.—Is there anything that could be applied to the feet of pointers to prevent them from becoming tender and sore? Does feeding a pointer with meat affect his scenting powers? and if so, what food will improve this power? What is the best thing to give a young pointer when he has the distemper? Ans. Keep him warm and dry, allow no exercise, feed well, give 5grs. of salicylate of soda three times a day.

E. C., New York.—About twelve years ago I received a consignment of skins from Arizona, near the border of New Mexico. The consignor called them buckskins. The skins sold here at $1 25 per pound. Weight of the largest skin was about 3lbs. Would you kindly let me know, under Answers to Correspondents, to what species of deer they belong? Ans. You do not give much information to go on—merely the weight of the skin and the locality. It is impossible to say whether these were antelope skins or skins of the small Southern form of the Virginia deer, sometimes called *C. mexicanus*.

PUBLISHERS' DEPARTMENT.

The Interstate at Richmond.

THE pleasantest way to go to Richmond, Va., is via the Old Dominion Line to Norfolk, thence by the Norfolk & Western R. R. to Richmond. Round trip tickets $14, good for thirty days. Steamers leave New York every afternoon, except Sundays and Saturdays, at 3 P. M. Leave on Saturday at 4 P. M. Time of sea voyage, eighteen to twenty-two hours.—*Adv.*

The Baxter Camping Outfit.

THE Baxter Camping Outfit has as its basis a camp cooking outfit and mess fit for six persons, in which two folding tripods are used in place of a stove for cooking over an ordinary camp-fire.

If preferred, a portable stove with detachable oven may be substituted for the tripods, or all may be included in one outfit.

The various articles are packed for transportation in what is known as the convertible table kit case, which somewhat resembles in shape a dress suit case. As this case is only 7in. in width, it will go under a buggy or boat seat. Unfolded it makes a table 30×33in. in size.

Full particulars are contained in a circular which will be sent upon request by Dr. W. E. Baxter, Frankfort, Ky.—*Adv.*

Vacation Days.

IN the lake regions of Wisconsin, northern Michigan, Minnesota, Iowa and South Dakota, along the lines of the Chicago, Milwaukee & St. Paul Ry., are hundreds of charming localities preëminently fitted for summer homes, nearly all of which are located on or near lakes which have not been fished out. These resorts range in variety from the "full dress for dinner" to the flannel shirt costume for every meal. Among the list are names familiar to many of our readers as the perfection of Northern summer resorts. Nearly all of the Wisconsin points of interest are within a short distance of Chicago or Milwaukee, and none of them are so far away from the "busy marts of civilization" that they cannot be reached within a few hours of travel, by frequent trains, over the finest road in the Northwest—the Chicago, Milwaukee & St. Paul Ry. Send a 2-cent stamp for a copy of "Vacation Days," giving a description of the principal resorts, and a list of summer hotels and boarding houses, and rates for board, to Geo. H. Heafford, G. P. A., Chicago, Ill.—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, MAY 1, 1897.

VOL. XLVIII.—No. 18. No. 346 BROADWAY, NEW YORK.

NOTICE TO SUBSCRIBERS.

ATTENTION is directed to the new form of address labels on the wrappers of subscribers' copies. The label shows the date of the close of the term for which the subscription is paid.

The receipt of the paper with such dated address label constitutes the subscriber's receipt for money sent to us for a new or renewed subscription. Unless specially requested to do so, we do not send separate receipts.

Subscribers are asked to note on the wrapper the date of expiration of subscription; and to remit promptly for renewal, that delays may be avoided.

For prospectus and advertising rates see page iii.

A true angler is generally a modest man, unobtrusively communicative when he can impart a new idea; and is ever ready to let a pretentious tyro have his say, and good-naturedly (as if merely suggesting how it should be done) repairs his tackle, or gets him out of a scrape. Thad. Norris.

YACHTING UNION.

THE advantages of union and coöperation among men who have certain common interests are quite as generally recognized in the domain of sport as in the more serious affairs of life, religion, business, politics, scientific work, etc. In all branches of sport and in all parts of the world, unions and associations of clubs and individuals within some extended area are to be found. In this country in particular is this the rule; almost every form of sport boasts of one national or at least of several large divisional associations, whose influence, be it said, both locally and on the sport at large, is uniformly beneficial. So much is this matter of union the accepted rule, even among the minor sports, that the case of yachting, one of the most important, presents a remarkable exception. Great Britain has boasted of a strong and influential association of yachtsmen for a quarter of a century; France has had a similar organization for half a dozen years, and even Germany, with its comparatively limited facilities for yachting, also has its national union.

In this county, in spite of its proud claims for a foremost place among the yachting nations of the world, nothing of the kind is to be found; the rowing men long ago came together and formed associations in different sections of the country; in the very infancy of canoeing its enthusiastic devotees succeeded in organizing a strong national association, which for seventeen years has maintained and enforced one uniform code of measurement and sailing rules, recognized in all parts of the United States and Canada. That nothing of the kind has been achieved in yachting is not for want of example or of enthusiasts to start the work; for nearly twenty years the project of a national association of American yachtsmen has been discussed, plans have been devised, and preliminary steps toward organization have been repeatedly made, but always with the same result.

The reasons for these many failures need not be recounted now, suffice it to say that up to a dozen years ago the lack of harmony and sympathy—and, in too many cases, actual hostility, open or hidden, between different localities, and even the clubs within certain localities—made a national union an impossibility. That such a condition should have prevailed in yachting and not in other sister sports is a matter of regret, but the facts are too well known to be concealed or denied.

Happily enough, a great change has come about of late years, the increase of racing in the smaller classes has resulted in the production of a large number of what may be called "small" clubs, that are to-day strong, healthy and prosperous. With the growth of these clubs, and the great increase in the numbers of yacht owners and yachts which has been seen since the international races in which Puritan and Mayflower were the victors, inter-club racing has increased to a wonderful extent. The formal regattas and closed club races of former days have given place to a connected and lengthy series of races, extending throughout the entire season, and participated in by the full racing fleet.

The intercourse thus engendered between yachtsmen of different clubs and localities, has borne good fruit in the formation and successful growth of such local bodies as the racing associations of Massachusetts Bay and Long Island Sound. Looking at the condition of yachting in these localities five years ago, it is difficult to realize that such organizations, with twenty to twenty-five clubs enrolled in each, and with practically perfect systems of conducting races, have been established and placed upon permanent foundations. That so much has been accomplished in apparently so short a time is due solely to the earnest and continued efforts of a small number of yachtsmen in each locality. These efforts, begun long ago, were for a time apparently fruitless; they failed in the face of many adverse conditions, such as local jealousies and prejudices, conflicting rules made to foster special local types, vested interests in one form or another. This labor, though apparently ineffective, was not lost, as is now evident, but it served to pave the way gradually for the progressive adoption of practically uniform rules and racing methods, and for the obliteration of all hostile feeling. The final efforts which have resulted in the formation of the two organizations mentioned, though both well managed, were probably no stronger at the outset and no better planned than some former attempts in the same directions, but now the time was ripe for them, and they met with success in place of failure.

The conditions in these local associations about Boston and New York are practically the same as throughout the country at large. The necessity for a national association has long been evident to some yachtsmen, and positive efforts toward its organization have been made at different times with absolute failure. To-day, however, the realization of this necessity is no longer confined to a few, but is accepted by yachtsmen in all parts of the country. The way to it is paved through the existence of a number of local associations, with comparatively little conflict in the matter of rules. The same motives which have impelled yachtsmen to form their local unions are acting to carry the work a step further, in the formation of one national union; and the experience gained in the former work may be relied upon to aid in the latter.

The meeting this week in New York is likely to mark the beginning of a notable era in American yachting, it is too soon yet to speak confidently of its immediate success in a task which presents not a few difficulties; but the conditions have never before been so favorable, nor the outlook so promising. Looking at the matter in a general way, there should be no reason why American yachtsmen can not do what others abroad have done, or, in fact, why these same yachtsmen are not quite as competent to establish and support a national association as American oarsmen and canoeists have proved themselves to be.

The chief difficulty in all unions, whether large or small of yacht clubs, has always been considered to lie in the measurement rule, this is the *bete noir* that has wrecked so many promising schemes, local and general, in the past, but, in our opinion, it is by no means a serious matter to-day. The conditions of the case are that no yachting organization in the world to-day has a measurement rule which will stand the test of steady building and racing under it alone without supplementary restrictions; that will penalize the fin-keel and the lightly-built racing-machine, and encourage something other than the extreme machine. In Canada and the United States, with the exception of the vicinity of Boston, all yacht-racing is carried on under one rule, with some trivial differences of details. Where the racing is very keen, as in some places on the coast, this rule has proved inadequate; but, with but a moderate amount of building and racing, it still works very well.

There being thus far no proposition whatever for a better rule, there is no good reason to abandon the present one, and the question of a common rule for the national association, if formed, to be used by all affiliated clubs, need not be discussed at present. All that need be done in this matter is to inaugurate a systematic attempt to formulate a better rule that will meet the exigencies of modern designing and racing. This investigation of the question may demonstrate the necessity for two rules, one for the smaller craft, of 30ft. or under, such as are generally designed for racing, without attention to general utility or cruising qualities, and another for the larger yachts, which, in the opinion of many yachtsmen, should possess certain qualities, such as seaworthiness and accommodation, however much they may be raced. We see no grounds for objection to such a double rule, in fact, it is quite in harmony with the assumed differences of use in the two classes of yachts, the smaller, of necessity with limited accommodation; and the larger, which may and should have some of the qualities of a sea-going vessel and a floating home for the owner.

The question of the difficulty of enforcing the universal adoption of such a rule when found in all localities, inland, on the lakes and on the seacoasts, in the face of vested interests, is of far less importance than usually assumed; it might not be possible to force its adoption in a single season, but no necessity for such a course exists. Let the rule be found, and if generally acceptable it can be adopted by every club in the country in the course of two or three seasons. It must be remembered that "vested interests" to-day mean almost nothing, such interests often vanishing through force of circumstances in a single season. The racing life of a modern yacht is at most limited to two or three seasons, and it may be abruptly terminated in the first year by some unforeseen and radical advance in design or construction. The experiences of last year in the 15ft. class, the success of Glencairn and El Heirie, are such as to call for a totally new type of yacht in this and the 20ft. class, and to destroy the chances of all existing boats save the two named in both classes.

The real trouble in the measurement question is to find a good rule, and this may prove no easy matter; but it is self-evident that the work can be better done by the concerted action of all American yachtsmen than if left haphazard to such clubs or individuals as feel moved to consider it.

The difficulty in the path of the proposed movement, as we consider it, is in no way connected with the measurement rule, but lies in the question of the constitution of the new organization. It must be an association either of individual yachtsmen, of clubs, or of existing and future local associations, and certain objections rest against each of the three methods. The plan which presents the fewest objections is that of an organization of clubs, with divisions based upon the present associations, about New York Boston and the Great Lakes and the Pacific.

THE MAINE GUIDE LAW.

THE reports from Maine, in respect to the new law applying to the guides, indicate that it is received with earnest disfavor by many of those concerned; and that some of them purpose ignoring it entirely, while others have agreed with their fellow-guides to defy it and violate it.

However obnoxious a law may be in itself or however great a hardship it may work on a class, a cure is not effected by contumaciously violating it or conspiring defiantly to break it. There are orderly legal measures which afford the needed relief, and though they may be slower than what might be desired, they have the merit of being efficacious and final. To defy a law is but to become entangled in the meshes of other laws which govern law-breakers and conspirators, and this without making any progress whatever in the true course. Indeed, public opinion is often prejudiced against a good cause when its promoters adopt illegal measures to express their resentment or to further their ends.

If the law is unconstitutional, it is an easy matter to make a test case through the established legal channels, and such single case would serve as well to establish legality or illegality of the objectionable law, as if all who were interested were to challenge prosecution.

If the law is constitutional, it is within the power of the majority to repeal it by the legal means provided for the repeal of all objectionable laws, namely, the ballot. No man or group of men can arrogate to himself or themselves the power to disobey such laws as are found displeasing; for if that were so, it is self-evident that all law would be at an end.

Our law-makers, in their wisdom, have provided legal channels of relief when a law has proved to be illegal, unjust or undesired, and these channels are open to all alike, the majority always deciding the question.

Our remarks are not to be construed as passing on the merits or demerits of the law itself. We deal with it as a law which, being a law, is the same as all other laws in their forces and penalties. We desire to point out that if the law is obnoxious to the guides, they should make their resistance in an orderly legal manner, and to this we call their attention. Their vocation is such that they should display the most punctilious observance of legal exactions, for there is no vocation in which the temptations and opportunities to violate certain laws are so constant and so numerous as in the vocation of guide. If a class of men openly defy one law which they declare to be inimical to their interests, it is an easy matter for the public to infer that they would violate any other law which in any way affected their interests. Thus, for the better conduct of the case and the general reputation of the guild, there is every reason for a conscientious observance of the law, and every reason in opposing it to pursue only legal procedure.

The Sportsman Tourist.

SAM SPENDS A DAY INLAND.

SAM put his gun in the canoe for company or from force of habit, but took no pains to find use for it. His paddle strokes fell so noiselessly that the water fowl sitting in the edge of the marsh were first notified of his approach by the sight of the canoe's prow nosing its swift way past their hiding place, or of the paddler's slightly swaying figure and the flash of his dripping blade. Others dozing full-fed were not aroused till the wake of the canoe shook the walls of their rush wigwam, and then with shaken quacks and squeaks of terror sprang to needless flight.

A flock of low-flying teal came upon him so suddenly that he instinctively ducked his head as they swerved upward and swept over him, and great fish dashed from beneath his stealthy keel with a startling surge.

Then he saw the two Indians a little way before him, paddling slowly and halting at every muskrat house, in such leisurely conduct of their affairs as if the bright day were endless and the genial season to have no following of storm and bitter cold, less provident than the muskrats, in no more haste than the lazily migrating water fowl. Their voices, attuned to nature's, sounded no louder than the rustle of their paddles in the sedges as he ran alongside, and they then, first aware of him, showed no more surprise at his sudden appearance than if a weed had drifted past.

"Quiee," Tocksoose gave greeting, and grinned a friendly recognition as he dropped a quarter-grown kit from a trap into the canoe; but his comrade did not so much as turn his sour face toward the newcomer.

"It's tew bad to ketch sech leetle runts," Sam remonstrated. "They hain't wuth fo'pence."

"Me no ketch um, mebby od' man ketch um. Mebby mink ketch um," said Tocksoose. "Me like um git fo' cen', as od' man got 20 cen', nex' year. Lil' moosquas mo' better for eat as ol' one."

"You might as well preach tu the minks an' foxes as tu these critters," Sam thought, driving his canoe forward with vigorous strokes that soon brought him to the mouth of the East Slang, into which he passed and made his way up the narrow, winding channel.

Rounding a bend, he came to the foot of a long reach, in which nothing animate could be seen astir but a solitary grebe wrinkling the glassy surface in widening circles at various points of departure and return, in his explorations of the nether watery world. Sam let the canoe drift at the will of the idle current, while he curiously counted the moments of the agile diver's disappearing.

Then his wandering gaze became fixed on a great hawk that came cruising low over the apparently tenantless marsh. With short, restrained beats of his broad pinions the falcon ranged the silent cover till suddenly, with a sharp, downward slant he swooped into its depths, wherefrom, in the same instant, with a clamorous outcry of affrighted squeaks, 100 wood ducks burst upward with a startling, thunderous roar of wings, threshing water, sedges and air. As suddenly as they had risen they settled with a resounding splash in the open water of the channel, where they sat motionless, silent and alert.

The baffled marauder mounted heavily from the weeds, and wheeling a moment above the vigilant congregation, each member of which was ready to dive at any sign of attack, he recognized the uselessness of a further attempt and sullenly retired.

The swimming ducks offered a rare opportunity for a deadly shot, but Sam admired so much the adroitness with which they had foiled the onslaught of the hawk that he hesitated to take advantage of it, and while he hesitated they became aware of the presence of a more fearful danger than that which had threatened them from above, now lurking close beside them, and again simultaneously sprang into the air.

Then Sam instinctively got his gun in hand, and taking aim at the nearest duck that was laboring upward pulled the trigger; but the cap responded to the stroke of the hammer with only a faint, lifeless click, and before it could be replaced by another one the tardiest laggard was well out of range. When an anathema had been bestowed upon the worthless cap and its maker, Sam tried to make a virtue of the misfire and be glad that it had happened, and thus attempting to fool himself with his own hypocrisy, came to the landing, marked as a place of resort by the ashes and spent brands of fishing fires that had burned in the spring nights when bullpouts were biting.

Measuring the height of the sun, it occurred to him that he might enjoy the excitement of the arrival of the stage coach by going a little out of his way to Friend Bartlett's, and therefore he held across the fields at a brisk pace toward the tavern, at which the coach halted for a change of horses.

As he came to the high rail fence of a stubble field, he surprised a small flock of wild pigeons busily picking up the scattered grain. He had but a glimpse of them on the ground, their backs shining in the slanting sunlight like variously tempered burnished steel, when, with a simultaneous clapping of wings, like a burst of applause, they took flight. He fired into the thick of the flock, and four birds tumbled out of it.

He strung them through the under mandibles on two of the long tail feathers tied together at the tips, and hastened on with his burden increased in weight, but more in beauty; for the pigeons were old males, with ruddy breasts and brilliant upper plumage that shone with varied hues in the shifting lights. It soon had another quite as unexpected addition, for as Sam skirted the brink of a hollow, where a brook looped a miniature intervale, in uncertain quest of easiest passage, a partridge, an early wanderer from the woods, burst out of the fringe of trees like a cannon shot from a palisade and flew straight for the home coverts, now with a blur of rapid, quivering wing beats, now with set pinions, till Sam, dropping his load and aiming far ahead of the fleeting mark, brought it to the pasture sward in a long incline, as if alighting naturally; but it struck the ground with a rebounding thud, which filled his heart with the pride that always comes to him who brings this noble bird down from its flight.

He made haste to pick it up and go on his way, for he could hear the unmistakable far-sounding cluck of the approaching stage coach and see the neighborhood gathering at the tavern. When he reached it he was not the latest comer, for two panting boys came running in honest undisguised haste, followed by another, who urged his bare legs to greater speed with sharp commands and vigorous cuts of a switch while he impersonated coach, horses and driver.

After them came a belated grown-up idler trying to stay his steps to a deliberate pace, and from his shop across the road the aproned cooper came bare-headed, with his short-handled adze in his hand and diffusing a wholesome odor of the pine staves and ash hoops of cheese casks.

Now came the stage coach, the four horses at a brisk trot, the red and yellow body rocking with stately motion under the burden of passengers, baggage and mails, and greatest of all the driver, known from one end to the other of his route by every one, some of whom had the distinction of being known by him.

He pulled up the horses before the low stoop, and throwing the reins to an hostler, descended from his lofty seat to open the door of the coach for such passengers as chose to alight and stretch their legs while the horses were changed. Hospitably welcomed by the smiling landlord, clean-shaven and in shirt sleeves spotlessly white, all availed themselves of the chance except a woman dressed in deep mourning who held a little boy with long wavy flaxen hair and a brunette complexion, seated upon her lap. He stared out wide-eyed at the juvenile groundlings, envying them their freedom no less than they his distinguished position as a stage coach passenger, while there was a silent interchange of bashful smiles.

Two of the passengers were spruce city men, wearing their well-fitting garments with the accustomed ease that a sharp-faced old lawyer wore his shabby suit of black and an air of half contemptuous condescension toward three farmers who like himself were representatives-elect to the Legislature on their way to the State capital. These three were already counting the cost of the honor as they longed for the daily comfort of shirt sleeves and old clothes, and wondered how they could bear the burden of coats for four long weeks, and what they should do with the strong, hard hands that till now few days but Sundays had found unemployed. Even now one got his knife open and searched the ground for a bit of soft wood to whittle, while another resumed interrupted work upon his finger nails, which gave promise of employment for some time to come.

There was also a bluff Englishman, who at once caught sight of Sam's birds and asked many questions concerning them, as did the city men—he, with a sportsman's interest; they, with a hungry relish of whatever smacked of wild life.

To the untraveled mountaineer the stage coach, with the mud and dust of other and distant towns upon its wheels and painted sides, and bringing hither dwellers in great cities and men whose home was beyond the sea, was as strange an object as a ship come to quiet port from the turmoil of the ocean and the busy world beyond it, with the salt of the sea waves still upon its decks and the breath of foreign atmospheres not yet quite exhaled. The sight and touch of it gave him a dreamy vision of scenes that he could never chance to see, and with such respect for its strangeness he marveled at the bold familiarity of the boys, who pranced and capered as horses at the empty pole, thrust out like a stripped bowsprit, while one enjoyed a blissful moment of regal glory on the box.

The little child inside the coach was teasing his mother for something, and she, after an unavailing attempt to quiet him, asked Sam—now sitting alone on the long bench of the stoop—if she could get a drink of water for the child. He at once brought a brimming glass from the barroom, and with a careful eye upon it as she stretched forth her hand, he saw a narrow band of unmistakable mulatto skin between the glove and the sleeve.

He gave a quick start at the unexpected revelation that spilled a little of the water, and cast a quick, inquiring glance at the black veiled face. The woman, as quickly divining the cause, hastily drew her sleeve down to her glove. The boy drank eagerly and she finished the glass under her veil, returning it with a trembling hand to Sam, who reassured her with a significant shake of his head and a hand upon his lips. The stage coach had a new interest for him now, but he did not betray it by staring inside it.

The fresh horses were brought out and put on, the travelers took their places, the rural representatives flurried with fear of being left, the lawyer, the Englishman and others with the easy deliberation of owners, for whom the coach must wait. The driver climbed to the box, cracked his whip, and the heavy conveyance rolled gayly away.

The landlord, the hostlers and the spectators watched its departure to the first turn of the road.

"By grab! Dan don't drive a livelier team 'an that on his route, I'll bet," said the landlord, withdrawing his admiring gaze from the retreating coach.

"Got quite a load o' rep'sent'tives," another remarked. "Don't know's they look much better 'n aourn. Wonder if he's goin' by stage."

"M'dah," one answered, evidently not a supporter of the successful candidate. "He's a-goin' tuckernuck, with his own team!"

"By jolly!" the fat cooper ejaculated, "I wish 't I had what it cost tu paint that 'ere Englishman's face. You wouldn't ketch me a-wheltin' hoops."

"That 'ere womern was turrible afeared o' showin' her face," the youngest man of the party said; "but she needn't ha' be'n if she's as good-lookin' as her boy."

"Some widder womern, proberbly," the landlord said oracularly, and the company dispersed slowly, except the boys' steps were hastened by the imperative rap of the schoolmistress's ruler on the rattling window sash of the schoolhouse. While the corner hamlet lapsed into its ordinary quietude Sam took the road, and presently came to Friend Bartlett's.

The peaceful atmosphere of the place was not disturbed by his approach. The fat dog arose from his basking place on the sunny side of the horse block and walked forth to meet him with a slow, non-committal wag of the tail, which was quickened to a friendly greeting when the game was sniffed and Sam's knee had passed olfactory inspection, and then escorted him to the door with dignified cordiality.

Rebecca Bartlett met him with a pleased smile lighting her placid face as she recognized him.

"Why, this is Samuel, isn't it? Well, I'm real glad to see thee. I've wanted to talk with thee about poor Pelatiah ever since John saw thee. What, thee hasn't brought us more ducks?"

"Wal, yis, marm," said Sam, "ducks was what I started tu fetch ye, but I run ontu a few pigins an' a pa'tridge, an' didn't know but you could work 'em in some way. Pa'tridge is pooty dry-meated, but pigins makes tol'able pigin pies, aour folks thinks."

"Thee has got a partridge? Now I am glad," she declared with great satisfaction and increased interest, as she raised the bird from the bunch and felt the plump breast with a critical hand.

"It's what neighbor Corbin 's craving, and nob'dy 's been able to get him one."

"Onwell, is he, marm?"

"Oh, yes, he's very low," said Rebecca, modulating her voice to due solemnity. "It's consumption, and it isn't likely he can continue long, but he thinks a partridge is all he needs to make him well. Thee knows how it is with people in a decline. Now, if thee 's willing, I'll send it to him."

"Why, sartinly, Mis' Bartlett, it's yourn to du jest what you're a min' tu with; an' I'll sit ri' daown an' pick it an' dress it."

"No, thank thee, Samuel, I think it will please him to see it jest as it is. He's been a great hunter. Perhaps it would be better for him now if he had given his thoughts more to weightier matters; but it has seemed hard that he couldn't have one partridge now, when he used to get so many, and for other people too. Margaret!"

"Yes, mother," a soft voice answered out of a light stir of housework inside, and in a moment the daughter appeared, without a trace of its recent performance upon her neat attire. A shade of anxiety fell upon her face as she recognized the visitor, to whom she gave friendly greeting.

"Why, how does thee do?" and then turning questioning eyes to her mother, "no bad news of—of the apples, I hope?"

"No news ary way," Sam answered. "I see 'em git a good start tow-ards Canerdy."

"No, it's nothing about them," said Rebecca, "but Samuel has brought us more ducks and some pigeons and this partridge, which seems almost providential. Now thee put on thy bonnet and run right up to neighbor Corbin's with the partridge, will thee? While thee 's gone I'll get these pigeons ready and make a pie for dinner. If thee 's a mind to help me pick 'em, Samuel, we can talk about Pelatiah, and thee'll stay to dinner with us."

Sam was not loth to accept both invitations, and followed Rebecca to the woodshed. Half of this was floored with plank, neatly swept, but thickly scarred with axe wounds where misdirected blows had fallen along the border nearest the chip-littered ground, on which the tiers of wood arose to the base of the cobwebbed rafters, to which phebe birds' nests of past summers clung in various stages of dilapidation. The cheese press stood at one end of the floor, the lever, weighted with worn-out plow points, making occasional spasmodic, creaking descents, presently followed by an increased trickle of whey into the keeler. A work bench stood at the other end, with a vise and a few tools upon it, under a dusty window, a rack of augers and a sickle, and a corn cutter made from a broken scythe. Along the walls between the cheese press and the work bench hung various utensils of the dairy and the kitchen, divided by the kitchen and cheese room doors. Elderly hens made cautious incursions into this debatable ground between indoors and out, where nests were tolerated if once established.

Rebecca sat down on the chopping block and Sam on the saw-horse, and they stripped the feathers from the birds into the same basket; and so, with hands and tongues employed together, economized time like two gossips at their knitting.

"Poor thing," Rebecca exclaimed, pitying a wound she had uncovered of resplendent feathers, "it does seem cruel to kill such pretty creatures, but they do pick up a great deal of wheat, and they make excellent pies. And now tell me about Pelatiah. Was he greatly cast down?" She sighed deeply and made piteous little sounds with her tongue against her teeth, as she listened to the story of Pelatiah's disappointment and Louisa's death, and when it was ended said in soft, motherly tones:

"Ah, poor souls, how sad! Pelatiah was very kindly and faithful, but I used to wish he was more tender. He didn't go to meeting with us very often. I hope he is softened. Louisa was a pleasant young woman, but light. Poor thing! poor thing!"

"Well, Peltier ain't no gre't hand tu go tu meetin', but I wisht there wa'n't no worse folks in the world. And he's as tender-hearted as a gal."

"There, now, I'll get the broom and sweep thee off," though Sam protested that he was quite clean enough. "My," she exclaimed, as she supplemented the vigorous sweeping of Sam's legs by the application of a moistened forefinger, "how feathers do stick to woollen stuff. Now I guess thee'll do."

Now Margaret returned glowing with the freshness of the morning, but sobered by recent speech with one who was near the end of life's journey.

"Well, my dear, how did thee find David this morning?"

"Very feeble; but he brightened up wonderfully at the sight of the partridge, and says he shall be able to shoot them himself in a little while."

"Ah, poor man," Rebecca sighed, "he's done with all such things."

"He wanted me to thank thee," Margaret said to Sam.

"Why, it wasn't me. It was your mother an' you. But I be sorry for anybody 'at wants to go huntin' an' can't. That is tough. It 'ould du him more good tu shoot one pa'tridge 'an to eat a dozen."

"I don't quite see how that could be," said Margaret with a questioning smile. Sam answered by asking:

"Why, wouldn't you druther pick one wild posy 'at you s'arched for yourself 'an tu hev a hul harnful fetched tu ye?"

"O, yes," and being a woman Margaret shifted ground. "But I can't understand how people can enjoy killing things, such pretty things as partridges."

"They hain't no prettier 'n posies, an' it kills posies tu pick 'em. But that ain't what you pick 'em for. It's to hev 'em."

"But it doesn't hurt the posies," she argued.

"That's more'n we know, bein' 'at we hain't posies, not all on us," and Sam's honest admiring eyes completed the compliment.

"Well, child, we must be doing," said her mother, admonished by the deliberate chime of the kitchen clock.

"Samuel, will thee go and visit John Bartlett or will thee come in and read the 'Liberator' and the 'Anti-Slavery Standard,' or maybe thee'd rather read 'Thomas Chalkley's Journal,' or some account of early Friends. Thee'll find them very improving."

Sam saw Margaret making a wry face at the mention of these works, as if at recollection of some unpalatable dose of childhood, and wisely decided to seek recreation in the company of living rather than departed worthies. He found Friend Bartlett in a stony field behind the orchard, persuasively urging a yoke of deliberate oxen who moved with a slow, ponderous progress, in apparent unconsciousness of the plow behind them, though the tense chain creaked under the constant strain, the share groaned and grumbled a subterraneous complaint among the stones, and Michael, bending between the handles, grumbled and cursed in as continuous an undertone, which he took good care should not be loud enough to call a reproof from his employer.

Sam was greeted with quiet cordiality by Friend Bartlett, and accommodating his long legs to the pace of the procession, enjoyed a peripatetic visit till the mellow conch sounded for dinner. Michael's presence had prevented their speaking of what was uppermost in their thoughts, and now that he went to the barn with the oxen John Bartlett said:

"Well, I guess our colored friend must be safe over the Line by this time."

"They went off a-kitin' anyways," said Sam. "An' I tell you what, Mr. Bartlett, I b'lieve the' 's a couple more on 'em a-p'intin' for Canerdy right in broad daylight," and went on to tell of the two stage coach passengers.

"Thee don't say! In the stage this morning! I had a letter from one of our friends in Middlebury saying that he had a woman and her child in his house and would send 'em along as soon as it seemed safe. But I didn't think he'd venture to so soon after they were hunting for Robert—and in this way. It was a pretty bold stroke, I say for it."

"Mebby it's the safest arter all, an' the' won't nob'dy mistrust 'at hain't on the lookout, for the woman keeps her face clust as ever you see, and the young un's as white as—as any white young un," and Sam instinctively looked toward the east as if he could see through the "Pinnacle" to the Danvis hills, where his own flaxen-haired boy played safe and free in the shelter of the Green Mountains.

"They'll go right to one of our friends in Burlington, and he'll put 'em aboard of the steamboat that'll take 'em right to St. John's," said the other. "Come, let's go to dinner."

The neatly-served meal and its decorous prelude of silent grace forcibly reminded Sam of the difference between home life and camp life, and just then the latter did not seem quite the best, and it set him to longing for his own fireside. This longing continued to abide with him when the quiet afternoon was half spent and it was time for him to return to camp, for which he felt a kind of disgust, not lessened by the impression of his entertainers' unspoken conviction that his present recreation was a sad waste of time. He could not take their view of it any more than they could understand his, but he craved their good opinion, and could not be satisfied with mere toleration.

Till he was out of their sight, halfway across the fields, he felt a shame that he was ashamed of. Then a westerly waft brought him the heartening fragrance of the autumnal woods' odor of pine and hemlock and ripe leaves. Far behind him he heard the returning stage coach clucking like a hen bringing home her brood, and presently after the joyous clamor of the freed school children, for the stage coach was the school mistress's clock.

Unheeding the incoming water fowl that swerved aside or upward from their impetuous flight to pass him, he paddled steadily down the channel, his constant wake gilding the silver water far behind him with pulsing reflections of the sunset that were reflected again in flickering shafts of duller gold dropping aslant down the paling of marsh, and so he came to the end of his peaceful voyage.

THE LOST MAN OF LABRADOR.

Editor Forest and Stream:

I was very much interested in reading in the last issue of Forest and Stream Mr. Fitzgerald's letter about the wandering of a man supposed to be Dr. Carnes on the Labrador coast. I take it that there have been previous letters published concerning him, which unfortunately I have not read, and so know nothing about his previous history. In regard to his wanderings in the far North I may be able to afford a little more light, as I traveled from Ungava to Rigolet on the Hudson Bay Company's steamer in 1893, and heard about this unfortunate man, but did not meet him, as he was on his journey between Davis Inlet and Nachvak when I stopped at those places. I wintered in Labrador and did not return to civilization until September, 1894, and consequently did not know inquiries were being made for him.

Last year I again passed down the coast, and as I was naturally interested in the fate of the poor fellow, I made inquiries at George River and Nachvak; but unfortunately did not pay particular attention to details, as I had no idea that he was being sought for.

The account given by Mr Fitzgerald is in the main correct, and I can only alter the details of his last wanderings and sad death. From what I could learn, the poor fellow was suffering from religious mania, which became acute only at intervals, when it impelled him to travel onward. The greater part of the time he was, to all appearance, quite rational, but was always very reticent concerning himself. He passed Davis Inlet in September, and tramped, with occasional lifts in boats, to Rama, a Moravian mission station north of Cape Mugford, where he remained until late in October, when he again started northward for Nachvak, but returned in a few days nearly dead from exposure and starvation; refusing to remain with the missionary, he was sent on with some Eskimos, and arrived at the H. B. Post at Nachvak in November. He remained there as the guest of Mr. Jas. Ford until February, and during that time made himself useful in teaching the children. In February some Eskimo arrived from George River with dog teams, and he resolved to accompany them home. He started with them across the high barren mountains; and, having occasion to stop when only a short distance from Nachvak, the Eskimo—probably being afraid of him—went on and left him. He followed on in hopes of catching up to them, but was unable to do so; and without any blanket, or even means of making a fire, he followed their trail over the roughest country in Labrador without food for nearly a week, only once sleeping in a snow house erected by the Eskimo, the distance between the houses being too great for his unaided daily tramp. Under such conditions, it is simply marvelous that he should reach the Hudson's Bay Post at George River, as he did, with hands and feet badly frozen. He was well looked after there by Mr. John Ford, and under careful treatment soon recovered. He remained quietly at this place for about two months, and took delight in teaching the children about the post. Mr. Ford informed me that he was a well-educated man who had evidently traveled considerably, as he often spoke of the various places in the United States, and although he would not directly tell where he resided Mr. Ford was under the impression that he was from Philadelphia, if I remember rightly, and that his name was Curran, which agrees closely with Carnes

The night previous to his sad death he was very restless and called several times for his mother. The following evening he said that he must continue his journey, and pointing across the small cove on which the post is situated, said that if he would get to heaven he must go straight in that direction over the hill, that rises almost perpendicular 1,000ft. above the cove. He insisted that Mr. Ford should open the front door, which was blocked with snow for the winter. Mr. Ford, becoming alarmed, left him to arouse the servants in their house, and when he returned found that the poor fellow had bursted open the door and was gone. Before doing so he had removed all his clothes and went forth into the cold, starlight night naked.

They immediately followed his tracks, which led down a small hill and up over the store belonging to the post, and on the far side they found him quite dead, having slipped on the roof and fallen, his neck striking on the sharp edge of a fishing flat that rested against the store.

Thus ended the life of this unhappy wanderer, who must have been a man of exceptional physique and will power, to overcome, without any aid whatever, the hardships and trials of a journey up the coast of Labrador, a journey that no one unacquainted with the physical character of the country can have any idea of, and to me, with some knowledge of travel in Labrador, it seems nothing but marvelous that he did not perish long before reaching far-off Ungava Bay. His body now rests in the lonely little grave-yard on the barren hill overlooking the small Hudson Bay Post beside the grave of Mrs. Ford's eldest son; and although a wanderer unknown, poor and demented, he was taken in and treated as an honored guest by these kind, simple people of the far north, who give us, living in civilization, lessons in practical Christianity that might be learned with profit to ourselves and the wayfarer at the gate.

I inquired of Mr. Ford if he had any papers or other articles that might be used to identify the poor fellow, but he informed me that he only found a Bible on his person; and therefore if he had a wallet he must have lost it on his wanderings before reaching George River.

During the coming summer I shall probably again visit George River, and will then make more careful inquiries; in the meantime I would be much obliged if his friends would send me a description of his personal appearance and other facts of use in identifying the unfortunate wanderer.

THE SCHOOLHOUSE COVER.—II.

(Concluded from page 306.)

After lunch we returned to the hummocks, as this portion of the grounds was called. The veteran dog Joe had hunted here many times and knew every favorite spot, and it was most interesting to watch him as he worked out the ground. Instead of beating it out regularly he would gallop to the well-known places, slowing up as he approached them until he arrived at his chosen spot, when he would stop, and, with nose in air, feel for the scent, and if nothing was found his head would drop and off he would gallop to the next place. But did he catch scent of a bird there would be a wag or two of his tail, a quick and expressive glance toward his master, and then he would straighten out on point. One incident that occurred in this connection I shall never forget. Joe had passed by a small knoll without giving it any attention, and was some 50yds. beyond it when my dog pointed just at the edge, and as Joe caught sight of him it was very curious and interesting to watch his performance. Joe was one of the best dogs to back that I have ever seen, and he at once honored the point in good style, but only for a second or two, when he crouchingly stole around behind until he had the wind, then, with nose in air, he carefully approached a little to one side until he caught scent of the bird, when he pointed in his usual good style for an instant; then, with an expressive wag of his tail, he carefully crawled to the rear some 10 or 12ft., when he raised himself up and again backed my dog.

This interesting performance was keenly enjoyed by us. It was plain as daylight that Joe did not believe there was a bird there, and thought that my dog was pointing false; but after satisfying himself that there really was a bird there, he realized that he had done his companion an injustice, and at once made the proper *amende* by going to the rear and backing him. It is perhaps needless to say that all three of us firmly believed that dogs think and reason, but I am not going to discuss that question, and will only say that I do not believe that any intelligent person who owns an intelligent dog will disagree with me.

After talking over the performance I stepped in front of my dog, when three grouse rose at the upper end of the knoll and swung to the left Although a long distance away, I cut loose at the nearest one; but he kept on. "A long shot," said the veteran, while Sabin shook his head and said something about wasting ammunition—impossible to kill at that distance—all foolishness; but Sabin thought everything of his reputation as a sure shot, and never took any hazardous chances, while I usually shoot regardless of reputation or distance, and I kill enough of these wild shots to keep me up to the mark; at least, I still continue to take all the chances.

Following the birds to the run where we had marked them down, my dog threw his head in the air, and taking a few strides picked up my bird and brought it in stone dead. The veteran again said "a long shot," while Sabin again shook his head, but never said a word. Meantime Joe had struck the trail in the middle of the run and was waiting for us. The veteran went to his dog, Sabin took position on the right flank, while I crossed to the left side, and in this order we followed the birds up the run. We had gone but a short distance when I heard a grouse rise a long distance ahead of us, and soon caught sight of it coming at its best speed directly toward us. I well knew that Sabin would not shoot, and as I could not tell whether the veteran could see the bird, I took a quick sight and pulled, and was greatly pleased to see him collapse and come down; and so great was his momentum that he struck the ground 20yds. behind us, although he was fully that distance in front when I fired. Mentally congratulating myself upon the beautiful shot, I proceeded to load, and was greatly surprised to hear the veteran also loading, and to hear him exclaim, "What! did you shoot?" "Yes," said I, "did you?" Sabin averred that the reason why he did not shoot was that he knew that no one gun could stop a thunderbolt like that, "but," added he, "I am awful sorry that I did not shoot, for then I could enjoy with you two the satisfaction of having made a brilliant shot." Joe still stuck to the trail, and as we knew that two birds came in, we continued on up the run in the same order. When we came to the end of the trail of the bird that we had killed, Joe showed by his actions that he knew that the bird had flown; but as the trail of the other one was near by he again drew on for a few yards, when he signalled that this one had also taken flight, probably at the same time as the first one. Joe told us plainly that the bird had gone squarely to the left, and as we knew nothing about it, we followed the course indicated to another run some 200yds. away. The wind was blowing across the run toward us, and when we arrived near the edge Trump and Joe pointed at almost the same instant, and a second later my dog caught sight of Joe and then Trump, and backed them, the three making a wonderful picture that has not grown dim in all the long years that have passed since I gazed upon it that beautiful October afternoon. There in the bright sunlight stands old Trump 20yds above me, as firm as a rock, his forefeet are in a small hollow, while his hind ones are considerably higher, which brings his nose close to the ground, although his head is sticking up like a mud turtle's, while that stumpy tail of his is pointing straight in the air instead of at its usual angle of about forty-five degrees. His white and orange colors stand sharply out from the background of dark green turf that covers the springy hillside, and as every hair on him is pointing, his portion of the picture is a gem in itself. Just beyond him stands his master with a smile upon his beaming countenance and an air of rapt attention that does full justice to the scene. Some 6yds. nearer me stands Joe also pointing in grand style, with his head over his shoulder and his tail as straight as a ramrod, pointing squarely toward Trump, while just behind him is the veteran, and a glance at his speaking countenance plainly tells you that he too is happy. How his eyes snap and sparkle as he gazes upon that beautiful picture; see with what grace he doffs his hat, and almost reverently bows low to each of the trio of living statues. Such homage was never more sincerely offered.

My dog was at heel and not near enough to get the scent, but he was in plain sight of both dogs, and almost as soon as Joe pointed he backed him, with his head well up, while he crouched behind nearly to the ground, and as I turned to look at him he caught sight of Trump, and I could see his eyes grow brighter and the hair along his spine raise up as he honored the point of his old and tried companion. The peculiar positions of the dogs added much to the charm of the picture, and we gazed upon it for some time in deep admiration.

Finally the veteran waved his hand to me, and in response to the silent command I went down the run a few yards, and crossing it to the opposite bank took my station just above the veteran and a little below Sabin. The veteran then walked in and put up the grouse, which flew as straight as an arrow for Sabin, who was standing facing us; but no sooner did the bird start than he wheeled squarely around, and as it passed him the gun came into position, there was a sharp report, and the swiftly whirring pinions were stilled forever. As we were nearly at the head of the little run, my companions came to me, and after talking over the performance a while the veteran suggested that, in order to save time, we should separate and beat out the remainder of this portion of the cover, so I bore sharp to the left and Sabin took the right-hand edge, while the veteran was to work out the section between us, the place of meeting being the open ground between this cover and the run that leads back toward the starting point.

I had gone but a short distance past the place where we so handsomely stopped the thunderbolt, when my dog came to a point just at the edge of a strip of low-growing birches. Walking in front of him, I passed through the narrow strip where, from almost under my feet, a brace of woodcock rose, and flying low went nearly straight away, giving me a splendid opportunity for an easy double Now there is no sport I love so well as shooting at flying birds, so I shot at both of them, and then followed them up and gave each of them another dose; one of them kept straight on, while the other swung to the left and settled in a dense tangle of thorns and birches. Sending my dog around into the wind he soon had him fast, and while I was wondering how I should ever get into the thicket the bird solved the problem by flushing wild nearly thirty yards away, and as I caught a glimpse of him twisting through the branches I cut loose and he either hit a limb or blundered into the charge and came down and the dog brought him in. My fun was over so far as this one was concerned, and I started for the other, but had only two shots at him before he refused to rise again, and was also gathered in. Working out the remainder of my share of the ground I found two more woodcock, both of them giving up at the first shot. Before arriving at the open ground I found both of my companions awaiting me. The veteran had accounted for five woodcock and Sabin had scored two woodcock and a grouse. When I reported my four the veteran slyly remarked that he had missed one shot, of which I was undoubtedly aware, as he had only five birds to show for his six shots. This I knew, of course, was a covert fling at the fusilade that had been going on in my quarter, but I cared little for this; and told him that I never kept score except of the fun, and hits or misses were so nearly alike in this respect that I scorned minor details, consoling myself when I killed a bird with the thought that my companions would be pleased, and congratulating myself when I missed that I would have the fun over again. "If that is the case," said he, "it is a thousand pities that you killed that bird this morning when you were tumbling down the hill."

"Oh! no," I replied, "that shot appeared to afford my companions so much pleasure that I was really glad that I tumbled the bird."

Crossing the open lot to the run I have mentioned Sabin volunteered to beat the cover while we guarded the flanks, the veteran passing down through the cover while I kept guard along the upper edge, both of us keeping some 30yds.

in advance of Sabin. We had gone but a short distance when a grouse rose not 6ft. behind me and pitched into the run, and I could only cry "Mark," as I dare not shoot, not knowing just where Sabin was. The veteran, however, could see both Sabin and the bird, and as the latter was high enough in the air he cut loose and dropped the bird almost squarely onto Sabin, who knew nothing of the matter until he heard the report of the gun and felt the bird as it brushed his shoulder and struck the ground at his feet. While standing there awaiting the signal to move on another grouse rose just below me and started up the run, and as it was going into the air rapidly I threw the gun well above it and pulled trigger, but instead of keeping its course the bird alighted on a limb just as I pulled, but it immediately started again pitching down this time, and I gave it the other barrel and was well pleased to see it tumble. The veteran saw the performance rather indistinctly and thought that I had shot at the bird while it was sitting on the limb, and he exclaimed, "That is right, always give them a chance, shoot off the first barrel to start them and kill with the second." Soon after a woodcock flushed from the edge of the cover near him, and as he let go at him the bird fell a foot or two and lodged in the fork of a limb some 30ft. from the ground. As the tree was too large to shake and too smooth to climb the veteran was about to give the bird another shot to bring it down, but Sabin assured him that it was very unsportsmanlike to shoot at a woodcock in a tree and proposed that Trump should climb for it, but the bird settled the matter by twisting free in its death struggle and coming down.

Continuing on up the run the veteran scored one more grouse and Sabin two woodcock without noteworthy incident, all being brought to bag at the first rise. We were now but a few rods from our team, and as it was nearly night and a long road home, we were soon smoothing out the plumage of our birds and carefully packing them in the box which we always carried for this purpose. Everything went all right until Sabin had finished with his bird, when he exclaimed, "I have lost a woodcock out of my pocket." Both the veteran and I tried to make him believe that he had counted wrong, but he took out of his pocket some gun wads, and counting them over averred that one bird was lacking. We then tried to make him believe that he had missed, but he would not have it, and I then told him of the bird that he had dropped in the orchard, which set matters straight, but we did not have the fun that I had expected, as I thought that he might miss when I would make him believe that he had not done so by finding this bird. We were soon in the wagon and on the road home, where we arrived in good season, thoroughly well pleased with our glorious day, the most enjoyable, we all agreed, of the many glorious days we had spent in our dearly loved schoolhouse cover.

This was long, long ago. My companions have fired their last shot, and for several years I have not visited the dear old place. For more than a quarter of a century I went there several times each season. When I first knew it the covers were all that could be desired; the surrounding farms with their buildings were well kept, the little schoolhouse with its two score of bright-eyed lads and lassies was always pleasant and cheerful; but as the years rolled by it was with deeply saddened feelings that I noted the gradual change and decay that was stealing over the place and its surroundings. As the merry band of lads and lassies outgrew the little schoolhouse many of them sought homes far away, and but few were left to take their places, and it was with sorrow that I noted the gradual thinning of the ranks of my little friends. Many of those who left the place drew after them parents and relatives, and soon deserted farmhouses dotted the landscape; and soon—alas! the crowning glory of the covers!—the beautiful woodcock nearly all sought other resorts. Grouse were fairly plentiful for many years, but on my last visit I found few of these and only one solitary woodcock.

We were working up the run where the veteran and I made the brilliant shot at the grouse that was coming toward us, and I was relating the incident to my companion when he exclaimed: "History repeats itself; that is your bird;" at the same time pointing to a woodcock that had flushed from nearly where the grouse had started, and like that bird was coming directly toward us. As I dropped the bird he exclaimed: "The last of his race; he met his fate bravely." This was my last visit to the dear old place. Heartsick at the utter desolation, I deeply regretted that I had come to dispel the pleasing remembrances that clustered around my heart and I have not since had the desire to repeat the visit, although I am very glad to say that I can now look back upon the well-remembered scenes with old-time pleasure. Oft, mingled with the happy thoughts of the good old days, are sad feelings, and I still grieve over the desolation of the deserted farms grown up to weeds and brambles, the dense briar thickets in the once clean covers, and, worst of all, not a single happy child to give me kindly greeting, not a single stick or stone of the little brown schoolhouse to mark the spot where it once stood.

SHADOW.

TALES TOLD BY THE CAMP-FIRE.—VI.

BY AMATEUR.

(Concluded from page 323.)

THE next evening one of our number began: It seems scarcely credible that only 100 years ago this great country was the home of wandering Indians in a state of savagery, and that our ancestors, tenants in common, as we may say of these Indians, were scarcely less savage than the red men whom they hunted, feared and fought, but such is the fact.

Elias Blank, Isaiah Jones, both first and second, as they have been designated by our friend; the Engles, and many more of the early settlers were remarkable men, strong men mentally, morally and physically, in a day and generation of strong men, and their peculiar traits of character have come down to their descendants, where they left any descendants.

Elias Blank was one of the first of the early settlers to burn coal—the soft, bituminous coal—of what, I suppose, is at least part of what is now the great Connellsville Region. It came about in this way: One night the old man was aroused by a rapping at his door, and after due precaution opened it and admitted Lewis Whetzell, the great Indian fighter, and a companion of his named Jonathan Gates, who was called, both by white and red men, "Long-arms." Gates was a most peculiarly constructed man, he had no beard, but immense, bushy eyebrows which passed entirely across his forehead; his hair was something near the color of fallen leaves and formed the only covering for his head, for he never wore either hat or cap; his legs were very short and, although he had the body of a man 6ft. high, his stature was scant 4ft., yet his arms were so long that he could place his hands flat on the ground or on a floor, straighten his elbows, keeping his knees straight at the same time, and swing back and forth without touching the ground with his feet. In his progress through the woods it was said that he could use either or both hands to spring from, or catching the limb of a tree to swing from, would clear a prodigious distance at a single spring.

This man was a terror to the Indians, and white men carefully guarded against enraging him. He was a most dangerous foe to the red men, and when he joined forces with such a man as Lewis Whetzell Indian blood was sure to flow. But I am not about to give a history of Long-arms nor to detail any campaign of Lewis Whetzell. When Elias Blank opened his door these two men stepped into his cabin. Blank gave them food, and, after they had eaten, they sought their beds and slept until late next day.

When they had again partaken of food Elias Blank said to Whetzell:

"Friend Lewis, where have thee and our friend been, and where bound?"

"I want to get out of here at once," said Whetzell, "and Long-arms is of the same opinion; this country's bewitched, and Long-arms and I are both nearly scared to death."

A half frown passed over the face of old Elias as he said: "Friend Lewis, thee must not tell such stories to me. Thee knows I'm thy friend, and I have saved thee when a price was on thy head. I know thou art a man of courage, and friend Jonathan Gates, whom some call Long-arms, fears nothing on earth, and I'm fearful nothing anywhere else, and yet thou tellest me that he and thee are scared even almost unto death. Shame on thee to so declare before thy friend who loves thee both as he were thy father."

"No, no, Elias," said Whetzell, dropping into the Quaker speech, "I tell thee no lie. We are scared and are even now on our way to the 'dark and bloody ground,' I tell thee, Elias. Yesterday afternoon we were in hiding about a mile from Dunkard Creek, an' in the evening we built a fire under a bank, very carefully, and we got some black rocks to prop up a little kettle, and put them beside the fire rather than in it, and the black rocks took fire and burned furiously, with a filthy smoke and a bright light, and Long-arms said the devil would come if we stayed, and we grabbed our kettle and poured out the water, and made our way here, leaving the black rocks to burn."

Elias Blank was much interested, but he didn't tell Whetzell what the black rocks were, though he did find out exactly where they had made their fire, and when they left he gave each of them a new Ezra Engle rifle, a knife and a tomahawk, 4lbs. of powder and a supply of lead. He then hunted up their camping ground, found the black rocks and opened a coal bank into one of the river hills, and this coal bank is yet in existence in a 12ft. vein of coal that is absolutely free from slate and burns like pitch.

I don't remember where Lewis Whetzell died, if indeed I ever heard. He was merely an Indian fighter, but he was perhaps the most celebrated of a group composed of Daniel Boone, Simon Kenton, Adam Poe and a number of others. Long-arms, or Jonathan Gates, lived many years after the discovery of the black rocks, and finally died at the house of Een Blank, who had him buried on the burial ground of old Elias Blank at his (Een's) own expense.

Long-arms, at his own request, was buried in a birch bark canoe for a coffin, clad in a buckskin suit and moccasins, with all his weapons of war or the chase around him. On his tombstone are the words, "Jonathan Gates, Long-arms. Died —— —, 18—."

He seems to have been the last of the old Indian fighters in western Pennsylvania.

EASTERN NOTES ON WESTERN MATTERS.

Editor Forest and Stream:

May I, without discussing the Forest Reserves in Washington, recommend for careful reading the communications of Gov. Black and Cayuga in the issue of April 10?

As to Cayuga "not reflecting the real sentiment of the West," I suspect he does reflect just that. There is a little skeleton in western closets of which I often caught a glimpse when with intimates: it is the opinion that the Pacific States are entirely able to get along without the rest of the country. The sentiment is vainglorious, but not intentionally bellicose or disloyal I have heard it often and know it well, yet but for the editorial pointer I should not have suspected Cayuga of harboring the old familiar skeleton. So far from deserving censure for his "argument of sectionalism, provincial conspiracy and geographical enmity," he avoided these very offenses to a degree hardly to be expected under the present provocation. There is on the West Coast much restiveness under Eastern interference and criticism. Like the Helvetian chief, they want to know what business this Cæsar has in their Gaul, which they have conquered; and doubtless Cæsar would have made the same inquiry had Orgetorix come to Rome!

As one who has lived West without becoming a Westerner, I wish to express my high opinion of the people among whom I have resided; and I judge they were not exceptions to the average population of Washington and Oregon. If this Forest Commission is as wisely regulated as we are promised it will be; if it is intelligent in its choice of reserves and just in its dealings, the people of the West will give it a patient hearing The eastern press need not worry over the unwillingness of Washington to support what will be for the benefit of the State. Here we have nothing which corresponds to the western belief in the possibilities of a glorious country: it is farsighted because it is full of faith; it is willing to wait or to work, because it does not admit the possibility of disappointment, and it extends through all grades of society from rich to poor. It is my husband's delight to hear every man talk of the subject of most interest to him, and we entertained in our home all grades and opinions—the salvationist, the theosophist, the populist and the nihilist—all trades and traditions. We found seventeen new sorts of religion and only one opinion of the future of the Pacific Slope, a solidarity that may be depended on to favor the permanent good of the country. It is true that our western friends are not there entirely "for their health"; but that they have uncommon public spirit is patent to anyone who knows how they have borne up under the extraordinary discouragements and reverses of the last four years, without complaint and always with confident optimism.

The opinion, that reservations in the Cascades will subdue the Columbia is an eastern error which deserves a word of comment. The great floods of 1894, so destructive to property over the lower Columbia valley, did not reach their height till late May or early June. At that time the snow on the Cascade Range was gone. This was doubly apparent to me from watching the snow-line climb Mt. Hood, and from observing the Willamette, a river fed entirely by rains and the melting snow of the Cascades. That year the Willamette was quiet and clear in April, and was not afterward affected (if my recollection serves) by any rise except that caused by the back-water of the Columbia—a sure sign that the Cascade snows were gone.

If Portland is to be preserved from another such flood as we saw there, it will not be by the agency of reservations in the Cascades, but by proper dealing with its headwaters and those of its treacherous affluent, the Snake River. But that forest reserves in the Cascades might affect a river like the Willamette, which lies entirely in the wet coast region, is not impossible. I have seen that river rise seventeen times in one winter and attain a maximum flood of 34ft. Not only was this dangerous, but it caused great loss to the country in the wasting of the soil. One couldn't drink the water, even after it had settled, without feeling that he was robbing his neighbor's garden. I have seen a half-inch of good soil settle in the bottom of a pitcher of water.

A number of Cayuga's observations, as those on the sparse timbering of the foot hills and the over-luxuriant growth on the low lands, will strike a resident of the "web-foot country" as pertinent and just. No one who has not wintered there can fully appreciate the excess of moisture which these forests absorb in winter and do not retain in summer. They are super-saturated part of the year, and tinder-boxes the rest of the time. In that country nature is not contented to give you enough of anything, she always gives too much—an unsalable, unemployable overplus of flowers, fruit, wood, water and weeds. Often the best use that can be made of this lavishness is to waste it, and this question brings me to a subject which must often distress the tourist—the waste of wood in land clearing. I do not speak of the waste in lumbering or by forest fires, but by the methods of clearing farms. It is a deep distress to the visitor who sees trees—to obtain which alive Boston would sell Bunker Hill monument—trees of incomparable majesty, blown up with giant powder and burned on the spot. I have seen within a few miles of Portland, and within easy railroad transportation thither, enough fine timber burned to have warmed a city. The waste here seemed unpardonable, perhaps in this case not justifiable; but the man who has "proved up," and is clearing his land, has no other use for the wood but to destroy it most economically. So enormous is the labor of clearing this land, so impossible is it to save the wood in the log, so costly to prepare it for store-wood, that the expense of saving lumber is no small item. Finally, the roads are so bad and the market price so low, that to anyone at all removed from his market, the costs exceed the profits. I used to buy the best split fir for $3 a cord; bark was a trifle more. Yet I have seen four horses and three men work half a day to deliver a load of bark, that in New England would be regarded ridiculously small for one horse. I would not be believed if I said how inconsiderable the quantity was; but then no one East would believe that roads could be so bad as are the Oregon roads in winter.

The farmers and settlers in Oregon do not appear to have New England thrift, but eastern cities should give them the credit of desiring their own best interests and working to get them. If they waste wood, it may be set down to the exigencies of pioneer life. A hundred years ago, or even less, the same necessities demanded similar action here in the East. There was a time in Maine when a pine tree was an enemy—but *I* never had the pleasure of looking at a first-class pine. The people of the West will undoubtedly be wise enough to keep and care for tracts of their best forest land as the most fitting memorial of what herculean labors their pioneers underwent, as a more beautiful testimony of their pride and appreciation of the men who "won the West" than any that human skill could devise. We may depend upon them to do this; let us not presume to dictate how they shall do it. The æsthetic side of their noble forests appeals to them—not as vividly as to us, but with that deeper, ingrained affection of the native, to whom no air, no soil, no sun is like that of his own home. And as for forestry as a protection against floods, were they not their farms, their homes, their cities, that were destroyed or menaced a few years since? I, who saw it all, speak for myself and my western neighbors, in saying that we do not desire a repetition of these horrors, and that, with returning prosperity, we shall not forget to try to effect a cure. The difficulties are enormous, the methods by no means decided upon; but the Columbia will be shackled before the Mississippi—or even some lesser rivers—shall be subdued.

FANNIE HARDY ECKSTORM.

BREWER, Me.

Proposed Labrador Excursion.

QUEBEC, Can.—*Editor Forest and Stream:* A friend of mine, hunter, woodsman, canoeman and explorer, for many years in the employ of the Hudson's Bay Co., would like to take a party of three gentlemen for a three months' trip in the interior of Labrador, to the region east of Hudson's Bay and south of the Strait. It is a country entirely unknown to white men and only very sparsely inhabited by Indians (whose language this gentleman speaks), but who are all away at the coast in the summer.

He tells me that the trip would not be a difficult or costly one, and that the country can be very much more easily reached by the route he proposes to take than by any that would have the Lake St. John region as its starting point. The mosquitoes, which are supposed to be a terror to explorers in that country, he says are left not far from the coast, and that when the open country, toward the Barren Grounds, is reached there are none at all.

The fishing on the waters he proposes to follow is extraordinary (which we can well believe) and game is most abundant. Caribou "are in sight all the time." The Indians know the wapiti, and there is also another animal (presumably of the deer tribe) that he was not able to identify from the Indians' description. Bears are plenty.

If three gentlemen of some scientific taste and knowledge would like to visit an entirely unknown country, combining research and exploration with unlimited sport, this would seem to offer a rare opportunity. If I were twenty-five years younger I should like nothing better. CANADA.

The Next Best Thing.

WITH great pleasure I send you $1 for my weekly treat of reading for the ensuing year, which is a delightful substitute for the woods and waters, and a companion I could not now do without, feeling quite one of the happy family. GEORGE HOLMES.

NORTH CAROLINA.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Natural History.

SNAKE LORE.

LOWELL, Mass., April 6.—Occasionally the columns of the FOREST AND STREAM have contained queries concerning the habits and food of snakes, none of which have ever brought out any data that shed much light on this interesting subject.

Many years of hunting, fishing and camping, coupled with an interest for investigation, has furnished the writer with considereble matter at hand to draw from. In the small space that the crowded columns of the FOREST AND STREAM can afford, it will be impossible to treat a subject which covers so wide a range other than in a general way, and I shall only try to give some of the most important instances that have come under my observation; some of them separated by many years, and long distances.

Like everything else living, the habits of snakes are governed very much by the nature and quantity of their food supply, which varies very much during the yearly change of seasons. They are governed also by conditions which vary with change of locality and climate. These facts render it impossible to establish rules to gauge the habits not only of snakes, but of almost every species of life having fur, fins or feathers that may exist over a wide extent of country, and where food is obtained under differing conditions.

That most of the common varieties of the snakes of the Atlantic States from Maine to Florida are voracious and predatory is quite well established, but the wonderful variety of their food, which embraces almost every living thing that is not too great for swallowing, is not generally known. During many years I made it a practice to kill all the snakes I met with when possible—especially those of the larger species—and have cut open the stomachs of many hundreds of them, and after consulting my notes I find this surprising medley of food noted during a number of years: young chickens and ducks, young birds of almost every kind—especially ground and bush-nesting birds—mice, moles, young squirrels of various kinds, weasels, young of muskrats, mink and rabbits, the young of grouse, quail and woodcock, frogs, toads and tadpoles, often young snakes of the larger species, old ones of all the smaller varieties, grasshoppers, crickets, most kinds of butterflies, and fish of every known variety, and of all sizes from ½-pounder down to the smallest minnow. Is not this a most astonishing assortment? And the list is not yet complete.

Once, while fishing a trout brook that flowed through a meadow, my attention was attracted to the erratic behavior of a few bumble bees that were making much ado around a small tussock of grass. On closer inspection I found a small snake of the adder family ducking to avoid the onslaughts of the bees while stealing out of the little grass-hidden nest the young bees. I attended to him at once, and after his troubles were over I found in his maw the fat young bumble bees that he was caught in the act of swallowing.

I am not aware that snakes held in captivity ever take into the stomach any substances other than flesh, but on many occasions I have found in the stomachs of snakes that were cut open considerable vegetable matter, mainly in the form of buds, if in the early spring, and later in the summer often a profusion of small green leaves, oblong in shape, and in all cases appearing to be the same leaf. I have found these not only in stomachs that were nearly empty, but also in others that were full of animal food, a condition which would seem to preclude the possibility of their presence being due to hunger. These observations have led me to believe that snakes, like many animals, act as their own physicians, and know when and what to take into the stomach to correct any irregularities from which they may be ailing.

As flesh-eating gluttons, snakes have no equal, and when gorged to the utmost they act as if in a trance, and appear perfectly helpless, as the following cases would show: About fifteen years ago, while fishing the outlet of a shallow lake in Maine, near the Canadian line, I had occasion to visit a small, partially dried up bog to replenish my supply of little frogs for bait. While doing this I routed a large, red-bellied water snake. He acted as if trying to avoid the customs officials. I soon slit him up with my big knife, and emptied from his stomach about a quart of large tadpoles, many of which had the legs well developed, as occurs when commencing to assume frog citizenship.

Some years ago, while fishing at the Hebron Meadows, Newfound Lake, N. H., my companion and I were interested spectators of a very fierce battle between two mottled-back, red-bellied water snakes over the possession of a yellow perch of about 8in. in length, which one of them had captured and both wanted. The battle continued with great fury; first one, then the other was in temporary possession of the fish; then both would secure a firm hold and tug fiercely for possession. At times the perch seemed forgotten, and lay helplessly flopping in the mud and grass, while its captors writhed and twisted in the fierce heat of battle for the mastery. At length the smaller snake abandoned the conflict, and the victor, seizing his prey, made his way toward higher ground, only to encounter a more formidable foe, armed with a paddle. His snakeship measured 5ft. 4in. The perch was 8in. long and pulled down my pocket scales to 6½oz. Although some the worse for his experience, we returned him to the water, and after a few erratic movements he slowly swam off into deeper water.

On one occasion, while hunting, a large blacksnake was encountered. I saw from his swollen abdomen that he had only recently dined. I ripped him up with my knife, and found in his stomach an enormous green frog that measured 13in. in length.

Some years ago, one Sunday morning found us cooking breakfast in camp, which was situated on a low bluff by the side of a river that for a number of miles flowed through a succession of meadows. This occasion furnished us with a tragedy never to be forgotten. A splashing in the water on the opposite bank of the river attracted our attention; the reeds and rushes, with the tall grass, rendered it impossible to see the cause, while the noise continued so long that all thoughts of muskrats were banished from our minds, and the writer, with a companion, dipped over in a canoe to learn the cause of so unusual a disturbance. We found a large blacksnake over 6ft. in length with a catfish or horned pout stuck fast in his throat; about 4in. of the fish's tail protruded from his mouth, while the head and the remainder of the body was fast in the snake's throat, held there by the stiff, bony spines of the dorsal and pectoral fins that were protruding through the neck, one at the top just back of the head, and one on either side of the neck. The struggles of this snake, both on land and in the water, were frightful to behold. Such thrashing around in the bushes and grass; such writhing and twisting as took place in the water, amazed us. For a number of minutes we watched this awful struggle of the snake to free himself from his equally distressed victim. Tiring at last of witnessing so much suffering, we put the snake out of his misery. The head and forward part of the snake's body was badly scratched and cut up from so much thrashing around among the bushes. The fish's tail and body were also badly scratched and torn from the same cause. The bony spines protruding through the neck, and the cause of the snake's downfall, were stripped bare of fins and skin.

It is not generally known that snakes move about and feed during the night, but after many years of observation I am quite certain that some of the common species, both North and South, especially those that live near, and freely take to the water, not only move around considerably, but also feed during the hours of darkness.

I have often encountered them at night while on the water during the warm months of summer, but after the colder nights of autumn arrive I have never seen them abroad after dark.

I have found some of the water snakes caught on set lines that were put out at night and taken up in the morning, and well remember once while fishing for big-mouthed bass at least two hours before sunrise in the morning, of having a little frog that I was casting on the surface of the water taken by a red-bellied water snake. He was hooked and landed in the boat, and there was no chance of mistaking his identity, and it was yet so dark that you could see only a few feet on the water. I am afraid that this admission will show me up the same as once happened to Mr. Cheeney, and go to prove that there are fish other than trout that can be caught on the surface of the water during the silent hours of the night.

During a moonlight summer night I once listened to the awful cries of distress and anguish that came from a large green frog that was slowly being swallowed by a blacksnake. This was proven, for on pushing out from camp in our punt and making our way up a slough, guided by the mourns and cries of terror from his victim, we arrived in time to take part in the tragedy, and add to the already long list another snake victim, and give life and liberty to one whose song we had been used to listening for o' nights while happy in his home in the bog.

GEORGE W. DEARBORN.

The Crocodile's Upper Jaw.

IN the crocodile notes in the last FOREST AND STREAM, Mr. Le Baron is right about the crocodiles lying in the sun with their mouths wide open. I have seen it many times and put a good charge of buckshot down their throats: but what I am trying to find out is if a crocodile's upper jaw is hinged any different from any other creature. I don't think there is anything—bird, beast, fish or reptile—that has the upper jaw hinged.

Game Bag and Gun.

CAMP BOUILLON.

IN looking through some papers to-day I ran across a pencil sketch that reminded me of a camping expedition participated in by the members of the Old Saginaw Crowd a number of years ago, how many I will not attempt to say.

It was our custom to have a camp annually near Saginaw, giving as an excuse that we wanted to hunt partridges and quail, when, in reality, it was for the purpose of getting together under the leafy boughs to enjoy the crisp, fresh air of the woodlands, toast our shins before a roaring campfire, and last, but not least, to sleep beneath canvas and let off steam.

This particular trip I have reference to was taken early in November in the midst of the most delightful autumn that existed anywhere. Packing up our tents and belongings one Friday morning, and putting them aboard the Narrow Gauge baggage-car, we went down to a little station called Kintner. The advance guard going with the dunnage was Briggs, Jack Morley, or Section 37, Lindsley and myself. Lindsley was a lumberman of Morristown, N. J., who, in a rash moment, had expressed a desire to come up into the wilds of Michigan and kill half a dozen deer and a bear or two.

We explained to him that we would have more fun by confining ourselves to partridge and quail shooting, and he arrived one morning with his brand new paraphernalia, a happy smile and a cheerful disposition, and the next day we were in camp alongside of a little stream about three miles from the station above mentioned, our truck having been transported to the camping-ground by means of a farmer's wagon.

The forenoon was used up getting the camp in order. We had taken along two tents; the rear one had the cook stove put, and the cooking was presided over by George, our car porter. The front end of one tent was left open, and fastened to this was the other tent with both ends open, so it was really one long tent about 24ft. deep, giving us plenty of room for sleeping, cooking and eating.

You all know how to make a camp, and can imagine what was done to get things in order.

In the afternoon we went out for a little shoot, and I have forgotten how many birds we got, but partridges were plentiful, and we had enough for a rousing big supper that night when some new arrivals came into camp. I remember one of them was McCarty, the other George Morley, and I think Ferd Ashley was also one of the late arrivals—poor old Ferd! he has since passed to the happy hunting ground.

I remember George had a rather exciting time finding us. It was dark when the last train arrived, and he had a white paper bag filled with supplies for camp. He noticed a man approaching in the darkness carrying a lantern, and all of a sudden the stranger stopped and threw up a gun; George called to him just in time to save being peppered with a charge of shot, for the farmer had mistaken the white paper bag for a dog, and as some sheep had recently been killed by a vagrant cur, he was out watching for him. The farmer felt quite crestfallen over this incident.

The next day was spent in shooting, and it was a day full of incidents. McCarty, Lindsley and myself made up one party in the forenoon. I remember getting into a fence corner, where a covey of partridge, I do not know how many, began getting up one at a time until all of us had blazed away to our heart's content. Indeed, those were great days for shooting right around home; far better than it has been in later years.

In the afternoon Jack and I started out after wild turkeys, for a light snowfall had come on that forenoon. We had not gone far before we struck the tracks of a flock, and followed them until late in the afternoon; but as we were quite a way from camp Jack decided to give it up, and started back. I followed on but a short distance and the tracks disappeared, but whether from the birds flying or the rapidly melting snow I have forgotten which, I, too, started homeward. The camp must have been three or four miles away, and I took the road for it. In passing by a farmhouse I noticed a fine flock of turkeys. They were black, and an expert would have been required to tell them from the wild article. Striking up a bargain with the owner of the flock, I filled one big gobbler's head full of shot, slung him over my shoulder, and eventually brought up at camp. Instead of following the road, I cut across lots and came on to the camp from the woods side. The boys were all sitting around the camp-fire; it was just getting dusk, and I commenced calling out as loudly as I could when I got within earshot, telling Jack he had missed it by not staying a little longer, and the clamor I made brought them all out to see what occasioned that excitement. Of course they did not suppose for an instant that the turkey I had was a tame one. Lindsley was in ecstacies, and after they had all admired the bird, and asked all sorts of questions as to where I got it, how I got it, and all that sort of thing, I presented it to Lindsley. He was delighted with the gift, and expressed it home to Morristown to his wife. A letter received soon after his return informed me his wife said it was the finest turkey she had ever eaten; far better than any tame turkey that ever lived. Lindsley has quit the lumber business, is now editor of a newspaper, and I suppose if he sees this, it will be the first intimation he has ever had that even an Eastern lumberman was not safe from the jokes of a Saginaw sportsman.

But you are all anxious, I suppose, to know why we christened the camp Camp Bouillon, and I am in a long-winded way approaching that part of it.

I had promised the boys I would make them a woods' stew, so at noon time when we started away from camp I had fixed up a kettle containing slices of onions, potatoes, salt pork, turnips, and in fact everything that was around the camp, including a fox squirrel and a rabbit. This had been put over a slow fire to cook and sputter away until night time, and the boys were ravenous, having sniffed its savory odors for some time, and were only waiting for me to put in an appearance to literally fill themselves full. They were tired out, as hungry as wolves, and after they were all seated at our woods' table I noticed they were partaking of the stew, smacking their lips and sending back for more.

Mack is a hearty eater, and as he weighs considerably over 200lbs., he has a large cellar wherein to store an enormous quantity of food. When his plate had made the third or fourth trip to the bouillon kettle Jack rather intimated that he thought he had had his share of it.

We sat round the camp-fire that night, told stories and smoked, and as it had turned very cold, we gradually one by one crawled into bed.

Ferd was of about the same build as McCarty, and I know that Jack slept between the two, and claimed they stuck up so high that the blankets did not touch him at all, so he rattled around like a pea in a pod between these two fat men, who held the clothes about a foot higher than his frail form, and allowed the cold wind to whistle in around him in a disagreeable manner.

I do not know how long I had been asleep, certainly not a great while, before McCarty began to groan, and how he did groan; then he got up and went out into the cold, starry night, and, glancing out, I noticed he was leaning with his brow firmly pressed against the bark of a maple tree. He came back to bed only to groan and twist and go out again and cool off in the starry moonlight. Finally Mack's ravings became less frequent, and he at last settled down to a troublesome sleep.

The next victim of wakefulness was Lindsley. It had gotten awfully cold by this time; the moon had gone nearly down and it was getting dark. An old owl on a tree near by began hooting, and I could almost hear Lindsley's ears prick up, and he finally asked in a hollow whisper, "What's that?" and there was a tremor in his voice that seemed to indicate he thought his time had come. I whispered to him, "It is a great horned owl," and he asked me whether I supposed he could shoot it. I said, "Of course; nothing is easier; just follow the sound and you will see him sitting up on a limb and blaze away at him."

Up he got; how his teeth did chatter; I guess the thermometer had gotten down to zero by that time. He hunted around for his boots, and, after a good deal of difficulty, dressed himself; his benumbed fingers fished out the cartridges, and he started out.

I could hear him banging his shins and falling over logs in the darkness. The hooting of the owl seemed further away, and I was just dozing off when Lindsley came in, frozen nearly to death, and crawled into bed.

The next morning bright and early, before we had finished breakfast, we had visitors. It was Sunday morning, and the farmers were coming to see what kind of a crowd was camping among them. They could hardly understand for what purpose business men could be living in tents so near their back yards. McCarty had not gotten up yet; he was pale and unsteady. Lindsley was hunting for a pair of silk stockings that he had gotten wet the day before and had hung on a little branch to dry. They had disappeared. One of the farmer visitors suddenly remarked that some one must have been mighty sick in this camp last night (he was standing suspiciously near the maple tree). "Why," I asked. "Well," he said, "I have heard of people throwing up their socks before now, but I never saw it done."

Alas for Lindsley's silk socks. We will draw the curtain of charity on the scene. McCarty took the first train home Monday morning, leaving the rest of us to pack up, and to this day, if a rabbit stew is mentioned, his memory takes him back to that night when he destroyed Lindsley's hosiery.

W. B. MERSHON.

CHICAGO AND THE WEST.

Good Boating Streams.

LEXDEN has the following inquiry and information in regard to streams suitable for a canoeing and camping trip:

"Will you kindly advise me, if you have any information upon the subject, as to the character of the Wisconsin River from a point near Eagle River Station, on the Milwaukee, Lake Shore & Western, to Merrill or Wausau?

"I spend one of my vacations, usually in July or August, in taking a trip down some river with one or more companions, and boats or canoes of light draft, carrying protean tent, blankets, provisions and fishing tackle, and making three or four or twice as many different camps in the space of two or three weeks. We prefer a rather small stream, and as our boats draw only a few inches of water, we can start pretty well up. I have been down the Kalamazoo, the Thornapple, the Tippecanoe, the White River and the Kankakee (from Momence), and like to go down a different stream each season. The best trip I ever had was down the smallest of these streams, the Thornapple, of Michigan, from Thornapple Lake to the mouth of the river.

"On such trips we rarely use anything but the fly in our fishing, as we make it a point to kill no fish which we cannot eat; and a fish caught on a fly is only lip-hooked, and not injured.

"I met a man last fall who said the Wisconsin below Minoqua is a good bass stream. That he had taken them weighing 4lbs. (small mouths).

"This year there will be four of us, with three boats and two protean tents. We would like to know of a small stream where we can have from 100 to 200 miles of boating; where the scenery is picturesque; the population not dense, but rather the reverse; campers not so numerous as to be in each other's way; the stream rather rapid, with riffles, etc., and good fly-fishing.

"This is a large order, but I have great confidence in 'Chicago and the West.'"

The Wisconsin River, even so far up as Eagle River station, is considerable of a stream, deep and with good current, yet very well suited for a boating trip. It has some few rapids, but nothing dangerous. It offers fine fishing for bass and wall-eyed pike, and yields an occasional muscallonge. It runs through a wild pine country. Near Merrill, Wis., one strikes good trout streams; among others, I think the Prairie River a very good stream indeed. Lower down in the State the Wisconsin gets to be a big river, carrying steamboats and that sort of thing, but between the points above mentioned it is not a bad stream for a boating trip, and has been run by several parties equipped somewhat as Mr. Mott describes. The Brulé River is a wilder stream, with more rapids and more dangers for small boats. This trip would not offer the fishing afforded by the Wisconsin River, and the navigation would be far more difficult and hazardous. I have tried the Brulé rapids once and have not lost any more of them. The Flambeau and the Chippewa are other considerable streams of the pine country and offer attractions similar to those of the Wisconsin. The Ontanogan offers a good trip, but gives only trout fishing. For a quiet trip through a farming country with good bass fishing, the Rock River is a good one. All the above streams are in Wisconsin. Of course, a rapid and eventful trip could be made down the Au Sable River, of Michigan, South Peninsula. Here one could get all the trout, grayling, risks and rapids he would probably care for. All these streams would afford mosquitoes in abundance. I believe I would rather have the Wisconsin River for a camping run than any of them.

From the Northwest Coast Country.

Mr. W. S. Phillips, of Latona, Wash., sends me the following from the far-off Northwest country of the Coast. In regard to the cutting of the trees by beaver at so great a distance from the ground, the thing may be strange, but not incredible. The snow in these big mountains fall to a very great depth. I have seen the face of a drift in the Rockies exposed for a height, I should think, of 15 or 20ft. Moreover, this very winter, as it happens, I have seen the trails and cuttings of beaver on the top of the snow (near the Two Medicine Creek, in Montana). The snow here was probably not more than 6 or 8ft. deep, but had it been twice that depth the beaver could have gone on top of it just the same. They were working out in the woods, a little way from an open stretch in the creek. Mr. Phillips goes on to say:

"A friend of mine told me of a queer fact the other day. He has been with Government Survey outfits working in the Cascade Mountain country for several years, off and on. While working among the Mt. Rainier foothills he found trees which had been cut off as high as 20ft. above the ground by beaver. Said he saw this in the summer, and could only explain it by the theory of the animals working on top of the winter snow. Did you ever hear of a similar incident? He also tells me that mountain goats are very plentiful all around the snow ridges that flank the peak.

"Spring is on with us here; weather warm; birds singing; flowers in bloom, and the hills full of prospectors; regular '49 rush this spring, which will probably cut a big figure in the game question in the mountain country of this State, as every man going out carries arms, the .30-30 Marlin being about equally in favor with .45-70 Winchester, and they are all 'meat' rifles. This fact, coupled to a rush of prospectors, bodes ill to the peace of Washington game."

Snowshoe Wear.

Mr. William Goldthwait asks for the address of the store in St. Paul that sells the rubber-soled moccasin, mentioned in my letter from there of March 2. I obtained the shoes of a local store whose address I do not recall, but I think the goods were those of the American Rubber Company. After trying them I found that my theory had not been carried out quite successfully. The sole of the shoe is too heavy, and the whole foot is too stiff and clumsy for successful use as a foot cover for snowshoeing. In this work, as of course every snowshoer knows, the foot must not be cramped or bound in any particular, and the shoe must yield to every movement readily. For snowshoeing in a cold, dry snow, a great many are fond of the moccasin. The main trouble with the moccasin, aside from its leading, is that when ice forms under the ball of the foot it punishes one more than when the foot is protected by a rubber sole. The woodsmen and trappers of Wisconsin and Michigan, indeed also of Montana and the Northwest Coast country, use a rubber called the Gold Seal, which, to my notion, is about the best snowshoe wear I have found. The sole of this is flexible and the top soft enough to serve as a moccasin. These rubbers are sold with leather tops at some of the Montana towns for instance, at Kallispel, but I do not know the name of any dealer there. I finally came around to use these rubbers on my Rocky Mountain snowshoe trip this winter, as we were in a country where the snow was wet and very deep. Ordinarily it makes no difference that these rubbers have no tops to them, as the snow which gets in about the edges will not wet through the heavy socks, but in this country I found that the snow was too damp, so I sewed some heavy canvas tops to my rubbers, leaving a wide lap or fold of the canvas which I could tie closely about the leg with strings. If Mr. Goldthwait will get a pair of the Gold Seal rubbers, wearing them over heavy German socks, and attaching to them heavy canvas tops which will come well up to the knee, and tie firmly with thongs from the top down to the ankle, he will have what I believe to be the best all-around snowshoe wear possible to obtain. We found the buckskin uppers soft, but they wet through like paper in the damp snow. The rig suggested is altogether superior to the heavy and clumsy shoes mentioned earlier, and the main beauty about the latter was that they had a top capable of lacing, so that the snow would not get into the rubbers. They were not "rubber soled," but were rubber shoes with buckskin tops. The Kallispel Gold Seal rubber with leather top is far better. These I had not seen when I wrote the item cited. The Gold Seal rubber without tops can be had of the Goodyear Co., at Milwaukee, Wis. They are not sold in all the city of Chicago, but are handled in towns supplying more directly the pine woods trade.

The Overflowed Districts.

Mr. Percy F. Stone, of this city, is just back from a business trip in the hardwood lumber districts of the Mississippi Delta. He says that nearly all the hunting grounds of that country are under water. Large numbers of wild turkeys are being killed along the timbered ridges, to which they have resorted and where they are comparatively hapless. A good many turkeys were being killed by hunters from Greenville, Miss., and he was told that it would be no trouble to get a gobbler, if he liked, in a short trip by boat. Mr. Stone says that the town of Clarksdale, Miss., eighty miles below Memphis, would be under water but for a small levee which protected it at last accounts. Captain Bobo's plantation, eight miles south of Clarksdale, is now practically an island, his ridge being so high that it is never under water. Here the redoubtable bear-hunter could, no doubt, if he liked, kill abundance of the game which has taken refuge with him. The country in which we hunted bear last winter is now all eight feet under water.

Tennessee Quail Netting.

Mr. Benj. C. Miles, of Brownsville, Tenn., with whom I had the pleasure of hunting during a visit last year at that point, states that during the past season he bagged 125 birds on the same ground over which we hunted, and that he thinks at least 500 birds were killed on that same strip of country, though abundance were left over for breeding purposes. Mr. Miles goes on to say:

"I inclose you copy of our game law as we succeeded in having it passed, and we needed it. For the past season it is estimated that there was shipped from our county 10,000 Bob Whites. They were never in such numbers before, and the pot-hunters had their inning. Several of the square sportsmen killed above 500. The writer, though long past his best shooting, bagged 485; best score any day, twenty-eight coveys, thirty-two birds, using my dogs Joe and Cassio. Since the close have been surprised to find coveys of fifteen or twenty birds, and think will have as many to breed as last year.

"All our native songsters got through the winter in fine shape, and are now preparing to nest; have seen as many as twenty bluebirds (last year not one), and my theory that they have been forced to the woods by the English sparrows holds good; have not seen any within two miles. Nine miles from town on the 8th saw summer and scarlet tanagers, orioles, waxwings, black martins, two or three kinds of warblers and sparrows, and wrens galore, all twittering and hopping about, proof that summer is not far off.

"While shooting in December with Drs. Taylor and Gillespie, the latter gentleman had the misfortune to shoot and permanently injure Dr. Taylor's Boy, one of the best setters I ever saw, and over which you shot when here.

"The high water has forced our deer and turkeys and wolves to the hills, and they are being hunted in defiance of law, some half-dozen deer being killed in the last three weeks, all does, and in face of the fact that fawns come from May 10 to June 10.

"A few days since Robert Sevier, a fourteen-year old boy, and fifth generation descendant of the pioneer, Indian fighting family of that name, while hunting squirrels, came upon a wolf and five whelps; he wounded the dam, though she and two whelps escaped, killed two, and captured one of the latter. The Sevier family commenced hunting buffalo, elk, Indians and wolves in the eastern border of the State 130 years since, and now a descendant finds a specimen of their game within thirty miles of the western border, wild and untamed and fierce as at the first.

"We are trying now to get through a fish law with a few entertaining features."

The text of the Tennessee law for the county of Haywood makes the open season on partridge, quail, woodcock, pheasant and wild turkey from Nov. 15 to Feb. 15, and it is "also unlawful to kill wild turkey between May 1 and Nov. 1." It is a misdemeanor to ship or carry from Haywood county any of the above birds at any season of the year. Netting of birds at any time is forbidden, even upon one's own land. It is unlawful to "hunt, kill, net trap or capture quail or partridge at any season of the year." The grand jury has inquisitorial power on all such cases, and the fine for a second offense may run as high as $50. This is an excellent law for each and every county in Tennessee to copy, and well might it be for the counties of other States should they pass and enforce laws forbidding the netting of quail and the taking of them for market by any means whatever.

An Illinois Farmer on Game Laws.

Mr. Blinn Smith, of Woo Sung, Ill., sends me the following interesting budget on game laws and other matters. Mr. Smith does not take quite the view in regard to the opening date of the chicken season which is commonly accepted by the sportsmen of Chicago. Here the impression is that the later the date and the shorter the season the better it is for the bird; and indeed it is hard to see why, if men are disposed to break the law at all, they will not break it anyhow, under one date as much as another. The "sooner" in chicken hunting has been one of the institutions of the West, and he seems likely to remain a permanent one. Nevertheless, Mr. Smith's views are well worth attention, especially as coming from one of the class most intimately concerned in game law matters, the land owners, who have the game before them at all seasons of the year and who feed it the year round. Mr. Smith says:

"There will soon be an end to the duck supply. I have that Du Pont calendar that Jim Grimes says 'ain't nacher'l,' and see that all the ducks left are drakes.

"A late article on golden plover reminds me of a flight I saw some six years ago. On the next farm there is a large mound of about five acres; the birds came from the northeast, circled the south side of the mound, and flew north, northwest. A flock would be out of sight before another came to view. I have always lived here, but never saw a similar flight. Do these birds take the same course from year to year, or are they influenced by currents of air? Will some one please rise and explain?

"There were more chickens in this portion of Illinois than there has been for years. South of Dixon and Sterling, in the fall of '95 the law was well observed generally; but '97 was—Oh, what a difference! Each one said: 'I waited for the law last year, and found the birds all killed. This time I'm with them.' And they were.

"The principal reason for this is that the season opens after our fields (stubble) are not in condition to hold birds. In northern Illinois, by Sept. 15 the stubble is plowed up. If the field is seeded to grass stock has been turned in, and the birds go to the corn by that time. Those that observe the law can get action but no birds, and they have given up shooting, protection and all in disgust. This is the class of men that would do their best to protect if they could get three or four hunts each fall. But this is just what makes it so dead easy for the poacher and market hunter—no one cares to trouble him. He commences plenty early to be before his kind—about July 15, when the birds have yellow dust on their feathers.

"When the law was Aug. 15, with a good chance to get birds, everybody observed it, but they kept making the law a little later, putting a premium on crime. It would be wise to make every other or every third season a close season.

"I am a farmer, and see this same old circus, concert and all, each year. I think I got five birds in Illinois; what others I got were from a Minnesota duck pass, after Oct. 16.

"If I should come to the June shoot I will tell you about the wonderful ways they have of arresting and prosecuting persons with birds in their possession."

The Cave at Castalia.

All readers of FOREST AND STREAM are more or less familiar with the characteristics of the wonderful trout stream at Castalia, O., and perhaps know that it is formed by enormous springs that burst up through the surface of the ground. A vast sheet of water seems to underlie that region, for when an artesian well was sunk at the lower club it so affected the supply of water in the springs of the upper club as to raise a serious question. The daily dispatches of April 12 have the following singular information in regard to a vast cavern which purports to have been discovered beneath the town of Castalia, and near the big springs which make the head of the creek:

"CASTALIA, O., April 12.—The discovery of a vast subterranean passageway here has caused many visitors to inspect a new cave lately. Sunday visitors come from many surrounding towns. The cave is situated at the source of Castalia Creek and extends underneath this town. The people of Erie county are much exercised over the explorations that are being made. The entrance is as yet made with difficulty, but the splendor of the interior is marvelous when shown by the illumination of torches. The State geologist will inspect the cave this week, after which the opening will be enlarged. It is believed that this cave is connected with Perry's cave at Put-in-Bay, and also with Flat Rock cave, which would make it extend over an area greater than that of Mammoth cave."

Trout and Elk.

Mr. John D. Losekamp, of Billings, Mont., writes me as follows about trout, elk, etc.:

"Some time ago I wrote in reference to stocking one of our finest lakes with trout. What is your opinion as to the best way to stock this lake, with native trout or a different variety from some hatchery?

"In offering you the following information I do not wish to invite your indignation at my asking you the following question, 'Did you know that elk give birth to young in months other than May and June, which is supposed to be their breeding season?' I have reliable information that calves are dropped nearly every month. Not far from here there is a little band wherein there are October, November, December ('96), January and February ('97) calves."

While I do not know much about such matters, my personal belief is that it is better to stick to native fish in stocking than to monkey too much with varieties from elsewhere that may be thought to be a trifle more gilt-edged. The fish commission of Illinois has done good work because it spent its money in planting fish which it knew would do well in Illinois waters. I can testify that the native trout of Mr. Losekamp's country are good enough for any mortal being, although there may be other trout which are almost too good to be true.

I take it that Mr. Losekamp's information in regard to the young of the elk will be news to a great many, at least it was to me, although I do not know a great deal about elk.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Pike County Grouse Shipments.

MATAMORAS, Pike county, Pa., April 17.—*Editor Forest and Stream:* In an article appearing in your last issue, signed by Mr. L. W. Mazurie, he says: "I know several station agents on the line of the D., L. & W. R. R. in Pike county, Pa., who informed me that they had each shipped between 1,400 and 1,500 ruffed grouse to New York and Philadelphia markets."

The D., L. & W. R. R. does not pass through Pike county; its nearest point is miles away, as anyone may see by referring to a map. Secondly, all the grouse killed in Pike county last season would not make a number equal to the amount claimed to have been shipped by one agent. We were enabled to make a fair estimate of the game killed, for one person was appointed in each township to make a report at the end of the season. J. G. VAN GORDON.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

REVERIES AND REALITIES.

Over my desk hangs a Winchester calendar. It depicts three scenes of sporting character. The largest of these three represents a sportsman in the act of shooting a wounded moose. On one side is portrayed a shooter about to break—we will give him the benefit of the doubt—a clay pigeon. Below appear two hunters shooting at an extremely lazy mountain goat—I know he is lazy, for he has stood in just the same position for almost a year. One becomes nervous by regarding these scenes for long. I suppose the human mind, always striving after the positive and absolute, becomes worried by trying to determine what is quite insoluble from the pictures, namely, what will be the effect of the different shots about to be fired.

This calendar has been a great source of distraction to me. At times when my eye rests on these scenes I am carried—in spirit—far from my work, far from the city with its roar and din, and suddenly I find myself in a vale, a red deer is discernible through the trees; I shoot and it scampers off. Another bound of imagination and I am walking on muddy flats; two brown balls jumping from under my very feet tear twisting away; a right and left! I hear the two reports; one brown ball loses its roundness as it falls limp to the ground; but the other—alas! I watch it twist and turn and corkscrew into the distance. The scene again changes. The green marsh converts into brown land and fences appear, and men, four brown boxes, arrange themselves in a semicircle upon the ground. What are these? As I watch them a brown thing issues from one and skims gracefully toward the blue sky. Bang! The brown thing is converted into bits of broken clay. One after another the different and varied incidents of my various outings appear and disappear like scenes of the magic lantern.

Of course, every sportsman has similar excursions while sitting at his work. It is one of the glorious pleasures given him by nature—her reward for his love. The same kind mother of all sportsmen provides that only the happy phases of sporting appear at such times—the successful days, the heavy bags, the large fish we have captured. And so, on each return to the humdrum of daily life from these voyages of retrospection, we are pleased with ourselves, and as a consequence friends with all the world.

One reads in the Forest and Stream only the accounts of lucky hunting trips. Once only have I read in its pages the experience of an unfortunate sportsman—a charmingly-written article, telling of an enjoyable trip the writer had after deer. He killed nothing, but had a glorious outing That account was a great balm to myself, and I doubt not to many other unlucky brethren of the gun.

A fellow can take with him a grand gun, wonderful cartridges, and hie him to a firstrate locality, but if he wear not on his brow the magic wreath of luck—he will have a good time, no doubt, but his bag will not be uncomfortably heavy. I believe in one man possessing good luck and another poor luck, just as thoroughly as I believe that the former is a poor shot and the latter a good one. There must be something to counterbalance, so it has been decreed that the unlucky man shall be a capital shot. The few opportunities he has, therefore, are improved; he has the satisfaction of "hitting nearly everything he saw." "But," does someone say, "I am an exception. I am not a good shot, neither am I a lucky one." Shake hands my brother! Let us console each other! We have stickatitiveness though, haven't we? We will pursue coy fortune until finally we have captured her. Some day we will find a place alive—crawling with woodcock; some time we will plant our leaden bullet behind the shoulder of a deer. Then we will import into that solemn forest a German brass band, trombone and all, and bid them play the requiem over the prostrate form and antlered head of the monarch of the American forest. I stood over him once, with but little satisfaction, however. Perhaps the incident might be of interest.

My guide and I had tramped three days, and had not fired a shot. This day, the 4th, was rainy, converting the 2in. of snow into slush. It was dreary weather, and our spirits were low, for this was my last day, and the prospects seemed to point to a fruitless hunt. Several times during the morning, and always in the thickest woods, for it was raining, we encounteted my esteemed and respected friend, the ruffed grouse. Esteemed, for I have eaten him; respected, for I have shot at him as he thundered away into the depths of the woods. In the wilds where unmolested by man, these birds are foolish and easily approached. We always fired at them, believing in the sage proverb that "a bird in the hand gathers no moss."

About 2 P. M. we turned toward camp, much disappointed. We were not far from that destination, when Pierre, who was trudging on ahead, suddenly stopped, raised his rifle, and with it still at his shoulder, whispered, "Shall I shoot?" Thinking it to be another "partridge," I assented. His .44-40 Winchester snapped angrily almost as I spoke.

"He's coming!"

"What's coming, you idiot?" I replied, for I was not in a good humor. But I needed no answer, for bowling straight at us I caught sight of a deer.

He certainly did look grand as he rushed on, his head thrown back, taking great bounds like a greyhound. He must have been 100yds. or so away when disturbed, so I had several seconds in which to admire this grand piece of nature. But this was no time for admiration. Perhaps I had a momentary attack of "the fever"; perhaps I reserved intentionally my fire, I cannot remember. But that deer was not 15yds. from me when I fired, and launched by the momentum of the rush he fell at our very feet. A moment the poor brute struggled to regain his feet, then his muscles relaxed, a quiver shook his body, and he was dead.

I tell you what it is, brother sportsman, when some non-sporting friend asks us why we kill harmless birds of the air and creatures of the forest, we have few excuses to offer. It is the very height and pinnacle of happiness for hundreds, yes, thousands of us, to shoulder an infernal machine and stalk into the woods to kill animals we do not need. I think I hear a chorus of angry protests: "I never kill an animal I do not want; when I have shot what I need for camp I stop." This is the refrain. But oh, sportsmanlike sportsman, what need is there to go so far into the wilds for your outings that it becomes necessary to kill for food? Because, is it not, that you may reach the home of the wild, though homeless, animal? It is not the outing nor the grandeur of the woods. They both can be enjoyed much nearer home than either you or I make our yearly preparations to go; neither is it the pleasure of tickling our palates with dainty morsels of game that prompts us to shoot the whirring grouse and running deer. Goodness knows that where we enjoy one meal on juicy moose-meat we are forced to deaden our craving appetite for the next ten on salt pork. No, brother sportsman, it is nothing higher than the savage instinct, handed down from war-like forefathers, which prompts us to make these killing excursions. The day has passed for slaying each other, so what more natural than that we should seek out the next best thing to destroy.

But I have departed far from my story. Perhaps the easiest and most comfortable way of dismissing the subject of killing from our minds is to place all the blame upon our forebears. It can not hurt them and it will ease our consciences.

To return, then, the stag at our feet was a fine nine or ten year animal, with a good pair of antlers.

On examination we found that the guide's bullet had entered behind the shoulder, making a grove in the heart My bullet had broken his front shoulder-blade, entering on one side of his chest.

I do not believe that that the stag had any idea of charging with intent to kill. Merely a coincident that he ran in our direction. Of course I knew the guide's shot, and not mine, had been the effective one, yet I trudged home that evening in a much happier frame of mind than when I started out in the rain and slush. J. K. K.

Montreal.

THE VERMONT LEAGUE.

From Secretary John W. Titcomb's Annual Report.

A reference to the constitution of the Vermont Fish and Gun League explains the objects of the League as follows: "To procure and enforce suitable laws for the protection and preservation of food fishes, game, song and insectivorous birds; the promotion of fish culture; the introduction of new species and varieties of fish, game and useful birds; to disseminate information relating thereto; and to procure the revision and codification of the laws on these subjects when necessary."

What Has the League Accomplished?

To give a most concise answer, it is possible to say that every one of the objects of the League, as above-mentioned, have received attention successfully. Taking the first, second and last clauses of above, it may be said, truthfully, that most rapid progress has been made. In 1892 the laws were revised by a committee from members of the League appointed by its then acting President, which, as a chapter, was introduced in and passed by both houses of the Legislature, and all previous acts relative to the protection of fish and game repealed. While this chapter was not entirely perfect, it was a vast improvement upon the cumbersome and conflicting legislation which then existed in the form of acts and amendments passed biennially for the ten previous sessions. In 1894 a general revision of the Statutes necessitated another overhauling of the chapter of game laws by the Legislature. It may be said, to the credit of the Legislative Committee of the League for the session of 1892, that the chapter then enacted stood well the test of the Revisory Committee of the Legislature of 1894. A set-back was received in 1894, however, in the legislation for the protection of fish in Lake Champlain, whereby an agreement, entered into between the State Fish and Game Commissioners and the Department of Marine and Fisheries of Canada, was nullified by the legislative enactment making seine-fishing in Lake Champlain practically free, and gave the Canadian authorities an opportuntty to license fishing in the Canadian waters of the lake, while the pike-perch were running up to spawn. This has been partially remedied by the Legislature of 1896, if the Canadian authorities see fit to renew an agreement previously broken by Vermont. Perhaps at no time in the history of Vermont has the Legislature been so much occupied by bills for the protection or destruction of fish and game as during the session of 1896. Over thirty-five bills of this nature were introduced, and of this number eighteen became laws. Of the eighteen which became laws, Nos. 35, 88, 89, 90, 91, 92, 93, 95, 96, 97, 98, 131 and 139 of the acts of 1896, were drafted by the attorney acting for the League. This is mentioned to inform the members that the League is carrying out the objects set forth in the constitution as well as its official representatives know how to do it. Three measures relative to the prohibition of sawdust and the constructions of fishways advocated by the Fish and Game Commissioners, and drafted by the League's attorney, failed to become laws. The legislative Joint Committee on Game and Fisheries were confronted with a large amount of legislation which was not for the interests of the State at large, and it is to their credit that such legislation was uniformly reported adversely by them.

Taking up the third clause of the constitution, viz.: "The Introduction of New Varieties of Fish, Game and Useful Birds." The recent report of the annual meeting, held in November, 1896, gives the report of the Committeee on the Introduction of New Game. The writer will simply add that the Mongolian pheasants at his aviary have so far (Feb. 25) withstood the rigors of a St. Johnsbury climate, which may be regarded as severe as in any portion of Vermont. The birds do not mind 20° below zero weather, and have had no shelter except what might be called a box laid on the ground, open on one side, and without a bottom. The boxes thus used are 6ft. long (with opening on side the entire length), 4ft. wide and 2ft. high. The pheasants are insect feeders, and there is only one question to consider as to their ability to withstand our severe winters. That question is as to whether they can procure food during the period that the snow is deep. The writer has been informed that the birds will bud when forced to do it. They certainly like some vegetation as well as insects. They should be a friend of the farmer, in that they are insect-destroyers. Right here the writer will digress to say a word for the song and insectivorous birds. Many people do not think it worth while to enforce the laws for their protection, while in reality these birds are a necessary protection to the farmers as insect-destroyers. The little harm some of them do in stealing fruit is amply atoned for in their destruction of noxious insects. The writer expects to raise two or three hundred Mongolian pheasants and crosses between the Mongolian and English pheasants the coming season. That the Mongolian pheasants will withstand the climate and obtain food in the lake towns, is proven from the fact that their less hardy relatives, the English pheasants, have spread rapidly from Dr. Webb's preserve throughout several counties.

The writer is very skeptical about the successful introduction of quail other than on preserves where they can be protected and fed during the rigors of winter, and therefore does not recommend a further expenditure by the League in this direction.

Of the capercailzie received last fall, one pair was sent to Gen. Ripley, of Rutland, and turned loose in suitable covers for them. The balance of the consignment are on Dr. Webb's preserve, where he has large pens, and hopes to be able to rear them in confinement and then distribute for the benefit of the League.

The black game were distributed last fall, five each to Gen. Ripley and Mr. Gelot, of Rutland and Middlebury, to be turned loose in the woods. Of the ten remaining, one or two died, and the balance are in confinement at Dr. Webb's preserve, to be propagated the same as the capercailzie. It is hoped that the artificial propagation of these two species will prove successful, as the cost of getting these birds from Sweden is very large.

Turning to the fourth clause in the objects of the Association, viz., "To disseminate information," etc., the members of the League are familiar with the cloth posters containing a synopsis of the laws which are very generally distributed every year, being posted in public places throughout the State, as well as being mailed each member of the League. Pamphlets of the game laws have also been very generally distributed throughout the State as often as any changes have been made by the Legislatures.

The midsummer meeting of 1894 was most enjoyable, and most successful in every respect. The social features of this and the annual meetings have always proved very desirable, in that they bring together once or twice a year men of similar tastes, all desiring the promotion of the welfare of Vermont, through the medium of the League, as well as in a general way. This interest is evidenced by the fact that there are no "dead heads" in the League. It is doubtful if any other organization of a philanthropic character can boast of a membership which is so prompt in paying initiation fees and annual dues, and is always ready to make subscriptions when called upon. The annual dues may be regarded as a subscription, in that many members never have an opportunity to enjoy the social features, and their only satisfaction is in seeing the steady development of Vermont's fish and game interests through the work of the League. It seems desirable that the social side of the organization should be kept up, not only for the mutual enjoyment of the members, but also because it is on these occasions that so many new members are added. The vote of the League, at last annual meeting, to have a midsummer meeting in 1897, will be carried out, but the time and place has not yet been decided upon.

A SUCCESSFUL ASSOCIATION.

Editor Forest and Stream:

Thinking they may be of value in the line of suggestion to organizations for the protection of game and fish, I venture to inclose herein a sample of the "literature" used by the Hillsborough County Game and Protective Association; and send you also, under separate cover, one of our large cloth posters

The campaign of education, as well as prosecution, we have been waging the past three years, has been productive of good results.

These cloth posters are sent to every postmaster, also to sportsmen and hotel keepers, and are put up in post-offices and public places, as well as nailed on barns, fences, trees, and beside streams and rivers. The small card-board folders being distributed, gratis, in all directions (within the county). These ideas (so far as our association is concerned) are original with us, and have proved so beneficial that they would seem worth a trial, at least, elsewhere.

This association was formed in 1893, by that sterling sportsman the late Col. John B. Clarke, of the Manchester *Mirror*, who clearly saw the futility of endeavoring to enforce the game laws by a State organization which tries to cover too much territory, "spreads out too thin," so to speak; or, on the other hand, by purely local organization, which is too local in its sympathies to ensure prompt and fearless handling of violations.

The association is not a "gun club," and has no trap shooting attachment to offer as an inducement for membership. The only social feature is the annual meeting and dinner, which is held at some central point during the daytime, so that members may all attend, and yet reach their homes the same night. The annual dues being only $1.00, does not keep any true sportsman out, and provides a fund out of which are paid only printing bills and the $25.00 we offer in the shape of a reward for evidence sufficient to ensure a conviction. The result is, that we have a membership of over 100 earnest, active sportsmen.

We do not claim to have entirely suppressed law breaking, but we do claim to have made it dangerous to violate the game laws in this county. We have secured a long list of convictions, in every case being successful in our prosecutions; and what adds to our strength is the fact that local officers have (as a rule) nothing to do with a prosecution, the blow generally falling from a direction least looked for. Not a little of our success is due to Hon. Nathaniel Wentworth, chairman of the New Hampshire Fish and Game Commission, who is a member of our executive committee, and who personally attends to most of the cases.

At our annual meeting in Manchester, April 6, we indorsed the Platform Plank of Forest and Stream, "That the sale of game should be prohibited at all seasons."

If anything in our plans, or literature, should commend itself to you, and you should know of any club or association who might like to receive copies, we shall be glad to furnish them free, upon application to George P. Kimball, Sec'y, Nashua, N. H.

Commissioner Wentworth informs me that in his journeys up and down the State he has never seen nor heard of so many partridges as he has this spring. A mild winter has much to do with it, and we should have excellent sport in the fall. W. H. B.

Forests and Mining Claims.

Chillicothe, O., April 14.—*Editor Forest and Stream:* In my travels through the West I have seen at various places where timber thieves had staked out, in good timber, mining claims (300×1,500ft.), digged a small hole to make a feigned compliance with the laws governing working of mineral claims, and then proceeded to remove and saw up all the timber. This has been done in many parts of Colorado. In remote parts the thieves boldly cut and destroy timber *ad libitum*. The timber reserves have no value except for their timber, and are all practically valueless for agricultural or grazing purposes. L. B. Yaple.

THE ALABAMA ASSOCIATION.

BIRMINGHAM, April 21.—*Editor Forest and Stream:* As secretary of the Alabama Game and Fish Protective Association, I wish to express our appreciation of your interest in our cause, and especially of the use of the columns of the best and oldest sportsman's paper in this country. This is a benefit which none could fail to appreciate.

Right now I want to say something to the sportsmen of the State through your columns. I wish you could ring it in their ears until it would arouse them to the fact that four or five men, no matter how determined or zealous in a cause, cannot carry it to a successful termination. You must get up and help, brother. You cannot do any good by sending us a postal card saying you are heartily in sympathy with us, then sitting down and grumbling because we have accomplished nothing. So get up and go to work.

We want a local association in every county in the State. What is the matter with your county? You are the very man to organize it. Suppose most of your friends and neighbors are farmers—the very people! They own the majority of the land in this State, and we need their help. Don't say they will not do anything but chase you off their land every time they find you there with a gun or fishing rod. Try them first and see if they won't give you their support. I guarantee they will, and if you are a right-minded sportsman, and do not try to carry off all the game, they will not only let you shoot, but invite you to come again.

Now, to insure a grand success we must have concert of action all over the State. You see how we are liable to have conflicting laws, when each county enacts local laws with no regard to her sister county. How shall we enforce the laws unless we have officers whose duty it shall be to attend to their enforcement?

The utter disregard for the laws now in force demonstrates the fact that "What is every man's business is no man's business." You can hardly blame a man for not reporting a neighbor or friend, thereby creating an enmity or probably a feud in the neighborhood. Don't you see the remedy? Let us have some one whose duty it shall be to attend to this, then we will have protection.

Now, are you fellows going to sit off down there in your counties and wait until we pass laws for the State, then raise a row, and say, "Those laws don't suit us in this county"? That won't do. We beg and implore every county to send as many members as they see fit to our annual meeting, so they may have a voice in everything that is done.

We are going to push this protection to a successful issue, whether you help us or not from your county. If it don't suit you, keep quiet; for you had a chance to have your voice in council, but would not.

Now as to what we are doing so far. We have some of the best legal talent in the State interested in our cause, men who are in close touch with our representatives. They are now at work framing laws to secure the ends we seek. These laws will come before the association at its next meeting for approval.

We have secured bass from the Government for stocking three of our streams, also their promise to put in fishways in the locks at Tuscaloosa on the Warrior River, where the fish have been cut off from their spawning grounds for several years.

This is not much, but it is a beginning; and if all will work together it will be but a short while until we have a veritable sportsman's paradise, such as it was when it came from the hands of an all-wise Creator.

J. H. ALLEN, Sec'y.

SHOOTING PRIVILEGES AND TRESPASS.

Editor Forest and Stream:

Mr. Lexden is evidently a gentleman who has the welfare of game at heart, and probably has no personal interest in any preserve or tract of land which has upon it the kind of scenery which he loves to admire. I am sorry he thought I was making an argument that landowners should not do exactly as they please with whatever belongs to them, when I was only asking a question for information—What are we poor devils going to do when the terrible landowners agree that the interests of game protection demand that we be put off? I am not talking about the turnip patch back of the house; I wouldn't like to tramp up any man's quail preserve, and I think he would do just right to take the shotgun to me. I suppose Lexden has never been where he has not seen the face of a companion, even a dog, for any considerable time—at least, does not make a practice of going off alone twenty or thirty miles from any living soul. But when he realizes that that wild land is private land, as absolutely under its owner's control as the ground his house is built upon, some curious questions will arise in his mind, and if ever he has been ordered off or forbidden to go upon such land, those questions will demand an answer.

The rights of property are sacred and inviolable. What I make, or what I have paid fair compensation for, is mine absolutely to do with as I please. I am surprised Lexden seriously argues that, but that he misunderstood me I am not in the least surprised. We expect to be misunderstood when we say some things. But what annoys Lexden is the horrible suggestion that there are any rights inseparable from acreage. The owner of the land does not have "exclusive control" if the "State requires him to pay each year 'something' in the form of taxes."

Mr. Lexden intends that no one shall hunt game except owners of land? Then it seems to me it is perfect nonsense, this talk about "game protection." What right have the impertinent public to say to the man who has killed his game on his own land in what way he shall dispose of it? What right have they to say when he shall not kill it any more than when he shall not kill his hogs? What right have they, after he has paid his taxes, to meddle with his affairs?

But wild animals, like trees and rivers and mountains, are not uniformly distributed over this terrestrial sphere. They not only prefer some places to others, but can only live in favored spots. If Lexden will tell me how any amount of hard cash is going to keep caribou, for instance, alive in a certain part of North Carolina that, as landowner, I have some interest in, or will move a little mountain scenery and cool rivers and such things there, he will confer a favor indeed on one grateful individual.

I am far from suggesting a definite remedy (and I wish to make myself clear on that point) when I say that it is precisely because of this unequal distribution of the good things that are the work of nature, not man, that calls for a better understanding, not of Free Trade, nor Populism, nor pie, but the fundamental relations of men in an organized State. Each man is so busily engaged about his own affairs, he comes to ignore rights that are ridiculous to State because so evident, and substitute "legal" right, which is the creature of the hour, changing or needing to be changed with the growth of the world for moral right. "We hold these things to be self-evident," etc It may be incompatible with the increase of the human inhabitants of this earth that animals shall exist anywhere wild, and that they shall continue to exist at all only in certain circumscribed areas called "preserves." In that case why talk about "game" protection any more than cow protection? Why invoke the power of the many (the State) to protect that which only the few can enjoy? The trespass laws are ample, surely.

But my purpose in writing was this: Not to get into a discussion of the land question, which very many have not considered from every point of view—if they have thought of it seriously at all—or into the fundamental difference between ownership in a book and in a piece of land, but to point out that the coming of the hour when men shall exercise the prerogatives that ownership of land necessarily gives, can only be postponed by making it unnecessary for landowners to exercise as yet the fullest control over their area that the law allows. That can only be done by enforcement of the game laws. I am sorry to learn that only ultimate solution lies in the trespass laws, and people who ought to know are saying it will come to that.

At the risk of bringing another storm about my ears, I might suggest: if the United States Government has the right to prevent the cutting of timber on settled lands, why, when the game comes to be restricted to the preserves of a few, and is therefore not accessible to the "fellow with a gun," then can't we keep the other fellow also from shooting, by establishing a close season at all times? We could thus get even with the terrible fellows; or we could get even by taxing 'em pretty high. TAPPAN ADNEY.

GERMANY'S GAME SYSTEM.

GERMANY produces more game than any other country in proportion to its area, says a critic in the Paris *Figaro*, quoted by the New York *Tribune*. There is a profitable trade in it, and the markets of France are largely supplied from this source. This abundance is not caused by any unusually favorable conditions of soil or of climate, but by wise legislation, which does not sacrifice the general interests to the pleasure of a few.

The German law regards game as one of the useful products of the soil, as property which cannot be appropriated without the commission of theft, at least if the right to hunt has not been obtained through the proper channels. This right can be exercised only as a result of holding a certain amount of land, either by lease or through ownership—about 150 hectares for each tenant. Below that amount all the holdings are joined together and rented by the community for its own profit, the proceeds being divided among the several proprietors in proportion to their holdings. If the land altogether is not enough to make one parcel of 150 hectares adjoining communities can make a pool.

That is the foundation of the system. It is absolutely equitable. Nobody can hunt for his own pleasure or profit exclusively, but nobody's property rights are infringed. Each person gets a profit from that which belongs to him. The small farmer is not, as in France, at the mercy of the great landed proprietor, or of the poacher, and the farmer does not have to see his fields trampled by the hunters, as in France, where the landholdings are too small for the establishment of preserves.

The legal consequences of this state of things are that the taking of game without the right to do so duly obtained is regarded as theft. The owner of the land cannot take back with one hand what he has disposed of with the other. He cannot hunt on his own land, having sold the right to do so. Game is placed under legal protection. There is a period when hunting is forbidden entirely; another period in which only certain kinds of game may be taken, or only the males. These periods are generally fixed by law, with modifications in various provinces. From March 1 to the end of June it is illegal to kill stags and the young male fawns; from Feb. 1 to Oct. 15 to kill the does. Partridges may not be shot between Dec. 1 and the end of August. This protection is extended to all kinds of game—to hares, pheasants, and even to birds of passage, which it is against the law to kill in the breeding season. All huntsmen at all times are forbidden to use nets, traps or snares. This prohibition also exists in France, but if the terms of law are severe its execution is not. Years ago a law was introduced into the French Senate founded on the German legislation, but there has been no discussion of it lately.

The Germans have stopped the nocturnal exploits of the poachers without the aid of the law, in this way: There grows in that country a certain kind of forage shrub with which they have planted all their hunting grounds. This plant, precious on many accounts, is, unfortunately, little known in France. Its botanical name is *Lathyrus silvestris wagneri*. It flourishes where the soil is very meager, and where in summer drought spreads desolation and death among other plants. This shrub, of very high and thick growth, forms a mass impenetrable by birds of prey. Beneath it the game birds enjoy the additional advantage of finding its seeds, which they are very fond of, and which keeps them fat. Their flesh also acquires a succulence and flavor therefrom altogether unique, and adjudged absolutely perfect by epicures. No other plant combines these valuable qualities in such a measure for the protection of game. It is impossible for poachers to spread nets in a plantation of lathyrus.

In his botanical field work in 1862, the famous agricultural writer, Wagner, observed the lathyrus growing in a soil where limestone and silicious formations predominated. The vegetation of the neighborhood was dry, the trees and shrubs bore only scant foliage, but the lathyrus was growing luxuriantly. The phenomenon at once attracted the attention of a keen observer like Wagner, and he devoted himself to studying this wonderful shrub, which was so completely indifferent to the severest conditions of drought. He planted its seeds on his grounds, improved and perfected it, and since that time the lathyrus has become almost a national plant in Germany. It flourishes without fertilizers in thin and arid soil. Its roots strike down several yards into the lower strata, where they seize the chlorine and potassium compounds and phosphoric acid they find there. The foliage is shown by analysis to contain 30 per cent. of proteid matter, while the best lucern-grass shows only 16 per cent. The plant is eaten with avidity by horses, pigs, sheep and all domestic animals.

The German law has taken great precautions to exterminate poaching by striking at its root—that is, at the poacher's profit in selling his booty. Game is not allowed to be shipped by railroad, by the express department of the postal service, or by any public conveyance, or to be sold from door to door at private houses or in shops unless it is accompanied by a certificate as to where it came from, which must be signed by the landowner or lessee of the hunting district. It is easy to see how difficult the business of poaching is in Germany. It is humiliating, it is dangerous, and, thanks to the numerous plantations of lathyrus, it is unprofitable. So it is that this nursery of smugglers, idlers, thieves and assassins does not exist among our neighbors. Furthermore, everybody is satisfied, especially the farmers, who do not have to stand by, as they do in France, and see the hunters—known and unknown alike—tramping over their fields, over their oats and buckwheat, and crushing their beets under foot.

A TALE NOT OFTEN TOLD.

PITTSBURG, Pa.—*Editor Forest and Stream:* I notice that all the letters written to FOREST AND STREAM are good ones. They all tell of the vast amounts of game that have been killed and what a good time was had. But I never read of a fellow going away off to hunt and going home again without getting anything. The sportsmen who don't get any game never tell about it. But I am going to tell you of a party of five from the East End, who went into West Virginia, stayed two weeks, and came home with an empty bag. It was in November last.

Messrs. W. J. Cullin, Jas. McNeil, A. K. Henderson, W. T. Renton and myself left Pittsburg for a two-weeks' hunt on Middle Mountain in West Virginia, eight miles south of Romney. We had received a letter from a man at Romney saying that game of all kinds was very plenty; but we found just the reverse.

The first day we started out to hunt wild turkeys we hunted all day with an experienced guide, but didn't see a sign of a turkey. Another day we went for deer. We rose at 4 A. M., got out the team and went about ten miles up the Potomac to the Trough. The guide placed us on the stands and the drivers went in to drive out a herd of deer. We watched all day and only one poor little doe came out, which we did not shoot at. And thus it was, day after day. There was plenty of good hunting but very poor finding. The only thing we had which was anything like sport at all was rabbit-hunting. The rabbits were plentiful, and with a good dog we could get all the shooting we wanted at this kind of game. We had three good bird dogs, but they were of no use, for there were no quail in this country, and pheasants were as few as the teeth of a hen.

It is my opinion that this part of West Virginia is going on its past reputation, for I don't believe there is a half dozen deer in the county, and as for wild turkey, I only saw two small flocks of about eight or ten each, and I hunted the mountain for miles in ever direction.

But the Mr. Johnson, with whom we stayed, didn't forget to charge us the regular hotel rate for board (although it is only a farmhouse), and extra charges for taking us to and from the depot, and for the team and driver the day we went to the Trough. Some of our party had been there before, and were very much surprised at the bill, as all the extras were unusual.

I hope this may be of benefit to some hunter who contemplates going to this locality, and may save some one a big disappointment. It is only wasting time and money to go to Hampshire county, West Virginia, for game.

I would like to hear through these columns of the success of other sportsmen who have been in West Virginia of late years. I haven't seen a letter about West Virginia in these columns for a long time. Let us hear the good or the bad. If it is good, it may benefit some one; if bad, it may save some one a disappointment. J. K. T.

INDIANS AND DUCK EGGS.

BALTIMORE, April 21.—*Editor Forest and Stream:* Some time since I noticed a letter of Mr. John Henry Keene, Jr., of this city, to the Earl of Aberdeen, Governor-General of Canada, in relation to the importation of the eggs of the wild duck from the Dominion into the States.

The question is an important one and deserves the careful consideration of every sportsman. For a number of years I shot ducks on the Chesapeake and its tributaries, and noticed a falling off in the number flying from year to year. Local causes could not account for this. The ducks were not flying. Why?

In 1868 I made a tour through Canada from Queenstown to the upper waters of the Saguenay, following the shores of the St. Lawrence. On the way I conversed fully with gentlemen acquainted with the game and fishing found on the river and its tributaries, and with men who as habitants or voyagers lived on its shores or traveled its waters.

The great marshes along the shores were pointed out to me as the breeding places of the wild duck, and I remarked that their extent gave them ample ground for the purpose and I could not understand why they did not visit us as formerly. Then it was explained to me that their nests were robbed by the natives for the purpose of getting their eggs, which were eaten. Nothing was said of the importation into this country, but simply that the inhabitants hunted them as a means of subsistence.

For whatever purpose the eggs are sought it matters not. The ducks are disturbed on the breeding grounds, the eggs are removed. The young are comparatively few and far between, and the manly sport of the blind and the point is fast becoming a thing of the past. A. C. TRIPPE.

[There is no question that the Indians in the North, both East and West, use vast quantities of wild duck eggs for food. But as they have always done so, this consumption is no new factor in the problem of duck protection. It may be a more serious one now than formerly, since with the diminished supply every agency of diminution counts more than it did when the supply was abundant. The point on which Mr. Keene is seeking information, however, is as to whether a large consumption of duck eggs by civilized man for confectionery purposes has been added to this consumption by the savage. As was said in our issue of April 17, we can find no evidence in New York of any such trade.]

Maine License and Moose Laws.

GREENVILLE, Me , April 25.—*Editor Forest and Stream:* The Moosehead Lake Protective Association, representing the guides of northern Maine, at their recent meeting here, voted unanimously to respect and uphold the Guides' Registration Law passed by the last Legislature. Commissioner Oak, of the State Fish and Game Commission, was present at the meeting, and explained the provisions and intent of the law to the satisfaction and approval of the ninety guides who are enrolled as members of the organization.

There was much feeling expressed by the guides, however, over the alleged blunder in the moose law, whereby the open season is made from Oct. 15 to Dec. 1 instead of from Oct. 1, as the Game Commissioners claim the open season was to have been, according to the original bill prepared with their sanction. The guides say if the law as it now stands is an error, and was not intended by those having the matter in charge, it shows a loose way of making the laws they are required to respect, and they allege carelessness, if not something worse, in the manipulation of this particular law. Indeed, there is a strong disposition to test the validity of this moose law, and it may yet be taken to the full bench of the State.

The guides have behind them influential and interested parties, who are willing to make a fight on the question and who will furnish the sinews of war.

At present we are lying low, waiting for the Commissioners to make some move in finding a remedy for the harm they unintentionally have done our interests by the enactment of this most unnecessary short open season for moose hunting. They profess to be so sorry for us, and so sorry that their law providing for an open season of two months miscarried, that we guides begin to feel sorry in our turn for them, and so will give them a chance to do the square thing by making an effort to get the law to conform to their intentions, and thus get themselves out of their unpleasant dilemma.

The outlook for a good season at Moosehead Lake is very promising. We have had no freshets to roil the water and raise the lake too high for good trout fishing, so that "when the ice goes out" the conditions for sport will be all that could be desired.

Tote teams with big loads are still crossing Moosehead, the ice being 16in. thick. However, we are looking for open water by May 12, and good fly-fishing by June 1.

GUIDE.

Ontario Game.

BELLEVILLE, Ont., April 20.—*Editor Forest and Stream:* Our Legislature has adjourned without tinkering the game law. Sentiment has prevailed against common sense, and the city "tenderfoot," instead of being allowed to kill his one deer in the water, will continue to blaze away and wound three or four of the "antlered monarchs" and may-hap "pot" a companion, while the cunning law-breakers, by invoking sentiment to their own purpose, as his Satanic Majesty quotes Scripture, will go on slaughtering their hundreds of deer, instead of finding their occupation gone by an enactment stopping the sale of venison, as was proposed by the Forest and Stream Club, of this city. The sale of partridges, etc., has been prohibited in order to prevent their extermination Why not that of venison also, Messrs. Commissioners of unstable purpose?

Game Warden Smith has secured convictions against ten residents of Lanark county, whose fines aggregate $170. He expects to secure many more convictions in the same locality. Most of the penalties imposed were for shooting deer in the water.

With reference to catching bass through the ice, as referred to in a recent issue of FOREST AND STREAM, I may state that during the past winter a large-mouth bass was caught through the ice at Bradley Bay, on the Trent River, some twenty-five miles distant. A maskinonge, which weighed 40lbs., was caught at the same place and about the same date with hook and line.

In one of the early papers in his charming series on "Men I have Fished With," Mr. Mather tells his readers to pronounce it Man-i-to-*bah*, with the accent on the last syllable. An Indian missionary tells me that his people place the accent on the penultimate syllable—hence, Manitoba, Caughnawaga, Niagara, and so on *ad infinitum*. R. S. BELL.

An Arkansas Game Preserve Opportunity.

EUREKA SPRINGS, Ark.—*Editor Forest and Stream:* Having been a reader of FOREST AND STREAM for some time, I have noticed a number of articles about game preserves, and how in late years their number and extent have been increasing in this country.

All sportsmen and lovers of nature should take an interest in these preserves, and do all in their power to increase their number and area; for with the wanton destruction of the game and fish, judging from the past, it is only a question of a few years when comparatively no game will be found except on such preserves. Proper laws for game and fish protection are hard to obtain, and harder to enforce.

I know of a body of land only about twenty miles from this city, in which 10,000 to 20,000 acres could be obtained in one bunch, cheap. It has fine bass streams, with clear springs and good timber, and there are deer still on it; I have been hunting there several times, and our party never failed to get deer.

I have no interest in this land whatever, and simply write you in the hope that you might know of some sportsmen who would like such a tract of land for game preserve, as our country is fast filling up with home seekers, and I dislike to see this fine game country broken up. Our people here are all in very moderate circumstances, and none of our sportsmen are financially able to carry out such an undertaking. Such bodies of land are now hard to find within any reasonable distance of railway and civilization, and I know of no other anywhere in this part of the country.

F. N. CLAFLIN.

The Ooglywoo.

THE London *Mail* says that a number of wealthy Englishmen have organized an expedition to come to the United States to shoot wild horses in the Rocky Mountains.

The gentlemen can, after they get through shooting "wild horses in the Rocky Mountains," come down onto the plains and shoot the Ooglywoo, which is found in great numbers in that locality. It has six legs and a very strong, short tail.

When danger appears, it at once stands on its tail and spins rapidly around. Of course this makes a hole, into which the Ooglywoo sinks rapidly out of sight. The hole then disappears also.

The point of the whole matter is to shoot the animal when it first raises up on its tail, and before it has time to make the hole, disappear and then pull the hole in after it, and our English friends will find rare sport in shooting them, much more so in fact than in "shooting wild horses in the Rocky Mountains."

Again there is a spice of danger which will be appreciated by our sporting friends, for the Ooglywoo, when in a close place, invariably stands on its two front legs, elevates its rear end into the air and clubs the hunter over the head with its tail, which is worse than any policeman's club.

The tail is used so rapidly that it makes a buzzing sound in the air, and it is impossible to dodge it. We shall send a copy of this issue to the London *Mail*, in order that it may post up our sporting friends.—*F. M. Gilbert in Evansville Tribune.*

New York Legislature.

THE several bills introduced into the New York Legislature to repeal Sec. 249, which permits the sale of game at all seasons, failed of enactment. The New York markets remain open the year round. To them will continue to be brought game from other States—exported unlawfully from those States—and game killed out of season, and game unlawfully shipped from the various counties of New York. Under such a system the game code is in a large measure a farce. It restrains and restricts the sportsman, and tempts and encourages the man who makes a business of game killing. We may not look for any improvement in the game supply situation so long as this iniquitous system prevails.

In our next issue will be given a summary of the work of the session with respect to game and fish.

Pennsylvania Game Law.

STEVENSVILLE, Pa , April 15.—*Editor Forest and Stream:* I had thought to be done with the Pennsylvania Game Law question, but since some of its defenders have debased the question into a personal attack instead of keeping it in the sphere of reasonable argument, I feel called upon in justice to myself and readers of FOREST AND STREAM to define my position, and most earnestly protest against the false inferences purposely drawn from my opposition.

Mr. Atherton's paper is too voluminous to be answered in detail. In discussing the merits and demerits of the proposed law, I criticised it as applied to our own people and conditions, and not as to real or imaginary evils that may or may not exist in remote regions, under varying influences of climate, varieties of game, citizenship, etc. Louisiana and Mexico are a little remote for the jurisdiction of Pennsylvania, and I am totally ignorant of an attempt at any time in any article to "stir up antagonism between the rich and the poor"; but simply ask for the same consideration for high and low, rich and poor, wise and foolish, with justice for all, and discrimination for none. I do not champion market-hunting, neither do I champion the club man, nor the yacht owner, who kill by "the hundred in a morning's shoot" (Mr. Atherton to the contrary notwithstanding); but as between the two butchers, the needy market-hunter is the least to be despised.

The English gentry, who lease shooting privileges in Scotland, annually sell large quantities of game, thus bringing it within the reach of the poor and less fortunate, and at the same time adding materially to the sums required to keep up their preserves, salaries of gamekeepers, etc., etc. Are the poor of America to be deprived of like privileges because a bigoted few pretend to believe that the game was made for a "gentleman's (?) pastime" and not for the masses. Will Mr. Atherton, in his broad charity and philanthropy, seek out the sick, the poor and the unfortunate; the constant toilers and the unskillful, and from his bag of plenty equalize the gifts of nature? If not, then by what legal means under the proposed law can the less fortunate taste of God's bounties?

When Mr. Atherton writes that "out of the army of contributors to FOREST AND STREAM, I am pleased to note that such opinions do not come from the best writers and thinkers, be they rich or poor," I take issue, and would ask, who, in the readers' minds, are the best writers and thinkers." Those who think and write for a class, and who wish to relegate to themselves "special rights and privileges," to the exclusion of the masses, or those who think and write for the great majority and seek to obtain equal rights and privileges for all? Mr. Atherton's deductions as to the cause that prompts my defense of a much and long-abused class (the so-called pot-hunters), as against the self-constituted "gentleman sportsman," are as narrow in scope as unfair and ungenerous in application as the spirit that prompts him to say that "the club owner and yacht owner are the better sportsmen," even though the spirit of gentle woodcraft or of knight errantry alone beats under the tattered vest of homespun. Is Mr. Atherton a better sportsman, in the broad sense that the term should imply, because he eats his game, than his needy neighbor, who from adverse conditions is forced to convert his into the necessaries of life? Must a shooter eat or give away to ungratified friends or thankless companions the fruits of his labor and his skill that he may become possessed of the spirit of true sportsmanship? Out upon such theories!

And now that I may not be mistaken, but may stand in my true light in print, as I do in forest and field, I will again say that I have no interest in "pot-hunters" or "true sportsmen," but am heart and soul in favor of honest, consistent game protection, but unalterably opposed to protection that protects for the few to the exclusion of the many.

W. W. MCCAIN.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

FISHING ON THE GUNPOWDER.

BALTIMORE, Md.—Learning that a friend of mine who was very fond of fishing, but seldom had an opportunity to indulge in the sport, could spare a day off, I told him if he would go down to the Gunpowder River with me I would endeavor to give him a real good day's sport. He accepted my invitation with alacrity, and wishing to make our day on the river as long as possible, we went down the night before and made arrangements to stop over night at the bridge-tender's house. On our arrival, having about an hour of daylight left, we went over to the boat house and arranged my boat for the next day's work, putting on board sails, oars, anchor and fishing tackle. A severe storm had carried away our wharf, which made it rather difficult to get the things on board, and as soon as we finished we rowed to another wharf that had withstood the storm, and moored the boat off the end of it.

At 3 o'clock the next morning (which is my usual hour for rising when on my fishing trips) I got up and started the alcohol to burning under my Vienna coffee pot, and by the time the coffee was ready had some water boiling on the oil stove, into which I put eight eggs, boiling them just four minutes by the watch. The people we stayed with had left bread, butter and preserves on the table for us, and we sat down and ate a hearty breakfast, with delicious coffee. At half past 3 we left the wharf, it being a glorious morning, the atmosphere clear and cold, with a good breeze from the north. The stars shone with unusual brilliancy, the beautiful belt and the sword of Orion being directly in the zenith, while a magnificent planet in the south served me as a beacon to steer by. The breeze freshened as we went down the river, and the little boat bowled along finely. In less than an hour we reached our first stopping place, and taking in sails anchored and fixed up our rods and lines, which was a difficult job in the uncertain light of approaching day. After we were ready for fishing, and had a good supply of bait cut up (we were using shedder crab), we pulled up the anchor and I put the boat exactly on the right spot for fishing, which was at the end of a bar where the depth of water increased suddenly from 3 to 7ft. By this time the river had become quite rough, owing to the tide cutting across the wind, and the boat wallowed and pitched a good deal. After fishing for quite a while I hooked a good-sized fish, which proved to be a white catfish of about 3lbs. My friend in a minute after caught a large white perch much to his delight. Then I hooked a rock fish about 20in. long which gave me splendid play, bending my split-bamboo rod nearly double in his efforts to get under the boat. My friend became very much excited and thought I would surely lose the fish, but in a few minutes I had him safely in the landing net. So it went on for about an hour, first one, then the other of us catching either a perch, rock, or catfish.

As the tide by this time had run down considerably and the fish had stopped biting, I decided to move to another point, a mile further down the river. As we rounded the point off which we had been fishing, we disturbed two large blue herons, seeking their breakfast, which rose, and lazily flapping their great wings sought more secluded quarters. Off to the east was a large seine boat containing eight or ten men, who were laying out their seine, they and their boat looming up in the early morning light and appearing very much larger than they really were. By this time the sun was beginning to show himself through the openings in the woods on the bluff, suffusing water and land with a beautiful rosy flush, bringing out the brilliant colors of the variegated clays in the banks on the west shore and dissipating the little fog banks that slowly floated in the mouths of the creeks. The wind was dying out, and by the time we reached our objective point it was so nearly a dead calm that we had to resort to an ash breeze to place the boat just right.

We had no sooner gotten our lines over than the fun began again, and there was hardly a time for the next two hours that there was not a fish of some kind being landed. Such fishing is no novelty to me, as I indulge in the sport quite frequently during the season, but it did me good to see the way my friend enjoyed himself. He was supremely happy, and many times during the day would break out with such exclamations as "Isn't this splendid." "The finest day I ever had." "By jingo, this is grand," and kindred expressions. When he would hook an eel his lamentations were long and loud, but as I always went to his rescue on such occasions we soon had the slimy squirmer in a quiescent state, and the hook extracted. I manage eels without any trouble in this way, my boat has lateral strips running fore and aft, nailed to the ribs about three inches apart, when I hook an eel I lift it clear of everything by the line and let it run its tail between two of these strips. When it finds its tail between them it will twist round them and pull hard on the line. I watch for a favorable moment and stick it through the spine near the head. This paralyzes the eel instantly, and it is an easy job to get the hook out of its mouth.

By this time the tide had almost ceased to ebb, and I could see that vessels out on the Chesapeake Bay had the wind from the south, which was a sure indication that the flood tide had commenced. It was not long before we had a gentle puff from the south, which was followed by another much stronger, and out toward the bay could be seen the dark-blue line of the breeze, which was coming in with the tide. The fish ceased biting all at once, and I told my friend that our day's sport was over, and that we might just as well quit, which we did, having a strong and fair breeze that sent us flying toward our boat house. On arriving there we counted our fish and found we had seven rock, seventy-two perch and twenty white catfish. After putting everything out of the boat we moored her to her buoy, and went over to the house to rest until train time, and to watch the varied changes of a most remarkable sunset.

The sun went down in a blaze of glory behind a bank of heavy clouds, and after he had disappeared the whole river and sky toward the west was bathed in a beautiful rose-colored haze, which turned to a delicate purple in the distance; toward the north the water took on a warm, steel-gray tint, caused by the reflection of the clouds in that direction. There was not a ripple in the beautifully tinted water, and the reflection of all objects on its surface was perfect. To crown all, Venus, in all her glory, shone with transcendent brilliancy just above the edge of the dark clouds, adding her magnificent beauty to the lovely and peaceful scene, which will long have a dwelling-place in our memories. This beautiful sunset was a fitting ending of a happy day, thrice happy to me, on account of the pleasure I had been enabled to give my friend, whose delight at all that transpired, and whose genuine appreciation of every moment showed how fully he had enjoyed the outing.

EDWARD A. ROBINSON.

Catching a Ghost.

OVER on Cheesewesick's Creek, on the eastern shore of Virginia, lived a man who had a habit of going fishing by night, after this fashion: He would run the bow of his skiff on shore, bait his hooks, cast them seaward as far as the power of his arm would allow, then with lines made fast to his wrist, fall asleep, waiting a bite from the striped bass, or rock, which frequented the shallow water.

A practical joker found him thus, and casting off his clothing slipped gently into the water, detached the hooks and fastened the line to his waist.

Now came the circus. A solid pull brought the somnolent fisherman up standing. Down went the man fish swimming low while the man at the other end put in his fine work.

At last he drew his prize gently toward the boat, when his blood froze at the sight of a naked human form rising from the deep with extended arms which seemed about to clasp him. With a yell that would shame a Comanche the fisherman broke for home, his flying feet beating a rataplan like the long roll of a snare drum, while a little later he told the story of the ghost, his teeth chattering with his fear.

Just imagine the situation. True, every word.

PINK EDGE.

Florida Tarpon.

AT Fort Myers, Fla., the tarpon record up to April 14 shows seventy-three fish taken. The record tarpon fell to the lot of Mr. R. T. Holloway, of Kentucky; it measured 6ft. 10in. and weighed 163lbs. Up to the same date fourteen tarpon had been taken at Marco, and thirty-two at James City, the largest weighing 158lbs.

MEN I HAVE FISHED WITH.

XL.—Delaware Bradbury.

NEAR the junction of those Virginia rivers, the Pamunky and the Matapony, which form York's broad stream, dwells what is left of the once powerful tribe of Pamunky Indians, and Delaware and his brother John were intelligent and influential men among them. It is not at all certain that I have spelled their family name right, for it was spoken "Bradby" and sometimes like "Bradley," and no doubt some Virginia sportsmen would call me down but for this explanation. The time was in the spring of '75, and the late Prof. Spencer F. Baird, U. S. Fish Commissioner, had sent me down there to see what could be done to increase the shad in the Pamunky River, and by some good fortune I became a guest of Delaware Bradbury's, on an island some distance below White House landing, which was then the head of navigation of the river and some ten miles above its confluence with the Matapony.

Delaware was then about forty years old, above the middle height, and built like an athlete. As with most of his tribe, his hair had a tendency to curl; but how could a small colony keep from mingling with its neighbors for a century or two? We were friends from the start, and while education was very limited among my Pamunky friends, they were intelligent to a high degree. I had put up my old-style Green hatching boxes down at a place called Fish Haul, which does not appear on my present maps nor in the *Post Office Gazetteer;* but as a part of my duty was to collect specimens for the Smithsonian Institution, much time was spent with Delaware, and when the hatching season was over we were together daily.

War time was not far back then, and Delaware was shy of the subject at first, but afterward told me that for services in the War of the Revolution his tribe had been relieved from taxation on their property and had preserved it; that it required a certain amount of Indian blood to be recognized as one of the tribe, but that during the Civil War many of them had been pilots on Union vessels, and for this reason some people were trying to have the law repealed which exempted them from taxation. How this turned out I don't know, as no correspondence has been held with any of the family since then.

John and Delaware, as well as others, were in demand as guides and boatmen by the sportsmen from Richmond and other places. They knew every bit of snipe or woodcock ground within twenty miles, and when the flight of soras came on their services were in great demand. I use the Virginia name of "sora" for the bird we Northern gunners call "rail," because Delaware knew no other name for it. Perhaps you will call Delaware a pot-hunter and all kinds of bad names when you know him better, but that's no fault of mine. To me he was a delightful study, because so unconventional, honest and true. For instance:

"What's that, Delaware?" I asked, as I saw a extra long double paddle lying alongside his fence. It was made of some light wood and about 18ft. long, too long to use in paddling a canoe, and it excited my curiosity.

"That's my sorasin' paddle"

We walked along toward the house, for dinner was about due, and I overhauled my little knowledge of canoeing while listening to a mockingbird whistling in a tree by the front door. A "sorasin' paddle" was a huckleberry beyond my persimmon, but you know how one dislikes to expose his ignorance, especially on subjects of sport, if he pretends to any knowledge of it in a general way.

"What kind of a paddle did you say that was?"

"A sorasin' paddle; we use it when we goes a-sorasin'."

With no dictionary to consult, there was nothing to do but to revolve the strange verb, chew it and try to digest it; and then came the inspiration! "That's the longest sorasin' paddle I've seen, and I don't see just how you manage it, because it's so long."

That brought the facts out, and for the benefit of sportsmen, naturalists and pot-hunters, I'll give you the tale as 'twas told to me. He said:

"It's got to be long to reach 'em in the mud flats when the tide is down along the creeks. You see, we pushes the sportsmen at high tide among the reeds, and they shoots a lot, but don't get 'em all, 'cause it's hard to mark 'em down; but when a bright night comes we rows along the flats at low tide and spats the soras with the paddle, an' then we reaches 'em in on it, an' it's a heap more killin' than shootin', an' we get every one we spat, an' sometimes make more money in a night's sorasin' than in two days' poling for sportsmen."

I took a good look at the paddle, now that its use was known, but the Standard Dictionary fails to describe Delaware's name for the killing of the sora. "What's a fair night's work with a sorasin' paddle?" I asked.

"Well, eight or ten dozen, accordin' as the flight is on. They're cur'us birds. They come an' go an' no one knows where. They don't make no nests, nor have any young ones. Some say they turn into frogs, but if they do they don't all turn at once, for frogs are about when the soras are here. The soras come in spring and fall, here one day and gone the next. What you think?"

"They probably breed in the North, like the geese; they're here one day and gone the next."

"Yes, but you can see the geese go an' hear 'em o' nights, but no man ever see a flock o' soras goin' overhead, an' in the winter the frogs go in the mud, but the soras have disappeared long before, an' it's a mystery."

The spring season for rail had passed or I should certainly have seen the working of the "sorasin' paddle," for much might be learned in a night when everything was right for the work; of course, it can't be called sport; but a lecture to Delaware on the iniquity of using a "sorasing paddle" on a game bird would have been a waste of breath. The birds were worth a certain price, and methods were not to be considered. I would have poled or paddled him on such an expedition entirely in the interest of gaining knowledge, and, as a man of the world, would never think of pointing out what I might think to be the error of his ways, because that is not to my taste. If that sort of market supply does not please the sportsmen of Virginia, they can argue the case through their Legislature and their game protectors. Delaware was my friend, and who knows but his views on the killing of game birds were not as correct as mine? Did it ever occur to you that your pet opinions might be all wrong, and that your opponent might be right after all? The best and coolest judges of human motives and actions try to see with the eyes of the other fellow, and put themselves in his place.

Delaware was a very interesting man. He told me that his tribe had a tradition that centuries ago some of his people fished in the sea and caught a man, who said: "Get back to your people and take your biggest boats, put in all your goods, for to-morrow the water shall cover the earth."

"They did so," said Delaware, "and after many weeks they were left on the top of the mountains by the Shenandoah River."

We gathered pottery made by his people in the days before the white man came, and I well remember one fragment which had a drawing upon it that was like those of Egyptian make. These things were sent to Washington. He showed the Indian as being destitute of humor or a sense of the ludicrous, qualities of mind not always found among Europeans and their descendants, but possessed by the richest intellects, who always realize that there is a grotesque side to everything, and that madness lies in too serious thinking. Yet serious fools often pass for wise men. Charles Lamb once said: "Here comes a fool, let's be grave," but please do not think that I mean to insinuate that the American Indian is a fool because he seldom sees a joke, nor that some solemn men, who take the world and themselves seriously, are entirely deficient in intellect because they have no sense of humor. That is merely a deficiency which detracts from their personal enjoyment of life, but as they are not aware of it they are really not the losers. A man can not lose what he never had. The negro has a sense of the ludicrous, but has little humor; therefore the product of the two races can not be expected to do other than to take life in a serious way.

At Fish Haul the shad fishing was run by A. B. Hill & Son, and it was almost a failure on the Virginia rivers that year, and it was late (May 11) when I arrived, but I spent a week in their cabin on West Island, and had a good time with Hill and his assistant, Mr. Waring. We had gone into our bunks on the first night, after spending the evening talking about shad and other fish, and I, at least, was drowsy, when Hill asked:

"Where do you live when you're home?"

"Way back in the State of New York."

"Never been down in Virginia before, I reckon?"

"Yes, I've wandered over a portion of it while I was with the Army of the Potomac."

"The —— you did! What corps?"

"The Second; Hancock's."

Two men jumped out of their berths with a jar that made the shanty shake, and one said: "See here, Yank! If you were with Hancock, we met you often, for we were with ole Jube Early, and you've got to get out o' that bunk and take a drink to old acquaintance."

It was near daylight before we again turned in and we had not fought half our battles over. When Delaware came to take my camp and garrison equipage to Indian Town my new friends gave me a good send-off, and came over to visit Indian Town several times while I was there. This was a common experience throughout the South. The men who did the fighting always fraternize and respect each other, because they realize that stubborn battles cannot be fought by one side alone.

Mr. Waring wanted to see the working of some trolling spoons and Delaware rowed us down the river. Holding the spoon close to the boat, he saw how beautifully it spun, and his face showed that he began to believe that a fish might be induced to take such a glittering thing, which now assumed a different aspect from when held in the hand. A beastly gar struck it first and was landed; but it was a job to get the triple hook out of its jaws.

"Them gars is tough," said Delaware, "an' their hides will turn duck shot. They'll live out o' water longer than any fish in the river."

If my friends had been told that the gar was a ganoid, a survival of a type that existed before man was on earth, that their optic nerves do not cross and that the few existing species differ in having bony or cartilaginous skeletons, they would have been no wiser, but when I said, "The scales on these gars are like flint, and you can't cut 'em with a knife," they both grasped this character of the gar.

"Yes," said Delaware, "before the Yankees sent down plows with steel mould-boards, the Virginia farmers used to tack the skin of a gar on their old wooden mould-board plows, and they were almost as good as steel"

Waring indorsed this statement, and said that he had seen an old plow with a gar skin on it, when he was a boy. "And now, Delaware," said he, "we have been trying to see how long a gar can live out of water. How long do you suppose a full-grown one can live without water?"

"Half a day, or more."

We kept one on the sand back of our shanty for over three days, and a good part of the time it was in the blazing sun, and it might be living yet, only our friend killed it so as to stuff the skin before he left us. The fish was a little over 4ft. long, and it's over there now; I'll bring it here in time to have it packed to go North."

Delaware watched a buzzard sailing in the distance as he rowed while the spoon was spinning astern, but made no comment. His face gave no indication that he thought the yarn too tough for digestion, but his sudden interest in the buzzard created a suspicion that he did not care to question the story, and, knowing it to be true, I came to Waring's relief.

"Yes, Delaware," said I, "that fish did live for three days and a half, as Mr. Waring has said, but he neglected to mention that we had four thunder showers during that time—on two of the nights and on two of the days. The rain wet the gills of the fish and certainly helped it to live, and so the test was not a fair one, but it was a most surprising one, for I had no idea that any fish could live as that gar did."

Delaware thought a moment, then replied: "They suttinly is tough. Our young boys hates 'em 'cause they is good for nothing on'y to eat other fish an' get ketched when the boys don't want 'em. I'll tell you what they does to 'em; they opens their long, narr' bills as wide as they can an' then puts a piece of wood upright in it and lets 'em go. They don't eat no more fish nor steal no more bait then. I've seen a dozen of 'em gagged in that way bobbin' about at a time. I wonder what becomes of 'em, an' how long they'll live with a gag that they can't shake out."

While revolving this problem in mind there came a good strike on the trolling line, and after the hardest fight that a fish ever put up for me, in twenty minutes afterward I brought to boat a striped bass which weighed 10lbs, plump, on the grocer's scales, the largest fish of the kind that ever I caught, before or since.

"A mighty fine rock," said Mr. Waring, and I remembered hearing that name for the fish on the Potomac. Rock and rockfish was the name of what north and east of Philadelphia is called "striped bass," but the great market of New York city is slowly substituting its names for fishes wherever Southern fishermen supply it. My old friend Francis Endicott used to tell this joke on a New York angler, who fished for striped bass from the islands of Martha's Vineyard, and for bluefish from Barnegat to Montauk Point. He had gone to North Carolina for duck shooting purposes, and in conversation with a native bayman asked: "Is there any good fishing about here?"

"No, nothing but rock and taylor, and no one fishes for 'em but the darkies."

That was perfectly satisfactory, and he spent his vacation in shooting, for which he cared but little; and one evening in New York at a cafe frequented by anglers, related his shooting experiences, and regretted that the Southern coast had no good game fishes. He is dead now, but while he lived he was often reminded that the "rock and taylor" which swarmed along the Carolina coast were his favorite striped bass and bluefish, and he never ceased to regret that his tackle box had not been opened on that trip.

"Yank," said Waring, "sell me that spoon and line, will you? That's a grand rig for trolling, an' you can get more when you go home."

"Johnny,"* said I, "you haven't got money enough to buy that fishing tackle. I had mentally promised to give it to Delaware, and that settles it. In my box of tackle on the island there are several duplicates of this outfit, and they are at your service."

On another fishing trip a curious code of names for the mallard seemed worth recording, and my notebook says: A pair of mallards is called "a duck and mallard," the male only being known by the specific name. A black duck is a "gray duck." Delaware said:

"There's a lot o' wing-tipped ducks that gunners don't get, and them that runs their chances o' hawks, gulls, minks and other duck-eaters mates up and breeds along the river. Sometimes it's duck an' mallard, or a duck an' he gray duck. They're putty much alike an' it don't seem to make any difference, but when we kill a he gray duck with curly feathers in his tail we knows his daddy was a mallard. I 'spect we can't allus tell the half-breeds; an' what difference does it make if we can't?"

This last remark showed a desire for knowledge, which seemed to him to be of no use; or did he mean to apologize for talking on what he thought to be a trifling subject? To tell him that all knowledge was useful would be to talk over his head, so I answered:

"I always like to know about such things. When I kill a bird I want to know what it is. You surprise me with the number of half-breed ducks on this river, as you say you see broods in every bend in early summer, and what happens here must happen on the other rivers as well; and it brings the thought that these hybrid young would grow up and in time would so mix the two breeds of ducks that there would be but one, and that one a hybrid, perhaps the male being gray, with some green on its head, and the curly tail feathers of the mallard. There is such a breed of tame ducks called 'Cayuga black ducks,' very much larger than any of our wild ducks, and they claim to be improved wild black ducks, or gray ducks, as you call 'em, but the mark of the mallard is there in the curly feathers, which no other wild drake has."

"You call a half-breed a high-bred duck. I don't, any more 'n I'd call a mulatto man a high-bred man; but—"

"I didn't mean it just that way, Delaware. I meant half-breed; but go on."

"Well, these here young half-breeds is putty plenty ev'ry fall; but, bless you, they're all killed off afore the Northern flight comes. This is their home, an' they ain't a-goin' to leave it till cold weather drives 'em South, and so they fly up an' down the river, hatin' to leave it; an' I doubt if enough of 'em live through the early an' late shootin' to make any mark on the wild Northern birds. You see, these native ducks ain't wild when the shootin' opens; they've seen men in boats all summer an' don't get 'fraid of 'em, an' they hear guns before we begin to shoot ducks, an' they get well killed off early. I tell you, they're fat an tender; ain't had to fly far an' get tough"

These men of the woods and waters are always close observers. Delaware disposed my notion that the hybrid progeny of wounded ducks might contaminate the original stock. His view of the case seems correct. The proposition resolved itself into this: Given, a river so well covered by gunners in the fall that enough wounded ducks should escape other enemies all winter, as well as the spring gunners, that they were able to find mates, fit or misfit, in the spring and raise broods in every bend of the river or in every marsh, it was certain that the gunners of the next fall would harvest the home crop before the cold weather brought down the Northern flocks. Figure it out on the blackboard. Let X represent 10 ducks reared on the Pamunky River and XI represent 11 gunners from Richmond, and each must take one duck home for Sunday dinner. The solution is easy. One gunner gets left, but the ducks come out even. I never was bright in mathematics, but one never entirely forgets all that he once knew, and I am proud to think that a problem in algebra is not entirely beyond my present capacity. Delaware Bradbury never could have figured it out in that manner; he knew it in a general way, but his education was deficient in the matter of algebra.

Some two years after this there came a letter from a Mr. L. P. Smith, New Kent C. H., Va., in which he returned a little Masonic pin which had been lost in that great land of Somewhere, and forgotten. He said: "You may remember that I visited your fishing camp the night you told the story of Cold Harbor, when we three were against you there, but were with you then. * * * Come down again and hatch shad, we missed you last year, and we will get up an excursion to meet you and Hill, and Waring will entertain the whole crowd. Lately I came across a verse which I have altered a trifle to suit. It is:

"I tell yer, old boy, thar's er streak in us
Old Rebels and Yanks thet is warm—
It's er brotherly love thet'll speak in us
An' fetch us together in storm;
We may snarl about 'niggers an' francheese,'
But ef a foreign war comes afoot,
The two trees'll unite in the branches
The same as they do at the root.'" †

* During the war the Confederate soldiers called every Union soldier "Yank," no matter if he was from California or Tennessee. The name was generic, and was finally accepted by our boys, who, before the war, had never heard the name of "Yankee" applied to any man who was not a New Englander. In turn we first named our opponents "Rebs," then "Johnny Rebs," and finally boiled it down to "Johnnies." It was forbidden for pickets of both sides to hold communication; but when close together they would swap coffee for tobacco, and in violation of orders a picket would call: "Hello, Yank," "Hello, Johnny," "Got any coffee," etc.; and the men who would be engaged in deadly conflict the next day, would agree to lay down their arms and exchange needful articles and newspapers.

† I don't remember meeting this verse and can't say wherein Mr. Smith may have altered it, as he says he has. The sentiment is such a beautiful one that no apology seems necessary for introducing it as he wrote it.

Opportunity never came to meet any of these friends, and in the course of a busy life they were temporarily forgotten but for that very bad habit which some men have for jotting down things in note books, or of keeping men and events in memory.

Prof. Baird wanted live snakes, lizards and turtles for the Philadelphia Zoo, in trust for the Smithsonian Institution while they lived, and "Uncle Peter" was sent for to arrange for their capture. He dealt in rattlesnake oil for rheumatism and in snake skins for other uses, and he lived up in the mountains. He could get them if any man could He came. He was verbally announced, having no card-case with him, and I went forth to interview the great serpent-slayer and catcher, for he was said to skin his rattlers alive when it was desired to retain the colors of the skin for making belts. He looked to be a well-preserved man of perhaps sixty to eighty years, with a larger percentage of negro blood than was usual in the tribe, and one can't figure closely on the age of a negro after he passes the noon mark. He was seated on a log by the beach, making figures in the sand with a cane, as I sat down beside him and remarked on the beauty of the morning.

Uncle Peter kept his eyes on the figures in the sand, but did not look up; he had sized me up from under his hat as I approached. There was a long silence which was to be his turn to break; but he seemed to prefer to make figures on top of the other figures, reminding me of "My Uncle Toby," although it was years since I had read one of Laurence Sterne's books. The figures in the sand became so mixed that I began to doubt if the artist could untangle or explain them, when he said, without looking up: "Dey say yo' wants to git some snakes."

"Yes, Uncle Peter, I would like to get a lot of the different kinds of snakes that live about here. They must be alive, and I'm willing to pay for them."

More drawings in the sand. "W'at yo' spects to pay fo' 'em?"

"A fair price; say $2 for rattlers and pilots (copper heads) and $1 for all others over 2ft. long, and 50 cents for little fellows, but they must not be hurt."

As near as I could follow the workings o the old man's mind through his diagrams on the sand, he was thinking out the battle of Cold Harbor, which occurred a few miles away. After occupying half an hour with this, he slowly asked: "What is yo' gwine to do wid 'em?"

All hope of getting his services was now lost It was apparent that he had no confidence in any statement I might make, so I merely answered; "They will go to Philadelphia and Washington to be studied by men who look after such things."

"Hasn't dey got any snakes up dar?"

"Yes, but they want snakes from this part of Virginia, and if you want to catch some, and get more money out of them than their hides and oil are worth, I've got the money to pay for 'em."

Hieroglyphics and cuneiform figures were multiplied on the sands, in spite of the protests of a mockingbird which had a nest above us, and my patience was nearing the limit, when Uncle Peter, without raising his head or his eyes, made a few artistic strokes to his complicated map and asked:

"Is de Virginny snakes diff'nt fum de udder kinds!"

FRED MATHER.

IN THE BLUE RIDGE.

HIGHLANDS, N. C., April 14.—*Editor Forest and Stream:* As I was saying in my last letter, I never really saw the Blue Ridge until this spring. I have long ago been all around it, through it and under it (or portions of it), but this is the first time I have felt like expressing decided opinions about it, as based upon personal observation.

I have been for some time looking for a good, all-round climate, with fine scenery, pure air and water, and little snow during the winter, and it appears to me that I have found it. Therefore I am correspondingly grateful to the friend who suggested that I extend my wanderings to this place.

It seems to me odd that, with the superior facilities afforded in this vicinity for the acquirement by sportsmen's clubs of large tracts of land, traversed by brooks and streams, on which large ponds could readily be established and fish and game preserves maintained, so little has thus far been done in that way. Your correspondent, Mr. Henry Stewart, has about 4,000 acres adjoining this village, and the Cullasaja River, which rises in one of the neighboring mountains, winds through his estate. On this he has two large ponds, and about seven miles of trout fishing. These waters he has stocked with rainbow trout, while they already contained the speckled trout of our boyhood. He courteously extended to me an invitation to make myself at home on his estate, but the season has been very rainy, and I have not tried the fishing.

I think, however, that the trout are there. It is related that not very long ago a lady and gentleman went to fish in Mr. Stewart's upper pond. For a time all was peace, until at last the gentleman, who had strayed to a distance from his companion, was startled by her voice in agonized accents, appealing to him to "come quick." Visions of bears, panthers and rattlesnakes flashed across his mind as he rushed to the rescue, only to find the lady sitting in the grass.

"What's the matter?"

"I've caught a trout."

"Where is it?"

"I'm sitting on it. I don't want it to get away."

"O oh."

The trout was saved. It measured 23in. in length.

At another time I may write for you of the wonderful mountain scenery, of the dozens of springs, streams, falls and cascades, the minerals, plants and flowers, the big trees and many other things which are numbered among the attractions of this region, but will close with the remark that the railroads seem to be creeping gradually to Highlands, and the time for securing desirable properties at low figures is before they come much nearer. KELPIE.

San Francisco Fly-Casting.

AT the fifth semi-monthly competition, April 10-11, at Stow Lake, in Golden Gate Park, the distance records were: For longest casts, in feet, April 10: Dr. L. N. Lowry 91½, W. L. Bacheller 85, A. E. Lovett 77, Horace Smyth 75, C. G. Young 71, A. N. Crowell 64. April 11: Dr. Lowry 90, W. Emery 88, F. H. Reed 84, Chas. Huyck 78½, A. E. Lovett 73½, A. N. Crowell 72, C. G. Young 71, J. P. Babcock 67, Horace Smyth 65, F. S. Butler 60, Chas. Klein 60, R. Isenbrock 50.

FISHING IN THE SIERRA NEVADAS.

MARYSVILLE, Cal.—"Well, Ben, when will you be ready to start for the mountains?" said I, about the middle of July. Ben, Howard and myself were all residents of Marysville, and were fortunate enough to be able to spend about three months every year in the mountains, away from the heat and dust of the valley.

The little city of Marysville is situated at the confluence of the Yuba and Feather rivers, in the great Sacramento Valley, about 170 miles northeast of San Francisco, and is within a few hours' drive from the foothills, which gradually rise to form the great range of Sierra Nevada Mountains.

Within a short distance of Marysville is a splendid stretch of country, abounding in ducks of many varieties; geese and quail galore. Not the Bob White which I have often brought to bag in the Eastern States, but that elegant little game bird the California valley quail, which is on the increase every year, and, if anything, is more wary and difficult to shoot than its larger brother, the mountain quail.

The vast stretch of tule land reaching from Butte Creek to Suisun Bay, a distance of 150 miles, is inhabited in the winter by millions of ducks, geese and swan, so that there is no lack of game in this section

Ben would be ready in three days. This time was consumed in securing good saddle horses and pack mules, and a general camping outfit, with provisions enough to last two weeks. The time allowed to arrange for our trip was all too short, as we had to look out a stock of flies and leaders; then rods and reels had to be overhauled, and a hundred other little things too numerous to mention. At last July 17 found us all prepared and eager for the fray.

We had been fortunate in securing the services of Bill Conway, as cook and general man Friday about camp.

It was 12 o'clock at night when we left Marysville, preferring to make the first part of our journey in the night, instead of encountering the heat and dust of the day, and headed our horses for Oroville, a mining town in the foothills about thirty miles in a northeasterly direction. We jogged along by the light of the moon, and arrived in Oroville in time for an early breakfast. After partaking of a bountiful meal, we resumed our journey, still in a northeasterly direction, past Pence's Ranch, where we lunched and rested our animals, and thence to Dogtown, where we camped, having made fifty-four miles the first day The next morning we were up, and got an early start, passing through the mining camps of Inscip and Chaparral, and made camp that night on the banks of Butte Creek, where we spent such a cold night, that Ben christened the spot Icy Cañon.

I was stirring by 5 o'clock the next morning, and while Bill was cooking breakfast I put my fly-rod together and proceeded to tempt the speckled trout in the creek to breakfast on a red spinner or black gnat. I was fortunate to catch about 5lbs. of nice little brook trout about 6in. long which Bill cooked with cracker crumbs, as he knows well how to do. I also noticed while walking up the banks of the creek several well worn deer trails, which indicated the presence of many deer in the neighborhood. We afterward saw eighteen while riding along the road. Owing to the law prohibiting the killing of deer for a term of years they have increased surprisingly, and are plentiful throughout the foothill country.

By the next evening we made Humbug Valley, and while Bill was building a fire and unrolling our blankets, we caught a nice mess of small trout in Humbug Creek, before the sun rolled down behind the mountains in gorgeous splendor. These we enjoyed for supper, along with four or five gray squirrels that Howard had knocked out of the pines with his .22 Winchester. During our ride over the ridge into Humbug Valley we noticed several bear tracks, which my Irish setter nosed in a curious manner, indicating evidently that scent was still fresh in them.

There are several salt licks in the neighborhood, which are great resorts for the deer As we passed one of these we disturbed a doe, and on investigation we discovered that the whole patch around this little salt spring was perforated by hoofs.

The following morning we rode through Prattville and arrived shortly after at the famous Big Meadows, which was to be our camping ground for a week. These meadows, a grand formation of nature, extend for over forty miles, hemmed in by lofty mountain ranges, which have only one break to admit of the exit of the Feather River. Here, in the meadows, in a favorite wintering resort for ducks and snipe, while in summer the fishing cannot be excelled. Indians and sportsmen then flock to the banks of the river, and enjoy such sport as most of us have had the luck only to read about; and there are plenty of fish and lots of room for all. The point where we rode into the meadows was about twenty miles from the head, and we decided to pitch our tent on a little wooded knoll, giving us a splendid view both ways. We selected camp close to a small spring, with plenty of wood and good feed for the stock.

That evening, by the light of a large camp-fire (I am a great hand for a good fire), we selected leaders and flies and put the split bamboo rods together for an early start up the stream in the morning.

As I was the only one in the party who had ever fished here before, my advice was eagerly sought as to the description of tackle to be used; my favorite lures for this time of the year being a small professor, with red tips, on the end of a 9ft. leader, and a cow-dung and royal-coachman as drop flies, 3ft. apart. That night we hardly slept, so eager were we for the sport that we anticipated on the following morning. After a hasty breakfast, prepared by our man Friday, we proceeded to wet our lines in the stream and test our leaders, as we were no longer after brook trout. Now it was more a case of skill. These magnificent rainbow trout, seldom running under a pound and noted for their gamy qualities, would strain the little strand of gut to the utmost.

It would be hard to find a more ideal locality for the enthusiastic follower of Izaak Walton than this. There are few places in the whole forty miles in which the fly caster is not able to swing his rod to the utmost, and send out the little deceptions in a straight line to drop delicately on the water; then to experience the thrill of pleasure as he sees the swirl and rise of the hungry trout, a quick motion of the wrist, and then the battle has begun. Only those readers who have gone through those few minutes can appreciate the sensation.

The banks are almost entirely free from bush or trees, while overhanging banks and deep pools afford ample protection for fish, which are not infrequently caught weighing as high as 9 and 10lbs., the largest fish generally being caught with a natural grasshopper or caddis fly. I was more fortunate than my companions, being an old hand with the fly, having had a thorough drilling as a boy from as expert a fisherman as ever wet a line in Exe River, Devonshire, England.

At noon we repaired to camp, and on sizing up our catch found that we had thirty-four beautiful trout in all, only two of which weighed under a pound Ben had caught the largest by using a grasshopper on the tail fly. By my pocket scales this beauty weighed just 6¾lbs, and Ben said it took him just eighteen minutes to land him.

We might have caught many more than we did, but preferred to catch only what we could use and give away; as we decided by mutual agreement to act as true sportsmen and not as game hogs, whose appetite for slaughtering seems never appeased and whose sole ambition is to break all former records, and adopt any means whatever to accomplish their object. During the afternoon Howard and I saddled the broncos and rode to the foot of the meadows on an exploring trip. I wish that your correspondent Julian could have accompanied us, and he would never have raised the question of deer eating lilypads. Just as we emerged from the woods on to the open meadows we came on three deer, two does and a fawn, browsing in an unconcerned manner on pond lilies in about 18 in. of water.

We thought it nothing unusual at the time to see them feeding on lilies, and since reading the many arguments on the question in FOREST AND STREAM I at once recalled this instance.

I could also show Julian, almost any day before the lilies die down, deer feeding on this plant on the Klamath Reservation, Ore., where there are many acres of lilypads, extending for miles around Klamath Lake.

We did not regret not having brought our rifles with us, as the season for deer does not open until Sept. 15 in this county, and even then the California law does not permit killing any doe or spotted fawn at any time.

The deer, on seeing us, seemed to know that there was no danger and trotted off leisurely to a clump of timber.

The next day we learned that a camper was going down to Oroville with his team in a day or two, so we decided to catch a nice mess of trout and send them down to our friends who were less fortunate than we.

All the next morning we whipped shallows and pools with indifferent success, only once in a while being rewarded for our pains by seeing a trout rise lazily to the fly and turn away again without accepting the bait. We tried a variety of flies, and even live grasshoppers and grubs, but all to no purpose. The afternoon's results were not much better. The sun was hot and the water was clear, and our total catch footed up to six small trout

That evening after supper, when we were stretched out beside a huge campfire, enjoying the fragrant weed from our "Missouri Meerschaums," I said, "Boys, we'll have to fish with finer tackle if we want to catch any fish to-morrow, as there will be no wind, and the water is so clear that they can see our deceptions too well"

So, going to work, I soaked a quantity of light stained gut of different sizes and made three leaders, selecting a size of gut almost as large as the silk line, and gradually tapering the lengths down to the farthest end. A leader made in this way flies out straight when cast, instead of doubling up. I also tied the knots so that I could open them with my nails wide enough to admit of the snell of the fly. Drawing the knots of the leader together again, the fly was kept in position by a knot in the snell, which prevented it from slipping through, at the same time causing the fly to stand out straight from the leader, and not wrap around it, as it would if looped to the leader. Those who take an interest in fly-fishing would do well to try this method. In fine, delicate casting, where the water is clear and there is no wind to ruffle it, I find that it is best to dispense with all loops, as the motion of drawing them through the water causes air bubbles, and seems to scare the wary trout.

The next morning, with our fine leaders and smaller flies, we proceeded to a favorite pool and commenced operations. This time we were more fortunate. Just as Ben commenced to cast in a rapid he got a splendid strike; although the fish took the fly under water he was well hooked, and Howard and I reeled up our lines to watch the fun.

"You'll have to take him down stream," said I, "and drown him out"

"I can't," said Ben, "he's got tangled in some weeds."

"That's just what I expected," I replied.

"You haven't learnt the lesson yet, Ben; always to take a fish down stream, as he couldn't enter the weeds from above."

"I don't feel him any more; I guess he's got away."

"Hold on awhile, Ben; you may feel him if he begins to struggle."

Taking the rod from his hand I was rewarded in a short time by feeling the fish struggling in the weeds. I applied a little more force to the rod, and as he continued to struggle he gradually became disentangled from the weeds and made a break for liberty, taking out about thirty feet of line before I could check him.

"Now take him down stream," said I, as I handed Ben back the rod.

Ben handled him very carefully, profiting by his former experience; and after two or three leaps and as many rushes, he got his fish somewhat under control, and before he was able to turn again to make another rush, Howard, who was waiting below, net in hand, had scooped up the magnificent fish, still full of fight. I weighed it carefully on my scale, and the result was 7lbs. and 5oz. Ben was delighted and vowed that the pleasure of catching such a fish was well worth coming so far for.

We had spent about twenty-five minutes playing this fellow, which was caught on a small red spinner, a No. 10 hook and 6 ounce rod.

After this victory we separated, and continued fishing till darkness warned us that it was time to return to camp and pay our respects to the supper that Bill would have in readiness for us.

Our total catch, which we spread out on the grass, footed up seventy-three beautiful trout. Of these I had caught thirty-four, Ben and Howard twenty-six and thirteen, respectively.

After a splendid supper, eaten with a zest such as only those who have been fortunate enough to enjoy camp life can appreciate, we turned our attention to dressing and packing the fish, to send away in the morning. We adopted the most successful method that I know of. First, we always killed the fish as soon as taken from the water, by a sharp rap on the head, to prevent its bruising itself. Next, they should never have any water used to wash or dress them with, but the thin, slimy film should be allowed to

form on them. Next, we separated the gills from the back of the lower jaw, and with a sharp knife laid open the fish from the gills to the anal fin, removed the entrails and blood from the backbone, and wiped them dry with a cloth; then stuffed the fish with a wad of dry hay or straw to prevent the soft parts from coming together, and put each fish separately in dry hay. Nothing damp should be used, as heat is generated and the fish will quickly spoil. We packed our fish in this way, and afterward learned that they arrived in splendid condition, after being two days on the road.

We remained three days more at the Big Meadows, catching what fish we needed for food each day, and varying the sport by killing some jacksnipe which infest the marshes, and gray squirrels in the pine woods, which gave us a nice variety for the frying pan.

We reluctantly broke camp and set out for home, firmly bent on returning later on when the deer season opened, as big game seemed plentiful; while at the head of Big Lake, Lassen Mountain, is famous for its big bucks and cinnamon bear, as well as its hot springs, where it is possible to catch fish in Butte Creek, and, without moving in one's tracks, lift the fish into a hot spring and cook them.

I hope in the near future to give my readers some short accounts of my hunting trips in the Sierras.

H. W. WILLS.

ANGLING NOTES.

Thickness of Gut.

A CORRESPONDENT reminds me that he asked me about six months ago to inform him in this column about the different sizes of gut, and if there is any rule which regulates the size of black bass, trout, salmon gut, etc. I regret that I have been so dilatory in my reply, although the letter is not dated quite six month ago. My disposition is always agreeable to an early reply to letters and queries, but unfortunately my disposition and my time are not in accord.

There is no arbitrary rule in regard to the size that gut shall be for any particular fish, and it is a matter for the tackle dealer and the angler to settle each for himself. The tackle dealer advertises trout, black bass and salmon leaders, for instance, or heavy, medium and light leaders for each of the fishes named, and the gut of the trout leaders is of less thickness, as our English brethren say, than the gut of the bass leaders, and the gut of the bass leaders of less thickness than the salmon; but there is no recognized standard by which to measure the thickness of gut to be employed in making leaders for either trout or black bass. It is safe to assume that for salmon the thickest gut obtainable is used, but for trout one man may desire to use a leader of drawn gut and another may feel it incumbent upon him to fish with gut that would hold a sturgeon or a small whale; for I believe it is generally understood that, while some men "fish fine," others derrick their fish. Therefore, a tackle dealer could not institute rules as to the size of gut that all men should use in catching the same kind of fish.

In the trade gut of different thicknesses is designated by different names, which the dealers understand and the average angler knows little or nothing about. In natural gut, and by this I mean the silk sac of the silkworm, drawn and dried on a board, from which the yellow skin is removed afterward and the gut bleached, when it is graded and put into hanks as it comes to the retail dealer and in the condition which the angler finds it, this natural gut may vary in thickness in the same grade of gut; for it is very uneven, not only in the hank, but in the strand itself. The natural gut is graded as follows, the finest being:

"Refina," about	7 to 9-1000in.
"Fina," about	11 to 13-1000in.
"Regular," about	13 to 14-1000in.
Radron, 2d, about	14 to 16-1000in.
Radron, 1st, about	15 to 16½-1000in.
Marana, 2d, about	16½ to 17½-1000in.
Marana, 1st, about	18 to 19-1000in.
Imperial, about	18½ to 19½ 1000in.
Royal, about	20 to 22 1000in.

The length of the strands of gut is an important factor in the cost. I have a price list before me just received from London, and it gives the price of imperial gut as follows, retail, per 100 strands:

	11in.	11½in.	12½in.	13in.	13½in.	14in.	14½in.
English shillings	21	23	25	25	26	27.6d.	30

Royal gut of 14in. is worth 50 shillings and 15in. gut 60 shillings. "Drawn gut" is the "natural gut" drawn through plates exactly as wire is drawn, and this being the case it does not vary in thickness, if properly drawn, in the various grades. Of drawn gut the finest is:

XXXX	6¼-1000in.
XXX	7½ 1000in.
XX	8½-1000in.
X	9-1000in.
½ drawn	9½-1000in.
¼ drawn	10-1000in.

Drawn gut is used comparatively little in this country, and I think there is a prejudice against it, but I have had drawn gut that has done excellent service. I have some leaders tied by Forest & Son, Kelso, one dozen drawn gut and a dozen natural, and the latter is finer than the drawn; but it is remarkably fine and even gut.

The care of gut is not included in the question, but I will say that I have kept gut perfectly sound for years, so far as I could judge, by putting the hanks in a roll of paper that had been slightly oiled with olive oil and placed where the light could not strike it. It is the poorest kind of economy to use old leaders that have seen service unless they are thoroughly tested. It is far better to throw them out if there is the least doubt about their strength. There was a time when after a season of fishing I would go over my leaders and patch them up, and rub down the frayed places with a bit of rubber; but that was back in the drift period, and I have grown older and wiser.

Cannibal Trout.

There is a middle-aged man, an excellent mechanic, in the town where I live, and I occasionally meet him in the street or the post office, and generally we have a few minutes' conversation when we meet, for he has been a close observer of nature during his life and I like to talk with him about what he has observed. A few evenings ago I was about to pass him with a bow when he stopped me with the queston: "Do you know the capacity of a brook trout as a cannibal?" Confessing that I did not, he told me of a youthful experience of his own. He was a boy attending the district school some distance from his home, and carried his dinner in a tin pail. A man in the neighborhood desired to stock a pond with trout and offered 5 cents each for such trout as the boys would bring him alive and in good condition. There was a trout brook close to the schoolhouse, and one afternoon my friend went there to earn some of the money. He caught nine trout and put them in his dinner pail and covered the pail with his straw hat and set out for the man's house. Eight of the trout were about the same size, quite small, and one was so large that the diameter of the pail was not great enough to accommodate him without bending his tail a trifle. When he reached the house of the purchaser of live trout he announced that he had nine fish worth 45 cents, but when the hat was removed from the pail it contained but two trout, and he stood open-mouthed looking into his dinner pail, wondering what had become of seven trout he had started from the brook with. They could not have escaped from the pail, for his hat had kept them in. The man saw that the boy's surprise was genuine, for his 45 cents had shrunk to 10, and he showed his disappointment in his face. The explanation came as both were looking into the pail, for the big trout, with a dash, seized and swallowed the remaining small trout, and his 45 cents shrunk to 5 before his eyes.

This was something absolutely new to me, that trout, just caught, and confined in a small dinner pail, would eat one another in the manner described until but one was left, the survival of the biggest. I do not question the story in any of its parts, but before it was told to me had I been asked if such a thing could be possible I would have said no. I have carried hundreds of trout in pails and other vessels during boyhood, and later, but never even suspected such pronounced cannibalistic tendencies in fish freshly caught and confined in such small space. That trout will do this same thing in an aquarium I have had ample evidence, but not until they become accustomed to their new quarters and other kinds of food was not forthcoming to appease hunger. We live and we learn.

The New York Bass Season.

Having read the article by Mr. Van Cleef in FOREST AND STREAM of April 17, I feel that I must dissent from his conclusions.

Nearly thirteen years ago I wrote an article in this journal advocating a close season for black bass extending to July 1, and not for a moment since that time have I had reason to think I was wrong in so advocating, if we were to save our black bass from practical extermination. FOREST AND STREAM commented upon my article editorially in the same issue, viz.: Sept. 25, 1884, and I will quote briefly from the editorial, which is nearly a column in length:

"If the object of the law is to protect the black bass while they are spawning, and during the time they are protecting their young, as we suppose, then the period between Jan. 1 and June 1 is not sufficient. * * * In the State of New York, the date at which all law-abiding bass should have finished spawning and protecting their young has been fixed at June 1, but we regret to say that the majority of bass are so depraved and have so little regard for the law as to delay their family agreements for a month later, and the question is: Shall the fish be compelled to change their habits to comply with the wisdom of our legislators, or shall we acknowledge that they know best when they want to spawn and accommodate ourselves to them. * * * The fish begins to take food, after its winter fast, as soon as the temperature of the water rises to about 45° Fahrenheit, *and not until then does any increase in its ovaries take place.* * * * We think Mr Cheney has rather understated the case. Even in southern New York the bass are not done spawning by the middle of June. * * * The law needs changing."

My article was not based upon observations made at one or half a dozen of local ponds. I had been in correspondence with anglers in all parts of the State and made an honest effort to reach conclusions that would benefit the black bass of the entire State, that the close season advocated should cover their breeding season and give them time to rear their young before they could be killed legally.

From 1884 to the present time I have urged with all power of my pen that the close season be extended to July 1, and every single fact that has come to my knowledge regarding the spawning of bass, has convinced me that this time was proper for the purpose. In 1890 a Commission was appointed to take testimony from one end of the State to the other, and from top to bottom, regarding the spawning seasons, etc., of fishes, and the breeding seasons of game, to enable the Commission to codify the game laws in accordance with what was proven to be the proper seasons to protect the fish and game to perpetuate it. This Commission was composed of Hon. Robt. B Roosevelt, formerly president of the New York Fish Commission; Hon. E G Whitaker, Deputy Attorney-General, and Gen. Richard N. Sherman, one of the Fish Commissioners.

Gen. Sherman was elected president of the Commission to codify the law, and meetings were held all over the State. I think the appropriation for this purpose was $10,000. After the hearings were finished, Gen. Sherman wrote me under date Dec. 19, 1890, asking me to submit my views regarding the proper season for opening the fishing for certain fishes, among them black bass. I urged that the season should not open before July 1 and close Dec. 24; with the testimony taken in the State before him, he wrote me: "I am glad to find in your suggestions confirmation, substantially, of my own views" We did not differ as to the season for black bass, but I did want the lake trout season to open May 1, as it was, while Gen. Sherman favored, without persisting in it, a uniform season for all species of trout; and in this he was right, as I believe, although the uniform season should begin May 1 instead of April 1 or 15. But that is another matter.

The most persistent advocates of an open season for black bass dating from June 1 are the summer hotel keepers, who desire guests for the June fishing when the bass are in shallow water spawning or guarding their young; and the FOREST AND STREAM editorial of thirteen years ago refers to them in these words: "The main opposition to the change (from May 30 to July 1) would come from summer resorts and country hotels, which look for the black bass fishers in June." That prophecy has proven true.

Under date of Jan. 23, 1891, Gen. Sherman wrote me: "Our Commission finished the code on the 14th, but have delayed its presentation to the Legislature for a few days, to give time for a careful revision and verification. * * * There is no class of men so pertinacious and exacting as the sportsmen, and if we had listened to one half the demands for special provisions and exceptions our work would have been a miserable bundle of patch-work. * * * For the State, the black bass season opens May 30; I consider this too early but it is a compromise date." The original code provided for a season to open June 15, and that, too, Gen. Sherman considered a compromise date.

What has been the result of June fishing for black bass? Ask the Fisheries, Game and Forest Commission to show the applications made each year for black bass, to stock waters from which the bass are disappearing. Where are these bass to come from? One man, when I put that question to him, said, Lake Ontario, as though you had only to lift a gate on the shore of the lake and the bass would flow in a stream into other waters within the State. But Lake Ontario asked the State for 1,000,000 black bass in one year. The black bass is not a fish of small waters, and nature placed them only in big waters. Man has tried to improve on matters, and in most of these cases man has failed of success, and to continue the open season for bass fishing through June will result in destroying the bass in the interior lakes. The remedy I would propose is for the State to stop planting black bass, as they cannot be hatched artificially, until a committee awakens to the fact that June fishing is doing more injury to the black bass fishing than the State can repair, and this lets the State help the awakened community to restore the fishing. This is a slow process, as one community has found. Bass were for years caught through the spawning season, and became practically extinct. Then a law was passed to cover the spawning season, and strictly enforced, for the people were aroused on the subject, and the lakes stocked by the State; but the fishing improves very slowly. The dearly-bought experience of this sort seems to be the only thing to look forward to to arouse the people to act for their own interests. It is not fair to take bass from one water where the sentiment is in favor of June protection, to stock waters that have been depleted by June fishing. I have no desire to even attempt to analyze Mr. Van Cleef's argument, but he refers to advice he has received from Canada that black bass are through spawning there by June 15 to 20. I do not know where this is, but I see that Ontario has a close season from April 15 to June 15, and only twelve bass over 10in. long can be taken in one day, and Quebec has a close season from May 25 to July 1; so the Provinces do not seem to be in accord. There is one thing I do know beyond a peradventure, and that is that black bass spawn on Long Island, N. Y., as late as June 25, and I believe we have no earlier waters than on Long Island. Black bass should be protected for two weeks after the young are hatched. When anglers and sportsmen generally become broad enough to unite and seek legislation that will cover the breeding seasons of all fish and game for the general good of all the people of the State, and not try to exempt their individual backyards from the operation of the law for reasons purely personal, then we may hope for laws that will, when enforced, do what fish and game laws are supposed to do, but which nowadays they do not do, when one man desires to get the bulge on all the other men in the matter of fish and game.

A. N. CHENEY.

Fishermen and Fishermen.

THIS is what Editor R. F. Wormwood of the Portland, Me., *Express*, has to say about them and their ways:

Confined beneath the ice of Maine's lakes and rivers is a familiar spirit which, as soon as that winter covering is removed, escapes and enters into and forcibly takes possession of the bodies and wills of a very large proportion of the able-bodied male residents of the Pine Tree State. In fact its jurisdiction is not bounded by the limit of our commonwealth, but extends far beyond the borders of the State, and more and more each year the irresistible spell works its perfect work on the wayfarer and the stranger, who gladly pay the tribute imposed or mortgage their possessions to pay ransom when ransom is necessary. In other words, the season is fast approaching when the desire to go a-fishing will become overpowering. The spell is a potent one, and those who are insensible to its power are those who prefer the music of a mouth organ to the melody of the birds and brooks; who prefer the conglomerate smells of the factory and the shop to the delicate odor of trailing arbutus; who prefer the artificial to the real. For several weeks fishermen have been looking over their supply of tackle, reading seasonable literature, and otherwise inoculating themselves in anticipation of the shibboleth, "the ice is out." When the longed for word comes, then the exodus begins. Men who ordinarily think of a day's absence from business as something to be brought about only by death or a baseball game, can always manage somehow to get away for a day or so for a little fishing. And the sport, if properly approached, is worth almost any sacrifice, for in addition to the supreme enjoyment for the time being, nothing can be depended on to furnish so many inexhaustible topics of conversation for months as an outing of this sort. If you are successful in what should properly be considered a secondary object, catching fish, there is the satisfaction of knowing that you are enrolled in the list of those who are to be envied; if you are unsuccessful in this particular respect, then, if you are worthy the honor of looking a canned salmon squarely in the face, or of casting a fly over a pool from which a barefoot boy has just lured an 8oz. trout with an angleworm on a bent pin, you will take matters as a philosopher and humble disciple and follower of Walton should, and remember that it is not all of life to catch fish nor all of death to go home with an empty basket. For, verily, there are fishermen and fishermen. There are those who can have all the sport they want pulling in codfish, hand-over-hand, with a clothesline; to them the season does not appeal. There are those whose souls are so thrilled by the music of the click of the reel that they forget they owe something to society and allow their wives to support the family while they commune with nature along the bank of some purling brook. Between these extremes are many grades. The genuine fisherman is a compound of many of the qualities that enter into the making of a man, and the simple fact that he likes to go a-fishing does not necessarily detract from his value and usefulness as a citizen.

Chinese Fishculture.

The included clipping is taken from *Littell's Living Age*, Boston, Dec. 2, 1848, and credited to the *Medical Times:*

"Hatching eggs by artificial heat is well known and extensively practiced in China, as is also the hatching of fish. The sale of spawn for this purpose forms an important branch of trade in China. The fishermen collect with care, on the margin and surface of the water, all the gelatinous matters that contain spawn of fish, which is then placed in an egg-shell (which has been fresh emptied) through a small hole; which is then stopped, and the shell is then placed under a sitting fowl. In a few days the Chinese breaks the shell in warm water, warmed by the sun. The young fish are then kept in water till they are large enough to be placed in a pond. This plan, in some measure, counteracts the great destruction of spawn by troll-nets, which have caused the extinction of many fisheries."

The described process of hatching fish seems to reveal a lost secret, which may be of advantage to all those interested in fish culture and natural history.

G. VON HEYSS.

Limit the Trout Catch.

PATERSON, N. J., April 22.—*Editor Forest and Stream:* Can you inform me where I can find anything relating to the Frank Forrester laws, limiting the catch of trout to eighteen, that prevailed on Long Island about 1848? Some time ago I read in some paper that the remedy for preventing the depletion of trout streams was to revive the old Frank Forrester laws. I was at once impressed with the great scope of this idea, as it would (if enforced) put a stop to the slaughter that has prevailed on many trout streams for a long time. I have at one time or another spent about a year and a half on the Beaverkill, in Sullivan county, and know the stream and its history thoroughly. For some time past I have never missed an opportunity to advocate my hobby of putting a limit on the number of trout caught in any twenty-four hours or had in possession at any one time. I have just returned from a run up to Joe Cammer's, on the Beaverkill, and there met several members of the Brooklyn Fly-Fishers' Club, who have now put a limit of ten on trout caught out their preserve.

We shall want some good, strong influence to work up a popular feeling among fly-fishermen throughout the State to take up the matter to their representatives at Albany, and no paper can do this so well as FOREST AND STREAM. Will you not take an interest in the scheme? Something must be done to stop the trout hogs. Last year four men from Port Jervis caught enough trout for twenty-five or thirty decent fishermen. They ate over sixty (this gives you an idea of their size) a meal, and carried home four baskets full and two large milk pails full. A few years ago two men (?) caught 700 little trout out of the Voorhis Brook. I could tell you many such cases.

You see, the limit law would cover a multitude of the troubles now existing as to size, etc. I think it would be a great and glorious thing for FOREST AND STREAM to work up, and I know that all fly-fishermen would rise up and bless you if such a law should be passed. The law should carry a big penalty to prevent violators, say $100, half of which should go the informer.

The western Catskill streams are the most beautiful trout streams in the United States, and are worth fighting for. Possibly a law taking in these streams only might be enforced. BENJ. KENT.

Trout in Central New York.

ITHACA, N. Y.—Local trout anglers manifested unusual activity at the ushering in of the brook trout season, the 16th, and notwithstanding the fact that many of the larger streams were, by virtue of recent heavy rains, running wild and boisterous, some exceedingly fine creels of trout were taken. The writer saw an especially even lot of twelve that were taken from Spring Brook at a point less than four miles south of town.

An angler who worked out the East Owego Creek, in the vicinity of Harford Mills, opening day, scored fifteen trout averaging 1lb. each. Rev. Jno. T. Stone, of Cortland and Rev. Arthur Hoyt, of Auburn, accompanied by L. D. Carns, of Cortland, passed the first two days of the season, at Slaterville, fishing the West Owego Creek, and took 75lbs. of trout.

Messrs. Wilson, Sharp, Miller, Middaugh and Calkins, of this city, were on the West Owego the 17th, and although the weather conditions were wintry in the extreme, a fine catch was reported.

An exceptionally large number of good scores have reached me as a result of the past five day's astream, justifying the prediction that plenty of sport awaits the trout angler as the season grows apace.

Fall Creek, reached from McLean, on the line of Lehigh Valley R. R. or the East Owego, reached from Harford or Richford, on the same line of railroad, should furnish satisfactory angling shortly. The West Owego within easy distance of Ithaca, Owego or Cortland, is one of the most alluring trout streams enriching the landscape of Central New York, being easy to fish and beautiful to behold. Many small but "trouty" streams abound in the country through which the West Owego flows on its way to the Susquehanna. M. CHILL.

When in Fishing Togs.

LITTLE ROCK, Ark.—I am sorry the picture I sent you was so dim it would not reproduce, for I had a desire to let the world see how so good a man as Brother Howerton can look so villainous and piratical. It is a physiognomical mystery. I will illustrate it. The parson had a parishioner, Mrs. Green; an old lady of saintly life, one of the salt of the earth, whom every one around here calls blessed. He and I had been fishing one day, and were coming home about sunset with a magnificent string of bass. He said, "My wife is away, and I will give my fish to Mother Green." So I drove him around there. The old lady was sitting on the porch enjoying the summer sunset. We stopped and Howerton went in, and the following conversation took place: "Mrs. Green, here are some fish." "Well, I don't believe I want to buy any this warm weather." "But you had better take them, anyhow." "No, I don't want to buy any. I have not ice enough in the house to keep them." "But let me give them to you." Thereupon the old lady put on her spectacles, looked at the parson, who all that time had been within 3ft. of her, scanned him up and down, and finally said: "Is this Brother Howerton?" The old lady was neither blind nor specially near-sighted, but the parson looked so disreputable she did not recognize the man who dispensed the Gospel every Sunday. J. M. ROSE.

The Lamprey as Bait for Wall-Eyed Pike.

BALTIMORE, Md., April 22.—Noting communication of M. Chill in issue of the 24th instant on the subject of "The Destructive Lamprey," I will ask if there is any reason why the lamprey should not be used as a bait in trolling for wall-eyed pike? The fishermen on the Susquehanna use the lamprey attached to the "gang" and spoon in trolling for the salmon, so-called, and say it is an additional attraction. How is this thus when M. Chill claims it to be a parasite? SWIFT.

An Oneida Lake Net Raid.

UTICA, N. Y., April 24.—*Editor Forest and Stream:* The State fish and game protectors have been doing business on Oneida Lake recently. Thirty-one large trap-nets were destroyed there and tons of pike liberated. Last week twenty-one more nets were taken, making a total of fifty-two within ten days. Some of those captured last were new nets, which were set immediately after the protectors were supposed to have left the lake. W. E. WOLCOTT.

The Schuyler Fishing Club.

SOME of the leading sportsmen of Stillwater, N. Y., have formed a fishing club. The organization is styled the Schuyler Fishing Club, of Stillwater, and at the first regular meeting, held on the 17th ult., the following officers were elected: President, P. S. Miller; Secretary and Treasurer, W. J. Barnes. It is the purpose of the club to aid in the protection and propagation of the fish and game of this locality, and steps have already been taken toward restocking the most promising trout brooks in the vicinity.

Lake Champlain Bass Fishing.

ST. ALBANS, Vt.—The migratory habits of the small-mouthed black bass brought thousands of them from the St. Lawrence River into the waters of Lake Champlain, conditions causing it in 1896, when the water was the highest for nineteen years. We had as good bass fishing in the season of 1896 as at any time in the past twenty years, and as you are aware, we have had most excellent fishing in the Great Back Bay of Lake Champlain. W. J. SAMSON.

"Angling Talks."

WE have a very few copies of George Dawson's "Angling Talks," a series of chapters of entertaining chat about men, fishermen, fish, fishing and fishing places. Cloth, 50 cents. Forest and Stream Publishing Co.

Jan. 17.—Continental F. T. Club's trials, New Albany, Miss.

COURTESY AT BENCH SHOWS.

HARTFORD, Conn.—*Editor Forest and Stream:* I have noted the growth, during some years, of the "courtesy to exhibitors" plaint made by some writers in their reports of certain shows. To me it seems that such complainings are both indelicate and unjust. Usually the complaint is made in behalf of the exhibitors, at least ostensibly so, but there generally is a ring of personal grievance and disappointment over the absent courtesies. From such data as I can gather, the "courtesies" omitted are free lunches to the reporters, with such accessories as add luster to the lunch, and some special attention paid to the exhibitors as to sightseeing. To me it seems as if it all was very absurd. If the management treats the exhibitors and press with politeness, it is all they have any right to expect. That a special committee should be expected, yes, demanded, with duties to look after the entertainment of visitors, at a time when the full energies and time of the club are strained to their utmost, is carrying a selfish feeling too far.

The exhibitors place themselves on a strictly business footing so far as the bench show concerns themselves. They are importunate in demanding cash prizes in the classes, and are quite as eager to have valuable specials. If they, on the other hand, were invited to give up something valuable in the name of courtesy, they would indignantly refuse. New and more classes are demanded of the management after the prize list is published, and when all this is secured, then the supplementary "courtesies" are looked for. The exhibitor enters on a business basis, and exacts the most valuable business considerations obtainable. Then when he and several hundred of him and his friends come in a body to the show, they each individually seem to expect to be treated as an invited guest. The show may lose money; the working committee may be overworked; the general routine may be most exacting and worrying, yet before all else must come the "courtesy."

I have noticed that when the committee or club members devote themselves assiduously to the entertainment of the reporters, there is seldom any complaint heard of neglect of the exhibitors, whence I am inclined to believe that neglect of the exhibitors, sifted of all its pretense, is merely a matter of neglecting the reporter. At all events, it is bad form to demand as a right what could be expected only as a matter of voluntary invitation. To be the recipient of hospitality at one time establishes no claim to make a demand for it the next time. I may add that the gentlemen in charge of bench shows are quite competent to pass on what is due courtesy and what is not, perhaps quite as competent as anyone else. If one management chooses to make a pleasure excursion for the exhibitors, and treats them as distinguished visitors instead of as exhibitors, that should not be made the standard for all other managements to live up to. Courteous attention and prompt arrangement of all business matters are all that any exhibitor has any claim to and all that he has a right to expect. To cry out because personal entertainment has not been extended may be termed a displeasing and inappropriate trait in the exhibitor or reporter.

GENUINE NUTMEG.

The Chicken Field Trials.

THE chicken field trials are growing steadily in popularity, and seem to have a vitality which is indicative of their permanency. Hertofore the greater part of the field trial support came from non-residents of the chicken country, but there are indications that this year the resident sportsmen will participate and add a greater material assistance to the chicken trials than they have given heretofore. The sportsmen of Minnesota in particular are manifesting an admirable interest, and if they once engage in earnest the permanency of the trials is assured.

With such advantages at their very doors, it is strange that the sportsmen of Minnesota have not organized a club or clubs of their own for the purpose of holding trials, as have their brethren across the line in Manitoba, but now that they have bestowed their interest on the competition, and the incentive is felt to own better dogs and ones better trained, the spirit of emulation will probably result in organization for field trial interests. The broad prairies afford the best of field trial grounds every where. They are easily secured and easily protected from the depredations of poachers, much more so than are the grounds in the quail country, and the rental expenses are far less. Setters and pointers are numerous in city, town and country, so that there is abundant competitive material to draw upon, if a proper degree of field trial interest can be aroused. The chicken trials are held at a season delightful for visiting sportsmen, and for the abundance of the highest sport, whether with dog and gun, or rod and reel, one has but to turn to the volumes of literature to learn of it.

THE FIDELITY OF THE DOG.

WASHINGTON, D. C.—*Editor Forest and Stream:* Poets and novelists have sung the praises of the dog for his devotion and love of his master. The fidelity of the dog was the highest standard of comparison, for nothing exemplified an affection so unselfish, a loyalty so unblemished, a watchfulness so incessant as it did. For his devotion and self-sacrifice the dog has always stood high in man's good opinion. History is filled with innumerable references to dogs as a companion or servant of man in war, in peace, or in the chase, from man's gradual emancipiation from savagery and ignorance to his highest development in civilization. In passing it may be said that dogs are not a universal favorite. There are men who are enthusiastic in their fondness for dogs, or some particular kinds of dogs. This fondness is often inspired by fashion or some peculiar combinations of circumstances in the mutations of life. As to the first, if one leader, gentleman or lady, of a fashionable circle adops a fad, whether it be riding, yachting, dogs or cats, etc., there is a swarm of imitators who immediately set about doing what the leader does. As to the combinations of circumstances, a man may be passionately fond of shooting or hunting, etc., at a certain stage of his life, and these circumstances being a dominant passion, he loves dogs for contributing to his sport. At a later stage in his life, when he cares not for sport, he would kick the dogs out of his path with peevish force—the same dogs which he once would have given warm welcome to.

But the devotion of the dog? The dog is fond of companionship, and he will readily associate with any animal which gratifies this need of his nature. He may form a friendship for a horse. Dogs which are raised with sheep form a friendship for them and find all the needed companionship in their society. Dogs form friendships for each other; but whether for horse, sheep or man, it is not from any sense of unselfish devotion, but it is, on the contrary, a selfish need of his nature which craves companionship and a slavish dependence on others to supply his food. He naturally drops into what best fits his needs, his comfort and his existence. He follows his master about; he is solicitous to be in his presence; he is attached to the home of his master; all this is from self-interest, for there he has his food, shelter and protection. Let him lose his home and master, and though the one may be luxurious and the other kind and gentle, he will transfer his affections to the most ignorant and coarse man who first attempts to be friendly with him, and will adapt himself to the new home life and surroundings with no regrets and no memories.

But he will fight for his master. He will fight for a dog companion. He is a born fighter, but not singly. The dog fights in packs. Two or more dogs fighting in company will fight bravely and desperately. One alone fights indifferently compared to the fighting of packs. The moral support of company and aid makes the dog brave, and this is precisely what the dog feels when in the presence of his master whom he loves, but will love some one else the next day without a break in the transfer of his affections. The intense love for a home is only long-continued habit. The wild dog has the same love for his own den. Fidelity is merely the dog's own contentment with his comfortable surroundings. His protection of his master's home and person is only the same protection which the dog bestows on his own den in the wilderness and his wild dog companions.

I think that Rev. Charles Josiah Adams could do much good by setting us aright on what is true dog nature, instead of accepting common assumption that it is the exemplar of fidelity. M.

Poisoning Extraordinary.

GAINESVILLE, Va.—*Editor Forest and Stream—and Sportsmen:* Since my retirement from the field trials' field, though still reading the reports with great interest, I have not had published a single article from my hand; for, as to my bird dogs, misfortune seems to have come in battalion strong.

In the last few years I've lost by the acts of cold-blooded and vicious people, in trained, field-trial and bench-winning pointers, Lady Spotswood, First Flight Virginia ("F. F. V."), Heineken, Flake of Flockfinder, Jr., Nick of Ion, Spotswood, Frank, Rod's Rod, Flockfinder III., all poisoned. On the evening of the 14th inst., a few minutes after I had fed her with my own hands, Lady Margaret was shot to death in the public road, opposite and within 25yds. of the line of our own Margaretta farm by a brutal negro.

My loss in her is great. The intensity of my feelings is such even now, that I will not attempt to express them I consider the loss to the sportsman afield even greater than my loss. She laid in state in my front yard the whole of the 15th, resting peacefully on the green sod, over which her feet had so nimbly trod, so that all could view the remains of the very best pointer that ever had died. I have prosecuted him for cruelty for unlawfully killing; I will now prosecute him for perjury, and also for felony in stealing the body from the public road. She never long backed a false-pointing dog; she has refused when dead to back stand a lying, brutal negro, though less brutal than those who put out the tempting, poisoned bait for the others.

Long years ago, on the evidence of my then living pointer, old Staunch, a white man was sent to the penitentiary, and now, on the evidence of the dead Lady Margaret, do I fully expect to send this criminal to the same place.

I have sued in Civil Court to recover $1,250, placing the minimum of $1,000, the price I named when Judge John D. King offered me $500 after she had run one puppy race with the great setter Lillian Russell. I add $250 because she was bred from March 8 to 17 to that great flock-finder, St Blaise, the only dog which could nearly approach her speed that was ever put down with her, although he was not in it on singles and retrieving.

My friends, regardless whether or not we have antagonized each other in the discussion or running of bird dogs—for I was fully satisfied when I had proved and assisted to prove that a real good pointer is as good as the very best setter. Where heat, birds and burrs abound, he's very much better. In this and in trials yet to come of pith and moment, I need your support and sympathy. HICKORY.

Language Used in Addressing Dogs.

Editor Forest and Stream:

I'm on'y a poor little crooked-legged dachshunde, but I hope you will hear my complaint and print it. As I lay by the fire last week I heard my new master read all the poetry which you printed in your article on the language used to dogs. Much of it I could not understand, for it was in foreign tongues or in old English. My late master was a man of good education and never told me to "Go lay down," as my new one does. At first I wondered what it was he wanted me to lay down, for I had nothing. I looked up inquiringly. He laid his book on the table and picked up a whip from the shelf where it had lain idle for a long time, and shouted: "Go lay down!" I crawled under the lounge and kept quiet, and now I begin to think he meant to order me to lie down. As you understand English better than I, please print this so that my new master may see it, and use language which I understand. DAXY.

Continetal Field Trials Club.

PITTSBURG, April 15.—*Editor Forest and Stream:* Customs arrangements for 1897. Extract: All dogs that have been duly entered in any of the Manitoba Field Trials Club's events for 1897 are allowed to enter Manitoba and remain for ninety days free of all duty. Those who contemplate entering dogs in the Continental Field Trials Club's events, the Blue Ribon or Excelsior Stake, should note that it is also necessary to enter said dogs in the Manitoba Club's events, in order to benefit by the above arrangement and pass the ports of entry without delay or anoyance. The Manitoba Club have reduced their entry fee in both events to $5. Dogs entered only in the Continental Club's events will be subject to customs regulations and duty.

W. S. BELL, Sec'y-Treas.

POINTS AND FLUSHES.

THE following, from the New York *Times*, indicates the need of breeding a new quality in dogs, one which will resist "hypnotism." It is a most humiliating and inglorious ending to a chase after criminals when they steal the pursuing dogs and evade their pursuers The story is as follows: "Albert Winger, George Gifford and John Barber, three prisoners in the Stark County Workhouse, escaped from that place. They were with others in line going from a meal. The Superintendent of the institution called a man from the rank of prisoners to speak to him. This act distracted the attention of the guards momentarily, and the prisoners made a dash for liberty.

They got a good start before the guards could dispose of the other prisoners and start in pursuit. Bloodhounds are kept at the workhouse to trail escaped prisoners, and these were at once put on the track. The animals were hot in the pursuit and followed the trail. Several miles away the three convicts separated. Barber was traced to a farm barn and finally captured. The other two men continued their run. When about ten miles from this city they were sighted. The dogs got close to them, when the prisoners in some way hypnotized the canines and took the brutes with them.

The convicts up to this evening had not been heard from, although every effort has been used during the day to locate them. Winger was sent up for larceny and Gifford for assault. Both are long-term prisoners of a desperate quality."

Mr. Boris D. Wostriakoff, of Moscow, Russia, sailed for his home on Saturday of last week. He attended the field trials at West Point, Miss., where he made many warm friends by his intelligent enthusiasm in matters pertaining to the dog and gun, and his sterling worth as a gentleman. He recently bought a Rip Rap—Queen III. pointer of the Charlottesville Field Trial Kennels, and a setter by Tony Boy of Mr. D. E. Rose, which he will have shipped to Russia: where he will have them prepared for competition in the Russian field trials. The competition there is mostly on snipe. He has also commissioned the eminent artist, Prof. Edm. H. Osthaus, to paint two pictures for him; so that the Professor's fame, already wide, is gaining a footing across the ocean. We hope that Mr. Wostriakoff's departure is but the beginning of his return to the United States.

Entry blanks for the third annual field trials of the Continental Field Trials Club, can be obtained of the secretary, Mr. W. S. Bell, 431 Wood street, Pittsburg. A departure has been made in naming the Derby, it being called the Blue Ribbon Stake.

The meeting of the Executive Committee of the Canadian Kennel Club at the Toronto Show last week, was productive of more tangible results in respect to joint A. K. C. and Canadian matters than any meeting previously held. Mr A. P. Vredenburgh, the secretary of the A. K. C., was present as the representative of that club. After a lengthy session, a memorandum was agreed upon to be submitted to the May meeting of the A. K. C. for ratification.

Wheeling.

Communications for this department are requested. Anything on the bicycle in its relation to the sportsman is particularly desirable

SKETCHES AWHEEL IN MODERN IBERIA.

THE modern tourist as like as not used the bicycle as his means of conveyance from place to place, and his unpretentious mode of travel has the advantage of putting him in touch with people and places that have not been worn threadbare by predecessors with pen and pencil.

In explaining their purpose, the authors of "Sketches Awheel in Modern Iberia" say: "The tour was made on bicycle, not to satisfy the spirit of adventure commonly ascribed to Americans, though something of adventure must be expected in a country like Spain, nor because there was anything novel to us in this mode of travel—the novelty had long since worn off—but as being the means of conveyance best adapted to our purpose, enabling us in entire independence of the usual hindrances of the traveler to pass through the country at leisure, stopping where and when he pleased."

The tour, which included the length and breadth of Spain and a bit of Africa, was made by Mr. and Mrs. D. H. Workman, who in company have wheeled over most of the countries of Europe, as well as Sicily and north Africa, and who an foot have climbed the mountains of Norway, the Alps, Apennines, Pyrenees and Atlas.

They are tourists of experience, and evidently not without that characteristic spirit which they say is commonly ascribed to Americans. On the way they carried from 12 to 20lbs. of luggage. Their daily runs averaged seventy-five kilometers, or about thirty miles, though they sometimes attained a maximum of fifty miles. A good portion of the route lay among mountains, the numerous passes of which necessitated walking and pushing often for hours at a time. As they traveled over 1,800 miles, they are well qualified to give an opinion on the Spanish roads, and the introduction to their book is devoted to this pertinent subject.

To quote:

"Spain is a large country, and no one term is descriptive of its roads as a whole. It has some that may be called excellent, and many that are good, being macadamized and well constructed with a hard, fairly smooth surface. Many more, though ridable, are rough, badly made and poorly kept up. Still others, and these a not inconsiderable portion in some sections, can only be spoken of as abominable, being now, if they ever were tolerable, thoroughly worn out, or merely tracks in the sand or clay soil."

A typical road of the latter class is thus described:

"Our route lay over long reaches of road with wide, well-laid-out roadway of sand or clay entirely innocent of the macadamizing or other constructive process. Through the center of this ran a single track formed by three ruts from 6in. to 1ft. deep, the side ruts being made by the narrow tires of the high-wheeled carts used in that section, and the center one by the animals, harnessed one before the other. The sides of the roadway were occupied either by heaps of stones or large stones placed at short intervals so as to prevent the use of any part except the center. The only available path for us was the center mule track, which, always narrow and never smooth, demanded the greatest skill and attention in riding."

Passing teams in such roads was no easy feat, and punctures, as may be imagined, were of frequent occurrence.

The country people, our authors tell us, were full of curiosity and old-fashioned in their lack of appreciation of the value of time.

Here is an incident which illustrates these characteristics:

"At 6 o'clock in the evening, after thirteen hours of hard work, in passing through a town we saw on the side of the street a little shop, where 'Varias Bebidas,' or drinks, were advertised. We were still twenty-eight kilometers from Cordova, with some long, sharp hills to climb, but we thought we would spare a few minutes to assuage the thirst from which we were suffering.

"We stepped in and asked for *sarza*, *sidra* and other beverages, which, notwithstanding the comprehensive list outside the door, were not to be had, and we were obliged to content ourselves with the only one, except the never-failing *aguardiente*, represented at this bar, viz., *gaseosa*, an effervescing concoction of limes. After considerable fumbling under the counter, during which his attention was chiefly occupied in satisfying his curiosity in regard to us, the proprietor procured two bottles stopped with glass balls, which he proceeded leisurely to wash in a tub of water, rubbing them vigorously in every part and resting between the rubs to ply us with questions.

"After washing them till it seemed as if he would never stop, he dried them carefully and handed them to us. We asked him where the wooden opener was. He replied he had none; so, in the absence of any more convenient instrument, we hammered away with a small pocket shoe-buttoner and at last succeeded in dislodging one of the glass balls, but the other resisted all efforts. He then brought forth two more bottles, which he washed in the same thorough manner, with ever unsatisfied curiosity, after which we tried our hand upon them with the shoe-buttoner, with the result of opening one more bottle.

"We now told him that our time was limited, and suggested that he give us some glasses. Accordingly, still asking questions, he took down two glasses with great deliberation from a shelf and subjected them to the same cleansing process. After the loss of some ten minutes we obtained the *gaseosa* minus the gas."

Though slow in most ways, the Spaniards appear to be abreast of the times in the matter of news gathering. The newspapers everywhere heralded the advance of the tourists, and though they refused to tell their plans and tried to escape by a pretended ignorance of the language, the ubiquitous interviewer generally managed to get a note from them.

Here is a sample.

"The Englishman, Señor Workman, and his *sposa distinguida*, who are making the tour of Spain, arrived in Cuenca from Tarancon yesterday afternoon. They rode two *bicicletas magnificas*, which they understand perfectly how to manage. It cannot be stated positively, but they will probably appear on the track at the velodrome tomorrow before the races," etc.

It is needless to say that Mr. and Mrs. Workman did not give an exhibition of their skill on the track, but the statement is interesting as showing how the reporter endeavors to give a sensational turn to an occurrence that in no way merits such treatment, thus proving that the methods of the "new journalism" are not confined to the United States alone.

"Sketches Awheel in Modern Iberia" is from the press of G. P. Putnam's Sons, New York, and is illustrated with half-tones from photographs.

The Wheel as a Game Carrier.

SOUTH PORTSMOUTH, R. I.—*Editor Forest and Stream:* Having handled a gun since I was twelve years old, and having reached the age of forty-five, it is but natural that I am much interested in the shooting notes contained in your valuable paper. During the years that have passed since my first attempts with the gun, I have, I think, killed my share of both ducks and game birds of various kinds, but, being an ardent lover of duck shooting in particular, any notes regarding this particular branch of sport are read by me with the most interest. Many times I have been led to regard the authors of some of your notes with great admiration, and possibly some awe and wonder.

I am no infant when it comes to size, at least—I weigh 230lbs.—and I also possess, I am told by my friends, a little more than my share of physical strength. Now, after this long preamble, I will say that when I read of anyone that packs on his back twenty to fifty ducks, mallards or other birds, and trudges off with them, it does excite both awe and wonder at the strength and bodily endurance displayed. I know that a mile walk with twenty ducks over one shoulder is a task few in our section care to undertake, and but few can accomplish the task. For myself, a load of twelve good fat ducks, with gun and shells, is about all I care to pack any distance. My partner and I use a strongly built buckboard for shooting trips. We often kill from twenty-five to fifty birds a day, and with our traps and ourselves we find that fifty birds make a very respectable load for a buckboard. On one of our trips three years ago we killed eighty-four in one morning's shooting, and what to do with them and where to put them on our team was a puzzle for some time. At last, by tying them to the axles and to the back of the seat in bunches we managed to get them all on. What prompted me to write this article was a question asked by my son, who is my partner on my shooting trips. The question was this: "How in thunder, dad, did that Wing Shot ever tote forty-three bluebills, eight mallards and three canvasbacks on his wheel?" My son is an ardent wheelman, and while this query is not written to express any doubts of Wing Shot's veracity, we would both of us be greatly indebted to your correspondent if he will tell us through the columns of FOREST AND STREAM how he managed the load as to fastening them on his wheel, etc., etc., for if one can do it another can if they only know how, and I shall be tempted to discard the buckboard for the wheel as a game carrier if it is as practical as the sketch referred to would indicate.

WILLIAM M. HUGHES.

Illinois Wheels.

CHICAGO, Ill., April 17.—There is good chance that the bicycle-as-baggage bill now before the Illinois Legislature will be passed. Prominent bicycle men are at Springfield now working hard in the interest of this bill, which is of concern to every wheelman who travels.

Wheels are out in force in Chicago at this date, and their riders are thinking of getting beyond the boulevards into the country as soon as possible. The roads over the Wheeling course are reported in fair shape, and it is thought they will be all right by the time of the road race. They ought to be good, since two strong associations, the Cook County Cyclists and the Associated Cycling Clubs, are both claiming that course for the same date—Decoration Day.

The Alley L road, of Chicago, has announced that hereafter it will carry bicycles free of charge on the rear platforms of trains going north and the front platforms of trains going south. No bicycle cars will be put on. It is thought that six wheels can be put on a platform without difficulty, and although this is not an extended accommodation, it is far better than nothing, and establishes a welcome precedent. E. HOUGH.

1.06 BOYCE BUILDING, Chicago.

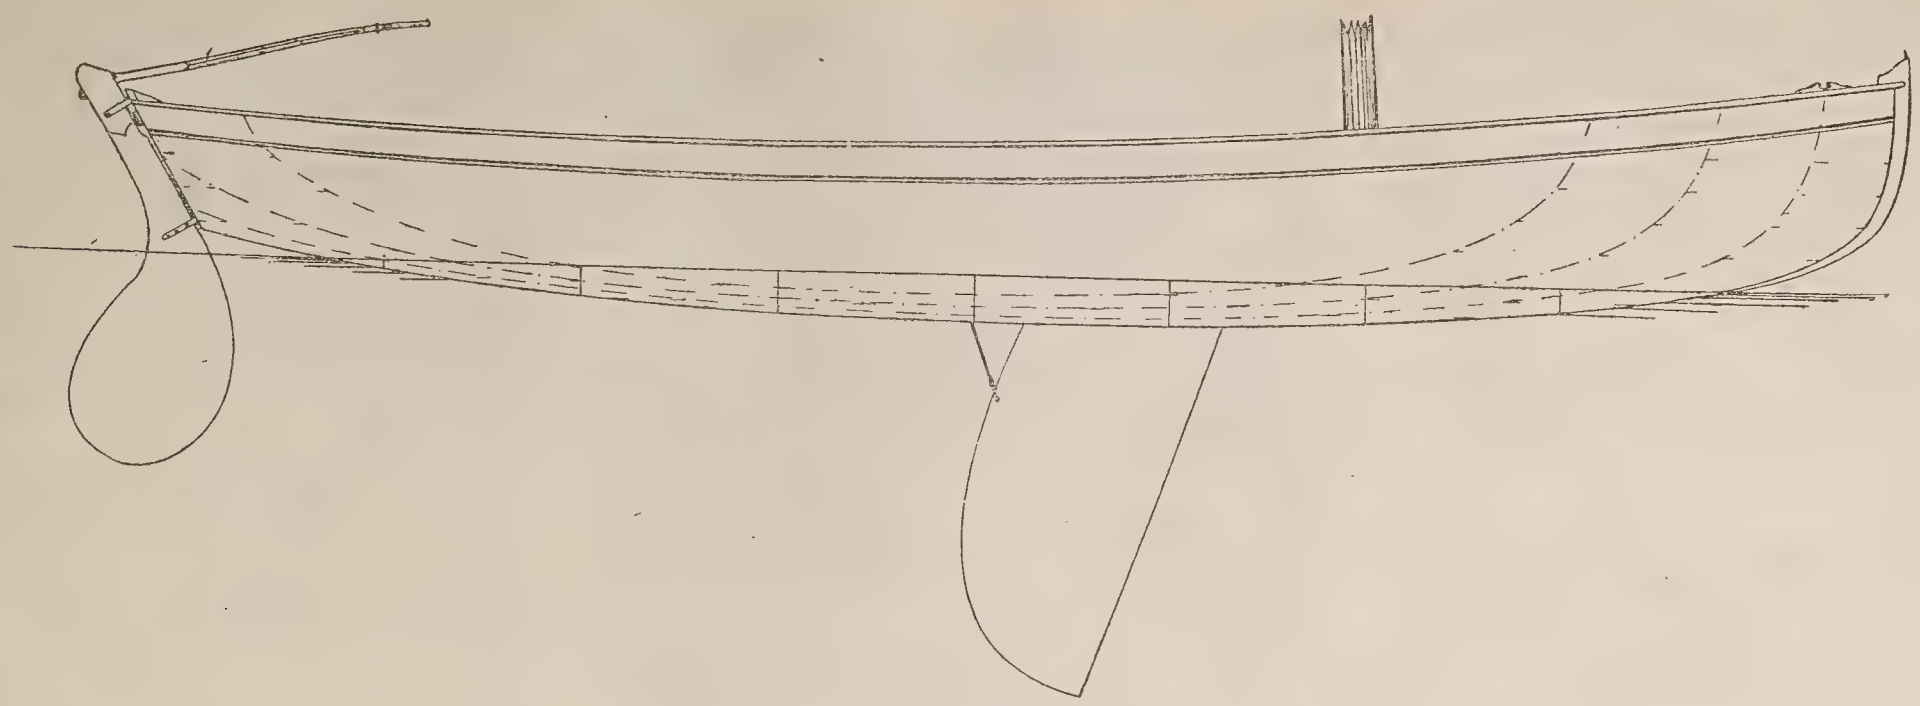
WHEELING NOTES.

THE following advertisement appears to come nearer the truth than was intended:

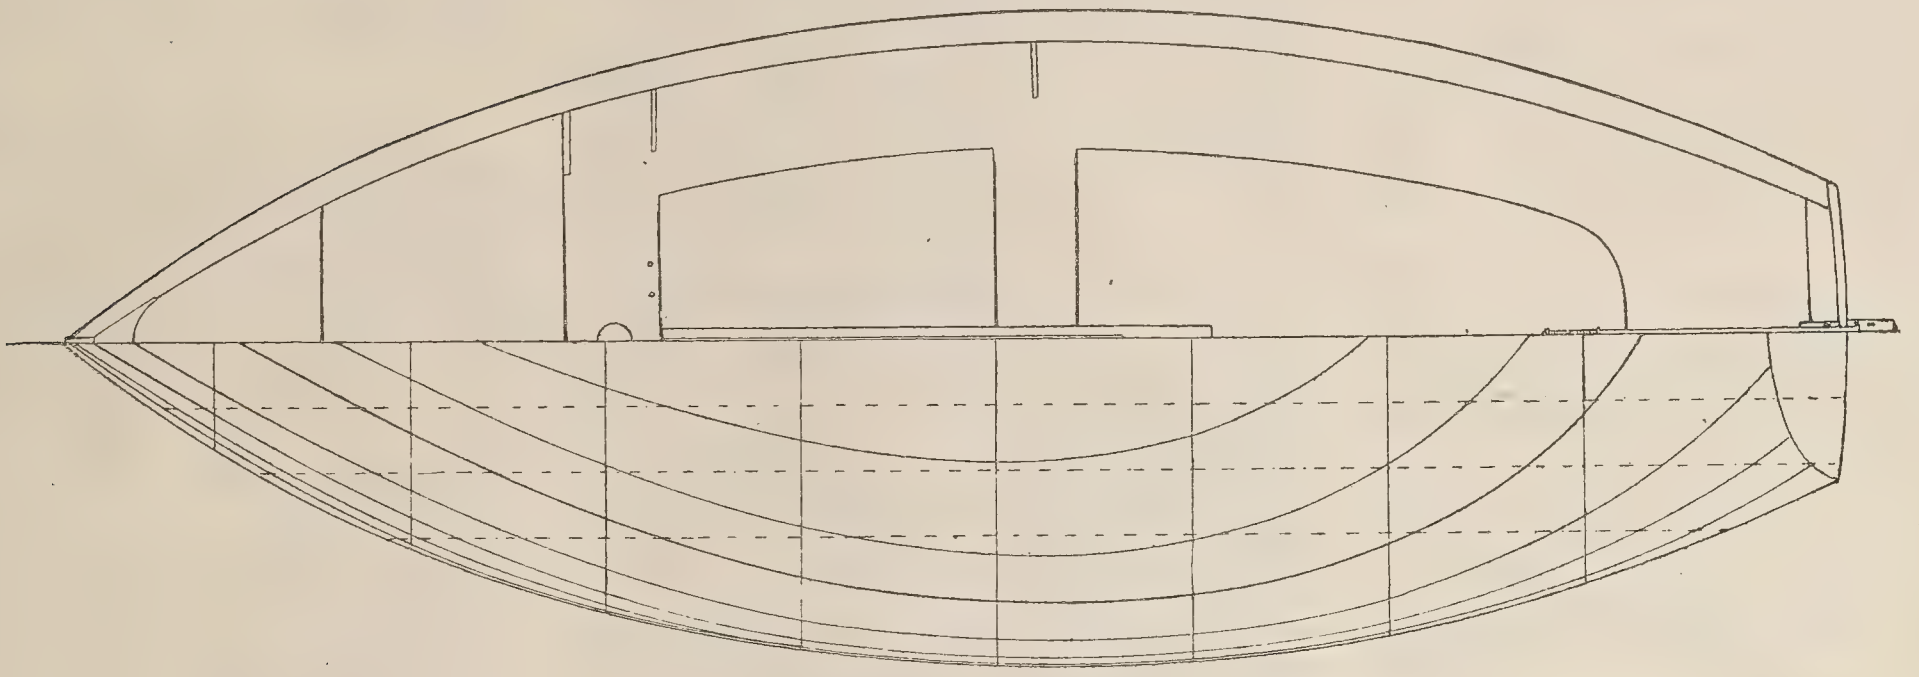
FOR SALE.—A few $100 Blank wheels, 1896 model, fully guaranteed, for $:5 while they last.

How perilously near that advertisement came to reading "fully guaranteed while they last." As a matter of fact, guarantees on many bicycles whose sole selling point is their cheapness, are deceiving, and have no value whatever.

A recent decision in the Pennsylvania Supreme Court is of interest to bicycle riders who may have occasion to cross railroad tracks. It is the case of Robertson against the Pennsylvania Railroad Company, and is reported in 1 American Negligence Reports.



It appears that damages were claimed for the death of a person while crossing a railroad track, but the plaintiff was nonsuited in the Common Pleas. The deceased was riding a bicycle, and when he came to the railroad, at a point having four tracks, a freight train was passing, for which he had to wait. He did not dismount, but made what was called a "bicycler's stop," by circling on his wheel round and round, at a distance of from five to ten yards from the track, and when the train passed he started across without dismounting, and was struck and killed by a train coming in the opposite direction on another track.



On appeal to the Supreme Court the judgment of nonsuit was affirmed, Justice Mitchell holding that it was the duty of the deceased to stop and dismount, and refusing to entertain the proposition that the circling round and round constituted a legal stop. "Riding round and round in large or small circles, waiting for a chance to shoot across, is not a stop at all, either in form or substance. Considering the ease of dismounting and the control of the rider over his instrument," continues the decision, "a bicycler must, under all ordinary circumstances, be treated as subject to the same rules as a pedestrian." The judge says further that "the rule to be applied requires that a bicycler must dismount, or, at least, bring his wheel to such a stop as will enable him to look up and down the track and listen, in the manner required of a pedestrian."

It would be well for bicycle riders to memorize the legal rule, "Stop, look and listen," and not forget it when approaching railroad crossings.—*New York Sun.*

A Stray Shinplaster

Comes to us once in a while for a copy of "Game Laws in Brief;" but shinplasters nowadays are scarcer than Moose in New York; and 25 cents in postage stamps will do just as well.

A GERMAN ONE-DESIGN.

Yachting.

As the yachting journal of America, the FOREST AND STREAM *is the recognized medium of communication between the maker of yachtsmen's supplies and the yachting public. Its value for advertising has been demonstrated by patrons who have employed its columns continuously for years.*

FIXTURES.

MAY.

29-30-31. Buffalo, opening cruise, Port Colborn.
31. Minnetonka, open race, Lake Minnetonka.

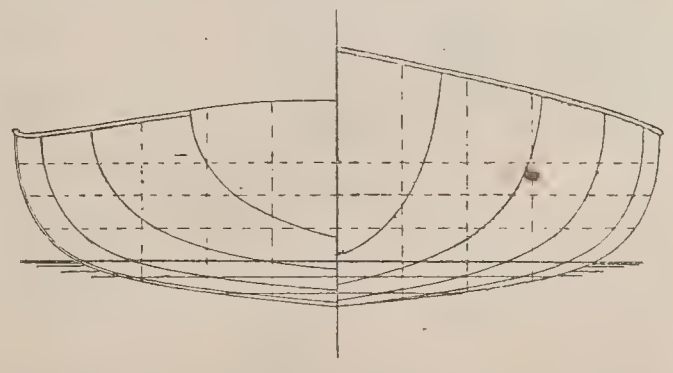
11. Buffalo, ladies' day, Lake Erie.
25. Buffalo, closing cruise, Lake Erie.

ANOTHER version of the Defender story is current this week, on the authority of the *Pall Mall Gazette*, to the effect that H. W. Walker, brother to the owner of Ailsa, is negotiating for her purchase, in the event of which she would be raced in British waters. Nothing is known of the matter on this side.



Chicago and Lake Michigan.

THE Chicago *Tribune* comments as follows upon the yachting outlook on Lake Michigan and in Chicago, the yachting center of the lake:

The yachtsman, besides worrying about the consolidation of all local yachting interests in the city into one organization, will look after the desired amalgamation of the Lake Michigan fleet with the Yacht Racing Union, of the Great Lakes. Both these plans are certain to make their influence felt among Chicago men.

SAIL PLAN.

BODY PLAN.

The jealousies of the clubs of the city have been settled, and a Chicago Y. C., with plenty of money and enthusiasm behind it, may be expected in the near future. When this obliteration of local quarrels has been accomplished, the Lake Michigan Association will grow into greater activity, and races will be more frequent, while the number of clubs will be increased.

The isolated position which the association on Lake Michigan now holds of being the only one on the Great Lakes outside the Union will probably soon be remedied. The objection to the measurements which are officially adopted by the Union is not so serious now as it was last summer, and the local clubs long to send their fast boats to Union races under Chicago colors.

No positive dates have thus far been made for races on this lake, but arrangements are already under way for lively contests on Geneva and Oconomowoc lakes. Interest is also being raised in the course on Pewaukee Lake. The fleet there has grown rapidly in the last year.

Of the new boats which are being built for Chicago men, all conform to the official measurements of the Union.

We hope that the *Tribune's* surmises are correct, and that by united and harmonious action in their local affairs, and a hearty coöperation with the associations of the other lakes, yachting on Lake Michigan may be established on a permanent and satisfactory basis; such as it has never before occupied. For many years yachting in Chicago was carried on in much the same manner, though on a greatly reduced scale, as that on the coast, a few large schooners, such as Idler and Countess (of Dufferin), plenty of gold lace, little sailing and less of systematic racing. The interest in the schooners died out long since, and for some years Chicago yachting has suffered from the transition stage, from large to small yachts. The old Chicago Yacht Club expired with the exit of the schooners, but for some years past new organizations on a nominally smaller scale, but with much more life and vitality, have been springing up. To-day there is no lack of yachting enthusiasm or of yachtsmen; all that is needed is united action and in the direction already set by the older yachting communities.

The ideas of the Lake Michigan yachtsmen in the matter of measurement and other rules have been largely at variance with those prevalent in the East as well as on the other lakes. Without assuming for a moment that the latter are correct, satisfactory or infallible, it may be claimed at least that they represent a fair concensus of opinion of the majority of yachtsmen in this country and abroad; and consequently that they are as good a guide as any.

The first need on the Lakes is a single association that shall enforce one uniform set of rules. Whether these rules are the best in the world is a secondary matter, as with a well-organized association and deliberate and intelligent legislation they may be improved year by year.

The rules lately drawn up by the new Yacht Racing Union of the Great Lakes are fully up to date, and in some respects decidedly in advance of those of larger associations, and we believe that there is no valid ground for objection to them by the Lake Michigan yachtsmen. Even though they may not be altogether in accordance with the ideas on the latter lake, far more can be accomplished both for Lake Michigan and for Lake yachting at large by the joining of the Union than by continuing in opposition. We hope to hear shortly that the Lake Michigan association has decided to join the Y. R. U. and give its hearty coöperation to the work already begun.

A German One-Design Class.

THE little boat here illustrated, for which we are indebted to our German contemporary *Wassersport*, was designed for the Hamburg Y. C. by the German designer, Max Oertz, of the firm of Oertz & Harder, Hamburg. The firm is building a number for sailing on the Alster Lake, at Hamburg, the price being about $100 each, complete with oars, sails, etc. The dimensions are:

Over all	17ft. 11in.
L.W.L.	14ft. 1in.
Beam, extreme	6ft. 6½in.
L.W.L.	5ft. 3in.
Draft, including rudder	2ft. 2in.
C.B.	4ft. 2in.
Mainsail	158sq. ft.
Jib	32sq. ft.
Total	190sq. ft.

The design shows an excellent model, of good power, and an easy form that promises speed.

A FEW DAYS "SINGLE-HANDED."

Perhaps some of the "cranks" would like to read the log of a short cruise, taken "single-handed," but which was none the less enjoyable, though hardly in line with the preconceived idea of a yachting trip. A cruise at once calls to mind, to most people, first, a jolly crowd, then fine fun and frolic ashore, and gay old times aboard in the evenings. Well, in this case, the jolly crowd consisted of the writer; the weather was fine enough, and frolics ashore were limited to landing for grub, and gay old times aboard consisted of efforts to convert what was obtained ashore into toothsome and attractive viands for the captain's table, which was generally spread in the forecastle.

Our good ship was the little cutter Sea Witch, 22ft. on the waterline, 26ft. over all, 7ft. 3in. beam, 5ft. draft, 24in. least freeboard, pole mast, rather small sails, 3,700lbs. of iron on the outside, 800lbs. of lead inside, plumb stern, painted black, with a white house, and strong as wood and iron could be put together.

Our vacation was the last week in May, 1896; rather early for small craft, but it was then or not at all, so I went then. Friday noon, May 22, having got a few stores aboard, I slipped the moorings off Stearns's yard, Marblehead, hauled aft the jib sheet, up helm and squared away for Gloucester. A strong southwester gave me wind enough for jib and mainsail and she plowed along at a good pace. The sun was warm and bright, the air delightfully fresh, and after a winter and spring cooped up in a downtown office, it seemed like getting out of prison to breathe and pull and haul and work out of doors.

In Salem Bay the wind came off in chunks, and if it blows anywhere in a westerly it is in Salem Bay; but running before it we did not mind it much, and made quick work of the twelve miles to Gloucester, and rounded to and anchored off Ten Pound Island light, close in, and decided to spend the night there; and after a good dinner sat on deck smoking and admiring the sunset over the magnolia shore, when the man in charge of the lobster hatchery at the island pulled out and made me a little visit.

I turned in early, ready for an early start, but was awakened about midnight by the wind screeching through the rigging, and could feel the yacht lying over under the force of the blast. I jumped on deck and found it blowing very hard from the north, which put us on a lee shore and close in, though we seemed to be holding on all right. I heard a schooner to windward paying out chain and did the same, and by that time the wind had gone down and it was calm.

I was not disturbed again and awoke about 6 o'clock on Saturday morning, which was clear and cold; wind northeast, and plenty of it, but as it was dead ahead for me I did not hurry, but took a leisurely breakfast, and then determined to go out and take a look at it at any rate; outside, however, the wind softened down to almost nothing, the sun came out warm, and I decided to keep on around the cape. But the wind fell lighter still and the tide set me inshore so far that I lost every bit of it, although two miles off shore I could see vessels moving along very well, but the air was killed before it reached me.

It was now about 2 o'clock and I had drifted to within about half a mile of the beach, directly off Cape Hedge; here we stayed within a radius of 100 yards for three hours. It was beautiful; the sun was burning hot, the sea smooth except the old swell from outside, the land lay along with scarcely a house in sight; the green woods and fields came down close to a white strip of sand which curved along, making a beautiful little cove; and after a winter of pavements and clattering teams and clanging electrics, the change to this scene of beauty was most refreshing, and all as quiet; the surf from constant pounding ceases to be noticed, and the only sounds—and those sounds always most agreeable and fascinating to me—were the occasional squeak of the jaws of the gaff against the mast and the flip-flap of reef-points and topping lift against the mainsail, as the yacht rolled and pitched in the swell.

After drinking my fill of the beauty of the scene which appealed to me all the more strongly after long abstinence, I turned to and finished some odd jobs on the rigging, freshened seizings here and there, whipped all the rope-ends I found lying around, rigged a couple of screens for side lights, etc., until at about sun-down a light air from the land fanned us along to Milk Island, where I came to anchor about 9 P. M.

It was a beautiful night—the moon was bright and clear and I hated to turn in, but finally left the yacht to keep her own anchor-watch and was soon oblivious of all surroundings.

At 5 next morning I awoke to find as glorious a day as one often sees. A fresh east wind, bright, sparkling sun, and the cool, damp air blowing in from the sea made living and breathing a pleasure.

After a hasty breakfast, I got under way and stood in for Thatcher's Island, and setting a jibtopsail we walked along at a good clip.

This easterly had but just begun to blow, as was evident from the smooth water, and it seemed a splendid chance to get across Ipswich Bay.

Passing Thatcher's and Straitsmouth islands, and the buoys of the new breakwaters, I laid the course N.½E. and settled down for an elegant sail, and an elegant sail I had. The wind held steady as a church, and strong enough to heel her down to within a few inches of the rail; and steering like a new bicycle she waded through it, and all too soon I made out White Island light at the shoals on the weather bow.

The wind here fell lighter, and hauled to the southward so much that I got the spinaker on her to starboard, and we rolled along in a quartering sea, dipping first the end of the boom and then of the spinaker pole in the water, and then straightening up with a slat, and throwing spray all over the deck.

The ebb tide from the Piscataquis delayed us a great deal, and as the wind kept falling it was 2 o'clock before we rounded to off Kittery Point alongside the Lorna, and Capt. Wasson, artist, sailor and boat-builder, came aboard and said I was the first arrival of the season.

A prettier place than Kittery Point it would be hard to find, and if it were not for the strong tide in the main channel it would be an ideal place for yachting.

In the afternoon I went uptown and telephoned to Marblehead, only to find that the young man whom I had expected to join me here was sick abed, so I decided to go no further East, but to return at once.

The country here is glorious. Give me May and June for country and seashore combined. Everything is fresh and growing; there is a deep, new color to vegetation that is gone later in the season; the days are long, and everything speaks of the coming season, not of the past; it is not as hot as July and August, and except for the bathing, the early months seem far more enjoyable.

That afternoon I paid a long visit on board the Sorna, a younger sister of the Bonnie Doon, and a noble craft she is, built by the owner, and finished off down below like a piano.

Then comes a good, square dinner, and speaking of dinners, I will take this opportunity to describe my culinary luxuries: Steak, done to a turn over the coals, fried potatoes, coffee (ah! what coffee I could turn out!), corn (canned), flap-jacks and maple syrup (that was my strong point), and all finished off with a corn-cob loaded with a charge of Lucky Strike. Who would ask for more kingly fare? I was a king for a week. I could do just as I pleased, go where I wanted (barring wind), eat, sleep, smoke, read, work and loaf when I pleased; was monarch of all I surveyed and felt like a young colt.

My orders were always obeyed to the letter, there was no quarreling; our crew were always unanimous, and we got along splendidly together.

Well, after dinner the Sunday papers, and then I turned in early ready for the morrow.

Monday morning promised a gray day; the wind was very light from the south'ard and no sun. I determined to start, however, and as I was making sail Capt. Wasson came aboard. "Won't get far to-day," he said.

"Well, I'm going to start," I replied, "and take a sail, anyway; I can run back if it looks bad. Won't you come part way?"

"No, I thank you; you will be back here before night."

"Well, so long," and I catted the anchor and hauled aft the headsheets. "I'll go out and look at it," and I fully expected to come back myself, for with a strong flood tide and a very light air it took at least two hours to work out by Whalesback clear of the current; but as I kept gaining on a small fishing schooner that started a half hour before I did, and soon almost caught up with her, I concluded that it was no fault of the boat's.

The wind held about S.S.E. moderate, and with a smooth sea, and after working to windward till about 2 o'clock, I laid my course S.S.W. full and by, which would carry me into the mouth of Ipswich River.

The wind rapidly freshened, and we were soon bowling along rail-to, hauled sharp on the wind and making good time. It was grand sailing; the ocean was a deep dark-blue, dotted with whitecaps that glistened pure white in the sun. The sun was warm and had burned off the gray haze of morning till the sky was as blue as the sea.

The air was fr sh and moist; you could almost feel it as you breathed it in, and the white sails and shining, varnished spars leaning to leeward made a glorious picture against the blue of sky and sea.

We were about four miles from Whalesback and an equal distance from White Island, when I thought I saw fog away to the S.E. It looked hazy and thick, and not caring to get "catched" I came about, turned tail, and ran back toward Kittery—for about a minute, and then, "Pshaw! I won't be bluffed out of this slant by a little fog. Here goes." So we jibed her over, flattened down again, and hammered away.

Now was the time to gladden the heart of the most incurable "farmer." The wind kept breezing more and more, and by 3 o'clock it was blowing a good fifteen-mile clip. We staggered along, rail under, with the water washing over the fore deck (the fore hatch is battened down; no leak there), but as dry as a bone aft the mast, the bows rising and falling as regularly as a pendulum, the water hissing in masses of foam along the lee side and under the boom, and sometimes sluicing up on to the lee deck and running aft and out of the scuppers. The tender was towing astern, half out of water, with the foam curling away on either side in bright, sparkling torrents, and only a touch of the tiller now and then was needed to keep her on her course.

In the midst of all this I chanced to take a look below, and was dismayed to see the water several inches above the cabin floor. Things were washing round in the reddish-colored liquid, and my red velvet carpet was a sight. Turn to and pump her out, and after fifteen minutes the pump sucked, though I pumped twice more before getting in. Nothing but the topsides, which had dried up during the winter, especially the starboard side, and had not had a chance to swell.

So we reached along, closing in with the coast gradually and heading up a point or so as the wind would occasionally favor Off the mouth of the Merrimack, and fully a mile from the beach, there was quite a rip, and one wave broke on deck and wet us down; but we passed out of them at once and about 5 o'clock fetched in to the south side of Plum Island after a fine reach of about twenty miles. Now came a turn of six miles to windward.

All this time the wind had been freshening, and now it blew hard and the sea had got up and was rolling in right up and down, steep and choppy.

On the starboard tack we took the sea nearly end on, and she pitched, and jumped, and stood on end, and dove into it; but we got there, and after a dozen tacks across the bay we ran into smooth water under the lee of Halibut Point, and sailed down to Lanesville and close up to the entrance to the harbor; but, as I had never been in there, and didn't know just how the trick was done, I hauled down the staysail and stood off and on a few times and was about to anchor, as it was growing dark, when some one came down to the end of the breakwater and sung out: "Come right in, it's all right." So I hauled my sheets aft and shot in through the hole in the wall, and found myself in a curious place.

The natural advantages of Lanesville for shelter are very small; but two immense walls of granite, say 50 or 60ft. thick and fully as high, all but meet from the opposite sides of the cove, leaving a space about 30 to 35ft. wide for vessels to come in and out. The sharp, square corners looked rather formidable, but I got through all right and tied up alongside a fishing schooner, for the bottom of this little gunkhole is solid rock, and there is no room to swing at an anchor; but I was glad enough to be there, for soon after dark it commenced to screech right out, and by midnight was blowing a gale.

No sooner had I tied up than I had a gang of big-booted fishermen all over the deck, who viewed with interest my little craft, which looked so small and neat, huddled in among the schooners, her new white sails adding to the contrast.

"Where are you bound?"

"Where you frum?"

"You all alone?"

"Ain't it rather early for yachting?" were some of the questions fired at me, and one grizzled old fellow said in an undertone to his neighbor: "Well, he takes his chances going to sea in that thing, alone, at this time of year," with which sentiment I fully agreed.

All night it blew hard, and I could feel the undertow as the yacht surged and chafed against the fenders; for I had hauled in close alongside one of the schooners, which are moored with big chains bow and stern, and when the sea is high they work back and forth, and bring up on the cables with a jerk that shakes everything up.

Lanesville looks very snug, but I was told of the gale of '88, I think, when the seas came clear over the breakwater, freezing as they fell, and sunk all the schooners in the place, while the undertow was something terrific.

I could well believe it, for even in this southeast gale of twenty-four hours' duration there was a strong current and ground swell setting in through the narrow opening.

Wednesday morning the gale was at its height; even in this sheltered spot the wind came down from the hills in fierce gusts, and the rain kept me below about all day. I had a snug, cozy time.

Lonesome?

Not a bit.

First, breakfast, and then clean up below; a morning pipe or rather succession of pipes, papers and books which I had bought the night before, and as it was cold and damp I kept the fire all day, and the glowing bed of coals added much to the charm and comfort of it all. A short nap and then dinner to get and clear away, and by that time it was 5 o'clock.

The rain had ceased to fall and I went up and took a look at the town and made a call on board the old schooner I Am Here, which lay on one side of me, while the Venus and a stone sloop lay on the other.

The gale had broken and clear sky appeared, giving promise of a fair day on the morrow, which found me on deck at 6 ready and eager to get away.

The sky was blue, the sun radiantly warm and bright, and without waiting for breakfast I was towed out by one of the fishermen in his dory, and setting the head sails put the tiller in the comb amidships, and laying a course for Halibut Point, dead to leeward, proceeded to get breakfast.

It was a morning to stir the blood of the most indifferent. The wind was light out of the west; the air was fresh and new as it is only after a rain; the ocean was heaving and rolling in the tremendous swell left over from the night before; on the rocks the sea was breaking furiously, and the surface of the water was flecked with patches of foam that had drifted off from the surf and spread out in sheets and sizzled and hissed as we pushed through them.

Without the mainsail she steered herself during the hour it took me to prepare, make way with and clean up after breakfast, and by that time I was well down past the point, and with the increasing westerly, under all plain sail, she slid over the seas in beautiful shape.

It was a fair wind as far as Thatcher's, and then falling light, and the course bringing it ahead, I had to beat up through the islands till about abreast of Eastern Point, and a couple of miles off shore I got a severe puff from the N.W. that induced me to douse the mainsail, and none too soon, for under headsails alone she had the lee rail awash, going like a race horse; but in five minutes it was over, and the remainder of the trip to Marblehead was in light airs all ahead or no wind at all, slatting and rolling in the hot sun.

By hugging the Magnolia shore we caught a little air from the land and about 3 o'clock fanned into Marblehead, picked up our moorings and voted our solitary cruise a grand success.

F. L. Eno.

The New 51-Footer.

The new cutter Syce, designed by Gardner & Cox and built by Wood & Son at City Island for F. M. Hoyt, of Stamford, is now out of the shop and ready for launching at any time. This yacht is specially interesting as the first of any size built under the racing length classification, the class of which she is the first, of 51ft. racing length, being the nearest to the old 40ft. l.w.l. class, the largest boat in which, the Gardner cutter Liris built in 1889, measured just 50ft. racing length. Unfortunately the changes of recent years have made it impossible to compare closely the results, as shown in the yachts built under them, of the two systems so hotly disputed some eight or nine years since, of classifying by waterline length alone, leaving the designer free to crowd on sail as he pleased after trial; or of classifying as well as measuring by the rule in which length and sail were equal factors, thus leaving it to the skill of the designer to determine the correct proportions of each for a given class and type. The old 40-footers, one and all, from the big Liris of 3,600sq. ft. sail area to the little Minerva of but 2,700, were merely cutters of considerable beam, moderate S section and improved lines, with very moderate overhangs forward. Between them and the new 51-footers has come the fin-keel in its most extreme form—from Dilemma to Niagara—involving a radical change of form that destroys the value of what would otherwise be a most instructive comparison. The 51-footer of to-day differs from the old 40-footer not only in being designed under a rule that encourages a longer and easier form with a smaller sail plan, but she is in form essentially a fin-keel, and in construction very much lighter and more elaborate, as well as much more costly.

The new class has so much to recommend it to racing men, of whom there must still be some left, that it is surprising as well as disappointing to find that but two yachts are building for it, the present boat and another in the same yard, designed by Will Fife, Jr., and owned by J. B. Mills. While the boats are comparatively costly, running up probably to $12,000, they give far more for the money in the way of sport than the 90ft. schooners on the one hand and the one-design classes such as the 30-footers on the other.

Syce is to all practical purposes an enlarged edition of the handsome cutter Norota, which Mr. Hoyt has raced so successfully for the past two seasons—the same long, shallow hull with easily turned bilge and fair and round fore and aft lines, the deep and short fin, and the rudder hung on a scag and projecting well below it. Her dimensions are:

Over all	69ft.
L.W.L.	45ft.
Beam	12ft. 6in.
Draft	10ft. 3in.
Sail area	3,250 sq. ft.

The hull proper is beautifully modelled, like Norota and Quisetta, the form being fair and easy in all parts, and the yacht will present a very handsome appearance when afloat. The lead keel is a formidable lump of about fourteen tons weight, short, deep and thick, being 22in. through at the widest part. The bottom has been left perfectly flat and with square corners between it and the sides, which are also straight, but not quite vertical, falling in a little. The wood keel is also very short, and some very nice ship carpentry is required in building up the peculiar curves of the stem and stern from the keel to the deck. As in Norota, a double system of framing is followed, the frames in the ends are of wood, with wooden shelf, but amidships from just forward of the mast to the sternpost, they are of steel angles, very light in scantling, supplemented by a steel girder plate in place of the wooden shelf, and by gussets, knees, tie-straps, etc., with light, angle steel deck beams. The frame is strengthened everywhere by diagonal straps and similar members, under the planking and across the deck beams. Both designers and builders are well entitled to be proud of the construction, as in design and workmanship it is far in advance of anything yet seen in yachts of this size. The sternpiece is a very fine job, everything from taffrail down being carved from a solid piece of mahogany. The planking above the garboards is double, the inner skin of white cedar, ½in.; the outer of yellow pine, ⅝in., fastened to the steel frames with composition screw bolts. The low bulwark is of mahogany, with no rail or cap. The wale is worked thicker than the main planking, the diminish on the lower edge forming a cove for the gilt stripe.

The interior cuts up well for a fin-keel, with at least triple the accommodation of Niagara, for instance. The depth of hold is just sufficient to give a full 6ft. of headroom over the floor of the main saloon, in the middle of the yacht, for a length of some 10ft.; this floor being worked close down to the skin. Only a short distance below it the fin shows a thickness of but 11in., so it will be seen that there is no space for tanks, etc., below.

Forward is the pantry and a very large and well-ventilated forecastle, occupying considerably more than the forward overhang. The floor is a few inches higher than in the saloon, but there is headroom about the after end, the galley and pantry; but of course the floor rises rapidly as it goes forward. However, there will be space, air and light in plenty for the crew.

Abaft the saloon is a steerage with a large berth on the port side of the ladder and a very large toilet room on the starboard side. Still further aft is the ladies' cabin, across the ship, a very good room. This part of the vessel would be useless, owing to the quick rise of the bottom, were it not for the expedient of a small cabin trunk, which gives the necessary head room. This trunk is 4ft. long and wide, square, with a flat top, built of mahogany with windows in each of the four sides commanding a view of the deck. It promises to make a most cozy and comfortable room of the after cabin. As a matter of necessity it is, however, placed

very close to the main companion, leaving only about 15in. space by way of passage to the latter.

Abaft the trunk is a very roomy cockpit, and there is a great deal of room farther aft for a sail-locker. The rudder is of a peculiar pattern, practically unbalanced, but projecting a couple of feet below the short sternpost and scag which support it. On deck forward there is a windlass of special design, worked by cranks and with powerful gears. The deck iron-work and fittings are specially designed for the yacht. The main chain-plates are Tobin bronze straps, placed on the inside of the planking. The sails were made by Lapthorne & Ratsey. The workmanship on the yacht, both in wood and metal, deserves special mention, and the builder is entitled to every credit for the manner in which the yacht has been constructed. The new Fife-boat for Mr. Mills is now under way, the stern being framed up in the mould-loft and many of the stem, keel and other wooden members ready.

Gilbert's Bar Y. C.

INDIAN RIVER, FLA.

THE usual monthly regatta of the Gilbert's Bar Y. C. was held on Saturday, April 10, in a reefing breeze from the southwest; only two boats starting in either class.

FIRST CLASS—27FT. AND OVER	Elapsed.	Corrected.
Joker		0 47 43
Albatross	Disabled.	
SECOND CLASS—UNDER 25FT.		
Beatrice	0 43 35	0 45 56
Ilderim	0 46 14	0 46 14

Raynham.

THE second launch of the season at Morris Heights took place on April 22, the steam yacht Raynham, designed and built by the Gas Engine and Power Co. and C. L. Seabury & Co., going overboard at 2 P. M. The yacht is of wood, schooner rigged, 85ft. over all, 72ft. l.w.l., 13ft. beam and 5ft. draft. The machinery includes a Seabury triple expansion engine and watertube boiler. Mr E. S. Woodward, the owner, will use the yacht on the Hudson, his country residence being at Nyack.

Yachting Union.

OUR views on the topic have been crowded this week on to the editorial page.

YACHTING NEWS NOTES.

Uvira, cutter, purchased last fall from E. M. Lockwood by Clifford F. Brokaw, has been out all winter at Piepgrass' yard, City Island, where she has been fitted with new and longer spars and a complete suit of new canvas, giving a considerable increase of sail spread. Some alterations have also been made below; the main saloon has been shortened a foot, giving room for pantry shelves in the after end of the forecastle, and the wash basin has been removed from the port side of the steerage and replaced by a smaller one in the w. c. on the starboard side. The galley has been fitted with a new and larger stove, and a very capacious ice-chest, a total increase of weight which must offset much of the gain in sail area. The yacht will still race in the 51ft. class, receiving time from both Syce and the new Mills cutter.

On April 19 a permanent association of both yachtsmen and oarsmen was formally organized in New York, as the result of a movement that has been under way for some time. The name is the Hudson River Boating and Yachting Association, and its objects are to protect the interests of aquatic organizations occupying property on the water front of New York city. The officers are: Pres., Edwald Langerfeld, Hudson River Y. C.; Vice-Pres., C. J. Coffey, Hudson Boat Club; Secy., W. H. Brady, Bloomingdale Boat Club; Treas., E. S. Peets, Hudson River Y. C.

Nourmahal, steam yacht, arrived at New York on April 19 from a cruise in the Gulf and the West Indies.

The Bayonne Y. C. has elected the following officers: Com., William E. Elsworth; Vice-Com., Philip E. Van Buskirk; Treas., Frank H. Elsworth; Secy., Philip J. Mooney; Treas., George Elsworth.

Navigation has reopened for the season and changes have been made on many steamers in the *personnel* of the engine room. There are nearly 1,000 Roberts boilers in use in steam vessels of all kinds, including passenger and freight steamers, tugs, yachts, launches, dredges, canal boats, etc. On account of these changes some engineers will have charge of Roberts boilers for the first time, and we are requested to announce that the Roberts Safety Water Tube Boiler Co., of 39 & 41 Cortlandt street, New York city, will cheerfully send a full set of their descriptive and instruction circulars to any engineer applying for same and giving his full name and address. There will be no charge, and no stamps will be required.

Pawnee, yawl, designed by H. J. Gielow and built last summer by G. H. Byles at City Island, has just been sold to Frank V. Alexandre, a young member of the Larchmont Y. C. Mr. Alexandre is a step-son of C. W. Flint, of the Larchmont Y. C., and as a boy has done a great deal of cruising on the various yachts owned and chartered by Mr. Flint. He has just attained his majority, and signalized it by becoming a yacht owner himself. Pawnee is a deep centerboard craft of 37ft. l.w.l., and with modern overhangs, roomy below; she is similar to the other Gielow yawl, Fidelio.

Rambler, naphtha yacht, has been sold by Rear-Com. Ellis, Columbia Y. C., to J. M. Foote, of Newark, N. J., through the Gas Engine & Power Co.

The San Francisco Y. C. suffered a serious loss by fire last month, its club house at Sausalito being totally destroyed. The house was a historic feature of San Francisco yachting, well stored with models, books, pictures and records that can never be replaced. Arrangements have already been made to rebuild. The new house, designed by R. H. White, will be 75×65ft., two stories high, with a large cupola; and will contain ample accommodations for the members. Work will be commenced at once.

Canoeing.

AMERICAN CANOE ASSOCIATION, 1896-97.

Commodore, John N MacKendrick, Galt, Canada.
Sec'y-Treas., John R Blake, Galt, Canada.
Librarian, W. P. Stephens, Bayonne, N. J.

PURSERS.

Atlantic Division, H W. Fleischman, 1611 N. 21st St., Phila., Pa.
Central Division, Laurence C. Woodworth, Gouverneur, N. Y.
Eastern Division, C. J. Burrage, West Newton, Mass
Northern Division, Francis H. Macnee, Kingston, Canada.
Annual dues, $1; initiation fee, $1.

WESTERN CANOE ASSOCIATION, 1895-96.

Commodore, C. F. Pennewell, Detroit, Mich.
Vice-Commodore, Nat. H. Cook, Chicago, Ill.
Rear-Commodore, E. H. Holmes, Milwaukee, Wis.
Sec'y-Treas., W. D. Stearns, Detroit, Mich.
Executive Committee: R. M Lamp, Madison, Wis.; C. J. Steadman, Cincinnati, O.; F. W. Dickens, Milwaukee, Wis.

The Western Canoe Association.

THE following circular has just been sent to members by the secretary of the Western Canoe Association:

MILWAUKEE, Wis., April 1.—The annual meeting of the Association, which should have been held at Mullet Lake in July, 1896, was not convened for want of a quorum. The old officers, consisting of C. F. Pennewell, Com.; N. H. Cook, Vice-Com.; E. H. Holmes, Rear-Com.; W. D. Stearns, Sec'y-Treas.; R. M. Lamp, C. J. Stedman, F. W. Dickens, continued to act until March 1, 1897, when Mr. Pennewell and Mr. Stearns resigned. By resolution of the remaining members of the executive committee, N. H. Cook was appointed Com. vice Pennewell, resigned; W. H. Crawford, Vice-Com. vice Cook, advanced; F. B. Huntington, Sec'y-Treas. vice Stearns, resigned.

A special meeting of the executive committee was held pursuant to call, March 11, 1897, at the club rooms of the Mahn-a-wauk C. C., of Milwaukee. There were present W. H. Crawford, Vice-Com.; E. H. Holmes, Rear-Com.; F. B. Huntington, Sec'y-Treas; R. M. Lamp, F. W. Dickens.

It was decided at this meeting to hold a summer meet of ten days' duration some time in July and at some place to be hereafter determined by a subcommittee of three. The secretary-treasurer was instructed to omit the customary publication of the Year Book, collect dues in arrears, and advise members by circular letter of the final decision of the committee respecting camp site and arrangements. Several sites are under consideration, among which may be mentioned Lake Geneva, Wis.; Green Lake, Wis.; Pewaukee Lake, Wis.

It is desirable to gain, as far as possible, an expression as to preference of date and location from those members who will attend a meet. You are particularly requested, in remitting dues, a statement of which is inclosed, to advise the secretary of your individual and club preferences, to enable the committee to make a prompt decision.

The resignation of Vice-Com. Crawford was accepted, taking effect at termination of meeting, and E. H. Holmes advanced to the office. R. L. Merrill was then elected rear-commodore to fill the vacancy caused by Holmes's advancement. The executive committee, as at present constituted, is as follows: N. H. Cook, Com., Chicago, Ill.; E. H. Holmes, Vice-Com., Milwaukee, Wis.; R. L. Merrill, Rear-Com., Milwaukee, Wis.; F. B. Huntington, Sec'y-Treas., Milwaukee, Wis.; R. M. Lamp, Madison, Wis.; C. J. Stedman, Cincinnati, O.; F. W. Dickens, Milwaukee, Wis.

We deviate this year from the practice of former years in anticipating an attendance of one dozen instead of 100. Twelve members are pledged to attend the meet wherever it is held. (This number includes some of the officers.) We anticipate this year's meet to be a small one, yet withal an enjoyable one.

It is proposed to curtail the racing programme and eliminate all uninteresting races. To insure attendance of the regatta committee, the commodore will make his appointments at the meet.

In the course of three weeks another circular letter will be issued advising all members as to camp site and arrangements.

THE EXECUTIVE COMMITTEE.
By F. B. HUNTINGTON, Sec'y-Treas.

The latest proposal is that the Association shall accept an invitation from the Pewaukee Y. C., of Pewaukee Lake, Wis., to attend the interlake races on that lake between July 12 and 26. Pleasant as this might be, it is not canoeing, and such a meet can do nothing toward reviving the interest in the Association and canoeing. We heartily agree with the following remarks of our Western correspondent. A real camp in the woods, even with a small attendance, which is apparently all that can be expected now at any site, will be far better in every way than the attendance of a handful of canoeists at a summer resort to witness yacht races. It would seem that the "Ballast or bust" policy of some members of the Association has brought it near to the latter extremity.

Pewaukee is a summer resort lake near to Milwaukee, and it possesses advantages as such a resort, but in that regard it has many of the disadvantages and lacks many of the advantages possessed by Ballast Island as a place for a meet. It is certainly too civilized to offer attractions as the ideal spot for a canoe meet. One might go further in the way of enumerating attractions, and hold out the claims of the city of Milwaukee itself as a good place for a meet. The races might be sailed in the harbor, and still better quarters than Mr. Auer's cottages might perhaps be attainable in the large Milwaukee hotels. But for a genuine canoe meet, such as the canoemen of Milwaukee can well afford to attend, such a spot as Charlevoix, Mich., or even Mullet Lake again, would be far better. There the canoeman is away from the cities and in the woods, where he belongs. He can really camp out if he likes, and he has a chance to sail and fish and be a follower of the stream and of the woods. Such a trip is worth more than a few weeks passed at a place under the wing of a big city, whatever may be the attractions of an hour's run to copious music and an occasional theater. While it would not be fit to condemn out of hand any choice made by the Association, it seems to me that a meet at Pewaukee would mean a meet almost solely for Milwaukee. Why cannot the Mahn-a-wauks take boat some summer eve and sail across to Charlevoix, taking a deck load of canoes along and going into camp like cruisers and sailormen? Would not this be better than using the shores of any lake where the banks are dusty from many feet, and where the striped parasol of summer is at hand at every turn? Are not the pine woods better than a lawn, and are not many brook trout better than a few weary big-mouth bass? To me it seems they are, though I should seek to look pleasant if the Association really agreed upon Pewaukee as the place.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Rifle Range and Gallery.

Columbia Pistol and Rifle Club.

SAN FRANCISCO, Cal., April 11.—Notwithstanding the extreme heat to day, a goodly number of members of the Columbia Pistol and Rifle Club visited Shell Mound Range. The results of to-day's shooting were as below:

Columbia Pistol and Rifle Club, re-entry matches, open to all comers, 50yds., Columbia target, Gordon Blanding pistol medal and cash prizes, 3-shot scores: J. E. Gorman, 5, 6, 8, 9, 9; A. B. Dorell .7, F. O. Young 19.

Diamond pistol record medal and cash prizes, 10-shot scores: M. J. White 46, J. E. Gorman, 39, 42; F. O. Young 49.

Howard Carr, any revolver, medal and cash prizes, 6-shot scores: J. E. Gorman, 26, 36, 38; C. Roberts, 30, 33, 40; F. O. Young, 38, 39.

Achille Roos, .22cal. rifle, medal, ladies' trophies and cash prizes, 5-shot scores: E. Jacobson, 12, 12, 13; Miss E. Wilson, 14, 16, 18; Mrs. L. J. Crane, 11, 14, 16, 17; Mrs. O. M. Peck, 12, 18; Mrs. C. F. Waltham, 16, 17; J. H. Dow, 8, 12; A. B. Dorell; 13, 14.

Class medals, for members only, one 10-shot score, with pistol:
Champion class—J. E. Gorman 49.
First class—Capt. J. E Klein 60, F. E. Mason 61, M. J. White 68.
Second class—G M Bailey 83.
Third class—C. Roberts 80, C. F. Waltham 98, Mrs. M. J. White 99, W. J. Unfred 109, R. W. Forrest 131, Mrs. L. J. Crane 163, Mrs. Waltham 205.

Re-entry matches, open to all comers, 200yds., Columbia target, F. H. Bushnell rifle medal and cash prizes, 3-shot scores—A. H. Pape 9, 11; F. O Young 13, O. A. Bremer 21, G. Schultz 26.

William Glindeman military medal and cash prizes, 10 shots, Creedmoor count—E. Hovey 47, F O Young 46, E. Jacobsen 43.

F O. Young rifle-record medal and cash prizes, 10-shot scores—F. E. Mason 49, E. Jacobsen 69, G. H. Dow 156.

Class medals, for members only, one 10-shot score with rifle, champion class—F. E. Mason 56, F. O. Young 61, A. H. Pape 62.

First class—E. Jacobsen 49, H. Hellberg 67, C M. Daiss 77, Captain Klein 85, E B. Dorrell 89, O. A Bremer 105, G. Schultz 107.

Second class—J. E Gorman 74, G Barley 91, M J. White 114.

Third class—G. Monnell 116, C. F. Waltham 146, Mrs. White 153, Mrs. Waltham 160, Mrs Crane 163.

ROEEL.

Revolver Shooting in England.

MARCH 31 at the North London Rifle Club the following revolver scores were made:

Revolver, series 1, 20 yds., stationary target: Class 1—Carter 36, Knapp 35, Howe 34, Clemence 33. Class 2—Tilbury 39, Holmes 37, Magrath 36, Evans 36, Brading 32. Class 3—Johnstone 34, Ledger 34, Soames 33, H. Soames 33, Joyce 27, Bateman 26

Series 3, 20 yds., disappearing target: Class 1—Carter 21. Class 2—Capt. Evans 32, Holmes 30, Tilbury 30, Magrath 28, Brading 20 Class 3—Ledger 23, Soames 25, Johnstone 22.

April 7.—Series 1, stationary 20yds. target: Class 1.—C Knapp 39, Carter 36, Tilbury 35 Class 2—MacDonald 39, Capt. Evans 35, Luff 34, Brading 34, Denyer 29, Britton 25. Class 3.—Thompson 36, Shearing 36, Ledger 34, Franzman 34, Joyce 30, Robearts 27, Parkinson 25, Johnstone 24.

April 14.—Series 2, alternate hands, 20yds., stationary target: Class 1.—Tilbury 33, Carter 33, Knapp 23. Class 2.—MacDonald 39, Brading 33, Capt. Evans 32, Britton 26, Luff 26. Class 3—Johnstone 37, MacCormack 22. Series 3, 20yds., disappearing target: Class 1.—Carter 28, Tilbury 27. Class 2—Capt. Evans 27, Luff 26, Chicken 23. Class 3—Johnstone 28, Lieut. Curley 25

The South London Rifle Club opened for the season on April 1. Revolver scores as follows: 20yds., stationary target: Knapp 38, Rowell 32, Lunnon 28.

April 8.—Twenty yards, stationary target: Knapp 38, Howe 37, Rowell 36, Capt. Heath 35, Capt. Foster 35, Lieut. Varley 32. Fifty yards target: Capt. Heath 40, Knapp 29, Rowell 28.

Mr. Walker Winans has given the bronze statuette which he got first prize for at the Hobart Tasmanian Art Exhibition (as well as exhibited at the Paris Salon and London Royal Academy) as a challenge rifle competition for the championship of the South London Rifle Club. It may be remembered that Clementi-Smith won the former one last year. The statuette represents Sitting Bull in full war paint, and took a year for the donor to model.

Cincinnati Rifle Association.

CINCINNATI, Ohio, April 18.—A strong, gusty, 4 o'clock wind blew all day to-day, making it difficult to make good scores. Below are the scores made to-day by members of the Cincinnati Rifle Association at their range, Four-mile House, Reading Road.

Conditions: 200 yds., off-hand, Standard American target, 7-ring black.

Oct. 13-14.—GREENSBURG, Ind.—Shooting tournament of the Greensburg Gun Club.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

The Richmond (Va.) *Dispatch* of Sunday, April 18, gives quite an extended account of the coming Interstate Association tournament at Blandon Park, in that city. The article is graced by cuts of Elmer Shaner and Tom Keller, and also contains an interesting review of the growth of the West End Gun Club, and portraits of its president, W. A. Hammond, and its boy shooter, Wm. H. Dean, Jr. Of the latter, the *Dispatch* says: "Master Wm. Harper Deane, Jr., aged thirteen years, is considered a phenomenal shot for his age; in fact, he can hold his own in company with many older ones. Master Deane has just been presented by his father with a Lefever hammerless ejector of a high grade, which he will use at the coming tournament." Of "Tee Kay," it remarks: "It is said of Tee Kay that he can create more amusement for a crowd in ten minutes than any other man in a week. His very good nature often spoils his scores, as he is far more apt to 'jolly' than pay strict attention to breaking clay targets."

The Marlin (Texas) Gun Club intends holding a big shoot on May 25-27 next The tournament will not be open to all: manufacturers' agents and professional shooters are barred from the regular events, being allowed to shoot only for the birds. All moneys will be divided on the Rose system, and all targets will be charged for at the rate of 2½ cents each. Guns and shells should be sent to L. S. Ross, Jr., who will see that they get to the grounds. On the first and second days of the shoot the programme will be as follows: Nos. 1, 2 and 3, 15 targets, $1 50; Nos. 4 and 5, 20 targets, $2; Nos. 6, 7 and 8, 5 live birds, $2.50. Live birds will be charged for at the rate of 20 cents each. We learn from a circular sent us that the club intends to give all its guests a capital time. As an item of interest we might add that the club states that it will give away valuable prizes amounting to over $1,000. For further information address the Advertising Committee, Marlin Gun Club, P. O. Box 196, Marlin, Texas.

We received the following letter from Mr. H T. Hearsey, secretary-treasurer of the Trap-Shooters' League of Indiana, too late for insertion in last week's issue. We publish the letter, however, to show that the Indiana League is a thing of life, with a career before it: "The tournament at Peru, Ind., April 28-29, promoted by Mr. J. L. Head, has the sanction of the Trap-Shooters' League of Indiana, and will have its cordial support. A special meeting of the league will be held in Peru on the evening of April 28, when a vote will be taken to determine the place of holding the first league tournament. It is desired that such clubs as have not joined, will do so at once; certainly not later than the date of the Peru meeting. In the meantime clubs wishing the honor of having the tournament on their grounds may canvass among their friends for votes."

We have received several letters during the past week from gun clubs in the State of New Jersey, all of them expressing strongly their approval of the efforts now made to start a State Sportsmen's Association. New Jersey should have an annual tournament second to none in the country. She has, outside of her own resident shooters, a large number of trap-shooters in Pennsylvania, New York and New England to draw upon. In her own State she has many men who are exceedingly expert with the shotgun, and there is no reason on earth why the State Sportsmen's Association of New Jersey should not be an active organization. The meeting called for May 19 will tell the tale.

Saturday, May 1, is the regular monthly club shoot of the Boiling Springs Gun Club, of Rutherford, N. J. This shoot marks the beginning of a new prize series, and is sure to be largely attended. It seems a good idea to divide the season into two halves, as this plan gives a man who has had a run of tough luck in one half a chance to redeem himself in the second half. The club also announces an "open-to-all no-handicap" 100-target race, $5 entrance, targets extra, for May 18. This should prove an interesting race as there are quite a number of shots in this vicinity who are close enough together to be called equal.

On Wednesday, May 26, the Brooklyn Gun Club will hold a shoot at its grounds, Liberty avenue and Enfield street, Brooklyn (terminus of the Kings County Elevated). The main event will be a 50-target handicap for a gold watch, entrance $2.50, including targets; all surplus added to the purse. The Brooklyn's grounds are easy of access for residents in either Brooklyn or New York, and visitors, who are always welcome, will find all conveniences in the way of club-house, plenty of shooting, etc, whenever they pay a visit to this new club.

A good deal has been said of late in regard to a trophy for the Grand American handicap winner; and we have received queries as to whether the Interstate Association has ever donated a trophy to the winner of this event. We can best reply to such queries in these columns by stating that the Association has never given any trophy at all. At the fourth annual Grand American Handicap, held last year at Elkwood Park, Messrs Phil Daly, Sr. and Jr., did donate a cup which was won by O. R Dickey, of Boston, Mass.

So Col. A. G. Courtney will, on May 1, sever his connection with the Lefever Arms Co., of Syracuse, and enroll himself under the banner of the Remington Arms Co. Frank Parmelee is doing his best to boom the Remington hammerless ejector, and Parmelee's best is by no means bad. With Courtney and Parmelee, men of solid weight both of them, the Remington should be found somewhere near the top in most of the tournaments of 1897.

A. H. Chapman of the St. Paul Railroad has donated an elegant silver cup, with gold trimmings, to be competed for by the members of the National Gun Club of Milwaukee, Wis. On the bell-shaped pedestal a field scene is engraved, representing trap-shooting at live birds. On the exterior of the bowl there is a laurel wreath supporting two guns. The interior of the bowl is gold-lined and the exterior is inlaid with gold.

The Portland (Me.) Gun Club held its annual spring tournament on April 14. The weather was rather unfavorable for good scores, but Dickey managed to pound out a total of 204 out of 225 shot at, winning first average with 90.6 per cent. The club will hold another tournament on May 30, when a magautrap will be used for throwing targets. Added money will also be another attraction at this shoot.

We wish somebody would give us a good receipt for preventing "flinching" or "fudging." We get lots of letters on this subject asking what should be done to stop it. In many cases the victims seem to have tried about every remedy possible, and still to be as bad as ever. Who can give us "a sure cure"?

The Indiana Trap-Shooters' League have granted sanction to the Greensburg Gun Club, of Greensburg, Ind., to hold a shooting tournament on their club grounds, Oct. 13 and 14. For further information regarding this tournament address Mr. Web Woodfill, secretary Greensburg Gun Club, Greensburg, Ind.

The programme of the twentieth annual tournament of the Missouri State Game and Fish Protective Association is ready for distribution. The book (for it *is* a book of fifty-six pages) will be made the subject of a more extended notice in our next issue. The dates of the tournament are May 17-22.

On April 18 the following scores were made at Washington Park, Kansas City, Mo., in a 25 live-bird race: Grimm, Gottlieb and Miles, 25; Gilbert 24 (lost his eighth dead out of bounds); Budd and Elliott, 23; Sergeant and McCurdy, —.

The Wilmar Gun Club, of Wilmar, Minn., announces that it will hold a tournament on May 17. The secretary of the club is D N. Tallman, who will gladly answer any questions in regard to this tournament.

Every member of the club will be allowed to shoot at ten birds six times during the year, in competition for the cup, and the marksman who kills the largest number of birds will be awarded the trophy.

The Magautrap Gun Club, of Findlay, O., will hold its first annual tournament May 25-27. Mr. Charles E. Steen, of Findlay, is secretary of the club.

APRIL 26. EDWARD BANKS.

ON LONG ISLAND.

EMERALD GUN CLUB.

April 20.—The regular monthly shoot of the Emerald Gun Club was held this afternoon, 28 members taking part in the club shoot. Gus Greiff (29) and Tom Short (28) were the only men to go straight. Scores were:

Class A, 29yds., 7 points:

G Greiff	2121112211—10	L Byrd	2210022101— 7
E J Clark	2201221102— 8		

Class A, 28yds., 6½ points:

T Short	2221111212—10	W Sands	2201?00121— 7
Dr G V Hudson	1121011211— 9	E A Vroome	2221002011— 7
J S S Remsen	21221•1121— 9	J H Moore	2001200121— 6

R Regan	0101220012— 6	E Weiss	2100010100— 4

Class B, 25yds, 5 points:

T F Cody	2101000000— 3	H F Burns	2010000000— 2
G K Breit	0100000100— 2		

NEW YORK GERMAN GUN CLUB.

April 21.—This afternoon the New York German Gun Club met at Dexter Park for its regular monthly live-bird shoot. There was a good attendance of members. The birds furnished were good, and as a result not one of the twenty three members could score more than 9 out of 10. On the shoot-off for the badge Wellbrock won in the third round. Scores:

Twenty-eight yards, 7 points:

Eugene Doenick	2111101112— 9	Dr. G. V. Hudson	1010112111— 8
John Wellbrock	1112•1211— 9		

Six and a half points:

John Schlicht	22222•2010— 7		

Six points:

Fred Sauter	1222220221— 9	August Schmitt	1101201210— 7
H. Thomford	2201221122— 9	Henry Leopold	2202102222— 7
Henry Nobel	2021121112— 9	Bernard Koenig	1011000210— 5
J. P. Daunefelser	0121222012— 8	George Braun	1001110000— 4

Five and one-half points:

August Lucas	0012210122—7	Edward Rudle	2110102120—7
R R Debacher	2010221202—7	Fred Kronsberg	2101010002—5

Five points:

Ph Morch	0101102002—5	Michael Bondon	0001200011—4
H Meisenholder	2100020110—5	J Boesenerker	0020011001—4
Henry Meyer	1200010020—4		

Four and one-half points:

Henry Oehl	0021012000—4	Jacob Bissinger	0000000000—0

Shoot-off for badge, miss-and-out: John Wellbrock 3, H. Thomford 2, Henry Nobel 1, Fred Sauter 0, Eugene Doeinck 0.

Sweepstake, 5 birds: Dr. Hudson 5, F. Sauter 4, H. Thomford 4, H. Nobel 4, J. Wellbrock 4, August Schmitt 3, H. Meyer 1.

FALCON GUN CLUB.

April 23.—Three members of the Falcon Gun Club met this afternoon at Dexter Park for the club's monthly live bird shoot. The club event is at 10 live birds, second barrel kills counting ½ a point. Scores were:

		Points.
J N Meyer (26)	2111?11112—10	—8½
J Moller (25)	1101221211— 9	—7½
H Van Staden (25)	0101110012— 6	—5½

After the live-bird shoot, Lewis and Moller shot a match at 20 targets, Lewis winning by 18 to 17.

NEW UTRECHT GUN CLUB.

April 24.—The Spring Handicap shoot of the New Utrecht Gun Club was shot to-day on the Club's grounds at Woodlawn. Lair and Remsen tied for the cup with straight scores, Lair winning in the shoot-off by killing 3 birds to his opponent's 2. Conny Fergueson and Eddie Lohman, the Club's boy-shots, both did well. The scores:

Montpelier Gun Club.

MONTPELIER, Vt., April 24.—The Montpelier Gun Club held their opening shoot for the season to-day. Although the hard rain in the hard rain in the forenoon kept many of our shooters at home, the few who did show up kept the traps warm, with results as enclosed. We were pleased to welcome our friends, Messrs. Houghton and W. H. and B. A. Eastman, of Barre, Vt., who shot with us a part of the events.

The regular shoot days of the Club this season will be Fridays, shooting to commence at 1:30 P. M. Shooting friends who may be in our vicinity will always be welcome. Scores:

Cook County Trap-Shooters' League.

CHICAGO, Ill, April 23.—*Editor Forest and Stream:* A meeting of directors of the Cook County Trap-Shooters' League was held here last evening to consider general business and arrange for the printing of hand book.

The clubs represented by delegates were Calumet Heights, Eureka, Garden City, Cicero, Garfield and Douglas. President Adams presided. Letters from donators were read and accepted, fully as many donations are on hand this season as last, and the season is expected to open with many more shoots of enthusiasm than last year.

The league passed a rule to employ an official scorer for each league contest, and each club is to manage contests on their grounds

The drawing for time and contests followed. Cicero Gun Club opens the season on their grounds, Madison street and Desplaines River, on May 15, followed by Calumet Heights in June, Douglas in July, Garfield in August, Garden City Sept. 4, Eureka in October.

The president, Mr. Adams, and the secretary, Mr. Fox, were appointed a committee to have hand book and programme published.

The question of classification was discussed without results at this time, and went over to some future meeting. PATTY.

Sandwich Gun Club.

SANDWICH, Mass., April 20.—The opening shoot of the Sandwich Gun Club was held April 19. A terrific wind made the shooting very hard, as will be seen by the following score. Twenty-five blue-rocks per man, unknown angles:

E. J. Beck	1101100010110010010000111—12
G. H. Haines	0001100100110001100001111—11

GEO. H. HAINES.

Wheeler—Cooper.

A VERY interesting live-bird match took place on the grounds of the Bison Gun Club, Buffalo, N. Y, on April 15. The contestants were F. Wheeler and Geo, Cooper, both members of the Bison Gun Club. The conditions were 50 live birds per man for $50 a side, 30yds. rise, 50yds. boundary. The race was very close up to the 25th round, when each man had scored 23. Wheeler missed but one bird in the last 25, going out with 47. Cooper missed four in the last half, going out with 44.

Wheeler	2222?2222222200222222?2222—23

DU PONT.

Fort Wayne Gun Club.

FORT WAYNE, Ind., April 23.—The Fort Wayne Gun Club was organized here April 22 with a charter membership of twenty. The following officers were elected to serve for the ensuing year: President, Lewis Melsheimer; Vice-President, Chas. Siemon; Secretary, Jos. A. Biemer; Treasurer, John Trautman; Captain, Max Witzingreuter. The election of directors was postponed until the next regular meeting.

It is the intention of the club to make application for membership in the Indiana League of Trap-Shooters. The members are all enthusiastic and the club has a bright future. JOS. A. BIEMER.

The Nebraska State Tournament.

First Day, Wednesday, April 21.

OWING to the rain yesterday, no effort was made to shoot any of the programme events, but it was decided to continue the tournament on Saturday, when the programme of Tuesday will be shot.

The entries at no time ran very high, though some very fine shooting was done. This seemed to be Gilbert's day, as he scored no less than 4 straights in the programme events, and made one run of 97 without a skip. He won first alone in the first event, and with such great shooting it is but natural that he made the high average, leading his nearest competitor, Heikes, 5 birds. Barre also shot excellent, that 50 straight in handicap race for the gun was a most creditable performance, as at no time did the wind blow harder or more spiteful. Fortunately he won the gun without a tie, as he deserved to do. While Hamilton, who scored 39 and had 10 added to his score, took first money, 40 per cent. of the purse, $32.40, he being the only 49. Green was lucky enough to win first alone in event 2, while in this same event Linderman was the only one to score 19 and got second without a tie. Sergeant, as will be seen by the table below, was badly off. Nevertheless he had his usual luck with him. When he made that straight no one else could do the same thing and he scooped all of first money. Only once did he score 15, and only once did this get in for money, but, of course, he got it in the proper place.

The 50-bird handicap was the fourth event on the programme, but we have placed it last in our table, and the figures that appear in the last column are the number of birds that were added to each one score. The scratch men of course had nothing added. Fifty-four was the largest number of entries in any one event, and in all sixty-one shooters took part to-day.

The weather was very blustery, which made the shoting somedifficult at times.

Savage	..	13	..	..	..	..	..	..	30	10	70	43	61.4

In addition to the above the following also participated, but only shot in one event or failed to make an average of 60 per cent.: Jim Parker, Troyer, Ray, Savage, Evans, Wyckoff, M. T Miller, Alvord, Krug, Beohner, Harley, Mann, Glade, Brooks and F. E. Mockett.

Second Day, Thursday, April 22.

This was a great day for scores; the wind that was blowing was scarcely strong enough to have any effect on the flight of the targets. The way some of the shooters ate up the targets was a caution. Long runs were numerous, and straight scores were common.

The 50-bird handicap for the E. C. cup was productive of a shooting match, no less than 8 having a total of 50 to their credit. Of these Heikes and Gilbert, two scratch men, broke 50 straight, as did also Running, who had a handicap of 3. Jim Den broke 47 and had a handicap of 4. Dr. Hungate scored 46 and had 4 added to his total. Ackerman and Woods broke 45; the former had 5 added and the latter 6. Harley broke 41, and with 12 added had 3 to spare. The tie was shot off under the original conditions, the scratch men realizing that they had a hard game before them, as only by duplicating their previous score could they have any hope to win.

Harley shot at 40, by which time he had lost 15, and his chances for a straight score. Hungate had no chance to win after the 27th round, as he had then lost 7. Ackerman withdrew in the 36th round, when he had missed 6. Gilbert managed to add 19 more straight to his former run, at which juncture he lost one, but pluckily shot his score out and finished 48 in this string, and 98 out of the 100. All of which netted him nothing. Running only scored 21 out of his string of 25 and withdrew. Heikes did exactly what Gilbert did, but quit when he missed his first bird. Woods felt that the game was too hard for him, and did not shoot off the tie. Den, with a margin of 4, ran his first 42 straight before he let one get away; he finished with 47, and had one to the good.

The averages for the day show Heikes in the van, with Parmelee and Gilbert tied for second position.

Then comes Running just one bird behind; he is in turn followed by Budd, who has scored one bird less; Parker has two birds less to his credit than Budd; Jim Elliott also shot well, but did not shoot in the 50-bird event. He leads those who did not shoot the entire programme.

The figure in the last column indicates the number of birds that each had added in the handicap.

Fifty-nine names appear on the table below, but sixty-two shooters participated. The following only shot in one event or failed to make an average of 60 per cent.: Horley, Brooks, Mann, Glade, Kenyon, Alexander, Englehaupt, Eaton, Boehner, Badhe, Malone and Erb.

Events:	1	2	3	4	5	6	7	8	9	10	Handicap.	Shot at.	Broke.	Av.

New Jersey State Sportsman's Association.

IN our last issue we gave notice of an attempt that will be made to reorganize the State Sportsmen's Association of New Jersey, an association which has been practically dead since September, 1889, a matter of close on to eight years. We published in full the call for a meeting on May 19 next, which has been mailed to forty-one gun clubs in the State of New Jersey: and we spoke favorably of the scheme for reorganization, urging, however, as an alternative that in case the old association can not be reorganized a new one be started at once.

From all sides have come letters of encouragement to the committee appointed by the Boiling Springs Gun Club to call the meeting. It would be a good idea to state here that in appointing this committee the Boiling Springs Gun Club had no other motive than the organization of a body of trap-shooters of the State who would be a factor when it came to regulating the game-laws of the State, and who would also meet together annually at a trap-shooting tournament. The subject had recently often been mooted, but nobody and no club seemed inclined to take the initiative.

It seems, however, that our city cotemporary does not approve of the methods used to galvanize life into a body that has been dead for such a long time; for it concludes a long article on the same topic, as follows: "According to my idea the proper way to infuse life into the New Jersey State Sportsmen's Association is for the president to call a meeting of the clubs belonging to the old association and to extend invitations to other clubs not now members; to have all the old officers resign and elect new ones in their places. Naturally the association cannot be reorganized from the outside. It must be done by the clubs which are now members of the association. I do not think any of the present officers will stand in the way of reorganization. * * * In conclusion I would say that I shall ask that President Heritage call a meeting at an early date, at which meeting can be discussed which is the better plan for the association, to go into voluntary liquidation and then organize a new State organization, or to build on the foundations of the old concern."

The above was written by the recording secretary of the old Association. This sudden determination to ask President Heritage to "call a meeting at an early date" is rather amusing. What can he expect or hope for from a meeting called by President Heritage, when the other meetings called by that popular official in 1890 and 1893 accomplished nothing? Here are the recording secretary's own words in regard to those meetings: "The last business meeting was held at 842 Broad street on Sept. 23, 1889. The election of officers was held at that meeting, and the result was the selection of Al. Heritage, of Jersey City, as President; Seymour G. Smith, of Plainfield, First Vice-President; Frank C. Hyer, of Colt's Neck, Second Vice-President; Jacob Pentz, Recording Secretary; W. R. Hobart, of Newark, Corresponding Secretary; W. Fred. Quimby, of Newark, Treasurer. Since that date another period of listlessness has followed. The president issued calls for meetings to be held Sept. 27, 1890, at Newark; Oct. 3, same year, at Dunellen; Oct. 31, the same year again, at Newark, and Aug. 16, 1893. At no one of these meetings was a quorum present. Since then matters have simply drifted along."

If there was no quorum at either of the above meetings, what has happened recently to make the writer of the above believe that a call from President Heritage would produce a quorum in this year of grace, 1897? Can it be the movement referred to in our issue of last week?

Take his own account of the career of the old association from 1884 to date: "After the meeting of 1884 came five years of oblivion. In April of that year a special meeting was called by Dr. W. N. Pindell. Many of the old members had dropped out of the organization, but several new ones came in. The most prominent of these were the Middlesex Gun Club, of Plainfield; the New York Suburban Shooting Association, of Claremont, and the Mercer Gun Club, of Trenton. In addition to these three the only clubs in good standing at that date were the Jersey City Heights Gun Club, the Midway Gun Club, the South Side, the Forester, the Newark Rod and Gun Club, and the Essex Gun Club. Two other clubs became members that year: the Bergen Gun Club and the Riverside, of Red Bank."

A roll call of the above list of clubs would show the following state of affairs: Alive—South Side Gun Club, Forester Gun Club, Newark Rod and Gun Club, and Riverside Gun Club, of Red Bank. Dead—Middlesex Gun Club, New York Suburban Shooting Association, of Claremont; Jersey City Heights Gun Club, Midway Gun Club, Essex Gun Club, and Bergen Gun Club. About the Mercer Gun Club, of Trenton, we are uncertain at this writing. Thus out of the eleven members in good standing at the meeting of 1889, six are surely dead, one doubtful, and four alive. Of the four mentioned, the South Side Gun Club has notified the committee that it will be represented by delegates; there is little doubt about the action of the Forester Gun Club, while W. Hollis Green, secretary of the Newark Gun Club, has taken enough enterest to write to the committee to ask for information in regard to the meeting, so that he could lay it before his club at its next meeting. (Mr. Green's address being unknown to the committe, the call had been mailed a few days previous to his letter to Mr. John Erb, with a request that he bring it before the club.)

In recounting the history of the old association, one must not overlook the fact that the last shoot of the association was held in September, 1884, nearly thirteen years ago, when target shooting was in its infancy. This meeting was held on the grounds of the Jersey City Heights Gun Club, at Marion, now occupied by the Endeavor Gun Club, of Jersey City. The files of FOREST AND STREAM show that the shoot was a success. The live-bird trophies were won as follows: Individual championship of the State: W. Fred Quimby, with 15 straight. The silver cup for the State team championship was won by the Jersey City Heights Club, after a tie with the Newark Gun Club. The shoot was at 10 live birds per man, 3 men to a team. The teams and scores were: Jersey City Heights Gun Club: Captain Jones 10, W. Sigler 9, W. F. Quimby 9, total 28. Newark Gun Club: Sam Castle 10, C. M. Hedden 10, Frank Class 8, total 28. The tie was shot off the next day at 3 birds per man, the Jersey City Heights team winning with 9 to 8, Hedden being the unlucky man to lose 1 of his 3 birds. This cup, by the way, is still in the possession of Al Heritage, if we mistake not. We recall that as recently as last fall Mr. Heritage informed us to that effect and said that it was at the services of the association whenever called for. We stated last week that Fred Quimby was willing to hand over his trophy in the same way, and since our issue of last week made its appearance, Mr. Quimby has spoken very strongly to us in favor of the reorganization of the State Association or the formation of a new one.

Briefly, therefore, the record of the old Association may be stated as follows: Last tournament, September, 1884; last business meeting, Sept. 23, 1889. Calls for meetings issued, but no quorum present, on the following dates: Sept. 27, Oct. 3, Oct 31, 1890; and Aug. 16, 1893.

If such be the record of the Association (and we have the recording secretary's own words for it), it would seem like a waste of time to adopt that official's idea: "According to my idea, the proper way to infuse life into the New Jersey State Sportsmen's Association is for the president to call a meeting of the clubs belonging to the old association, and to extend invitations to other clubs not now members; to have all the old officers resign, and elect new ones in their places." Ordinarily, there is no question but what the above would be the "proper way;" under the existing circumstances we think that the "proper way" holds out little, if any, hope of accomplishing the object for which the committee was appointed. The most expeditious way of organizing a State association is now the "proper way"; and that "proper way" has been adopted by the committee.

Returning once more to the clubs in good standing in the Association in 1889. Compare that list of eleven clubs and its present condition as to clubs dead or alive, with the list of forty one clubs now pursuing the sport of trap-shooting in the State of New Jersey, to which calls for the meeting on May 19 next have been mailed.

In conclusion we would say, the committee, working for the best interests of the sport of trap-shooting in the State of New Jersey, and to do away with any idea of there being anything personal in this movement, has issued a cordial invitation to the officers of the Association, who were elected in 1889, to be present at the meeting on May 19 next, and to help to consolidate the clubs of the State in a State Sportsman's Association that shall be a credit to New Jersey and her trap-shooters.

The date and hour of the meeting is May 19, 2 P. M. The place is Room 1009, No. 377–379 Broadway, New York city, the home of the Sportsmen's Association, which Association has generously loaned its rooms for the occasion.

The attraction at Elkwood Park next Saturday, May 1, will be the Floral Handicap, 15 birds, $20 enttance, birds included, handicaps 25 to 33yds; Rose system. The handicap will be started at 1 P. M.

IN NEW JERSEY.

NORTH HUDSON ROD AND GUN CLUB.

April 19—Below are the scores made to-day by members of the North Hudson Rod and Gun Club at the regular monthly club shoot held on the club's grounds at Secaucus:

No. 1, 25 targets, known angles:

W Casper	1101111111111011101111110—21
H Harms	0011111111100110111111110—19

No. 2, same: G. Engelbrecht 22, H. Harms 21, Heflich 16, Casper 15, Thoront 10, J. Schmitt 9, Schillinger 6, Strobert 4, Poeschel 3

No. 3, 15 targets, unknown angles: Outwater 11, G. Schneider 9, Harms 8, Heflich 6, Thoront 6, Poeschel 4, Schillinger 3, Aschbach 3, Strobert 2.

L. F. SCHILLINGER, Secy.

SHOOTING AT SINGAC.

April 19.—The shooting opened this afternon with an event at 7 birds, $5, with 7 entries. Just as the shooters were going to the score a very heavy wind and a little rain came on. The rain lasted about five minutes, but the wind kept up all the afternoon, blowing almost a gale and directly toward the traps, making the birds extra fast and drivers. There were only about half a dozen incomers all afternoon. Bunn furnished an excellent lot of birds for the shoot as the scores will show, but the wind had a great deal to do with the ciphers in the scores. If the wind got under a bird while it was in the air, it was a question how far it would be carried out of bounds.

Frank Class, James Timmons, Hathaway and another gentleman came from Morristown; Capt. Money and Noel Money drove over from Oakland; Colin R. Wise came from Passaic, N. J., and M. Herrington from New York; Hopper, Christie, Morgan and Worth came from Paterson. There was a large crowd present, it being a holiday. Everything went along smoothly. Bunn has got the regulation wire screen around his ground now; it is a great improvement and saved many a bird for the shooters. Now he wants to get a good dog and then he will have grounds equal to any outside of Daly's.

DUTCHER.

ENDEAVOR GUN CLUB.

April 22.—The shoot this afternoon at the Endeavor Gun Club's grounds was well attended. About 2,000 targets were thrown in the 14 events decided. Van Dyke shot a great gait, losing only 15 out of 175 shot at; and the Marion grounds are not easy ones by any means. Scores were:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14

E. R. EMERY.

Programme for the Savannah Shoot.

AFTER the tournament at Richmond, Va., the Interstate Association will move to Savannah, Ga., where, under the auspices of the Forest City Gun Club, it will give its next tournament, May 19–20.

The Forest City Gun Club adds $200 to the purses, at the rate of $10 to each purse. There are ten events each day: six 15-target events, $1.50 entrance; four 20 target events, $2 entrance. All events will be at unknown angles, and the price of targets will be included as usual in the entrance fee. The Rose system of dividing purses will be adopted.

The headquarters for shooters will be the Pulaski House, where a special rate of $2 a day has been obtained for shooters. Guns and shells should be forwarded to John Rocker & Bro, corner West Broad and Jones streets, who will take care of same and deliver them at the grounds.

The dates on which the tournament will be held are the same as those selected by the Grand Lodge K. of P., for the holding of its convention in Savannah, and for which reduced rates have been secured from all railroads in the Southern States Passenger Association. This information is given for the benefit of shooters who may be in a position to take advantage of the reduced rates.

Further information relative to this tournament will be cheerfully furnished by Henry B. Lemcke, secretary, Forest City Gun Club, Savannah, Ga.

Miss-and-Outs at Baltimore.

BALTIMORE, Md., April 17.—Although the Interstate Association tournament closed yesterday, several shooters stayed over and enjoyed a full day's sport at $2 miss-and-outs, with the results given below:

New Haven Gun Club.

NEW HAVEN, Conn., April 14.—The regular monthly shoot of this club was held to-day. About twenty members were on hand to take part in the different events.

The day was pleasant, with but very little wind. Still, for some unaccountable reason, the scores ran rather low, particularly in the handicap at 30 targets. In this race Whitney won first place by breaking 25, and had his choice of three merchandise prizes. He selected a fancy nickel-plated thermometer. Kelley and Gould tied for second place, and in the shoot-off Kelley won, taking a willow fishing basket. The third prize was a nickel plated fishing reel, which was also tied for by Sherman and Cowee, and was finally won by the latter.

The team race resulted in a tie, which was shot off at 5 birds per man. Sherman's team developed quite a streak and finally won by 3 birds. But the event which excited the most interest was for a fancy keg of W-A Smokeless powder, kindly presented by the Laflin & Rand Powder Co. This was divided into two parts, making the keg first prize and the powder second. Mr. C. B. Bristol did the handicapping in this event to the entire satisfaction of all the shooters. As will be seen by the scores, there was quite a close contest, Whitney finally winning the keg and Potter the powder.

A few extra events were shot, in which Stevens distinguished himself by breaking 5 pairs and 10 reversed angles straight. Following are the scores:

Handicap race, 30 targets, 15 known and 15 unknown angles; handicap of misses as breaks:

Whitney (J)	111111011001111111111101011111	25+0	25
Kelley (3)	01100101100101111111111111001	21+3	24

Ties on 15 shot off miss-and-out as follows: Whitney 5, Stevens 4, Robertson 2, Gould 0.

Ties on 14 also shot off in the same way, the shoot-off resulting thus: Potter 10, Reggiori 9, Bassett 8.

G. W. HAZEL, Sec'y.

Boston Gun Club.

BOSTON, April 14.—The Boston Gun Club, after a cessation of practice for two weeks on account of the death of Mr. David Kirkwood, its secretary-treasurer for many years, opened again to-day with a finely attended shoot at Wellington. The bright April day doubtless encouraged a number to shake off business anxieties and cares for an hour or two in quest of health and enjoyment, knowing well that change of scene, such as is afforded at an afternoon trap shoot, proves of inestimable benefit in the long run to the closely confined individual constantly nerved up to the demands of city routine. In the different events, where the desire to down an asphalt is uttermost for the time being, was found an efficacious remedy for the worry and ills of previous weeks, and with no sweep element to detract from success or failure, all was pleasant as it should be. There is always one exception to prove the rule, and ours to day was the fact that one was absent, and not just for to-day but forever, that not once again would Kirkwood handle a gun among his trap shooting friends of many years' standing. It will be a long while, in their opinion, before the niche left vacant by his decease will be as ably filled. Scores below

Garden City, of Chicago.

CHICAGO, Ill., April 19.—Garden City Gun Club, of Chicago, has out its programme of the season's shooting contests, which shows an appropriate lot of prizes in each class, A, B, C and D. There will be shooting every Saturday, beginning April 24 and ending Sept. 11, at the grounds at the terminus of the Metropolitan L., west side. The grand season prize is a fine gold watch, value $60, which will be competed for under the following conditions:

To members of any club in Cook county, 25 targets, known traps, unknown angles, American Association rules, entrance 50 cents, half of which goes to the treasury of the club, and half as a sweepstakes each Saturday, divided according to number of entries. Shooter making best five scores in the season takes the watch. Thirteen to 18yds. rise, according to ability.

Club Shoots and Handicaps.

LAST week we received a letter asking us the following question: "Can a shooter in a handicap race, where extra targets to shoot at are allowed, make more than a highest possible? In other words, in a club shoot at 25 targets, with an allowance of extra targets to the weaker shots, can a man score more than 25 and beat a scratch man who has broken every target he shot at?"

Of course we answered "No," basing our reply on the commonsense view of the matter that no man should be asked to do what is impossible. Simple as the matter seems to be, it is a fact that we have had to answer many letters asking almost precisely the same question.

This matter of club prize shoots is an interesting one, and it seems to us that a brief description of some of the systems in vogue in the vicinity of New York may be of use to the officials of newly-organized gun clubs who want to adopt something of the kind, but who don't know which is the best system to adopt. No doubt several of our readers will have pet schemes of their own, and we should be glad to hear from them on this point. Mr. Roger Van Gilder, the secretary of the Knoxville Gun Club, recently gave a very exhaustive review of his club's methods of "certificate shoots." The idea works well at Knoxville, and from the results obtained there, it would be worth trying elsewhere.

The Climax Gun Glub, of Plainfield, N. J, has a capital plan for its monthly prize shoot: At the commencement of each year the members are handicapped according to their showing in the previous year. The club shoot is at 25 targets, unknown angles, with an allowance of extra targets for the weaker shots to fire at. No man can score more than 25, no matter how many he breaks. A man who breaks 25 receives 6 points to his credit in the race for the yearly prizes; 24s get 5 points; 23s get 4; 22s get 3; 21s get 2, and 20s get 1 point each. Scores below 20 do not get any points. At the end of the year the totals are counted up, and the man with the largest total takes first prize; the next highest total takes second prize, and so on. This system works well, and seems to us to be one of the best in use around New York.

Another system that is much used around New York is that where a man is handicapped at so many points, receiving to his credit account for the yearly prizes all points scored above his handicap. This system is more generally used in live-bird club shoots, but is just as applicable to target shoots. It works well, and keeps up the interest of the members of the clubs that use it almost up to the last shoot.

The Boiling Springs Club, of Rutherford, N. J., has another system: It divides the year into two halves and gives a cup to the winner of each half-yearly prize series. The club shoot is at 50 targets, half known and half unknown angles; handicap allowances of extra targets to shoot at. For this shoot it charges $1 for the 50 targets. Out of this $1 per man it pays for the targets and deducts a certain sum to go to form a fund to purchase a cup and to pay out about $100 among those shooters who have attended four out of the six shoots. The cup goes to the man who wins it the greatest number of times, but the money is divided proportionately among those shooters who have the highest totals for the four best shoots. This plan must work well, because the monthly shoots of this club are always well attended.

Other clubs put up prizes for the different classes (the shooters being classified), and the man in each class who leads that class in the club shoots the greatest number of times during the year becomes the winner of the prize in his class. This system has its drawbacks, as a prize is apt to be "cinched" in a certain class rather early in the game, and thus all competition in that particular class is killed off and all interest dies. This is fatal to the success of a shoot, and a falling off in the attendance is only a natural consequence.

The above are a few of the systems which we recall at this moment. Who can give us some more?

Portland Gun Club.

PORTLAND, Me., April 14.—In spite of the rain and strong wind that prevailed to-day, 20 shooters put in an appearance at the grounds of the Portland Gun Club, and spent a pleasant day, notwithstanding the unpleasant weather conditions.

Among the shooters from out of town were: O. R. Dickey, E. B. Wadsworth and F. H. Rounds, Boston, Mass.; George E. Thompson, Bath; H. G. Trundy, U. S. Life-Saving Station, Cape Elizabeth, and F. L. Beane of Lewiston.

About noon the weather cleared, but a strong wind still blew and good scores were hard to make, yet some were registered now and then. In event No. 6 one squad averaged over 92 per cent. Everything ran smoothly under the management of H. A. Chisholm, and the programme was finished early in the afternoon; several extras were also shot. Dickey won first average with 90.6 per cent.

To-day's score is given below in tabulated form:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14

Trap at Buffalo.

AUDUBON GUN CLUB.

BUFFALO, N. Y., April 17.—The attendance at the regular weekly shoot of the Audubon Gun Club, held to-day, was quite large, 33 members taking part in the events. No. 3 was the badge shoot. In this event E. W. Smith and C. S. Burkhardt tied for the Class A badge; on the shoot-off Smith won. P. G. Myers won in Class B, and Zoeller and Hankins tied in Class C. Scores were as below, No. 6 being at 5 pairs:

Events:	1	2	3	4	5	6

G. H. L.

Bergen County Gun Club.

THE Bergen County Gun Club, of Hackensack, N. J., will celebrate its first anniversary by holding a two-days' shoot at targets on June 2-3. The programme for the two days will be as follows:

June 2.—The fourth shoot for the Recreation cup will be held on this day. The cup represents the individual amateur championship of New Jersey gun clubs, and is open for competition to all amateur members of recognized gun clubs of the State. The conditions of the race are: 100 targets, 50 at known angles and 50 at unknown angles, $2 entrance to cover the cost of the targets. The cup to the winner, $5 to the second high gun, and $2 to the third high gun. Optional sweepstakes on each 25 targets. Entries close before the completion of the first string of 25 targets. The shoot for the cup will commence at 1 P. M. sharp.

Sweepstake shooting of the regulation "Bergen County order" will be started both before and after the main event, traps being ready for practice at 10:30, with nothing to stop us until the sun goes down.

June 3.—A programme of sweepstake events will be arranged for this day, the events ranging from 10 to 25 targets, with entrance fees at popular prices. The Rose system will be used in dividing purses. Moneys will be graduated as follows: 1 to 4 entries, 1 money; 5 to 8 entries, 2 moneys; 9 to 12 entries, 3 moneys; over 12 entries, 4 moneys. Shooting commences at 10 A. M.

The main feature on the programme will be a 100-target race, handicap allowance of extra targets to shoot at, unknown angles, $5 entrance, targets included. The purse in this event will be divided under the Rose system, the number of moneys being governed by the number of entries. The winner of this event will be presented with a handsome cup by the Bergen County Gun Club. Entries for the cup event will close at the end of the first 25 targets. The event will be started at 2 P. M. sharp without fail.

Fifteen dollars will be given as average money and will be divided equally between the three high guns among those who shall have shot in all programme events decided between the hours of 12 noon and 5 P. M., exclusive of the handicap event.

Answers to Correspondents.

No notice taken of anonymous communications

A. W. R., Vermont.—Boats for bass and pickerel fishing may be painted lead color, drab or green; anything but red or black.

W. P.—Kindly tell me in your correspondence column how to poison a lot of carp which are in a pond here which contains no other fish. We want to kill them off and stock the pond with black bass. Also let me know how soon after the poisoning it will be safe to do the stocking. Ans Lime will do it if the water is small enough, or dynamite, which will kill everything else too. If the pond can be drained that may be your best expedient.

PUBLISHERS' DEPARTMENT.

Cut it Short.

If you've got a thought that's happy
Boil it down;
Make it short and crisp and snappy—
Boil it down.
When your brain its coin has minted,
Down the page your pen has printed,
If you want your effort printed,
Boil it down.

Take out every surplus letter—
Boil it down;
Fewer syllables the better—
Boil it down.
Make your meaning plain—express it
So we'll know, not merely guess it—
Then, my friend, ere you address it,
Boil it down.

Boil out all the extra trimmings—
Boil it down;
Skim it well, then skim the trimmings,
Boil it down.
When you're sure 'twould be a sin to
Cut another sentence in two,
Send it on—and we'll begin to
Boil it down. —*L. A. W. Bulletin.*

Tennessee Centennial Rates.—Effective April 29.

THE Southern Railway, the only line operating through car service New York to Nashville, announces the following low rates from Washington, D. C., to Nashville and return, account of the Tennessee Centennial; tickets limited returning to Nov. 7, $28 75; limited to twenty days, $21.05; tickets sold on Tuesday and Thursday each week, good to return within ten days, $15.30. The Southern Railway Limited leaves New York daily at 4:30 P. M., and carries you via Washington and through the glorious mountains of western North Carolina, Asheville, the Land of the Sky, and east Tennessee by Lookout Mountain. The scenery for the entire trip is a grand panorama. Along the line is located the many-noted battlefields of the late war For full particulars and descriptive matter of the Exposition, call on or address the New York office, 271 Broadway.—*Adv.*

The Kenwood Sleeping Bag.

THE Kenwood sleeping bag is a valuable adjunct to any sportsman's outfit. It is thoroughly practical and low-priced, and at the same time durable, waterproof and warm.

In its construction, these bags are used one inside the other, and any one of these bags may be used separately. The outside bag is of light-weight canvas, and is waterproof.

The price of this is $2, while the inside bag is listed at $4 and the other at $6, making the price, complete, $12. Write the Kenwood Mills, Albany, N. Y., for further particulars.—*Adv.*

A New Artificial Bait.

THE New Jersey Aluminum Company, 60 Arlington street, Newark, N. J., have just put upon the market a novelty in artificial baits, called the aluminum fish phantom. This may be used either for trolling or casting, and is said to be a very killing bait, especially for casting. It is an extremely light bait and will not sink if accidentally detached from the line, and it retains its silvery luster indefinitely. A descriptive pamphlet will be sent on application.—*Adv.*

Special Excursion Rates to Chattanooga and Mobile.

THE Southern Railway announces rates one fare for the round trip to Mobile for the Supreme Council, Catholic Knights of America, Mobile, May 11 to 15, good to return May 18. The National Baptist Young Peoples' Union, Chattanooga, Tenn., from July 13 to 15, good return Aug. 15. For full partiulars call on or address New York office, 271 Broadway.—*Adv.*

A Fishing Trip

Along the lines of the Chicago, Milwaukee & St. Paul Railway is the title of a beautifully illustrated pamphlet of thirty-two pages, the contents of which are devoted to practical methods of fish-catching in near-by lakes and streams.

One copy will be sent to any address on receipt of two-cent postage stamp. Geo. H. Heafford, General Passenger Agent, 410 Old Colony Building, Chicago, Ill.—*Adv.*

"Forest and Stream" Advertising Pages.

D. H. HECKMAN, Kennebunkport, Me., a builder of fine pleasure boats and canoes, writes: "Every boating or yachting paper far or near has written for my advertisement since it appeared in FOREST AND STREAM, but I have got all I can do now to answer the replies I get from FOREST AND STREAM."

The Fall River Line.

Sunday trips will be resumed by the Fall River Line, commencing next Sunday, April 25th, while the leaving time from New York will be 5:30 P. M., instead of 5:00 P. M., as at present, commencing on the same date. The Priscilla and Puritan are in commission.—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, MAY 8, 1897.

VOL. XLVIII.—No. 19. No. 346 BROADWAY, NEW YORK

NOTICE TO SUBSCRIBERS.

ATTENTION is directed to the new form of address labels on the wrappers of subscribers' copies. The label shows the date of the close of the term for which the subscription is paid.

The receipt of the paper with such dated address label constitutes the subscriber's receipt for money sent to us for a new or renewed subscription. Unless specially requested to do so, we do not send separate receipts.

Subscribers are asked to note on the wrapper the date of expiration of subscription; and to remit promptly for renewal, that delays may be avoided.

For prospectus and advertising rates see page iii.

If a bird's nest chance to be before thee in the way in any tree, or on the ground, whether they be young ones, or eggs, and the dam sitting upon the young, or upon the eggs, thou shalt not take the dam with the young: but thou shalt in any wise let the dam go, and take the young to thee; that it may be well with thee, and that thou mayest prolong thy days. Deuteronomy xxii: 6–7.

The Forest and Stream's Platform Plank.

"The sale of game should be prohibited at all seasons."

NAILS DRIVEN IN 1897.—No. 1.

TENNESSEE.

Act of March 23, 1897.—Sec. 1. That it shall be unlawful for any person to export quail, dead or alive, out of the State of Tennessee for five years from and after the passage of this act.

CAMPS.

RETURNING spring, wild flowers, song birds, budding woods and open waters remind the summer camper that his days of outing are drawing near. In imagination he already sees his white tent gleaming in the greenery of pleasant shores, or the smoke of his newly-kindled fire drifting from the chimney of the painted cottage which he calls a camp.

In one or the other, after being held for long months by stress of ungenial weather to the frivolities and proprieties of civilization, he is about to enjoy the freedom of camp life, with little deprivation of his ordinary conveniences and luxuries. His food will be cooked in and upon a stove, eaten off a napered table with a knife and fork. He will sleep as soft as at home, will dress as neatly, but he will be camping out, as he believes.

There are campers of another sort, who have not waited for spring, but have been invited more by the morose moods of nature than her gentler ones, who have been most cordially invited when most repelled. Some are trappers and some are hunters, who brave peril and endure hardship and discomfort for hope of gain or love of sport. Mr. Hough has told us something of the winter camp life of the fur trapper, and the veteran woodsman Mr. Hardy gives a realistic picture of the camp in which he found his friend Rufus, and of his entertainment there.

I traveled over fifty miles on snowshoes to visit him and introduce another hunter to him. I found his partner first, who had not seen him for a week, but undertook to pilot me. We traveled some twelve miles, and found him in a hole in the snow. He had built a little camp of split fir in the fall just large enough for himself, and the snow was then four to five feet deep around it. He was wonderfully glad to see us and made no apologies, but did the best he could for us. His whole outfit for cooking tools and for dishes to eat on were a shallow tin plate and a pint dipper. This for four men was not extensive, but he brought water in a birch bark dish, mixed his bread in another bark dish, rolled it out on a sheet of bark with a roller made of a maple sprout, and baked it in the tin plate. Then he fried moose meat in the same plate, and kept frying till we finished eating. He made tea in the pint dipper and roasted beaver on a stick.

The camp was so narrow that when we lay down we all had to lie on edge as there was not room to lie flat. We stayed and visited the next day and killed two moose. The next day we all went back to his home camp.

Doubtless there is more comfort enjoyed in the perfectly appointed camp in which one sleeps soft, dines and sups daintily and lives luxuriously, than under the rude shelter of boughs or bark or a strip of canvas, with only evergreen twigs and a blanket for a bed, a dipper, a tin plate and a forked stick for cooking utensils and on one's knee for a table, and some makeshift to be contrived for every emergency; yet so one gets nearer to the primitive condition of man, which is the real, if not always the recognized, motive of all camping, and he is closest to nature who lies closest to mother earth with the least intervention between him and the sky, no black wall of iron shutting him from the cheerful companionship of his fire.

What this man needs he invents, if the woods do not supply. What the other lacks, he buys or does without. The poorer this man is the richer he is, being the less burdened in body and mind. The richer the other the poorer, being most dependent.

Yet one does not envy the other, nor would either change places, for what one enjoys most the other would enjoy least. To both, akin with one touch of nature, let us wish the best that each desires.

SNAP SHOTS.

CONGRESS, which for years refused to enact a law by which poachers in the National Park could be punished, is of course responsible for the destruction of the last considerable herd of wild buffalo in the United States—those which ranged in the Yellowstone Park. Three years ago Congress passed a law which made protection possible in the Park, but of course this law had no effect in the adjacent States. For some years Wyoming and Montana had had laws protecting buffalo, and Idaho remained the only one of the States bordering the Park which left this species uncared for.

A considerable portion of the Park herd ranged in the southwest corner of the reservation, in what is known as the Falls River country, and often crossed the border into Idaho, and the section of the State bordering the Park became a resort for poachers and outlaws, who at every opportunity invaded the national pleasure ground and killed the buffalo. Strong efforts were made by persons interested in the Park to induce influential people in Idaho to urge the passage of protective laws. Letters were written to members of the Legislature, to successive Governors and to United States Senators, but so strong was the influence of the lawless element—or so weak that of the law-abiding—that nothing was ever done.

At last, however, after five or six years of effort, a law absolutely protecting the buffalo, has been enacted, though it may well be feared that it comes too late to do much good. Reports made this spring concerning the buffalo show that the numbers in the Park are not under thirty nor over fifty, and conservative people believe the smaller number to be nearer the truth. This stock is too small to warrant the hope that the Yellowstone Park herd will ever re-establish itself.

The Idaho law, which was approved March 4, this year, forbids the killing of buffalo, the transportation of any parts of such animals, and the pursuing them with dogs. It provides that a violation of the act by any individual shall be punished by a fine of not less $100 nor more than $300, or by imprisonment in the county jail for a time not exceeding three months, or by both fine and imprisonment. Having in possession a bison or any part of such animals shall be deemed *prima facie* evidence of a violation of the statutes. One-half of all the fines collected is to go to the county school fund, and one-half to the complainant. The act is to take effect immediately.

The clam is by nature a silent creature, but all clams large and small ought to cry out against the decision given by Judge McAdam, in the Appellate Court of this county, the other day in the Astor House clam case. The action was one brought by a game protector to recover the penalty for possession of clams of less than the lawful size. The statute provides (Sec. 191) that "no hard or round clams less than one inch in thickness shall be caught or possessed; but, if caught, shall be returned to the water from which they are taken without unnecessary injury." "Whoever shall violate the provisions of this section" shall be liable to a penalty. The Court held that the penalty for possession could apply only to the clam fisherman who actually took the clams, or to the immediate employer for whom he was fishing, and it was argued that this was clearly the intent of the law, inasmuch as the dealer, into whose possession the clams might subsequently pass, could not return them to the water from which they had been taken. We believe this ruling to be erroneous. It is directly in conflict with the repeated decisions of the courts bearing on the point, decisions, it may be said, upon which is based the entire system of prohibiting possession of game and fish in close season. The phraseology of the statute differs in no essential particular from the language employed in other sections, and the meaning, we believe, cannot here be different from that of the law in general. The case is one which is likely to go to the higher courts.

Of the several hundred bills left in the hands of Governor Black, of New York, by the Legislature, which adjourned last week, a number relate to fish and game, and, as the fate of these measures at the hands of the Governor is not yet known at the time of our going to press, it is impossible to give this week a summary of the work of the session. The general bill, introduced by the State Association, failed to pass, as did that repealing the law which permits the sale of game the year round. No measure of general importance in the line of further protection was adopted by the Legislature, except one relative to deer hounding, which has not yet been signed by the Governor. As a rule, the legislation of the session was reactionary and in the interest of local claims and of individuals who, dissatisfied to abide by the general law, go to Albany for special legislation in their own little individual interest.

Michigan, too, is reactionary. The House has passed the Graham bill, so amended as to forbid quail hunting with dogs, and to permit market-hunting. These two features are clearly intended to discourage quail shooting as a recreation, and to promote it as a business. The outer who hunts his game in a sportsmanlike way is barred; the industrious hunter who "ground-sweats" the whole covey at one fell shot is to have things all his own way. We are glad to know that the sportsmen of Saginaw have taken the initiative in a movement to arouse sufficient right public sentiment to defeat the measure in the Senate. It is a bill which, as a law, could mean nothing but disaster to Michigan's game interests.

Anglers and shooters visiting Canada will be pleased with the new regulations of the Customs Department respecting the duty on their equipments. When a sportsman enters Canada he is required to leave at the port of entry a deposit of the amount of duty due on guns, rods and other articles, which deposit is to be refunded to him when the goods shall have been brought out of the country. The duty so required is 30 per cent. of the appraised value. It has been the rule that to secure a refund of the deposit, application must be made to the Customs Department at Ottawa, accompanied by an official certificate of identification and the usual evidences of exportation; and the system has involved much vexatious red tape and delay. By the new regulations the old rule of applying to the Customs Department for the refund is superseded by an arrangement, which provides that the refund will be paid at the port of entry, 10 per cent. of the deposit being retained for the expense of handling.

The Maine game law amendments appear to have removed the provision of a close season for caribou. The statute as revised provides that between Oct. 15 and Dec. 1 no person may kill or possess more than one caribou; but it omits to forbid killing and possession for the rest of the year. This is, of course, an oversight, and should be corrected at the first moment.

Rarely has it been our privilege to publish a record so suggestive as the story of "One Man's Influence" told in another column by our contributor, Amateur. Read it, and let it stimulate to a personal, individual activity in game and fish preservation.

The notes in our game columns on Western outfitting are written by an experienced guide, and will be of practical interest to those who are planning trips to the glorious Rockies. It is of first importance in undertaking such an expedition to have a definite understanding respecting details of time, outfit and finances. Some folks, who are as a rule business-like and exact in the ordinary walks of life, become for some inscrutable reason lax and careless when they come to an outing enterprise, and appear to think that in their recreation they can do their business in an unbusinesslike way. The only safe rule is to have everything stipulated in advance, that there may be less opportunity for dissatisfaction, heartburning and all uncharitableness in the end.

The Sportsman Tourist.

THE WHITE BUFFALO.

A Tale of the Northwest Territories.

IN the year 1874 the Northwest Mounted Police marched west from Winnipeg and into the then unknown country lying along the Rocky Mountains, from the Saskatchewan River to the American boundary line.

The country, from the Cypress Hills to the mountains, about 250 miles in breadth, and as far north as the Red Deer River, about 300 miles north of the boundary line, fairly teemed with buffalo, and you could for days travel without once losing sight of countless thousands continually on the move.

This was a novel and exciting sight to the men in the force on its march west, and after sighting the first herds a closer view was soon had of them, as buffalo beef was to be the main sustenance of that force for some years after, until beef cattle were brought in from the south in 1878.

In 1874 the vast herds had not commenced to diminish, and it was an easy matter to overtake and slaughter them The Blackfoot tribe of Indians, who then inhabited the plains north of the boundary, lived altogether on the buffalo, as not only did they purchase tobacco, tea, blankets, ammunition and other articles they required, by their trade for robes either at the American trading forts along the Missouri or at the Hudson's Bay posts in the north, but their tents and clothing, together with their daily food, was gained from the herds of these animals. The buffalo did not seem at all to mind the vicinity of Indian camps, as the large herds were always met with in close proximity to one or more Indian camps out on one of their hunts. In fact, so near these camps would the buffalo graze, that it was not at all unusual for a band to be cut off from the main herd and driven right in among the lodges, where many of them were killed. It was not the Indians that caused the disappearance and extinction of the buffalo, but the advent of the white settler, the smoke from whose camp-fire or building these animals seemed to have a horror of, avoiding the settlements as much as possible.

The color of the buffalo is of course well known and never varied, being dark-brown and black around the head and neck; this color varied in shade, being of a much lighter shade in the summer than in the winter, and it was only in the winter that the robe had any value, being then thick and dark, while during the summer the hair was shed, and the skin worthless. On our arrival in the country many inquiries were made as to the existence of any white buffalo, but, although having daily intercourse with the Indians in many parts of the country, no record of any such animal could be gained. White beaver and wolves and other animals of that color were heard of, and sometimes obtained, but a white buffalo, never.

A very rare class of buffalo robe was sometimes seen, but very seldom, the beaver or silk robe, so called from the very fine, silky quality of the hair. These were very rare, and in ten years among the buffalo I have only seen three. They were, of course very valuable, Sometimes the hair had a greyish appearance near the skin, The robe was nearly always of a cow, very fine and very light. Many explanations were given by the Indians for this peculiar coat, and the right one was no doubt that given by Montana Indians. that it was caused by the constant licking of many animals in the herd, to which some motherless calf belonged, it having become the pet of the band, the animals testifying their liking in that manner,

Animals of this class were always small and hard to kill, being kept in the center of the herd while they were on the run and seeming to be protected by the bodies of the rest. And aside from this variety, which were seldom seen until the year 1875, no record of a white buffalo, or of one different from the usual variety, was ever known to have been seen by the Blackfoot Indians.

During the summer of that year bands of Indians returning from a hunt far out on the plains brought in stories of having seen at different times and in different places, and always in the center of a large herd, a white buffalo. They had used their best horses in the effort to overtake it, to no purpose, never being able to get anywhere near the animal. At first we did not pay much attention to these stories, but still it kept cropping up from different camps, and at last, in the fall of 1875, I myself had a chance to verify the truth of the report. I had been sent on duty north along the Red Deer River and was camped near a large band of Blackfoot, who were hunting south of that river The buffalo had moved north in vast numbers, and the prairie was black with them.

I had gone out one morning with a party of Blackfeet to see one of their hunts, and also to try and kill for myself. My horse was a good one, and much faster than any belonging to the Indian hunters. I had got detached from the party, becoming tired of the slaughter, and must have been at least twenty miles from camp, when I made for a small clump of timber not far off, intending to build a fire and roast a portion of some buffalo meat I had on the saddle with me. A few bands of moving buffalo were in sight, but far off. As I approached the wood a band of about a hundred animals burst out of the brush and made off to the south, and yes, most certainly, in the middle of them was a white buffalo. Although they were a quarter of a mile away, there could be no mistake about it; he was there as large as life, and quite white, and running like a deer. There was no time to much more than take in the scene, but I gathered up the reins and was after him, determined to bag that buffalo or kill my horse.

Oh, what a race it was, mile after mile; and although all the band with the exception of about a dozen had split off and gone in different directions, the white animal, with his body guard of about a dozen, kept at about the same distance ahead. I could catch a glimpse of him now and then, and there was no doubt he was snow white. Get within shot I could not, for many miles. At last they began to tire, and, although my horse was tired also, I had good hopes of coming up and getting a shot. Alas! for such a chance. Of a sudden my horse lurched forward on his nose, sending me over his head on to the prairie, and turning a somersault himself, missing me by only a few feet. He had put his foot into a badger hole and brought my hopes of a white robe to a sudden end.

I got up and shook myself, not much the worse, and my first glance was after the buffalo. There they were, seemingly miles away, and on the strong gallop. All hopes of ever seeing them again had to be given up, as, after getting my horse on his feet, he stood panting and utterly done up. I had, therefore, to make the best of my way back to camp, getting in late that night, and very much disgusted. After this there was no more doubt as to the reality of the existence of the white buffalo; but, although he was often seen in the distance, sometimes at points several hundred miles apart, and on two occasions was chased by parties of our men, no one got near him; and his speed, together with that of a small band that seemed always to surround him, became noted among the Indians, who were in despair of ever being able to get a buffalo runner to catch him. It was not until another year had passed that it was my good fortune to see him again, and for the last time.

During the following summer I had occasion to take a party of police north to Bow River to arrest a Blackfoot Indian who, a few months previous, had killed an Indian belonging to a camp of Crees. I found the Blackfeet assembled in a very large camp on the bench land overlooking the Bow River on the north side. There must have been 300 lodges in the camp, and they had come to this point to hold their medicine lodge. They had quantities of meat, the buffalo being in great numbers not far to the north.

In such a large camp it was difficult to find the Indian I wanted, and I remained some days in their vicinity, awaiting a good opportunity to make him prisoner without awakening the suspicions of the rest of the camp.

For some days a very heavy prairie fire had been raging to the north, and the wind changing to that quarter on my third day in camp, was driving the fire toward the river, and everything was covered with a dense cloud of smoke. The third night the wind increased to a gale, bringing the fire down very fast toward us, and although the smoke was thick, the long line of fire to the north, running east and west as far as the eye could reach, made everything as plain as day, but with a deep red light reflected from the sky. It was a most weird scene that night, and to make matters worse, about midnight the immense herds of buffalo that had been stampeding toward the west all day, had, at a considerable distance from the river, begun to draw in toward us. We could hear the thundering sound of the multitudes as they rushed along parallel to the river, edging down more toward us every minute as the fire hemmed them in, and their bellowings could be heard above the din. Now and then a band of several hundred would break out of the smoke and swerve toward the river, and above and below us we could hear them crossing.

The large Indian camp and also our own tents were in a bad situation for an emergency of this kind, being not far from a steep bank, over a hundred feet in height, which dropped straight down to the river. About a quarter of a mile west of us a deep cañon ran down to the river from the prairie, partly filled with timber, and it was this point that the buffalo seemed trying to make for.

The Indians were in a state of great consternation, and had gathered in their bands of many hundred horses and sent them down to the river with some of the young men, while a hundred others mounted and rode along the line of passing buffalo, firing and yelling like so many demons, trying to turn the herd away from the camp.

It was certainly a grand and awe-inspiring sight; the thousands of buffalo passing on the full gallop, not a quarter of a mile away; the shouting of the Indians mingled with the bellowing and thunderous tramp of the herd; the dense smoke, and all colored by the red light of the fire reflected from the sky—and it was certainly not without danger, as at any time the frightened herd might rush through the camp, and in a very few minutes there would be nothing left of us.

Our party, together with Indians, both men and women, set fire to the prairie grass in fifty different places in a line along the camp and some hundreds of yards to the north. This would help to prevent the buffalo running over us, and there was not much danger of the fire doing any harm in the camp, as in and around the camp the horses and Indians had trampled the ground nearly bare.

We anxiously watched the result, which at first was doubtful. One band of several hundred animals broke away from the hunters and the main herd, and running between the Indian camp and our tents, a space only a few hundred yards wide, blind with smoke and terror, ran right over the bank, which had a sheer fall of over 100ft., and we could hear them crashing to the river bed below, with terrific bellowings. After about half an hour of painful anxiety the main herd seemed to have decided its course, running down the valley to the west that I have before mentioned, and for several hours we could hear their plunges in the river as they swam across. About daylight the run slackened, only now and then a buffalo being seen. The fire had passed to the west and was a long way off, burning as fiercely as ever, but all to the north was a blackened expanse of burnt ground, with here and there a dead buffalo to be seen.

The Indians were already out and cutting up the dead animals, and a party was getting ready to go down to the river to cut up and secure the robes of those which had plunged over the cut bank during the night. From the top of the banks we could see a mass of them, and a good many of them were on their feet, but so injured as to be unable to move far. With some of the men I went down with the Indians, taking our rifles with us, as a wounded buffalo is not a nice animal to go near empty-handed.

When we got down to where they lay, near the edge of the river, what a sight it was! There must have been at least 300 in one pile, one on the top of another, and we could see that many of those below were still living. Many were on their feet and made attempts to charge as we drew near, but they were at once shot by the Indians. In and across the river a number were to be seen slowly moving off, some of them badly crippled. These were not molested, but all our attention was given to the great mass of dead and wounded. The wounded were killed as fast as they could be got at I had walked down to the water's edge and was watching some of the wounded animals on the other shore, when my attention was called by a great shout from the Indians engaged in moving the bodies from the great pile I have mentioned. On going there I found them greatly excited and all thronging round a geat pile of carcasses, from under which they were digging one which, although covered with smoke, dust and clay, was without doubt white.

I pressed through the throng, and there, lying before me, and looked upon with the greatest astonishment by both Indians and whites, lay the long hunted and far-famed white buffalo. It took a close scrutiny at first to tell the class to which he belonged, but there was no doubt whatever about it; he was a white Texas steer, only one spot of red on his side, but the long horn and short hair identified him at once. How he got among the buffalo will never be known. He must have joined a band when very young and that, too, far south, for in those days no domestic cattle were to be found north of the Missouri River as far west as this. He was an old animal and must have been for many years with the buffalo. We found more than one scar on him where at different times he had been wounded, and one of his long horns was broken short off. We tried the beef, but it was tough. His hide we took with us

This was the result of the only report I ever heard in many years among the Indians of a white buffalo bring seen, and I much doubt if such an animal was ever known. What thousands of reports of the kind must this one lone white steer have given rise to, traveling for years with the great buffalo herds, seen sometimes far south of the Missouri River and then again hundreds of miles to the north. No doubt most of the stories of white buffalo seen at intervals of several years sprang from him. This was also the only case I have ever known of a domestic animal running with the buffalo herds. His history would be a thrilling one if known, but his death put an end to the white buffalo stories in the Northwest forever.

C. E. DENNEY.

[Capt. Denney's graphic story is full of interest, and he paints a capital picture of one of the scenes often witnessed in the buffalo country in the old days.

We believe, however, that his assertion that white buffalo did not occur, and that this steer gave rise to most of the reports of such albinos occurring in the Northwest, is an error. We have been told by the Indians of the killing of white buffalo. Their folk stories often refer to such animals, and we know white men who have seen animals which if not white were mostly white.

A story in some respects similar to that told by Capt. Denny was given us years ago by Mr. C. J. Jones, then of Kansas, who also believed that the white buffalo so often heard of were domesticated animals which ran with the buffalo herds.

This occurred not infrequently, and it is only a few years since a Kansas correspondent sent FOREST AND STREAM an account of an old yellow Texas cow which used to run with the buffalo on one of the forks of the Republican River in Kansas twenty-five years ago.

It is too late now to settle by the inspection of specimens the question of the white buffalo's occurrence, but we believe that the testimony of actual witnesses that they did occur must far outweigh the opinions of people who never saw any.]

ON THE POTOMAC.—III.

I stood on the bank near the beautiful river,
Whose glistening waves were plainly in sight;
I could see old Potomac still ripple and quiver,
In manhood my pleasure—my boyhood's delight.

AT the conclusion of a brief description of some of the characteristics of that portion of the feathered species classed as ultra water fowl, which annually migrated to this terraqueous extent of territory to participate in nature's abundant supplies, I closed the second stage of my tour with an episode of a contest between an eagle and a fishhawk.

I now propose to mention superficially some of the feathered sojourners, constituting the connecting links in the feathered race.

Although great numbers belonging in this class inhabit this place during one-half the year at least, and notwithstanding the large and promiscuous population within its precincts, a stranger passing along its margin during the middle of the day gets not the slightest idea of the various and beautiful colonies of animated nature assembled beneath its tangled coverts; and gazing over its apparently repulsive surface of stagnant pools, sawgrass, cattails, etc., during the silence prevailing throughout its extent at that time of the day, he would turn from it in disgust, impressed with the idea that it was a faithful picture of desolation and solitude.

On the other hand, those who have penetrated its labyrinths and visited the haunts of its inhabitants know it to be, from ocular demonstration, the antithesis of solitude and desolation.

During the early morning and evening hours it presents a scene of vivid life and activity, radiant with the charms of brilliant and diversified plumage of the different families and species with which beautiful nature adorns her feathered subjects; while the numberless and varied notes of pleasure or alarm emanating from countless throats, if not in consonance with the lexicon of modern music, is undoubtedly harmonious to a sportsman's ear.

Among the above-mentioned sojourners, which are somewhat amphibious, and, therefore, constituting the links connecting the feathered race in one family, the rail class is perhaps entitled to precedence on the ground of its aquatic nature and habits. They were quite abundant, but exceedingly shy, and seldom left their cover unless their haunts were invaded. There was at that time considerable mystery connected with this bird, which has not been entirely eradicated (particularly from the minds of the colored race), although their habits have been investigated satisfactorily. They are somewhat nocturnal; their migrations are performed at night, and their food is obtained principally under the same conditions. This, in connection with their sudden advent and departure, caused many to believe that they buried themselves in the mud, like turtles, from which they emerged at the proper season. Some contend that they are frogs, and offer what they call irrefutable evidence by saying that no one ever heard or saw a frog in the swamp when the rail were there. Yet I do not think the advocates of that conception have ever found a frog with rudimental wings, or pin feathers growing from its rear, or in any other state of transition, except when discarding its appendage as a tadpole.

I have also occasionally seen among the thickets of this pocoson a bird similar in form and movements to the rail, and, no doubt, belonging to that class, but double in size, which we called a king rail. As I have never found them in social proximity, feeding or otherwise, I have thought they were transient wanderers from a more Southern latitude. Here could also be found a numerous class of residents (to the manner born) somewhat similar in form to the rail, but not so positively aquatic or seclusive in their habits. The bird was about the size of the king rail; we called it the Indian hen, and I suppose it belongs to the class of waders. It is evidently one grade in advance of the rail. Their nests were constructed in trees contiguous to their feeding resorts, and they were frequently on the wing following at a slight elevation the swamp drains, and occasionally uttering a "squawk."

Another interesting visitor could be found here in con-

siderable numbers during the summer and early autumn. I do not think it bred here, but suppose its natal bailiwick was further south. It belongs to the class of waders, and I suppose is a relative of the heron family. In size it is between the Indian hen and blue crane. Its plumage is magnificent; the body a brilliant chestnut brown; the wings and portions of the head and neck a glossy, brilliant green—some called it an itinerant ibis—nevertheless they were there.

I also remember seeing there on one occasion—only once—a flock containing eight or ten of those majestic fowl, the spotless heron, whose home is in the Everglades of Florida. No doubt they were driven from their native locality by one of those terrific storms which occasionally sweep over portions of the country without warning, with a velocity which no fowl can withstand. Therefore, they were transient and unwilling visitors, seeking rest and recuperative powers for their weary Southern flight. The plumage of this bird is superb, but not ostentatious. Its robes of snowy white are without a blemish, and some portions are equal if not superior to the plume of the ostrich. Their handsome plumage, crowned with a splendid crest, imparts to them a regal aspect.

I now propose to insert a few words in behalf of that elevated family among the oldest inhabitants of this domain—the blue crane. He no doubt was here to welcome Capt. John Smith on his expedition up the Potomac in 1608, to explore and reveal the mysteries heretofore unknown; and no doubt the Captain found him enjoying the exalted position he still adheres to as a privilege inherent in the blood of his family. If it is true (as some say) that the coloring of fowls is produced in some measure by sympathy with the blood; then this fowl should be called the royal blue crane, which would be in concord with the lofty position he assumes, and his reserved and silent habits. I have watched him frequently when perched upon his lofty throne or superstructure, amidst the surrounding waters of his domain, his lithe and elastic neck drawn to its utmost tension, solemn and silent as the sphinx and apparently oblivious to all surrounding objects, yet his eye as keen as the optic of Argus in scrutinizing every point within the bounds of his vision. And woe unto any unfortunate frog or small reptile daring to encroach upon the line of his measured range. Swiftly as an arrow his deadly beak descends, and equally swift resumes its place. And with wonderful celerity the royal blue disposes of his conquest. Then with a business-like air (similar to that of an enterprising barber when he gets through with a customer) he seems to say: Next! Such is my knowledge of the royal blue. There were at that time several other annual visitors which may be considered in the category of aquatic fowl, at least sufficient as links in the chain of the feathered race—snipe, woodcock, plover, sand snipe, and perhaps some others. In addition, reed and blackbirds assembled here in countless numbers.

Another class of inhabitants deserve brief notice, as they have been permanent residents from time beyond the memory of that celebrated character, the oldest inhabitant—I allude to those armored amphibious cruisers, the terrapins. The surroundings being particularly congenial to their luxurious nature and habits, their development in all essential accomplishments are of the highest order, particularly their speed. Among them are the snapper, marsh, diamond-back, slider and box, all celebrated for some particular quality. The snapper is renowned for its prowess, and also for its superior edible qualities; in fact its claims to the honor of belonging to the F. F. of the turtle race is based on the tradition that its ancestors furnished personally the wedding feast of Opechanconough, the father of Powhattan. I am afraid if I delineate the superior racing qualities of our blooded stock, Major Mather would become frantic with envy when reading of the wonderful performances of speed, in comparison to those little mongrels fished out of the creeks and mud holes along the Hudson, and trained by our mutual friend, Col. Chas. H. Raymond, and himself.

The above mentioned fowl and small quadrupeds comprehend the principal residents at that time occupying this attractive locality.

> Where often I wandered in sunshine and rain,
> And often in thought I wander again.

After leaving the margin of the pocoson in pursuit of other scenes, I came in sight of a large white oak tree standing alone. Its peculiar growth and altitude attracted my attention as an object once familiar but nearly obliterated from memory. When last I had gazed upon its ample form, it was surrounded by numerous others; now this aged patriarch stands alone; its companions have fallen beneath the relentless woodman's axe. Its gnarled and massive trunk, no doubt, foiled the woodsman in his task. Therefore, it stands breasting the storm, an emblem of many of its human cotemporaries. While standing beneath its ample shade, I recalled from memory an exciting scene of my early days, enacted beneath its spreading branches during the gloomy hours of a moonless night, with only an occasional glimmer from the stars penetrating the dense foliage; and the midnight silence broken by the dismal and weird hootings of the sombre owl, mingled with the frantic shrieks of those engaged in the tragic scene. This, with the fearful echo repeating through the adjacent forest, made night hideous, and converted the beautiful sylvan scene to pandemonium. As I was a participant in assisting to inflict condign punishment on that occasion on four incorrigible corn thieves, I will endeavor to give a detailed explanation in defense of our summary action with the malefactors, in my next article.

JAS. NORRIS.

MAGNOLIA, Harford County.

P. S.—I thank the author of the article "On the James" for his favorable comments, and also his remark that my production suggested the idea of his somewhat similar one—"On the James." Therefore, I am gratified to think my efforts have been successful in arousing an interest in one contributor at least, to assist in rescuing from obscurity many historical events and incidents worthy of record, which, in a few years, will be swallowed in the vortex of oblivion. J. N.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Adirondack History.

CONCERNING those "incidents in Adirondack history," which S., of Troy, N. Y., questions in my article on Alvah Dunning, I will say: I was wrong in stating that Sir William Johnson fought in the Revolutionary War, for he died at Johnstown, N. Y., July 11, 1774, not by his own hand, as S. says "many believe," but from over exertion at an Indian council.

S. is in error in saying that Johnson "didn't fight Indians," and that "he lived on most amicable terms with his red brothers." I will quote from Johnson's Universal Cyclopedia: "* * * In the French war of 1755 Johnson was commissioned a major-general and commander-in-chief of the Provincial forces in the expedition against Crown Point, in which he defeated Baron Dieskau at Lake George (so named by him) and destroyed his army in September, 1755. Johnson was severely wounded in this engagement, which was considered so important that it procured him the thanks of Parliament, a grant of £5,000 and a baronetcy. In 1756-57 Sir William was engaged in the expedition for the relief of Oswego and Fort William Henry, was with Abercrombie at Ticonderoga in 1758, and was second in command under Gen. Prideau in the expedition against Fort Niagara in 1759. On the death of Prideau, who was killed before that fort, Sir William prosecuted the seige, aided by 1,000 Indian allies; defeated a French force sent to relieve the fort and received its unconditional surrender. In 1760 he participated in Amherst's expedition to Montreal. For these services Sir William received from the king a grant of 100,000 acres of land north of the Mohawk, long known as Kingsland, or the Royal Grant." And if this wasn't fighting, then I don't know.

The elder Dunning served with Sir William, and also in the war of the Revolution. Without casting any doubt on the different stories that S. relates of Stoner and Nat Foster, from which he thinks there was created a Dunning myth, of which he is not quite certain, I will acknowledge that I was not there when Alvah's father killed an Indian with a bundle of traps just after the Revolutionary war, for boasting of an atrocious murder; but my informant got the story from a clergyman, who heard it over forty years ago near Johnstown, and it passed unchallenged.

I have replied to S. to the best of my ability, and for the facts about Sir William will refer him to "The Life of Sir William Johnson," by W. L. Stone, 1865, and also to Appleton's "Encyclopedia," in addition to what I have quoted. I got the story of the killing of the Indian so straight that I believe it, and am also willing to believe that each of the three stories which S. quotes may be true. In those days it was a small thing to kill an Indian in a drunken brawl, and the Dunning story may not be at all connected with the other two.

The spelling of Popskinny is not as serious a thing as the others mentioned, because, no doubt, every Dutch surveyor spelled those Indian names by ear, and put them on his maps as seemed best unto him. Therefore S's maps differ in the spelling of the name of this, to me, historic stream from those of Mr. Stott and of Col. Teller, both of whom have shown me that my ear-spelling is wrong; but as the surveyors of over a century ago disagreed over the spelling, I think mine as good as theirs.

FRED MATHER.

Editor Forest and Stream:

In FOREST AND STREAM of April 24, S., of Troy, takes exception to some statements made by Major Mather in his article on Alvah Dunning. Our Troy friend is right in saying that Sir William Johnson did not fight Indians during the Revolutionary War, but wrong in saying that he did not fight them before that date. Sir William died July 4, 1774, possibly by his own hand as suggested; but knowing what we do of his habits, his death at fifty-nine years of age could not have been unexpected. As Major-General, Johnson commanded the provincial troops in the attack on Crown Point in 1775-8, and in 1760 led the English Indians in the advance on Montreal. In both of these small wars Gen. Johnson fought the French Indians. Sir William did live on most friendly terms with the Indians of the Six Nations, and Molly Bran, the Mohawk squaw, whose relations with Johnson are well known, had great influence with her people. The General is supposed to have been on the side of the Colonists, but his descendants were rank Tories.

As I seem to be the "other fellow" referred to by S., permit me to say that my spelling of the name of our fishing Major's Popskinny was taken from the earliest published records. Of course all these early names were spelled phonetically. We know now that the French were the discoverers of this Hudson's River and first settlers at Albany. Following them came the Dutch, and lastly the English. Under these conditions the ancient Indian names had a fair chance to get badly tangled.

A. C. STOTT.

Natural History.

WOLVES IN THE ADIRONDACKS.

IT was in 1855 that I headed an exploring party to search for iron-ore in the mountain range which is the divide between Franklin, Lawrence, Hamilton and Essex Counties, New York, and is the head waters of the streams which flow east and west. It was a solitary desert then, rarely visited except by occasional explorers who were searching for deposits of the rich, magnetic iron there abounding. We left Plattsburg as soon as the snow was in good condition for snow-shoeing, and made our camps along the crest of the divide so that there should not be any risk of going astray in the wilderness. As soon as the snow had gone we went to work. Trails were made from camp to camp, and the deer were there in thousands. The wolves were still more numerous, as it seemed, and we rarely were out at night except when we were caught unawares in some difficult locality. I had been from one camp to another, five miles distant, and thought I could get through before dark I was alone, with nothing but my Colt's navy and a small axe.

The trail was muddy and I was soon overtaken by the darkness on account of the deep mire along it, so that I was far behind time. I had taken the precaution to have a man meet me on the trail, but he did not appear when it got dark, and I stumbled along the trail the best way I could. I lost my shoes in the mud and got within a mile of the camp when I heard the wolves behind me. They soon got within sight in the bright moonlight, and it was not long before I found it judicious to get my back against a tree and show fight. I exhausted my revolver and then took to my axe, chopping at those which came near enough. The vile beasts sat around me and howled. Oh! how dismally! I had told the Emerald islander who was to meet me to bring my dog with him when he came to meet me, but calling my loudest and whistling as shrilly as my wind would permit, I kept on the defensive for, it seemed, hours. The beasts circled about me and gave me all I could do to keep them at arms' length; a few I laid low with my axe, but a very big sum would have been given just then for some help.

By and by I heard a yelp, and the instant after my dog bounded into the pack, and the snarling and howling of the wolves as he worried the pack was something I never could have imagined. I helped the dog with my axe, and we together finally made the pack retreat. Then I felt such a lightness of heart that I have not forgotten through all the years since. I feel it now as I write, and thank that brave dog for my safety. That event has ever since made me reverence the dog, and fixed a firm friendship for the canine race. I went on my way rejoicing, never caring for my feet, now entirely bare, and bleeding from the wounds made by the sharp snags in the trail. When I got into view of the light of the camp, I found my Irishman sitting on a log waiting for me. He was positively trembling with fear, and gave little attention to the talk I gave him, which, you may be sure, was in vigorous terms and not to be mistaken, even by an Irishman. Meanwhile my dog was licking his wounds, and I sat on the log to rest and comfort him before I went to my camp. I have been in some tight places in the woods since, but in none that would match that night.

I am glad to hear that the wolves no longer prowl about in those mountains, for it is not a pleasant thing to get into too close company with them.

Some years after I made acquaintance with a small gang of jet black ones in northern Michigan around a camp. Three of them were killed within a few feet of our meat house. These are all the black ones I ever met in the many years I have spent in the woods.

I won't say the truth about the fish then in these Adirondack waters, further than at one spawning season I could have scooped up a wagon load from one bed in a few minutes; they literally filled the streams. The whole truth would hardly be believed. H. STEWART.

I have been asked, as a taxidermist in the Adirondacks, to tell what I know about wolves in that region, which will make a short chapter in your valuable columns.

In the fourteen years I have spent there, I have known of but two wolves taken, both of which have been mentioned in a recent number of the FOREST AND STREAM. The last was taken by Reuben Crev, in 1894, at Brandeth Lake, which I mounted at Blue Mountain Lake. I think, from this fellow's teeth, that he had lived to see many and great changes in his native forests since his cub days, and believe that he must have been the last or about the last of his kind. I have never seen so aged and dilapidated a mouth as this specimen had in any wild animal, and he must have soon died for lack of ability to seize and hold his prey, though he seemed in a good condition for one of his kind. I have always taken an interest in wolves (at a distance) and have made many inquiries of guides and trappers, but have not heard that even a track has been seen in the last three years. Five or six years ago it was not a very uncommon thing to see a few tracks in the Moose River region, the most secluded in the wilderness. C. H. D.

ANIMAL INTELLIGENCE.

I AM afraid Brother Von W. has been staying in the woods too closely. He would know better otherwise than to be surprised at a minister welcoming the truth in regard to the intellectual life of animals. Ministers are not, as a class, "opposed to scientific investigation" of any kind. Sometimes they object to "science, falsely so called," or to the inference that because a man knows something of natural science he is therefore competent to decide the most complicated question in Biblical criticism and dogmatic theology. But the animals have no better friends than these same preachers. John Wesley believed animals had souls, and expected to find them in heaven. And the author of the most popular natural history ever written was a minister.

It seems to me that there is no need any longer to doubt the rational quality of many of the actions of our four-footed friends. Old Roan was a cavalry horse marked I. C. (inspected and condemned). My father (a preacher, by the way, and as keen a hunter as ever trailed a deer or fooled a turkey) bought him at a Government auction for $12. When plenty of corn and oats and good treatment had counteracted the effects of hard cavalry service, ten times that price would not have bought him. He was a capital traveler and a good farm horse. But his intelligence in opening gates was extraordinary. He learned the trick of lifting a latch as soon as the new barn was built. Then we put a ring over the top of the post. He soon got on to this, and flipped it off with his upper lip. A chain, with the links keyed together, he could manage very well, also a rope, if he could get at the knot with his teeth.

His stall was closed by sliding bars. These he learned to slip back with his teeth almost immediately. We then bored holes in them and put in pins to keep them from slipping, but he studied this out, and drew the pins with his teeth. A hole was then made in the same bar, but at the inner end, behind the planking of the side of the stall. This stumped him for a good while, but he finally worked it out, found the pin, drew it, slipped back the bar and walked forth in triumph.

Your Iowa correspondent's amusing account of the way his dogs hunted rabbits brought up boyish recollections to me that caused a chuckle to pervade my inner man. Did you ever plow new ground? If so you will agree with me that it is just as well for a boy engaged in this occupation to have some source of distraction, as amusing as possible, if his record for language such as ladies might properly hear is to be kept immaculate. For when a broken root the size of your wrist slips off the plowshare and "swings" for his naked shin, or his team starts one second too soon or too late, yanking a heavy plow underneath an unbreakable grub just after he has laboriously heaved it out for the third time, or when a hidden stump fillips the plow handle up under his fifth rib, he is in danger of intemperate speech. The rabbit hunting of my two dogs furnished an atmosphere of hilarity which, as I look back now, seems to have thoroughly pervaded my last experience of this kind of pioneer farming. Ah me, what a darling, indulgent mother Dame Nature is! I know those were days of hard, sordid toil, but that is not the way I remember them.

At an end of the clearing, which had been made in a grove of sapling oaks and elms, was a great pile of rails and poles which had not been needed in making the worm fence. The dogs in question were a Black and Tan terrier and a lumbering cur. A wooded hill ran alongside the field, and the descent to the piles of rails was steep. From time to time a yap, yap, on top of the hill would give me warning. Here would come bunny, and behind her the black and brown pursuers. Now, when a rabbit runs down a steep, rough hill, she must be careful not to smash those delicate forelegs. So old Lion always gained on the down grade; but as all the rabbits made for the wood-pile, the dogs soon adopted Shep's tactics and made a bee line for it as soon as the chase commenced. They often beat Bre'r Rabbit so badly that he changed his mind and went elsewhere. Once in particular I looked up to see Lion coming down the hill like a gale, the terrier just behind, her head bobbing with the rapid working of her short legs, while she emitted that volley of yelping which seems as necessary to the running of a small dog as the puffing of a locomotive is to its progress. The rabbit was off to one side, trying in vain to lead the procession. Just in the middle of the race the leading dog made a misstep and doubled himself around a sapling with a loud *wow*. Bre'r Rabbit turned back up the hill, and seemed to the boyish spectator to wink with his other eye and point a derisive ear at the demoralized party of the second part. The smile of the boy between the plow-handles was wide and audible.

The interest of the dogs in getting to the rail-pile will be appreciated from what often happened there. The terrier

could frequently squeeze into the openings among the crooked poles. The instant she did so Lion would dash to the other end and stand guard. Then the poor rabbit was doomed. The most amusing part of the transaction would be the little dog's excitement, when, as often happened, she could not follow the rabbit through, but had to back out. The reckless haste which she made to the other end of the pile to see whether Lion had done his part was extremely comical.

I am glad Mount Tom can appreciate a dog's smile. I had often spoken of it to my wife, to whom all dogs look alike dreadful. But she could never see it till a year or two ago, when as we were visiting a friend's hacienda a greyhound puppy greeted us one morning with a smile that was absolutely dazzling. A dog shows his teeth in smiling, like the human animal, but supplements this very effectually with ears and tail.

Now, you see, I started to answer Mount Tom's question, "Did they reason?" and inasmuch as this screed may not be scientifically clear, I will give you my answer here: Of course they reasoned, just as you do and just as I do. I always believed it, and I believe it a good deal more since reading Mr. Thompson's capital letter. AZTEC.

SAN LUIS POTOSI, Mexico.

CARNIVOROUS SQUIRRELS.

HAD it not been that I read Mr. Sandys's note in FOREST AND STREAM, April 24, about carnivorous squirrels, I doubt if I would have had the courage to write the following:

Last September I was fishing the Metabetchouan River, in Canada, for ouananiche. Our camp was in a shanty near the third, or Island Pool, and one morning going down the steep path to the pool I stepped over a dead snake. I was going so fast, rather against my will on account of the grade, that I was not sure the snake was dead, and when I could pull myself up and come to a halt by grabbing the bushes, I turned back to make sure. To my surprise a chipmunk was tearing away at the dead snake like one possessed. It was a double surprise; first, that the little animal should be there at all a few seconds after I had passed over the spot, and second, that it should be eating the flesh of the snake, for that was certainly what it seemed to be doing when I interrupted it. When we returned from the pool we examined the snake, and it had a hole back of its neck which looked as though something had eaten of the snake, but my friend Mr. Rathbone laughed me to scorn when I said it was the mark of the chipmunk, for he contended that the "chip" was not carnivorous. Certainly the "chip" was not playing tag with the dead snake when I caught him in the act of digging into the snake's vitals with his teeth; and if he was not breaking his fast, what was he doing? I made a memorandum of the facts on the spot, but have never dared until now to print them. A. N. C.

GLOUCESTER, Mass., April 19.—Could Jacobstaff walk in on me at this time he would not only see a squirrel eat meat, but he would hear as well. A red squirrel sits on a post at the open door gnawing a bit of well-fried pork rind. This squirrel is not famished, for there is food enough for a dozen or more in the door-yard. Besides, he has just left off sprouting sweet acorns, so he could have had his fill, but instead is eating meat because he seems to relish a certain amount.

I have to inclose all fat meat for chickadees and nuthatches in wire netting to keep the squirrels from carrying it away.

Squirrels prefer the flesh of birds to any other meat, but will eat all kinds, choosing the lean first.

Red squirrels eat young birds, and doubtless would eat old ones if they could catch them. The scamps give me no rest while the young birds are in my door-yard.

By the way, I wonder if it is generally known that squirrels sprout acorns just as farmers sprout potatoes? Well, they do, and for the same reason. Some time in the near future I will write out what I have observed of this interesting feature of squirrel life for FOREST AND STREAM. HERMIT.

BETHLEHEM, Pa., April 29.—I noticed in FOREST AND STREAM something regarding the carnivorous propensities of squirrels. I have had nearly all varieties in captivity, and found that they were very fond of meat occasionally, either cooked or raw. A chipmunk fairly goes crazy over a piece of raw beef and devours a worm with relish. MOHICAN.

Editor Forest and Stream:

In my short article on a shooting with a muzzleloader of 105 squirrels in a little over two hours, the rodents feeding on a dead horse, I merely wished to record a tale as told me, for your Camp-fire Flickerings column.

The allusion to the carnivorous act, situation of teeth, grinders, etc., I put in as a "flyer," hoping to draw out some of your many correspondents. I was glad to see that our friend E W. Sandis has very pleasantly replied. Of course, the *Sciuridæ* are carnivorous at times. I had a pair of black squirrels that, having been caught when quite young, became very tame and very mischievous, as well as smart. They were allowed to roam at will over the house and extension grounds, and I well remember that quite a large dish of sausages was cleaned up in rapid time by the scoundrels while the good housewife's back was turned, and that after she had just given them a hearty meal of corn.

They did not masticate the meat, but, like the vulture and buzzard, simply gorged. Am I not right? But those little black imps would devour anything, apples, cabbage, lettuce, and I don't know but what they would suck eggs (though I won't swear to that). I believe they disposed of a ¾lb. trout that I had reserved for one of our professors. We could not prove it on them, and it was laid to the cat; but as the cat had disappeared some two weeks before and had not been seen since, it was doubtful.

I think these queries and answers by brother sportsmen are a very pleasant feature in a paper like ours. It is bringing together, as it were, in closer communion of congenial spirits. And if we cannot talk with our brother in these columns, where can we? There are eyes and eyes. Some eyes see what other eyes, even when directed to the same objects, do not, especially when viewing nature "in its various moods," and the peculiarities of its wild creatures' life. Some eyes are very keen, and their owners know how to use them, and to tell us about what they see, and to tell it well; and we, the less favored, are made glad by what we are able to see through their eyes.

But, pshaw! I am getting garrulous (that's a good word, isn't it?). But I am getting old, and can no longer climb the rugged mountain after the whirring grouse, nor tramp the fields as I could a score of years ago, but I like to see in print the good times others are having.

Some philospher has said that there are only two pleasures in this life: the "pleasure of anticipation" and "the pleasure of retrospection." Well, I am principally on the retrospect just now, and I know that in a varied career of nearly three score and ten I have had my share of enjoyment in the victories in forest and field, and by the babbling brooks or sounding waves of the sea. There I go again. Good luck and good cheer to all brother lovers of the dog and gun. JACOBSTAFF.

The Cat and the Door-Latch.

CHARLESTOWN, N. H., April 27.—*Editor Forest and Stream:* When that happy time comes, if ever, when correspondents of FOREST AND STREAM shall meet in the flesh, as they now do in its columns in the spirit, I shall hope to be able to shake hands with Charles Josiah Adams.

Mr. Adams's own book, on his dog, was first loaned me by a friend, but recently the rector of the church in this village, which makes "three of us" who agree.

Many years ago, when I was a small boy, my mother owned one of the old-fashioned "tortoise-shell" cats, so much oftener read of than seen. Now, pussy, though a celebrated mouser, was rather a misanthropic individual, and avoided personal contact with the family as much as possible, but had a great fondness for the warm spot under the kitchen stove, from which she was often, for various reasons, shut out. Still, she was often found in the kitchen when she had been expelled, while no one had opened the door for her, and her entrance was a puzzle, until one day, when one of the family discovered the secret. Just outside the door leading into the back kitchen stood a long wash-sink against the wall, with its front edge just coming out to the line of the doorjamb. Eighteen inches or so above this, in the corner next the door, was a broad shelf, on which stood the soap-dish.

The door had the old-fashioned "latch" on the inside, with the handle and thumb-plate on the outside. Now, pussy was seen by some one out on the "stoop" to jump up on the sink, and from there to the soap shelf, and thence down against the door, bringing her paws together on the thumb-plate, and thus lifting the latch inside, while the weight of her body forced the door open.

Of course, like all cats, she landed on her feet on the floor, and gently walked into the now open door and took up her accustomed position under the stove.

Now, if this was not a clear case of reasoning I never heard of one. VON W.

"Instinct vs. Reasoning."

Editor Forest and Stream:

I have so often broken lances with my respected friend, Rev Charles Josiah Adams, on the above matter, and have so thoroughly appreciated his chivalry as an opponent, that we seem to have about agreed to disagree.

If you will permit, I will say that the question whether intelligent acts in animals proceed from instinct, or from reasoning, narrows down to a very small lane—thus: We all admit that there is a wide difference between the mentalities of man and the lower animals. There are acts involving reasoning, so low in reasoning requirements as to be within the compass of the mentalities of the most degraded of human beings, and yet are entirely beyond the powers of the most intelligent animal. The gathering of apes around the expiring fire left by travelers, basking in and enjoying its warmth, yet totally incapable of maintaining the source of their enjoyment by pushing the expiring embers together, or the cow, quieted by the stuffed skin of her recently killed calf being given her, proceeding to eat the hay with which that skin was stuffed, are all illustrations of this. Now with such glaring instances of incapacity to reason staring us in the face, is it not clear that the lower animals do not reason in the sense that man does, and that their intelligences differ in *kind* even more than in degree? W. WADE.

OAKMONT, Pa., April 27.

The Crocodile's Upper Jaw.

JACKSONVILLE, Fla., April 27.—*Editor Forest and Stream:* In reference to the statement of mine that the Nicaraguan alligators lie with their mouth wide open, the upper jaw elevated, nearly at a right angle, I inclose a letter just received from Lieut. Peary, the Arctic explorer, who preceded me in command of the expedition engaged in laying out the Nicaragua Canal. You will see that this letter confirms my statement, and further confirmation may be found in the writings of Alex Von Humboldt, who states the same fact as to the alligators of South America that he saw in his travels. J. FRANCIS LEBARON.

Lieut. Peary writes to Mr. LeBaron: "I have repeatedly seen the alligators lying on the sand banks in the San Juan with their upper jaws elevated at a very high angle, though I could hardly swear that the jaws were precisely perpendicular. To all intents and purposes I believe your statement to be correct. R N. PEARY, Civil Engineer, U. S. N.

A Cat Adopts a Rat.

BELLEVILLE, Ont., April 29.—The following is taken from a newspaper published in this city: "Mr. J. G. Davison, is owner of a cat which recently gave birth to two kittens The other day he discovered a nest of rats and caught and gave them to the cat, which killed and devoured all but one, which it has adopted. She prizes it as much as her legitimate offspring and fondles and licks it with every symptom of a mother's affection, and the young rodent is very happy with its adopted mother. Perhaps the mother's affection is genuine and then again she may be waiting for a good fat meal.

A Coon's Age.

Editor Forest and Stream:

A common expression for an indefinite, but rather long, time is "a coon's age." There is no need to suppose that this is based upon a popular impression that the raccoon is particularly long-lived, but what are the facts? Can any of your readers give any precise knowledge of the ages which coons have been known to reach? E. I.

Bewick's Wren in Northern Ohio.

LAKEWOOD, O., April 20.—I caught to-day with my hand a fine male specimen of this species, while the bird was flying against the window of my hen-house. I have been a very close observer and collector of birds for the past twenty-five years, and never saw nor heard of one being taken here before. I therefore think I can safely say that this is the first on record in this vicinity. A. HALL.

Game Bag and Gun.

FORTY YEARS IN GAME COUNTRIES.

NORTHWEST TERRITORIES.—*Editor Forest and Stream:* I am now going to do what I have often intended to do for some years, but have been stopped by what is generally called procrastination, and at the same time being in doubt whether some of my hunting experiences would be acceptable to your valuable paper, being in many ways so opposite to what the general ideal of your hunting correspondents express.

I have retired after having enjoyed the best hunting in this country. From 1854 I had the buffalo to 1860. I then went West, and hunted the Upper Frazer through to the Finlay Branch, and down the Stikeen River to the coast till 1865. From there I came back to the north branch of the Saskatchewan, and hunted for five years on the east side and through the Rockies up to the Laird River, without going out once from 1860 to 1870; I was not employed, but was on a simple hunting and prospecting tour from 1870 to 1893. I have hunted through the whole of the Peace River, Athabasca River, English River, in fact from the Rockies to York Factory and Churchhill, and north to Great Slave Lake. I may safely say there is no one in the country who knows so much of it as I do, or who has enjoyed such unlimited sport—buffalo in Saskatchewan in thousands; big horns, goats, caribou, bears of all kinds in the Rockies; bears and caribou on the west side; bears, moose, caribou and reindeer in Peace River, Athabasca and English River, to say nothing of thousands of beaver; and as for wildfowl—geese, swans and ducks—you can imagine what they must have been on large feeding and breeding grounds, where few disturb them and shot is the only scarce article.

Now for one reason I don't agree with most of your hunting correspondents. Some write in favor of large bore rifles, some for middling size, some for small, for moose to grizzly bears. I say never take a rifle in a wood country if you are a hunter; and particularly never fire at a grizzly bear at more than four or five steps from him; and if your nerves are what they ought to be, you kill him at once or run on him with the left barrel and blow his brains out. Use a double-barrel gun. You can shoot quicker than with a rifle, which in thick woods is necessary, and you should never shoot moose or any large deer over 100yds. at the most, and seldom at that distance.

My idea of a hunter is a man who can beat an animal with his own weapons: the game has good eyes, good ears and good nose to save himself with and enable him to run from danger before it is too close. If you are a hunter you should be able to approach him so close that he cannot get away. I used nothing but a muzzleloading double-barrel gun, 28-bore, for all my hunting up to 1886, when I took a run home to England, and then I had made a breechloader of 20-bore. I would use no other either for ball or shot; and even here, with all sorts of hunters and guns about me, my small bore fills up the bag with ducks, chickens, snipe, etc., as well as the 12 and 16-bore do.

Your hunters may call me a pot-hunter, and I may call them only target shooters, who could not live by their guns unless they had markets close at hand. H. I. M.

WESTERN GUIDES AND OUTFITS.

ROCKY MOUNTAINS, April 20.—*Editor Forest and Stream:* It may possibly be an advantage to some of your readers who contemplate a camping trip in the Rocky Mountains with pack and saddle animals, to know what provisions one wants to take along, and cost for guides, packers, cooks, saddle and pack animals. As there is not a uniform rate throughout the West, I will only give the prices usually charged in Montana and Wyoming by the outfitters.

As a rule, your guide will furnish everything required for the trip, and if informed in time will have everything ready to start on your arrival at his headquarters. This means several days' work, for which there is no charge.

If you wish to rough it a bit and do some of the camp work (presuming you know how), you can get along with one man, who is guide, packer and cook. As there is considerable work in camp and on the trails, he will not be able to devote much time to your pleasure. If you have another man along to do the cooking, help pack, see to the camp and animals, your guide can devote all his time to you. If you wish to go very comfortably and have camp chairs, tables, cots, your bed made down at night and rolled for you in the morning; if you wish to start out ahead of the pack train, not seeing them again until night; if you don't wish to travel with the pack animals along the trails, nor to take a hand now and then to pull one out of the mud and get its pack off and on again—you would better have another man to help the cook take care of the pack outfit. He can look after the horses, help the cook, build camp-fires and do many of the thousand and one things constantly turning up. You can get along without them, however. It all depends on how you wish to travel. Additional men and horses mean additional expense. If you travel alone it is more expensive than for each one of a party, when there are companions to share the expenses. But if you are on a hunting trip and there is more than one hunter in the party, he must share the country with the others or make side trips from a main camp. If you are out only for pleasure to see the country or for scientific purposes, your party can be large to your advantage, making the expenses much less where shared by many, at the same time giving you ample help in camp.

The first important thing is to secure your guide. Contract with him for everything you wish him to furnish at so much per day, for a stated number of days if possible. Understand just how much you are to pay before starting out. Don't wait until the trip is over before making a bargain.

I ought to say something about both parties standing by their contract. If by any unforeseen cause you are obliged to give up your trip at the last moment, ought you to pay for the whole thing, just as though you made the whole trip? The guide has made a bargain with you for a service; he has engaged men, possibly having taken them from other work; has refused other parties, and might be unable to get another trip that year; in fact, would lose his season's work by your failure to go. On the other hand,

what ought the guide to pay in the way of damage, who, after contracting to go with one party, throws them over for something better, and fails to fulfill his contract? If it is late in the season, it may be impossible to secure competent men and transportation. If the guide is able to secure another party on the failure of the first one, they ought not to pay for a loss the guide does not sustain. I speak of this because there have been many disappointed guides in the West, and a few very angry and discouraged hunting parties, who arrive or start at the last moment without knowing anything about their outfits, where they are going to secure men and animals, or even if they are going to get transportation at all, owing to the failure of their guides. Under any circumstance, they lose valuable time. Therefore, it is best for both parties to the contract to have an understanding, if there is any considerable amount involved.

I will give a list of provisions based on the ration list used by the United States Geological survey. The quantities are ample, and there is enough variety for any camping trip. Of the 100lbs. of fresh meat, fish and fowl, only a small proportion could be taken on a long trip—enough fresh meat to last until something could be killed, or meat could be obtained as required. Fish and fowl are supposed to be had only when camping where they can be gotten fresh. If no fresh meat can be obtained, additional salt meat must be carried. The canned corned beef is excellent for lunches and hash. About all the provision can be purchased at any of the larger outfitting towns by your guide. If you have any particular kind of tea or coffee, it may be advisable to bring it from the East, also a few delicacies for lunches. The provision list can be varied to suit the taste, either adding additional canned goods, or more of one thing and less of another. The proportions on the list are what usually fills the bill. It is for 100 rations, or food for one man for 100 days, as follows:

Ration List for One Man, 100 Days.

Fresh meat, including fish and poultry	100lbs.
Cured meat—hams, bacon and salt pork	45lbs.
Lard or fat salt pork	10lbs.
Flour—"Montana"	60lbs.
Corn meal, hominy grits, farina, California Breakfast Food, oatmeal, rolled oats, in all	15lbs.
Dr. Price's baking powder	3½lbs.
Sugar—granulated	40lbs
Coffee—roasted	10lbs.
Tea	1lb.
Condensed milk—Eagle brand	8 cans.
Condensed cream—St. Charles or Imperial	12 cans.
Butter	11lbs.
Dried fruits—Apples (5), apricots (3), peeled peaches (?), prunes (3), raspberries (2), prunells (3), plums (2), in all	20lbs.
Rice	10lbs.
Beans (white Navy)	10lbs.
Potatoes	80lbs.
Onions	20lbs.
Macaroni	8lbs.
Cheese	8lbs.
Spices	2oz.
Mustard	8oz.
Flavoring extracts	2 bottles.
Pepper	4oz.
Pickles, chow chow, etc	3qts.
Vinegar	1qt.
Salt	4lbs.
Canned corned beef	6 2lb. cans.
Boston baked beans	8 2lb. cans.
Worcestershire sauce	1 bottle.
Canned tomatoes, corn, peas (sifted or French)	A few cans.
Peaches, pears, cherries	A few cans.
Maple sugar for syrup	5lbs.
Can of syrup	1qt.
Cocoa (Baker's)	1lb.

There are a few things that can be added to the above list. There will be a surplus of a few things, depending very much upon the taste of the party. If the trip is for a number of days, less or more than 100 rations, the quantities can be purchased accordingly. Don't make the mistake of judging the quantity of food for a mountain trip by your home appetite. The cost for provision is usually from 50 cents to 75 cents per day per man. This is in addition to the cost for men and animals.

The usual price for guides in Montana is $5 per day, including his saddle horse. For a packer and his horse, from $2.50 to $3; and the same for a first-class cook, including his saddle horse; camp helpers from $30 per month to $2.50 per day, mounted. Saddle horses are from 75 cents to $1 per day; pack animals from 50 cents to $1 per day, according to the length of the trip.

It depends very much on the amount of personal baggage a party takes with them how many pack animals they will require. The length of the trip and kind of traveling regulate the loading, which is usually from 150 to 200lbs. per animal.

One man, with his guide, can get along very nicely with three pack animals for a thirty-day trip, if he does not take too much baggage.

A party ought to have at least five pairs of good blankets to the man, with a "comfortable." Sleeping bags are very good, but are not sufficient alone; they are too warm for summer use if heavy enough for winter. A sleeping bag and three pairs of blankets and a piece of canvas 8×10ft. make a good bed for summer and winter.

The guides ought to furnish all camp outfit free, including blankets, pillows, canvas, cooking outfit, tables, chairs, tents, first-class saddles and good horses; in fact, everything required by a party except their personal baggage, guns and fishing rods. X.

Connecticut Game.

I have just had a visit from a brother, who has been back to our old home in New London county, Conn. He told me that ruffed grouse were more numerous there now than he had ever seen them, and his observations of that locality date back for forty years.

He also saw many woodcock, since they had returned there from the South.

Nearly all the trout brooks and much of the shooting grounds are posted. John Williams.

With Rod or Gun
To FOREST AND STREAM,
New York City.

ON RUNWAY AND WATER.

When I was in Waterloo at the gun club tournament I had an invitation to accompany a party on a deer hunt to the Fish and Game Club of St. Jerome at Lac Chapleau, Quebec

This was a chance I have looked for for several years past, but somehow I never could make connections. I was delighted with the idea.

When the train pulled in at Granby I found Messrs. Joseph Lefebvre, A. E. I. Beaulne, C. A. Nutting, Zoel Hudon and Joseph Clement from Waterloo as the main party. At Farnham we expected to take on three more, but only George Clement turned up.

At Montreal Mr. Arthur Whiteford joined us with his Irish setter dog that he said belonged to a friend in the city, had never seen anything nearer a tree than a telegraph pole on McGill street, or anything nearer a partridge than a sparrow on the same street, but "Boys," he said, "he's got the stuff in him, great blood, finely bred, and will hunt partridges on sight."

This made a party of eight. I bought a .40-82 Marlin rifle; Nutting had a .44 Winchester, Beaulne a .38-55 something, we won't say what it was because we never found out. There was one shot fired from it at a target, when it ceased to work, and despite the best mechanical talent in the party it remained obstinate and never said a word. All the rest had shotguns.

It was expected that we might get a deer or two, but that partridges and ducks would be the principal sport, so duck and partridge shells formed the bulk of the ammunition. However, we took along twenty-five buckshot shells for luck.

We had a sixteen-mile drive over colonization roads from the terminus of the railway and duly arrived at the club house about 4:30 A. M. A supper, breakfast or whatever you might want to call it, was prepared by the keeper, after which some of us retired, I among the number, to try and get a little sleep. The rest of the party, however, began firing at targets and trying my rifle, keeping up such a racket that I could not sleep, so I came down. I found two had been out after some fish, and had been fortunate enough to get eight parchaud, which we had for breakfast about 11 o'clock.

The guides had turned up, bringing two dogs, mother and son, very ordinary-looking dogs, mostly collie, but claimed to be A1 dogs

About 2 o'clock it was decided to go out and try them for a deer just across the lake. We took to the boats. I being a particularly green hand was toled off with Beaulne, who was supposed to be an old deerslayer, having visited the north regularly for the past eleven years, well posted on deer runways, knew just where the deer would take the water as soon as he heard the dogs bark, perfectly cool and collected, never got excited under any circumstances, and old enough to be my father.

I congratulated myself. Of course I did the rowing over. When we arrived at our place I beached the boat, under his instructions broke off some dead limbs that would obstruct the view, getting everything just as wanted, all the time learning the whys and wherefores of all our actions.

We were just nicely settled when the boat commenced to swing with the wind, making some noise, which Beaulne said would have to be obviated. However, he would do it, which he proceeded to do, arranging the boat so it would be handy to take to the water, as we were to wait until the deer had made about two acres in the lake before making our presence known, as, sooner, it would turn and get back to the woods before we could head it off.

He did not get it just right. I suggested that he place the keel upon a flat stone that showed above the water a few inches, then all we would have to do would be to lift it off as we got in, when we were immediately able to row away.

This was satisfactory. When he gave the signal I was to rush cautiously to the boat, place myself with the rifle in the bow, when he would lift the boat off the stone and row me quickly on to the deer, so I could get my first deer.

Finally I was told where to sit; must keep perfectly quiet, and in all things be governed by him.

He took his seat about 30ft. from me, where he could look over a bay, I to keep watch on the opposite shore, and signal him should I see anything on the water.

I put seven cartridges in my magazine, threw one into the rifle, sat down and scarcely breathed; in fact, was so still that a squirrel came and ate a burr within about 5ft. of me. We stayed that way for about an hour, when we heard the dogs a long way off; finally they seemed nearer, when we heard a shot. Beaulne immediately jumped up, telling me to get into the boat, as there was a deer in the water which possibly might get away from the others, in which event we would be right "in it."

I noticed he made considerable noise, but I said never a word. I took my place in the bow, as instructed. He jumped in, grabbed the oars, and commenced to pull for all he was worth. He had forgotten to take the keel off the stone, and in his excitement could not think what was the matter, but made an awful racket with the oars on the rocks and gravel. I suggested he lift it off the stone first, but he thought he could pull it off, handing me the paddle to push with. In the meantime we heard another shot down in the same direction. This greatly excited Beaulne, who said we would miss the deer unless we got out on the lake. I dropped the paddle, stepped into the water, lifted the boat off, and got in again, when he made the oars bend. By that time everything was quiet. He rowed me around the lake a bit, but we could not see any deer. Finally I suggested we return to our place, as the dogs might still run one our way. This we did, waiting another half hour or so, once hearing the dogs running away from us; but nothing came our way.

During this wait Beaulne sat nearer to me, keeping up quite a talk, as he said the dogs were likely with the guides or some of the others. When we heard the dogs Beaulne became quite animated, motioning to me to keep very quiet He then put his ear on an old log, explaining that when you wanted to hear anything a long way off by putting your ear to the ground you could hear which way the deer was running, etc., etc. I was beginning to lose faith in him a bit, as I thought he was doing too much talking for a still hunter; but then he was supposed to know all about it. We also heard a couple of shots around the point; but Beaulne did not know who was stationed at that point, and gave it as his opinion some fool was shooting at ducks.

Just then we heard some voices, and were surprised to find the canoe with the guide, George Clement, Jo Lefebvre and Hudon therein with their deer, a yearling buck.

Clement was the lucky man. He had been sitting quietly in his stand when he saw the deer coming close to him, but was in a bad position to shoot. However, he fired from the left shoulder and saw it drop behind some bushes, but making a very big racket. Catching another glimpse of it he fired again and then moved over that way, when he found it was still alive, so gave it the final shot we heard. The first charge of buckshot had broken the hind leg clear off just below the gambrel, the other lodging in the body.

When we got back to the club house, about 5 P. M., we were delighted to find a two-year-old buck hanging from the club-house post. Two of the guides were at the wharf whom we asked who had shot it. They replied, "Petit homme sou!" This meant Whiteford, who had a bad cold he had been doctoring for a week; his eyes were swollen and more or less bloodshot. He was also full of spirits, singing snatches of songs, was a bit of a ventriloquist and made lots of fun for the party. The guides thought he was drunk, hence the name, which clung to him the rest of the trip.

It appears that when the dogs went his way the buck took to the water, making a magnificent jump off a rock about fifteen feet above the water. They waited till he got well out into the lake and then took after him. Whiteford had only No. 4 shot, so rowed close up, giving the first shot around the head. The deer made wonderful efforts to get away, coming nearly out of the water when he gave him the other barrel, which nearly finished him, but getting closer put another shot into his ear, then hauled him into the boat.

Naturally we were much encouraged. Two deer in about two hours, besides Lefebvre claimed if it had not been for Whiteford's Irish setter he would have gotten another as he got up, besides seeing three others.

I asked a few questions of Beaulne and found out that he had never shot a deer. He acknowledged he got a bit excited, forgot all about the stone under the boat, should not have pushed out into the lake when we did, as if we stayed quiet Whiteford's deer might just as well have come our way. He was very sincere in his regrets, and anyway, he was the life of the party, barring Whiteford, was more anxious to have all the rest get a deer than himself, so all we could do was to chaff him, which he took good-naturedly.

The next day we started about 10 o'clock, going down the lake, the birch bark canoe portaging over to another little lake about fourteen acres away. I was placed on a runway near Lac Chapleau, Jo Clement being my nearest neighbor, but over near the brook between the two lakes. The guide told me to remain perfectly quiet, not to cough or make the slightest noise, pointed out the runway where a deer would be likely to show up, and told me to shoot her just back of the shoulder.

The guide, with the two Clements and Hudon, portaged along over to the other lake, leaving Jo Clement at the brook.

I seated myself between two trees, held my rifle ready and awaited results.

In about an hour I heard a noise in some bushes about 100ft. away. I brought my rifle to a ready, breathlessly waiting for what would show up. I soon got a glimpse of a moving object, but being naturally careful, I wanted to know what I was going to shoot at It very soon proved to be an old habitant, hunting for partridges He moved along my runway, looking around, but never discovered me. Just as he was passing within about 15ft. I hailed him, stating we were after deer, that another hunter was on a runway a little further up, and that he had better move another way, as some one else might not be as careful as I was. He seemed delighted to see me, came up, pulled out his pouch along with a clay pipe with about 2in. of stem, filled up, and with the pipe hanging from his toothless jaws, fire down, pulled away on "Tabac Canadien." Although I hinted pretty strongly that he had better move, that he would spoil my chances, as any deer within half a mile would scent that tobacco, he would not see it in that light, but told me that when a deer was before the dogs it was intent on getting away from them, and paid no attention to anything so trivial as a man smoking in his way. He then gave me several pointers about deer. When he got through I thought he knew as much about it as Beaulne.

Finally he moved off, wishing me success, and really I wished him no ill-will, as he was perfectly innocent of spoiling a shot for me.

Every little while I would hear the man near the brook calling "Hoo-hoo," but I did not answer. I learned later that it was Joe Clement, who said he wanted to keep in touch with his neighbor in case a bear came along. However, I did not answer him, but was thinking I was hoodooed on this trip the way luck was running.

Pretty soon we heard a shot from the other little lake, but that was all. Later we learned that Hudon, with the guide, were hid in some bushes in their canoe, when a fine big buck walked out into the shallow water within 20ft. of them. Hudon fired point blank at it with a charge of bird shot, but never touched it. Presume he had a fever. Of course the buck was out of sight before Hudon thought of his second barrel.

About twenty minutes after the old man left me I heard my neighbor shoot. My back was to him, but looking over my shoulder cautiously I saw a deer running up the hill out of range from me, but very close to Joe Clement, who had fired at it, but without success.

Five minutes after I heard him fire again, and, looking, saw another deer making away from him. "Well," says I to myself, "there is certainly no luck for me to-day." However, I had my instructions, and made up my mind I would wait till the guide said I could leave.

Just then I heard several shots over on the little lake, and within a few minutes heard the dogs.

I was waiting patiently, thinking that certainly all the shooting meant some deer. I always kept my runway in view. Suddenly, without the slightest noise, I saw a deer coming sideways to me. My instructions were to shoot behind the shoulder. I saw a couple of more jumps would bring her in a favorable position, and made up my mind to fire as she passed between some trees.

Just as she arrived there she paused momentarily; the guide afterward said she had caught my scent and paused to locate it.

At any rate, I took advantage of the pause. Of course, I was all ready for her at that particular spot, and just as she paused I fired. I saw her cringe, her flag go down, and then a streak of deer flash past; as she made the second jump I worked the lever of the Marlin, took a quick glance to satisfy myself that the other cartridge had slipped in all right, then looking up saw her disappear behind a large birch tree. With the rifle at my shoulder I waited for her to appear on either side for another shot, but she kept the tree between

us. I felt satisfied I had hit her, and that I had hit her where I was told to, but thought that if she was only wounded she might be waiting to know what struck her, and bleeding to death.

I kept perfectly still. In a couple of minutes the dog appeared where I first saw the deer, ran by me a little off her track, went a few rods, circled back, then struck the right trail with never a bark out of him, ran along a bit, when I saw him stand just behind the big birch. Then says I to myself, "Payne, you have her." I walked over that way. As soon as I got past the birch there she lay, stone dead with a bullet hole clear through her just back of the shoulders. Then I yelled: "Hurrah! hurrah! hurrah! Payne has one!" Joe Clement immediately came over from his runway one of the guides with Beaulne came up and congratulated me. Beaulne said it was as good as a $50 bill to him to know that I had been successful. We found I had missed the heart by about 2in, but had bored right through the lungs. Afterward we went over the ground to see where I had struck her. It was just 75ft. from where I stood. There was a little birch just the other side of her, against which there was a splash of blood, and in that tree, about 1in. deep, was my bullet, which I subsequently secured. It was the first deer I ever shot and the first time I ever fired at any game with a rifle. You can imagine how much I prize that partly flattened bullet.

Just after we had my deer (which, by the way, was a three-year-old doe, that is, Beaulne said so, and of course he knows) hauled to the boat, we went to the other lake to report our luck, and found that Geo. Clement had secured another that had put into the water, shooting it with duck shot.

There were four deer hanging from the club house posts that night. We then gave up all idea of partridges, wanted to get a deer each, there being eight of us. However, that night about dusk, the guide, Geo. Clement and myself went down to the gate of the lake to shoot ducks as they flew over, but, although we each fired six shots, we came home without touching one of them. J. BRUCE PAYNE

PROVINCE OF QUEBEC.

[TO BE CONCLUDED.]

ONE MAN'S INFLUENCE.

WILLIAM B. BENNER, the Western Union telegraph operator at Somerset, Pa., died suddenly at that place on Tuesday, April 27, of paralysis of the heart, aged about thirty years.

To the bulk of your readers the above simple announcement is of no more interest than any other record of sudden death; but Mr. Benner was a true sportsman, and has done much for the interest of the craft in Somerset county, which could be emulated elsewhere to the benefit of the lovers of the rod and gun.

About three years ago he conceived the notion that something should be done looking to game and fish protection by the persons interested, aside from the laws of the State, and after talking over the matter with others he went to Attorney A. C. Holbert, who, while not a fisherman, is an enthusiastic gun man, and laid his ideas before him. They had several consultations, and Mr. Holbert drew up a "constitution and by-laws" and a call for a meeting, at the Hotel Vannear, of all lovers of shooting and fishing on a certain evening.

When the evening came Mr. Vannear, himself a shooter, threw open his parlors, and seventy persons were there present. Mr. Benner was unanimously elected chairman *pro tem.*, and directed the proposed constitution and by-laws to be read, and after their reading they were adopted as read, and the seventy persons signed them, forming the Somerset Game and Fish Protective Association. The salient features of this Association are as follows:

1. No fees are paid for membership nor for remaining a member.

2. Any person can become a member.

3. Each member pledges himself on his sacred honor not to kill game or take fish out of season; not to fish with a net, except for minnows; not to shoot a bird on the ground, unless it has been wounded; not to fish or hunt knowingly on the lands of another without permission first obtained; not to kill any bird or beast under the protection of the game laws of the State, and not to be a hog in either shooting or fishing; to give information promptly to the secretary of any violation of the game and fish laws of the State, especially of the killing of game or taking of fish out of season, and the secretary pledges himself to inform the president and furnish him with a list of witnesses, and the president is pledged in like manner to prosecute the offender or offenders, and each member may be assessed a sum certain to defray the expenses of such prosecution, and if the same be successful the fine is turned into the treasury and appropriated first of all to reimburse the members their assessments.

Mr. Benner was unanimously elected president, A. C. Ferner secretary and treasurer of the Association. The fact of the formation of the Association and its constitution and by-laws were published in all the county papers, and similar associations were formed at other points in the county; and the writer is informed that in adjoining counties and even in far-away counties of the State similar associations have been formed, and have adopted, without change, the constitution and by-laws of the Somerset Association.

No prosecutions have been made, and none have been necessary. Persons who might have violated the law have come into the Association, and are active and conscientious members. The Somerset organization now numbers on its roll 150 members; others in the county swell the aggregate, as the writer is informed, to about 1,000 members, and all due to the efforts of the plain, unpretentious young man, William B. Benner, who now "rests from his labors and his works do follow him." AMATEUR.

Pike County Game Shipments.

DILLINGERSVILLE, Pa., April 23.—*Editor Forest and Stream:* Your correspondent from Pike county is right. I made a geographical error in my article on April 9. The Delaware, Lackawanna & Western R. R. does not touch Pike county. Nevertheless the largest part of the game, as I was informed, came from Pike county and the upper part of Monroe county. The agents at the stations, who informed me as to the shipment of game, are situated in Monroe county, and I may say not such a great way from Pike county. LEON W. MAZURIE.

CHICAGO AND THE WEST.

Wisconsin Deer License Law.

CHICAGO, Ill., April 23.—The most important news of the week is, without doubt, that of the passage in Wisconsin of a deer license law similar to that in force in Michigan. Senator J. Herbert Green, of the Fourth District, wrote me early in the week in regard to this, stating that the measure now in effect was introduced in the Senate as Bill 56. Senate Bill 57 has also become a law. Wisconsin now has a regularly enacted and effective game law, with no loopholes left in its construction, such as were found in the Buckstaff law, under which misunderstandings of the deer season occurred last fall. The sportsmen of Wisconsin had a good advocate in the person of Senator Green, as well as in other representatives who have assisted them in former years. They did not secure a bill entirely prohibiting the spring shooting of wildfowl, nor is it likely that the sportsmen of the State actually wanted such a bill. It is legal now, as before, to shoot all ducks in the spring excepting mallards, teal or wood duck.

The license for deer shooting under this new law is $1 for residents and $30 for non-residents. This is the third Western State within three years to pass a non-resident license law on all or some species of game. Such laws are naturally very unpopular with non-resident shooters, but it is to be supposed that the men of Wisconsin found the non-resident number so many, that it seemed necessary to tax them something for the privilege of hunting in Wisconsin deer country. Whether the law will remain on the statute books is yet to be seen. That it will in many cases be evaded goes without saying. While I can express no opinion in regard to the wisdom of such a law, I do know that it was a question of very short time before the deer of Wisconsin would have been destroyed under the riotous wastefulness of the earlier system. It may be that any law, no matter how odious nor how severe, will in its way be well if it serve to call a halt for a moment and teach the unthinking public what game really is and what a game law really intends. The great bulk of the shooting public thinks of nothing and cares for nothing so long as there still remains game to be killed.

The result of the Wisconsin and Michigan license laws will be that next fall there will be a flood of deer-hunters which will pour into the woods of Minnesota. The latter State is to be the next great hunting and fishing ground of the Western people, and is as yet but little known as compared with Wisconsin. It would not be surprising if Minnesota, so long a model in game-law matters, would find it necessary or expedient to pass a non resident license law. There have long been earnest efforts made to make the laws of Michigan, Wisconsin and Minnesota as nearly similar as possible, the conditions governing the chief varieties of game being much the same in these three States.

Other provisions of the new Wisconsin deer law are as follows: The open season is from November 1 to November 20. Night-hunting, fire-hunting, water-hunting, the use of dogs, the use of traps in taking deer are all unlawful and prohibited. It is unlawful for any person to kill more than two deer, except "any resident or settler shall have the right to kill, at any time during the open season, any deer which is to be consumed by his family or neighbors, and not for the purpose of sale or traffic." The fine may be from $25 to $100, or imprisonment from two to six months. Thus it will be seen that the non-resident hunter is to pay $15 each for his two deer, and cannot kill any more than two.

Yet other provisions in the new Wisconsin law interesting to sportsmen are those forbidding the use of sneak-boxes or artificial blinds in shooting wild fowl, and prohibiting duck-shooting between sundown and sunrise. It is also unlawful to use ferrets in hunting rabbits.

The record of legislation in Michigan, Wisconsin, Minnesota and Dakota for the past few years shows an increasing stringency in the game-law measures in this part of the West. It comes none too soon, if the game of this section is to be retained for the pleasure of the shooters. The history of its butchery has never yet been written.

What News From Illinois?

But what news from the grand old State of Illinois, which possesses the city of Chicago, which in turn possesses that odorous thoroughfare known as South Water street? What news from Illinois? Nothing, except that we still have South Water street, and still have the elegant game law that South Water street gave us years ago.

Many Jacksnipe.

The spring of '97 proves to be a great one for game, jacksnipe being especially abundant. Very large bags have been made at Kouts, Davis, Shelby, Water Valley, and other Kankakee points. The highest bag of which I hear was that made near Water Valley by two men, who killed 105 jacksnipe in one day. In his last trip to Maksawba Club, Mr. W. P. Mussey bagged forty snipe in one day, and eighteen the next. He and John Watson have again gone down to the club, and should be having even better shooting now. The weather is warm and exactly right for a good flight.

Heavy Shooting at Poygan Club.

There has been heavy shooting at Poygan Club, situated on Lake Poygan, Wis. This club has a large Chicago membership. One member this spring killed 101 ducks in one day. Two Chicago members in six and a half days' shooting killed 473 ducks. The gentleman giving me this news requests that I withhold his name and that of his friend. I don't blame him for the request. He is the secretary of a prominent gun club of Chicago. I suppose he and his friend were carried away by a sudden burst of enthusiasm, which lasted for six days and a half.

The Dress of a Cowboy.

There was a cowboy preacher recently arrested in Chicago for something or other, and one of the daily papers remarked that he was "resplendent in the full dress of a cowboy, buckskin jacket with gilt buttons, and doeskin trousers—both decorated with long fringe—high-top boots with spurs, broad-brimmed sombrero, and medals without number."

Somehow or other I must be out of luck. I have been knocking around in the West for quite a while now, but I never did see a cowboy dressed that way.

Some More about the Black Duck.

April 24.—Mr. Thos. Johnson, of Winnipeg, writes to me that he has just read the FOREST AND STREAM comment of some weeks ago on the character of the black duck, which he was good enough to send down to this office from the far North country. He says that he can see no right that I have to call his black duck (*Oidemia fusca*) a "base fraud and no black duck at all." He adds: "This bird is not found in Manitoba, but I say it is a black duck, as black as the marsh duck of Ontario. If I have failed of finding the breeding places of the marsh black duck, I have found the lake where the sea black duck breeds, and where it is found in thousands."

Mr. J. H. McIlree, assistant commissioner Northwest mounted police, writes from Regina on this same subject: "I was interested about the yarn started by your friend Johnston, of Winnipeg, that he had discovered the breeding place of the black duck north of Edmonton. I knew he must be mistaken, as I have been twenty-three years in the Northwest, am very fond of the gun, and have yet to see a black duck. I happened to be in Edmonton a little over a month ago, and went to the taxidermist there to see if he had a specimen of this black duck. He had not, but he showed me a letter, or at least copy of one, from you to Johnston which settled the matter. The next thing that struck me was the line of migration of these ducks in spring and fall. I have shot many hundreds of ducks in this vast Northwest in both spring and fall, but have never shot a scater. I always looked upon them as a sea duck.

"I have been taking FOREST AND STREAM since about 1876, and it loses none of its interest for me."

Mr. Ruthven Deane, of Chicago, one of the best posted ornithologists in the country, is good enough to contribute some points about the black duck, which I append as per his letter:

"I have been interested in reading the black duck controversy in the FOREST AND STREAM. In the number of March 13 your correspondent, Mr. Geo A. Boardman, of Calais, Me., states that the Eastern black duck is of only accidental occurrence in the West. Such may be the case in Minnesota, where Mr. Boardman has made his observations, but the true black duck (*Anas obscura*) is certainly a regular spring and fall migrant in Illinois and Indiana, and in considerable abundance, especially in the fall. As you are a duck hunter, I have no doubt but that this has also been your experience. I have not infrequently counted fifteen or twenty black ducks in a bag of fifty or sixty birds, the balance being mostly mallards (*Anas boschas*).

"In regard to Mr. Boardman's reference to 'two sizes' of the scaup duck, you state that you take the smaller of the two as applied to the ringbill (*Aythya collaris*) I think that Mr. Boardman does not refer to this species, for there are two distinct species of the scaup, both found on Eastern and Western waters, the American scaup duck (*Aythya marila wearctica*) and the Lesser scaup duck (*Aythya affinis*). The American scaup, more commonly known as the big bluebill or canvasback bluebill, is quite rare in Illinois and Indiana so far as my experience goes, and from such information as I have gotten from many sportsmen. At the English Lake Shooting Club, on the Kankakee marshes in Indiana, I have not known of more than half a dozen having been shot by the club members in the past thirteen years. I understand it is not of such infrequent occurrence on the Illinois River in the Swan Lake region, especially in the spring. Of the Lesser scaup, or, as better known in our shooting sections, the bluebill, you are of course intimately acquainted."

I want to thank Mr. Deane for setting me right about my comment on Mr. Boardman's "two sizes" of bluebills. Mr. Boardman was right, as he usually is, though it seemed to me he might have confused the two birds, the bluebill and the ringbill, which sometimes are so confused, my own memory being vague about the two sizes of scaup. I saw a fine specimen of the "larger bluebill" (American scaup or "Greater scaup," as it is sometimes called) at the office of R. A. Turtle, a local taxidermist, not long ago. This bird I recognize, but I think I have not seen it in my shooting in the North for six or eight years, and it is rare among Illinois duck shooters I think, though Mr Boardman has perhaps found it in more abundance in Minnesota. I am quite sure I have seen it in Texas. The man who had the specimen above mentioned no doubt thought it a curiosity here and so had it mounted. Of course, these bluebills, big or little, are not black ducks, even of the "sea black duck" sort which Mr. Johnson sets up; but I think now we have got these different animals sorted out so that we can tell what they are.

I am all the time learning that there are a whole lot of things I don't know a good many things about, including ducks. It is astonishing how loose the average observation is, when one is not making a special study of a subject. How many men can tell off-hand, for instance, what is the color of a canvasback's bill, or of a mud hen's foot, or of a mallard's foot, or can tell what a redhead's bill looks like, or that of a bluebill, or of a velvet scater? We all ought to know all such things, and probably we think we do, but quite a few would fall down on so short and simple a catechism as that. I remember that once when I was a boy I was executing a fine pen-and-ink sketch of a duck, under the supervision of my father, but he told me that I had put on the legs at such a remote corner on the duck that it could by no possibility have been able to stand up. Does everybody know where the hind legs ought to go on a duck? I presume everybody thinks he knows, but I would have to bet that he doesn't. This is how it happens that we sometimes get mixed up on bird matters. We try to tell somebody how a bird looks, and we can't, because we don't know.

From the Far North Country.

Mr. Thomas Johnson is very good at getting up for us curious things, surprises in natural history and odd questions of interest. This week he sends down a photograph of a snow-white mountain sheep head, with the following letter in regard to it:

"I am sending you a photo of the head of a white Rocky Mountain sheep. I understand that no museum in the world has a specimen of this animal. This one was killed by a British sportsman, Mr. Malturner, in British Alaska. Mr. Secord, of Edmonton, a friend of mine and his, got a photograph of the head, which he sent to me."

The photograph mentioned is at hand. It is very curious. It shows the horns of a big horn, possibly four, or three, years of age, but the scalp is pure white. The hair of the scalp seems to be that of the sheep, there being no possibility, for instance, that it could be a scalp of a mountain goat stretched over a sheep skull, even did the size of a goat scalp permit this. The jaw and nose of the head are those of the big-horn, and the whole head is a well-mounted specimen, though I should call the eye used rather too large. It may be an albino sheep, or it may be a new sort of sheep, and at any rate the head is very interesting. Mr. Johnson does not state when this head was killed, though that may have very much to do with its color. In our hunt on the Blackfoot reservation this winter we found the color shown by the big horns very much lighter than that of the fall coat. There

was one head in our camp, killed by a Mr. Riley, of Midvale, Mont., that of a four-year-old ram, which in the face was nearly a pure white, though about the back of the cheeks and on the neck the color darkened somewhat. This was simply an instance of change of color with the season of the year. As Mr. Johnson's sheep came from a still more northern and colder country, and may possibly have been killed in winter, it may be that its color is simply an instance of winter coat. It seems to me that it is much too white for this, however, and I leave this nut of Mr. Johnson's for some one else to crack.

Buffalo in the Northwest.

The same enterprising news gatherer sends a little later a clipping from the Edmonton *Bulletin* of March last, stating that the information is authentic, so that he thinks we have not yet gotten to the "Last of the Buffalo." The cutting reads:

"Official dispatches from Inspector Jarvis reporting upon his patrol as far as he has gone, have been received at police headquarters.

"At the time of writing Inspector Jarvis was at Fort Chipewyan, having returned there from Fort Resolution, Fort Smith and Smith's Landing on Feb. 25.

"Two buffalo bulls and a cow were seen twenty-five miles out from Fort Smith on Feb. 21. This makes about 100 of these animals seen in that vicinity since last fall."

No Chance for a Poor Man.

An injured citizen of Manitoba writes to Premier Greenway, by medium of the Winnipeg *Free Press*, about an indignity committed upon his haystacks by certain unbridled wild deer. He thinks he ought to be paid if the present efficient game-laws (a two years' close season on deer) are to continue so much in force, and says: "The deer have eat and destroyed me about twelve tons of hay this winter, through the snows being so deep and the hunting season being closed. I would like to know what recompense I am entitled to. I have informed one of the game guardians and he has seen what damage has been done, but said he could not do anything but said I must inform you about it, for it leaves me very short of feed and it cost me quite a bit for hired help and harvesting, for wages were high and the season very wet; so I hope you will consider me entitled to some recompense for my loss."

(The American deer don't eat very much hay. Not if your American knows it. Ever prompt to defend his home, he loads the old gun up with slugs and repels the invasion. Thus our deer will, after a time, molest us no more.)

The Tolleston Case.

The case of the Tolleston Club, mentioned at length last winter, in which the club wardens were arrested for firing upon trespassers, is this week on trial at Crown Point, Ind., some fifty witnesses having been examined, with conflicting results. No deaths have ensued from the shooting. The case will probably be closed next Monday, when prosecutor Heard will speak for the State and attorney Foster for the club.

Bitten by a Tarantula.

Mr. W. W. McQueen, late of Menominee but now of Chicago, took a hunting trip to Texas last winter, and came nearly losing his life by it. While out in the country near Redwater, Tex., he became aware of a prickling, numbing sensation in his thigh. He told his companion that he thought he had a splinter in his leg, recalling a pause made nearly an hour earlier at an old pile of rotten railroad ties. His friend was suspicious of the splinter and asked to see the place. They found the flesh already turning black, and the friend at once pronounced it a tarantula bite, though Mr. McQueen did not know when he had been bitten. Mr. McQueen was at once given whisky, and he says that he drank a pint at a drink, and felt no effect from it whatever, the action of the poison being so strong. A doctor was seen as soon as possible, and he quartered the wound and applied a cupping cap. Mr. McQueen's life was barely saved, and he lay in bed for some weeks. He walks now only with a cane, and in his thigh there is a deep hole where the flesh sloughed off to the size of his hand, it seeming to be a peculiarity of the tarantula poison to kill the flesh for a distance around the bite. Mr. McQueen was a shooter well known at Menominee, and will be welcomed in Chicago circles as soon as he gets around all right again from his narrow escape with the hairy spider.

Snipe Season Closing.

Our snipe season is drawing to a close, and has been on the whole a good one. Mr. W. P. Mussey has probably killed about as many snipe as any of our Chicago shooters, getting in his trips to Mak-saw-ba about 150 birds. He brought back a trifle over 100 last Monday, the result of three days' shooting on that famous marsh.

Oswald von Lengerke made five hunts for snipe and killed in all 105 snipe. Charlie Antoine did not do quite so well as that, and thought the season a bad one.

Mr. F. A. Place, of Chicago, and Mr. Hayward, of Crown Point, Ind., returned this week from a little run to the marsh above Shelby, Ind. They did not find many birds on the Kankakee marshes, but along little inland sloughs picked up a couple of dozen.

George Klehm, at Arlington Heights, near the west edge of Chicago, sent in twenty odd snipe this week, and probably killed them all in one day's hunt near his home at that suburb.

Messrs. C. S. Dennis and J. V. Clark, of this city, had a little hunt below Lowell, Ind., but report only a few snipe. They were a little too late.

Mr. J. B. Wiggins, of this city, has been to the Mak-saw-ba Club grounds once or twice, but has not killed many jacks. He did not try to do any severely hard hunting, but could not call the luck good.

Mr. Joel Kinney, on the same grounds, has hunted a few days in something of the same manner, and has killed enough jacks to say at least that he got enough to eat.

On the Kankakee marsh above Momence, Ill., a large party was in camp for ten days last week and this. These were Messrs. W. L. Wells, John Nelliger, Wm. Cutler and Phil Woodford, of Chicago, and Messrs. DeWitt Rike, Nate Hand, Fred Duree, Chas. Bullinger, Frank Freeman, Mark Atherton, Fred Knightheart and Bill Lyons, all of Momence. These hunters did not meet any very heavy shooting, probably killing less than 150 jacks during their stay; but they had a mighty good time living in camp and enjoying the outdoor features of the country, which included considerable rain. High bag for any gun was eleven birds, made by Mr. Wells on one day.

It is likely that the main flight of the jacksnipe has now passed on above this latitude. E HOUGH.

1206 BOYCE BUILDING, Chicago.

ONTARIO'S GAME LAWS.

Editor Forest and Stream:

Mr. Bell, of the Forest and Stream Club, of Belleville, Ont., in his letter in your last issue, is rather severe on the legislators of this Province for refusing to restore to the city tenderfoot hunters the privilege of killing deer in the water, and predicts that the result will be that the aforesaid tenderfeet will wound numbers of deer on land which will escape from them.

I have hunted in northern Ontario during ten successive seasons, and from what I have seen of the operations of the city novices I do not agree with Mr. Bell. Still-hunting is to them, for obvious reasons, out of the question; they are able to wound precious few deer running ahead of their dogs, and the only sport (?) open to them is on the water, where they can paddle up alongside of the deer and kill them with guns or clubs at their option.

Since they have no scruples against that kind of butchery and it is their only chance for venison, they are naturally willing to have the number of deer allowed to be killed by each hunter reduced from two, as it is at present, to one. It is venison they want, and one deer is better than none. They know perfectly well that if hounding were prohibited the result would be a great reduction in the number of deer killed and wounded, but it does not suit them to advocate that prohibition. What they want is a sure thing for one deer each.

The result of the amendment in the game laws of Ontario forbidding the killing of deer in the water, which went into effect last season, was a decrease of 50 per cent. in the total number of deer killed, and though there are no returns of the number wounded, it may be taken for granted that there was no material increase in this. It is hardly necessary to explain that in the days of canoe hunting, in parties who went in for it, all hands did not take to the canoes. For every man who lay in wait on the water it was necessary that several should remain on land to put out the dogs and watch the runways, and the latter did not neglect to shoot at any deer they saw. The addition, therefore, of the ex-canoemen to those who hunted on land last season did not make any material difference.

Our legislators deserve praise rather than condemnation for refusing the water privilege to the city tenderfeet; but I agree with Mr. Bell in the opinion that the sale of venison should be prohibited. The sooner the market hunter, and the catcher and seller of game fishes are suppressed, the better it will be for sport, but should it be done it will be rough on the city tenderfoot about whom Mr. Bell is so anxious. He cannot buy a deer from a settler and will have no chance to exercise his powers of invention on a yarn detailing the remarkable circumstances under which he himself killed it, and the wonderful shot by which he bagged it. Deer hunting will be robbed of a great deal of its romance.

WM. PANTON.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

BOSTON ANGLERS.

BOSTON, May 1.—The ice is out of Lake Auburn, in Maine, and the local fishermen are making the best of the early run of landlocked salmon. The ice c eared Monday night, and early Tuesday morning the electric cars, which run from Lewiston to the shores of the lake, were crowded with men bearing fishing-rods and pails of live bait. Mr. Elias Harmon caught the first salmon at 3 o'clock P. M It weighed 3¼lbs. City Clerk McCann of Auburn took a 4lb. salmon on Wednesday. R P. Thompson has taken a fine one, hooking him Thursday forenoon. Other local fishermen have had some luck there, but on the whole the fishing is poor, though the rush is great. Boats are hard to get, and are reported to be engaged eight or ten days ahead. One gentleman says that he fished all day Friday and did not catch a fish or get a strike. That day there were two small trout taken, neither weighing over a pound. His theory is that the water is still too cold. But B. D. Stevens did take a salmon from that lake Thursday weighing 7½lbs.

Sebago Lake, in Maine, opened on April 10, the ice going out with a high wind. The next day the mercury was down about to zero, making it almost impossible to launch a boat, and no salmon were taken. By Wednesday the weather had moderated, and Mr. John G. Wright, of Boston, with his friends, Mr. Souther and C. H. Merriman, of Providence, started for those waters. They were accompanied by Charlie Robinson, the South Windham manufacturer and most successful landlocked salmon fisherman. Fishing several days, they each took several salmon, but none of very great weight. Satisfied that the weather was too cold, each would like to try again a few days hence, and may do so. Lewiston and Auburn sportsmen have been well represented at Sebago, as well as the fishermen from Portland. H. E. Thurston, of Auburn, was one of the first lucky fishermen, landing one salmon of 6lbs. and another of 12½lbs. H. A Johnson, of Lewiston, has taken a salmon at Sebago weighing 10lbs. Two Portland sportsmen have taken big salmon each. But A. E. Poole, of Portland, has broken the Sebago record, landing on the morning of April 26 a salmon weighing 21½lbs. This is the largest salmon ever reported from that lake taken with rod and reel, though bigger fish have been taken by the Commissioners, for spawning purposes, and one was found several years ago, stranded and dead in one of the tributaries of Sebago, that was much larger It was a male fish, with the hook of the lower jaw so prominent that it would hang over a small stick. There are big salmon in Sebago, and the interest in fishing for them is good. Mr. John C Small has caught one this week of 9lbs. weight.

The ice is out of Dan Hole Pond, Ossipee, N. H , and some of the fishermen are going. John Caswell, of Boston, went to that pond on Friday, to stay till Monday. Doubtless he found the weather very cold. On Friday next R. O. Harding, E. H. Wakefield, Jr , Edward Brooks and S W. Boles, Jr., are to start for Dan Hole after landlocked salmon. They have decided to postpone their trip this year till they are sure that the smelts are running well. They expect to be joined at the lake by Nathaniel Wentworth and F. L. Hughes, of the New Hampshire Fish Commission. The ice is out of Newfound Lake and a few fishermen have started. Sunapee Lake is also clear, but no catches are yet reported from either Newfound or Sunapee. One or two big lakers have been taken at Winnepiseogee. The ice is very slow about going out of the Schoodics. W. L. Underwood, of Boston, fully intended to be off for those lakes early this week, but getting a dispatch that not even Grand Lake was clear, and not likely to clear for several days, he postponed his starting till early this week. He is a member of the Duck Lake Club, largely composed of Boston merchants, and brother of H. O. Underwood, treasurer of the said club. The club party will start on its annual spring fishing trip in about a week. Many of its members are anxious to be off.

Something is being done by the Boston trout fishermen. C. D. Sias, one of the most earnest of Boston fishermen, with George Talbot and Charlie Olmstead, fished the private brook of Mr. Sias, in Connecticut, on Saturday. The day was all that could be asked, and they landed all the trout they wanted. Mr. William Cumming and Mr. G. F. Edgett, with Robinson and Woodworth, were at a private fishing preserve belonging to Mr. Cumming for a couple of days recently. They secured a great many trout. Mr. Edgett was much delighted. Mr. Cumming had been there before. R. O. Harding and E H. Wakefield, Jr , were intending to try Mr. Wakefield's preserve on the Cape over Sunday of this week, but the fierce rainstorm kept them indoors.

The ice is not yet out of the Rangeleys nor Moosehead. It is expected that it must hold in longer, unless the weather suddenly changes from the cold of the past two weeks to very warm. Geo. H Cutting, of Andover, writes me that Richardson Lake is not expected to clear before the 15th to the 20th. At Bemis, foot of Mooselucmaguntic Lake, there was 14in. of snow, fallen the night before, on Monday last, April 26. The snowstorm was far the heaviest in the Swift River Valley, there being but 10in. in the White Mountain regions. The storm is reported as something unheard of in April, and must delay the going out of the ice at the Rangeleys. O. A. Dennen, of the Kineo House, Moosehead, writes me, under date of April 30, that the ice will be three or four days later in that lake this year than last; this date clearing it about the 13th.

Mr. John Caswell, mentioned above, has fished a good deal in Florida. From his trip this winter he brings back a fly that has something of a record. He took with it 110 sea trout in one day at Punta Gorda, and it is pretty good yet. It is a silver body, with very small yellow wings.

Mr. E. Noyes Whitcomb, the builder and president of the Inglewood Club, is on a flying trip to Maine, but will doubtless try the fishing wherever there is an opportunity.

SPECIAL.

New Jersey Coast Fishing.

ASBURY PARK, N. J., May 1.—Salt water fish of all kinds are moving extraordinarily early this spring, if reports from various points along the coast are to be believed. Already some plaice have been taken, which is something remarkable, as May 15 is as early as they are usually met with, and to day a school of bluefish is reported off shore. While some earnest efforts have been made, no bass have been taken in the surf.

Kingfish and weakfish are moving northward and are plentiful in the vicinity of the Chesapeake, and should be with us within the next month. Both varieties are frequenters of our estuaries, and are highly prized by all salt-water anglers, and their coming is anxiously awaited each recurring season.

Despite the discouragements the fraternity have encountered, if signs count, the coming season will be one of unusual activity, never has tackle been in better demand, or better grades of goods sold. The sand-eels, or sand-lant have again put in appearance, a most unusual occurrence, as they are strictly a fall and winter fish, and generally leave our coast by the middle of winter. It is evident that fish of some kind are holding them inshore, presumably the hake and cod, as the northern run of hake should occur at this season of the year. Perch are plentiful in all their usual haunts and fly-rods have seen active service the past few weeks. LEONARD.

The Canadian Bass Season.

TOLEDO, Ohio, May 1.—*Editor Forest and Stream:* A Toledo daily paper contains the announcement that the Canadian Minister has modified the close season for black bass so as to permit the Pelee Club to angle in Canadian waters for the first fifteen days in May. It is stated also in the same connection that ex-President Cleveland will be a guest of the Club during a part of the season.

If the information quoted above is not any more reliable than that contained in the same article regarding the Canadian close time during the past two seasons, it will hardly do to depend upon. For it is alleged that during this time the Canadian authorities had prohibited American anglers from fishing in Canadian waters, when in point of fact the Minister had extended the close season for bass from May 15, at which it formerly ended, to June 15. As is well known any resident of the United States may fish in Canadian waters during the open season by paying the prescribed license of $5 per rod for that season, while in case he is domiciled in Canada he is subject to no license fee. J. BEEBE.

[The close season for black bass in Lake Erie immediately surrounding Pelee Island was by order in Council of March 23, 1877, made May 15 to June 15, both inclusive.]

The Snowfish.

PITTSBURG, Pa.—*Editor Forest and Stream:* I was, of course, delighted to see myself "in print" in the last number of FOREST AND STREAM, but that was nothing to the exhilaration I felt at being represented by the compositor and proof-reader of your excellent paper as the discoverer of a new species of the finny tribe, namely, the "snowfish." I had written as plainly as I knew how "sunfish," but the gentlemen in question between them have immortalized me as bringing to the front the heretofore unheard of "snowfish" I hope this fish may hereafter be duly recognized, and that the *Ichthys chioneos chapmani* will appear in its proper place in future piscatory literature. T. J. C.

Large Hudson River Shad.

POUGHKEEPSIE, N. Y., April 27.—Two years ago, just at the close of the shad fishing season, a large roe shad was taken in the river near this city, which I saw, and which weighed plump 10lbs. Shad are being caught freely now weighing from 6 to 7½lbs. in our river, which was a thing totally unheard of ten or fifteen years ago, and it shows the benefits we are deriving from stocking and protection.

J. S. VAN CLEEF.

A HOLIDAY IN BRITISH COLUMBIA.

SHANGHAI, China.—*Editor Forest and Stream:* Shanghai is admittedly the best place to get away from during its two months of heat, July and August, and its one treacherous month, September; but the question where to go is not so readily answered. Chefoo is nearly as hot and is dreadfully dull; Pootoo or the Saddles do not yet possess a family hotel; and Japan, except in the hills, is as enervating as China. So we must look to America. British Columbia affords the most complete change that can be got within moderate time, and it also has the great advantage of giving the visitor something to do beyond simple sight-seeing, although the sight seeing there is on the grandest scale. This "something to do" can consist of fishing or shooting, or both, and I now give you a few notes of a six weeks' holiday spent by my wife and myself in the enjoyment of cool temperature, grand scenery, a magnificent climate, and some fair sport with the rod. What I have written may be accepted as supplementing the admirable papers contributed to your columns by Prairie Dog.

The places mentioned are all on the beaten track of the Canadian Pacific railway and its branches, most readily reached by China residents via the Empress steamers to Vancouver. The only drawback to the Canadian Pacific route is that it is somewhat too cold, and, even in July, the passenger must be well provided with winter clothing and thick rugs. And it is also necessary to prepare the traveler in British Columbia for two other serious drawbacks which exist there, more or less, every summer: these are the dense smoke caused by forest fires and the prevalence of mosquitoes. From Victoria to Banff the whole country was, this summer, enveloped in smoke for at least two months, and although residents declared that it was much worse than usual, it is an evil that exists each year during July and August. As to the mosquitoes they were simply terrible during these two months at all the places visited, with the exception of the Kootenay district and at Vernon, when none troubled us, nor did we find any at Vancouver; but the only places otherwise free from these pests (and black flies also) were the different lakes and, for this reason, trolling on the lakes afforded the most comfortable sport. Hotel managers and residents assured us that this was an exceptional year for mosquitoes and I would like to believe them; but even if the quantity is usually 50 per cent. less, there would still be enough to mortify the flesh and irritate the spirit of the fisherman.

I give the result of our experiences at each place visited and, looking back at the whole trip, give the palm to the Kootenay River and Vernon as fishing grounds for trout; but, if the mosquitoes could be forgotten, I should remember with equal pleasure the glorious walks, the grand scenery, and the tempting pools of the Bow River near Laggan. The trip would have been incomplete without the two days' salmon trolling at Vancouver, and I only regret not having left more time for that sport. These noble fish are not to be tempted with a fly but they afford the changing sensations of hope, expectation, exultation, doubt, dread, despair, failure and—sometimes—victory, after patient trolling with a stout salmon rod and a clean spoon

As regards flies, the fisherman will be astonished at the size of the favorites for the Kootenay; they are more like salmon than ordinary trout flies; but in the streams the smallest sizes are good killers. Each place has its favorite, and local sportsmen will always give useful hints to visitors, who can invariably count upon the good-will, assistance and friendship of fellow devotees to the gentle art in British Columbia.

Three weeks after leaving Shanghai, on the "Glorious Fourth," my notes commence at

BANFF.—Alt. 4,500ft. The climate at Banff during July and August was perfect, and is said not to be severe in winter, many invalids selecting the place as good for weak lungs. The hot sulphur springs have effected many cures of rheumatism and skin diseases. The air is highly rarefied, and sometimes causes trouble to those with any heart complaint. During summer mosquitoes abound, and this year they were innumerable, and exasperating almost beyond endurance.

The record of temperature at Banff in July of 1896 shows a maximum of 88° and a minimum of 30°. Snow generally falls early in September.

The scenery at Banff deserves the praise bestowed upon it in the guide books, but as regards the fishing it is a disappointment. The Bow River Falls, close to the hotel, are very pretty; and the stream then winds through a picturesque valley for about ten miles, surrounded by high peaks, many of which are snow-capped. I found the best fishing below the "Loops," but the best day's catch with the fly did not exceed four trout, the largest 1lb. and the majority ½lb. The fish are brook trout, with white flesh, and there are also grayling; both more ready to take a bit of raw meat or grasshopper than rise to a fly, but still quite amenable to the latter.

DEVIL'S LAKE (MINNEWANKA)—A long, narrow and winding lake, surrounded by bold, snow-covered peaks, distant about nine miles from Banff, whence it is reached by a good driving road. A pleasant week was spent here. Good trout are to be found in the lake by trolling, and old Joe, the boatman, talks of several 16-pounders having been taken, while the head of one said to have weighed 40lbs. is shown in the museum. It is seldom, if ever, the lot of an angler to fish anywhere at the right time, and our own experience at Devil's Lake was to kill only three trout by trolling, of which the largest was 3lbs., and he did not show much fight. Good sport, however, was afforded by the small-mouthed grayling (whitefish?), which were then taking bait freely, and proved very lively when hooked to a light rod, most of these weighing 2lbs. The Cascade River, within walking distance of Astley's cottage, has several good pools for brook trout, where, after the exercise of much patience, a few good fish were secured with a fly.

LAGGAN.—Alt. 4,900ft. A small station on the C. P. R., about one hour's distance from Banff, where good accommodation can be had at the railway house. This is an excellent center for two or three days' good stream fishing on the Bow River, which here dashes over many rapids and falls, through picturesque gorges, forming many tempting backwater pools where small but lively trout rise to the fly. A good deal of scrambling over rocks and fallen trees has to be done to get at the pools, but the sport and its surroundings well repay the exertion, and almost compensate for the mosquitoes.

LAKE LOUISE.—Alt. 5,300ft. A small and pretty mountain lake, about three miles from Laggan, where a few days can be comfortably spent. Some good trout can be taken from the lake with a fly, and still more with a grasshopper and by trolling. The upper part of the outlet creek also gives a few fish wherever room can be found to make a cast, but logs and bushes here form serious *impedimenta* to fly-fishing.

GLACIER.—Alt. 4,122ft. A very pleasant place to stay off at for perfect rest, but there is no fishing.

NELSON, on the Kootenay Lake, is the best center for the Kootenay River fishing. Nelson is reached by a branch railway from Revelstoke to Arrow Head (30 miles), thence by steamer to Robson (120 miles) and then by rail (40 miles); the total fare being $7.50. The whole journey is very picturesque, especially the trip down the Arrow Head Lake, if one is fortunate enough to have a clear day. The lake at Nelson affords fair sport both for fly-fishing and trolling; but the place is on the Kootenay River, some fifteen miles down stream, at what is known as "Ward's Crossing." The only trouble is to get there; or rather to return in the evening, as the train does not pass until about midnight every second day. The C. P. R. have four "shaks," or log cabins, on the river, but these are not at the best spots, nor are they now habitable by human beings. At present the only plan to fish the Kootenay is to take tent and boat to "Ward's Crossing" and there camp out until you are tired of the fishing. This was the plan we adopted, and found that four days' camping were very pleasantly spent, thanks to the C. P. R agent, who kindly lent two large tents, and to Mr. and Mrs. Stutter, who acted as our guide and cook. It may be noted *en passant* that a skunk stole our ham on the second day and that our supply of meat was thus exhausted; but, with the exception of field mice, no other animals disturbed our comfort nor were we troubled with mosquitoes. The fishing on the Kootenay River is best done from a boat in the eddies formed by the rapid current, which after passing over grand waterfalls, flows turbulently round many rocks before forming the comparatively placid water known as Ward's Crossing. The scene is a very grand one; the falls above are not unlike those of the Rhine at Schaffhausen, the volume of water is great, and clouds of spray bear witness to its force. High mountains on each side, all densely wooded, complete a very striking picture. And then the fishing is all that could be desired; the trout are of good size, often 2lbs. and seldom much under 1lb. in weight; they rise readily to the fly toward evening, and are to be taken throughout the day by trolling. Many of the fish are rainbow trout, lively to a degree, and when caught on a light rod give all the sport a fisherman can desire—struggling hard to escape the landing net, sometimes doing so, and exciting constant admiration by their brilliant color and rapid motion. Our best day's catch to one rod was twenty-six fine trout, and the only trouble on the Kootenay is to know what to do with the fish after they have been caught. During three and a half days' fishing our two rods killed 109 good trout. The temperature on the Kootenay was high, ranging 85° Fahr. during the day, but the nights were very cool. After finishing the Kootenay a return journey has to be made to the C. P. R main line at Revelstoke, whence two hours by rail bring us to

SICAMOUS, on the Shuswap lakes, the junction of the branch line to Vernon. One day's trolling on the Shuswap did not afford us any sport, but others testify to there being fair fishing in that water. I can only bear witness to the quantity and virulence of its mosquitoes.

VERNON, forty miles by rail from Sicamous, is a very quiet English town, well laid out—but sadly devoid of life. The Kalemalka Hotel is, however, the best one between Banff and Vancouver, and a week can be spent here very comfortably with trips to three good fishing grounds in its immediate neighborhood: Okanagan Lake, Long Lake and Swan Lake. Our experience gives the preference to Long Lake, where in two days' trolling our two rods killed fifteen good trout, running from 1 to 3lbs. in weight, the fish being very game and often jumping clear of the water before final capture. This district consists of rolling prairie land, suitable for wheat and fruit, and is of an entirely different character from the mountain scenery we have hitherto been in. Vernon is also a good center for shooting trips for big game as well as grouse and duck.

VANCOUVER—Good trout fishing can be had at several places in the neighborhood, but our experience was limited to salmon trolling in the "Narrows," which affords capital sport from late in August until the first week in October. The best fishing is done during the last of the ebb and the first of the flood; salmon are then jumping in all directions, and many of them come to the numerous spoons that are revolving in their neighborhood. From six to ten fish a day are sometimes caught, and although there are some blank days, most of the boats generally bring back a fish or two. The sport is grand when trolling with a stout rod, and the excitement from the moment a good fish is hooked until it is safely gaffed into the boat is a sensation to remember. My own catch during six hours' trolling consisted of three salmon, weighing 6, 8 and 10lbs. respectively; but there yet remains on my mind the recollection of grief at losing a much larger fish, which rushed my line and jumped itself off the hook before I could reel in and recover the strain on the rod. The disappointment was perhaps increased by seeing a distinguished member of the British Consular Service successfully capture a 15-pounder from another boat.

The following is a record of fish killed by my own rod (principally with a fly), during the holiday now completed; but it will encourage ladies who enjoy the sport if I add that my wife also killed eighty-nine fish on the same trip.

Banff	July 27–30	4 days	11 trout.
Devil's Lake	Aug. 2–8	7 days	7 trout.
Lake Louise	Aug. 11–12	2 days	12 trout.
Laggan	Aug. 13–14	2 days	24 trout.
Nelson	Aug. 19–23	4 days	10 trout.
Kootenay	Aug. 25–28	3½ days	55 trout.
Long Lake	Sept. 8–9	2 days	11 trout.
Vancouver	Sept. 12–13	2 days	3 salmon.
		26½ days.	133 fish.

H. G.

Probably a Golden Carp.

J. L. CRIDER, druggist, of Huntington, W. Va., has a fish in his aquarium, caught in a net in the Ohio River, which has all the appearance of a genuine gold-fish, so far as shape and color are considered; the mouth, however, is formed very much like that of the sucker. Mr. Crider has a considerable number of small genuine goldfish in his aquarium, none of them being finer, if as fine, in color as this one. In size it equals a dozen of the others. It will weigh about 1lb. Its color is a deep, brilliant orange throughout. I did not examine it closely enough to give details of fins, tail, etc. Can the FOREST AND STREAM tell us whether or not it is the golden carp of a certain variety, or a freak of nature? N. D. ELTING.

THAT BIG TROUT.

Editor Forest and Stream:

Referring to Mr. A. N. Cheney's article, under the heading: "The Big Trout at the Show," in your issue of April 24, as the owner of the fish referred to, and knowing a little something about it, I trust you will give space to the following, as I believe that Mr. Cheney's remarks may have a tendency to create a wrong impression.

The owner of the fish has never objected to anyone doubting its being a brook trout. Owing to the conflicting testimony of supposed experts, he has some doubts in the matter himself. He does object, however, to Mr. Cheney's insinuations that the fish has been "fixed," or so mounted as to intentionally deceive anybody.

There is no mystery about the fish. It was caught in a small brook in Montana, the exact location of which I am not able to give. It was sent to Chicago, and was carefully examined, measured and weighed by a number of gentlemen who know a brook trout when they see one, although they may not be able to recognize its picture in a book, or to spell its Latin name. These gentlemen found the fish to measure just scant 33in. in length, and to weigh 13½lbs.; and it had spots on both sides, and had a square tail.

A number of gentlemen who have caught brook trout all their lives, and two or three others who are generally accepted as experts in such matters, all of whom saw the fish before it was mounted, pronounced it a brook trout (*Salvelinus fontinalis*), and the owner had every reason to have confidence in their opinion. The fish was mounted to look as nearly as possible as nature had made it, and it was exhibited as a brook trout, in perfect good faith. Neither the man who owned it, nor the taxidermist who mounted it had any desire to fool anybody. As soon as it was seriously questioned that the fish was not a brook trout, the owner exhibited it simply as a big trout, and waited for somebody to name it correctly. A peculiar thing about the matter is, that of all the people who say that the fish is not a brook trout, no two of them agree as to what it really is.

Mr. Cheney knows that there never has been the slightest attempt to deceive anybody in the exhibition of this trout. It was sent to the last Exposition at considerable trouble, and was taken out of the case (simply mounted on a board), so that anyone interested could examine it closely. Nothing was claimed for it, and it was simply shown as a big fish. The thanks that a sportsman receives for all this trouble is a lot of uncalled for abuse and unfair insinuations from fellows who never saw such a big trout before, and whose brains are not built to conceive of anything out of the ordinary run.

The established facts in connection with this big trout are as follows:

First—The trout was caught in Montana.
Second—It measured just scant 33in. in length.
Third—It weighed fully 13½lbs.
Fourth—It had spots on the sides.
Fifth—It had a square tail.
Sixth—It is mounted to look as it did in life.

Mr. Cheney is "not sure as to what the legend over the fish read" when last exhibited at the Sportsmen's Show. After the very careful (?) examination which he made of it at that time, he may be surprised to learn that there was no label nor legend of any kind whatsoever attached to the fish, and no claim was made regarding it.

Mr. Cheney is sure that the fish is not a brook trout. He may be correct in this, for all of us are bound to be right once in a while. He has in the past guessed three or four different names for the fish, and now confesses that he really don't know what it is—which has been exactly my idea of his knowledge in the matter ever since he first wrote on the subject.

Dr. Bean, though not quite sure, thinks that the fish is a Dolly Varden (*S. malma*), and that it is not remarkable in size. I do not pretend to be competent to take issue with Dr. Bean, whose opinion I very much respect, but after looking up the Dolly Varden, I should certainly guess that this trout was something else.

There are two or three other expert opinions in the matter, one of them being that the fish is papier-mache. I wonder if this latter possibility has occurred to Mr. Cheney?

In view of all the conflicting testimony, the owner himself confesses that he does not know what the fish really is, unless it is a brook trout. He cannot find two people who will tell him what it is if it is not a brook trout, although a number have made some hard guesses. Mr. Cheney first said it was a lake trout—an opinion which was laughable in its absurdity.

I am far from being the oldest and most experienced trout crank extant, but have seen one or two trout in my day, and have yet to see one that in any way approaches the weight and length of the specimen referred to. I am not sufficiently expert intelligently to consider such details as teeth, ears, side whiskers, etc., in establishing the family status of this fish; but as an ordinary, every-day crank, and judging this fish from his fins and general appearance, I think that he is a brook trout (*Salvelinus fontinalis*)—a freak in size, and on that account, perhaps, possessing some peculiarities not characteristic of the rest of the family.

So much for what I think. I know that the fish is a trout of some kind, and that it is not a lake trout, a rainbow trout, a black trout, or a brown trout. I also know that it is mounted to look as nearly as possible as it looked in life, and that whatever it is, it is the biggest thing of the kind ever shown.

But whether it is a brook trout, or a land-locked bullhead, or a sea robin, it is "a blamed big fish," and there is a good price waiting for another one just like it.

If the fish is not a brook trout, I am more anxious than anybody else to know what it really is. It is perfectly fair to express a doubt as to its being a brook trout, but Mr. Cheney is unfair in insinuating that the fish has been exhibited under false colors.

"And that is not half what I know about experts that are not experts. CHARLES H. MEIGS.

[The Exposition catalogue described this as a brook trout. The dimensions of the fish exceed any authentic recorded measurements of a brook trout, hence if this is a brook trout its identity should be determined, since it would be the record fish. If Mr. Meigs will send his fish to the FOREST AND STREAM we will undertake to tell him what it is.]

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

ANGLING NOTES.

"Scientific Facts."

IF there was any one thing that excited my admiration as a boy it was the condensed scientific facts that I occasionally came across in the newspapers. In a few lines I would find the result of perhaps years of study and investigation all boiled down to a convenient size to put in a pocket or memorandum book, and consequently the clippings of "scientific facts" that in any way related to fish were always transferred to my pockets. When I became older I procured a scrap book for these "facts," as they were far too valuable to be worn out in my memorandum books. Later still, when I began to find out something for myself, I was not so cocksure of all these facts, and in some way I lost my respect for them, in a measure, and the scrap book was abandoned.

Nowadays I sometimes get these newspaper "Scientific Facts" hurled at my head whether I want them or not, and frequently they seem to be sound, and occasionally I know they are not. Here are two "facts," which head a column of scientific notes in a recent issue of a newspaper:

"Each salmon produces about 20,000,000 eggs.

"It is said that the Greenland whale sometimes attains the age of 400 years."

I pass on the whale's age, but it does seem to me that a salmon would have to bump herself to produce 20,000,000 of eggs during her life; but if she produced 20,000 a year and lived for 1,000 years she could do it if she attended to business all the time. It would probably inconvenience her the first year of her life, when she was only 5in. long or such a matter, to produce about five quarts of eggs, but she would get used to it by the time she was 1,000 years old, if she ever did. In contradistinction to the quoted scientific facts, I will give some cold hatchery facts. Twenty-eight salmon of all ages and sizes produced an average of 8,089 eggs each, and forty-eight salmon produced an average of 9,247 eggs each; and these fish were in size an average lot, as they ran in a Canadian salmon river; but say that they spawn annually, and spawn for fifteen years, producing each year 10,000 eggs, and it would make a total 150,000 eggs during the life of the fish. To be sure, this is a big cut in the scientific facts, but it comes nearer to the truth than the quoted figures.

Holes in the Game Law.

An item from the Elizabethtown (N. Y.) *Post* has come to this journal which says that "Certain shrewd fishermen, living in the town of Keene, took advantage of the amended game law, which permits fishing through the ice after April 16, and went up to the Giant's Wash Bowl, the result being that this curious body of water yielded quite freely to their wishes. We are reliably informed that several fine trout have been caught through the ice at the Giant's Wash Bowl and that the sport still continues."

The tone, more than the words of this paragraph, indicate that these fishermen had in some way got the better of the law by reason of some hole they had discovered in it that was undiscovered by other fishermen, but really there was nothing particularly shrewd about the fishermen who did this fishing. Any one who reads the game law to keep informed of its provisions with a desire to observe them could have done the same thing if desire and opportunity had been in conjunction. The law referred to was passed two years ago and reads: "No fish shall be fished for, caught or killed through the ice in any waters inhabited by trout, salmon trout, or landlocked salmon during the close season for taking such fish." The Giant's Wash Bowl is inhabited only by "trout" of this section, and the closed season ends on April 15. The closed season for "salmon trout" and landlocked salmon does not end until April 30, so it would be unlawful to fish through the ice in waters inhabited by these fish. The item would be scarcely worth referring to if it were not for the fact that too often any apparent defect in the game law is hailed with satisfaction. Those who consider it perfectly legitimate to beat the game law appear to forget what the game law stands for, viz.: the protection of our fish and game during their breeding seasons that they may not be exterminated. It is not the principle of the law which these people respect, it is the penalties and fines which they fear.

Fishing in India.

Upon his return from India, Mr. Alfred C. Harnesworth writes me from London, chiefly to say that a little later he will give me a detailed account of his fishing experience in that far-away land. One paragraph in his letter I had to read for the second time, because of the surprise I experienced on first reading.

He says: "I had magnificent sport in India, which, if it were not for the heat, would be the best angling country in the world, * * * The chief fish of India are carp of various kinds. Bred in the fast and turbulent Indian rivers they acquire enormous strength, and yet maintain the extreme caution of the carp tribe. My first fish was a 42lb. carnatic carp, now being prepared for the forthcoming fishing exhibition here." Another paragraph reads: "Our trout fishing season in the South of England opened on the 1st of April. There was a bad snow storm on, but I went out and got three fish. There is a certain charm about our South of England rivers which is missing in wilder waters, and I can assure you I positively enjoyed this smallness after the vast streams of India."

When an accomplished English angler, a dry fly-fisher and all that, one who has fished pretty much over the face of the earth where waters run and fish are lured, says that India except for the heat would be the best angling country in the world, it means something, and it caused me to stop and think. I confess that I have always regarded India as about the last place in the world for really good fishing. To be sure, there is the giant mahseer, called the salmon of India, that requires a heap of fishing to kill, but I thought it was about the beginning and the end of the bill when this giant carp was brought to hook. It seems that there are other carp, and that they afford sport in the catching. I know that the small mahseer and the small carnatic carp will take the fly, but the larger fish are lured with the spoon, generally, and I have yet to learn whether either is a good fish on the table—probably as good as any carp, and no better; but we must wait until Mr. Harnesworth has his say in detail before making odius comparisons.

Salmon in Hawaii.

Fishing in India for carp, reminds me that the Dominion of Canada has sent a lot of Pacific salmon from British Columbia to Honolulu to see if they can be established in the rivers there. The spread of artificial fish propagation is something remarkable when one sits down to think about it seriously, and realizes that it has all been accomplished in about a score of years or a little more. To be sure the first successful shipment of *salmonidæ* to the Antipodes was made in 1864, but I think it was in the 70's that distribution began in the colonies.

Cape Colony now has a successful trout hatchery, and who knows but India may yet have its trout fishing in its hill streams. As I was writing this note a letter came from Mr. J. J. Armistead, the Scotch fish breeder, and author of that very instructive book "An Angler's Paradise, and How to Obtain It," being a modern work upon fishculture which goes to the bottom of things piscicultural, in which he says: "There is great room for improvement in our fisheries, but we cannot get our Government to work here like yours. I only wish we could. I was a little while ago over in Germany, and my son has just returned from there. They are doing much in that country, and also in other places in Europe." Once in a while a letter like that reminds me how we Yankees are favored in the matter of artificial fish breeding by the liberal policy of our National and State Governments in their particular field, which is doing so much to keep up the food supply as well as to furnish fishing for other than those who follow it for bread winning.

A. N. CHENEY.

CHICAGO AND THE WEST.

Chicago Fly-Casting Club.

MEMBERS of the Chicago Fly-Casting Club met in banquet at the Briggs House, this city, Thursday evening, and had a pleasant time. Arrangements were made for the semi-monthly contests, which will begin May 8, at Garfield Park. A larger tournament is planned for August next.

A Good Programme.

Mr. W. H. Crawford, of Dayton, O., an ardent canoeman and angler, writes me that he has a good programme laid out for this summer.

"I do not know when I will be in Chicago again," he says, "probably not before June, as I am going to spend practically the entire month of May fishing. I have been invited to go in the Font'nalis Club on May 1, the opening day, and spend a few days there. Then on the 10th the Dayton Angling Club expect to go to Middle Bass, O., and there enjoy a few weeks black bass fishing. On the 26th I expect to leave for Boston, where I will join a party of twenty gentlemen, composing the Last Makers' Angling Club. We expect to spend ten days at Parlin Pond and Mt. Kineo, Moosehead Lake, Me. I have spent nearly all winter getting my fishing tackle ready, and if I should meet you at the summer meet of the W. C. A. I will be full of fish stories, etc."

It is too bad a man has to work that hard.

Wisconsin Season Open.

The Wisconsin trout season opened April 15, but high waters have held back the anglers, and I have heard of no one going out. It is usually well into May before trout rise well in Wisconsin.

Big Fishing in Fox Lake.

One rod killed ninety-three black bass in Fox Lake waters (probably on the Grass Lake spawning beds) on one day this week. Bass are now running and are biting a little in the streams.

New Wisconsin Fish Law.

Mr. G. A. Buckstaff, the Wisconsin State representative who framed and pushed through the former Wisconsin statute known as the Buckstaff law, which was found faulty later in some clerical features, writes me as follows in regard to the new Wisconsin law:

"The State of Wisconsin has another fish and game law that will protect all the inland waters from net-fishing. This means that on Lake Winnebago, Butte des Morts, Winneconne and Poygan there will be some of the finest black bass fishing there is in the Northwest. As Oshkosh is only four and one-quarter hours' run from Chicago, the Chicago sportsmen should take advantage of the fine fishing in these lakes and make Oshkosh their outing ground this summer. I will try to keep the readers of FOREST AND STREAM informed as to the fishing here."

Mr. Buckstaff was in the thick of the bitter fight with the Winnebago net fishermen, one of the stubbornest contests the sportsmen of the West ever saw waged with the market interests. The anglers of the country may thank him if they now have better fishing in the once prolific waters of Winnebago and adjoining lakes.

Burned the Nets.

I learn from a Dubuque, Ia., paper that some of the sportsmen of that city who have long been suspicious of illegal net fishing in Fentress's Lake, this week determined upon a little hunt for the nets. They dragged for the nets and got up a lot of them, of the sort known as hoop nets. These they piled up on the bank and promptly burned—without process of law, it is true, but just as effectively so far as the fire was concerned. Then they filled a lot of barrels with sand and sunk them in the water, so that seining will, after this, be a practical impossibility in that part of the fishing country. Mr. Fentress was one of the party. The Dubuque men have resolved to enforce the law, and they have in this case enforced it in a very efficacious way.

For Bass.

A friend who knows whereof he speaks tells me that last year he had most excellent bass fishing in the Kalamazoo River, not far from Saugatuck. The small-mouths in this river take the fly. Another good stream, I am advised by equally competent authority, is the Thornapple, a lovely wading stream where bass take the fly nicely in the summer. This is also a South Peninsula stream, and can be reached near Ada, a good fishing point.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

An Angling Pilgrimage.

NEW YORK, May 3.—*Editor Forest and Stream:* Mr. E. Vom Hofe left New York on March 19 for an extended fishing trip in Southern waters. He followed down the Florida west coast, stopping at Captiva Pass, Punta Rossa, Punta Gorda and Fort Myers, at which latter place he is at the present writing. From Fort Myers he expects to go to Texas to try conclusions with the Aransas Pass tarpon.

So far he has reported the capture of four tarpon, the smallest weighing 135lbs. The first two of these fish were taken in one day at Captiva Pass by the method known as "pass fishing." This is practically trolling with the boat anchored. The tideway gives a current of five or six miles per hour in the channel, and this gives the bait the necessary action. A mullet is used on one triple hook.

Mr Vom Hofe also reports very fine channel bass fishing, the bass running large and averaging 25lbs.

J. B. B.

RHODE ISLAND'S FISH.

PROVIDENCE, R. I., April 26.—*Editor Forest and Stream:* The season for trout fishing, according to the Rhode Island statutes, is from April 1 to July 15 of each year. Early in the morning of the first day of the trout season hundreds of anglers were trying to lure wary speckled beauties from their watery haunts, and this sport, so dear to anglers, has had scores of devotees daily since, who have visited the many brooks and streams in this State, particularly in the western part, and have returned, after hours of rare sport, with laden baskets. And the trout anglers report the best sport and best luck in years, thanks to the Inland Fish Commissioners who, for three years, have taken especial pains in stocking the brooks of the State with this beautiful and gamy fish.

The Inland Fish Commissioners, who comprise J. M. K. Southwick of Newport, Adelbert D. Roberts of Woonsocket, C. W. Willard of Westerly, and Henry T. Root and William P. Morton, both of this city, have charge, under the statutes, of fresh-water fishing and certain kinds of salt-water fishing, besides the catching of lobster. During the past three years the Commissioners have placed 35,000 yearling trout—fish from 3½ to 6in. long—in the brooks and streams of the State, distributing 10,000 yearling trout a year for the first two years, and 15,000 yearlings last year. During that time the Commission has also distributed in streams and brooks 100,000 trout fry, from ¾ to 1in. in length. All this fish was procured from the Carolina hatchery, C. A. Hoxie, proprietor. The Commission is also stocking some ponds with bass. The Commission has spent its yearly appropriations of $1,000 or $1,500 wisely—the fishermen think the amount should be doubled—and now anglers are getting the benefit. The yearling trout distributed a year or so ago are now large enough to be caught, and furnish good sport, and the trout fry are growing into yearlings, and prospects are good for fine sport for a number of years if the fishermen will co operate with the Commissioners, and obey the laws about not catching trout out of season, not catching any under 6in. in length, not using nets, etc., for all of which misdemeanors the law provides a fine of $20 for each offense. The Commissioners have destroyed a number of nets set in brooks to catch trout, and have also warned a number of people about catching yearling trout, and about going trout fishing out of season. The Commissioners are giving careful attention to their duties, and if the anglers of the State will co-operate with them in enforcing the law, there is no reason why trout fishing should not be a pleasure to those interested every year.

In their report just made to the Legislature, the Commissioners say of their black bass work: "A body of water located within the town of Westerly has been set apart for this purpose with the consent of the Town Council, and will be used exclusively for the cultivation of this variety of game and table fish. Two consignments of fish have already been received and planted in this preserve; one Aug. 4, of 600, and one Nov. 4, of 1,500, both from United States Commission. In two or three years these fish will have increased sufficiently to enable the Commission to commence the work of stocking many of the ponds and rivers of the State.

"The large-mouthed bass is native to the Great Lakes, the rivers of the Mississippi Basin, and nearly all the waters of the Southern States. In New England it is comparatively unknown, the small-mouthed being perhaps better adapted to the clear, cold waters of most of our lakes and ponds and has consequently received more attention. There are, however, in this State, many waters that are better adapted to the large-mouthed species; for instance, in large shallow ponds or lakes of comparatively high temperature and in rivers with sluggish current and muddy bottom, also in rivers that are somewhat polluted by refuse from mills. It is this class of waters particularly that the Commission hopes to largely benefit by the introduction of this species.

"As a food fish the large mouth bass rank among the first of the fresh-water fishes, its flesh being firm and white, and, when properly cooked, tender and juicy. As a game fish it is fully equal to its relative, the small-mouth, when taken in the same waters and under same conditions. And upon good authority it can be claimed that it is a much more ready biter, rising freely to the surface of the water for natural bait or artificial fly. The small-mouth, on the contrary, as many anglers can testify, is extremely epicurean in its tastes and on the whole a very uncertain biter. In point of size the large-mouth is certainly the superior of all varieties of the fresh-water basses of this country, attaining in some waters the enormous weight of 18 to 20lbs., whereas the largest specimen of small-mouth of which there is any authentic record, weighed but 8¾lbs.

"The fishing for the small mouth black bass last year was not equal to that of the preceding season. This fact is no taken as evidence that the fish are decreasing, but is probably owing to low water in many of the ponds during the best part of the fishing season. Realizing that there are many ponds and streams in the State well adapted to this species and which are as yet unstocked, the Commission has leased a small preserve near Niantic and has stocked it with adult fish. These fish spawned in May, and it is estimated that there are now several thousand young bass in the pond, which are doing well. They will at the proper time be transferred to waters hitherto barren of this variety of food fish.

"Squeteague have of late years been very abundant and very regular in their visits to our waters. They seem to have in a measure taken the place formerly held by their colleagues, the bluefish, whom they resemble in their habits, both being very destructive of other fish. Why the bluefish remain in the waters about Block Island and are very plenty further west, and cease to come here in numbers, is a problem we at present cannot solve."

W. H. M.

"Angling Talks."

WE have a very few copies of George Dawson's "Angling Talks," a series of chapters of entertaining chat about men, fishermen, fish, fishing and fishing places. Cloth, 50 cents. Forest and Stream Publishing Co.

Limit the Trout Catch.

Editor Forest and Stream:

In your issue of May 1 I read a letter from Mr. Benj. Kent relating to the revival of the Frank Forrester laws to cover the Catskill trout streams. I am heartily in favor of this, as Mr. Kent tells the plain truth as to the abuse of those streams by many so-called fishermen, who have only one limit—all they can get. Something certainly ought to be done to put a check on this senseless way of fishing for trout, and if you can work up a sentiment to get a law to limit the number of trout taken in one day's fishing to sixteen or twenty, you would earn the praise of scores of fly-fishermen within my knowledge. A. F. SANDEN.

This note from a New York correspondent has a bearing on the question of trout catch limit: "My former experience and results of trips of my friends in past seasons had convinced me that the Neversink River was still, as of old, the most famous section for the little beauties which inhabit the spring waters of such localities, and always reliable, as one there can satisfy his ambition as regards his catch either in way of numbers or of large size. At Fallsburgh, D. M. Case, of the Hotel Waldorf, Woodbourne, met me. I had about two days to devote to the sport of the stream, but those two days were big guns, as the first day's results gave me seventy-six fine specimens of both brook and California trout, the second day eighty more and finer ones were added to my catch. This record for the beginning of the season is a fair sample of what may follow during the months of May and June. My total catch was 156 trout, which weighed 47½lbs., the largest one weighing 1½lbs. The stream I found in fine shape and the fish plenty and active. J. F."

Black Bass Season.

CHICAGO, Ill., April 30.—*Editor Forest and Stream:* The "Angling Notes" by Mr. A. N. Cheney are always interesting and instructive, and the FOREST AND STREAM could do a world of good by taking the position he does in your issue of May 1, on the subject of the close season for black bass.

An editorial from you at this time, suggesting that the close season be extended to July 1, would have great weight with all true anglers, and most anglers—when properly approached—are true.

There are so many who do not stop to consider the wrong they are doing by taking bass in June. They obey the laws, but do not try to improve them.

In this vicinity the bass spawn in April, May and June, and I have seen them on their beds right up to July 1.

I am writing of the small-mouth bass, as I have watched their habits closely, and they are becoming more scarce each year. It is an easy matter to take bass from their spawning beds with an artificial fly, and there are a dozen fly fishermen out here now to every one who cast in these waters ten years ago.

The bait-fisherman cannot do so much harm in the clear, shallow water near the shore, but call the attention of the whole fraternity of anglers to these facts; please do, and in the meantime we will go to work on the laws. W. H. C.

Trout at Canadensis.

CANADENSIS, Pa., April 27.—*Editor Forest and Stream:* On the opening of the trout season quite a number of New York fishermen were gathered here at the Spruce Cabin House while the weather was against good fishing, being cold and raw; yet quite a number of excellent creels were brought in, the trout all running large. Dr Roth, of Wilkesbarre, took some very fine fish, the largest weighing about 1½lbs. Dr. Moore had twenty-five trout that weighed 11lbs. The total catch of the first day was 400 from 8 to 14in.

This section has quite a number of trout streams, among the more famous are the Brodhead, Buckhill, Middle Branch, Goose Pond Run, Levis Branch, Stony Run, Mill Creek and Rattlesnake Creek. It is also not only famous as a trout region, but is one of the best conducted hunting and fishing resorts in the State.

Among some of the prominent fishermen that were here at the opening of the season were: Kit Clarke, Nat Rodgers, Rev. Dr. E. L. Lyon, Walter McGuckin, Jas. McBride, Dr. W. Edward Halsey, W. P. Ketcham, W. H. Schroeder, Chas F. Roe, G. E. Ketcham, Jr., E. C. Smith, Geo. W. Shaw. C. L. K.

Gut for Salmon Fishing.

Editor Forest and Stream:

Your correspondent, Mr. A. N. Cheney, is so much of a fisherman that it seemed surprising, in the course of his article on "Thickness of Gut," to have him say: "It is safe to assume that for salmon the thickest gut obtainable is used, but for trout—" etc. If he will make inquiry at the large tackle shops he will find the salmon angler requires, not the thickest gut, but the roundest and truest gut of smaller size, which is much stronger than the thick gut that is flat in places and cannot be readily rolled under the finger. In times of low, clear water, a man fishing with the "thickest gut" would not have much chance of success on a salmon stream. Leaders 9ft. in length of ordinary large gut, for bass fishing, can be bought for $8 to $12 a dozen; salmon leaders, of smaller gut, but round and true and testing, dry, up to 10lbs., cost $28 to $44 per dozen; showing it is quality and not size that the salmon fisher wants. Last year the writer killed fifty-two salmon—and played and lost many more—using only three leaders of rather light gut, and lost only one fish by breaking of the leader. GARD.

It Certainly Is.

BETHLEHEM, Pa., April 29.—I would like to say something regarding game protection in this vicinity. There is a State Fishery not far from here and the brooks are stocked every year, including the Little Lehigh. While walking along this stream I passed a number of farms where fyke-nets were hanging on the trees to dry in plain view. Is it not ridiculous to stock a brook and then allow the farmers to net out the fish? MOHICAN.

The Kennel.

FIXTURES.

FIELD TRIALS.

Sept. 1.—Continental Field Trials Club's chicken trials, Morris, Man
Sept. 6.—Manitoba Field Trials Club, Morris, Man.

Nov. 8.—Union Field Trials Club's trials, Carlisle, Ind.
Nov. 15.—E. F. T. Club's trials, Newton, N. C.
Nov. 16.—International Field Trials Club's eighth annual trials, Chatham, Ont.
Nov. 22.—U. S. F. T. Club's autumn trials.

1898.

Jan. 10.—U. S. F. T. Club's winter trials, West Point, Miss.
Jan. 17.—Continental F. T. Club's trials, New Albany, Miss.

MINNEAPOLIS BENCH SHOW.

THE initial dog show of the Northwestern Kennel Club (member of A. K. C.) was held April 20–23 inclusive, in the Exposition Building at Minneapolis, Minnesota. It was held as an adjunct of the Cycle and Pure Food Show, and primarily as an additional attraction thereto. But the fact that over one-half of those who paid for admission to the main exhibit paid an additional quarter to see the dogs, shows what a strong affection the public has for our canine friends. The Exposition Building will be remembered as the location of the National Republican Convention of '92. The brilliant success of the show is another example of what Western push, energy and "rustle" can accomplish in case of need.

Generally, the managers of a dog show feel aggrieved if less than six months is given them in which to arrange it thoroughly. Less than five weeks before the doors were opened, the N. W. Kennel Club decided to make the venture. In that short time all the innumerable details were prepared, all the inevitable obstacles met and overcome, premium lists printed and sent out, entries received, catalogue printed, and in short such an immense amount of work done and so well done that the morning of the 20th found 377 dogs awaiting the inspection of the judges and the public.

The former were surprised and gratified; the latter, well, i simply went wild.

Generally the entrance to a bench show is accompanied with certain qualms of the stomach, as the usual strong odor assails the nostrils; but here it was the universal verdict, from the veteran judges down, that a show was never held in such a pure atmosphere. There was absolutely no disagreeable odor. Right here is where holders of future shows may learn one of several lessons from this management.

They made sure that there was full and free ventilation, that the white capped attendants were constantly on the move with broom and basket of sawdust, that the disinfectant was plenty, that a huge pile of sawdust was constantly on hand, fresh from the huge gang-saws of the mills, redolent with the aromatic aroma of the pines. And as a result that aromatic perfume filled the air and formed a fit atmosphere in which to view man's friends of field and forest There was not a hitch or a balk in the whole proceedings. One can but give honor where it is due, and the highest credit should be given to. Messrs. C. E. Dickey and E D. Brown, President and Secretary, and Mr. N. P. Whiting, Chairman of the Bench Show Committee, for to their tireless labor and genial courtesy the splendid success should be attributed.

One hundred and thirty local entries as a starter, and the rest of the State, outside of St. Paul and Minneapolis, hardly represented, give the N. W. K. Club confidence in laying their plans for a date in the regular circuit of bench shows; not a date for one year merely, but a regular member of the circuit hereafter. And this is as it should be; for there are a whole lot of purely bred, registered dogs in Minnesota and the Dakotas and Wisconsin that would not be sent even as far as Chicago to a show. Many of them are fully able to make a great big percentage of the Eastern prize-winners tremble for their places, when once they are all in the same ring. As Judge John Davidson said, it was a pleasant change to him after being so well acquainted with the regular dogs of the show-rings of the regular circuits, and an agreeable surprise to find here so many new, fresh dogs of such excellent quality. Judge Tim Donoghue found many "cracker-jacks" in the classes, and what surprised him especially was that he met in the street several dogs, not entered in the show, that would have surely been placed had he met them in the ring. Moreover, these Minnesota and Dakota dogs have, to an unusual extent, that quality, somewhat rare in bench-show winners of late years, which would bring them to highest prominence in "Père" Hough's Special Class of "meat dogs." When out with them you get game—if you can hit it.

Now let the N. W. K. Club consider this. Make a date in the season for a combined bench show and field trial. Hang the best purses up for classes in which the winners are to be those reaching the highest averages of marks in both field and bench. 'Tis a combination devoutly to be wished.

Those old veteran judges, Messrs. Davidson and Donoghue, unite in placing this show on a very high plane of excellence, dangerously near, in fact, to New York and Chicago, considering quantity and quality of the classes, cleanliness and general excellence. They call it an unexpectedly good, high class show. Their opinion goes.

When a man enters seven animals and comes out with four first prizes, two seconds, and one vhc. from seven different classes, he is apt to think that he "is too good for this world, his home is in heaven;" but such success did not affect Mr. Robert Hoodless; he was still content to return to Chicago. But they do say he chartered a Pullman for a few of his friends, viz., the pointer Devonshire Jennie, the cocker Major Mack, Nannie H., Dalmatian; Fleetwood Bell, bull terrier; Scion Lomond, St. Bernard, and the Irish setters Prince Elcho II. and Shamrock Pattie.

Whenever a broad, delighted smile was seen spreading over all the faces of all the multitude advancing toward one it was never necessary to look around to know the cause; one instinctively felt that Major Mack was just behind, leading Mr. R. Hoodless for a stroll. The Major was the pet of the show. His peculiar marking, a shade of tan which no painter could ever hope to copy, contrasted with a coat of black so lustrous and so silky it is comparable to nothing but itself, his affectionate good nature, his joyful activity—all combined to capture every heart.

A brindle bull dog chained short in a corner of a corner stall, deemed "all space a temple, and all seasons summer," for venting his rage in impotent railings at mankind. For three days he kept up an incessant barking at every newcomer; by the afternoon of the third day his voice was failing, and resembled that of young manhood in that the passer by remarked, "Why, his voice is changing." Friday noon found him stretched on his side sleeping the sleep of exhaustion, unconscious of the nose of an African brother just within good reaching distance, as he stooped over to examine those fierce fangs. Just imagine if he had waked up.

If any more gray hairs appear in the beard of Judge Davidson on his return, remember that class of twenty-five St. Bernards, a most difficult problem in itself; remember his kind patience in laboriously explaining the minute points wherein the pet of a fair exhibitor failed of obtaining the first prize, instead of a lower one.

Here is another lesson for other future managers to learn from those of this show. "Dangerous. Don't handle." Such was the legend posted on the outer edge of the partitions frequently. The judges especially noticed this and the marked effect it had on the visitors, who always want to handle the dogs. All the dogs were grateful for it, from the challenge Gordon, Highland Vola, with her record of thirty-three prizes, down to the weest of the collie bairns that was commencing a prosperous career of bench shows at its mother's side. One man should have been grateful for it, but he wasn't. Consequently two long St. Bernard fangs met in the side of his hand.

The special and local prizes were very acceptable and useful articles, in addition to special money prizes. They ranged from handsome silver cups to—think of it—1lb. of candy. Strange how some people will bankrupt themselves with generosity.

The cycle show came near being the side show to the bench show, but don't mention it, for the cycle show was a great success.

A six-day, two hours a day in the evening, bicycle race is in progress also, ladies only. For four nights the three leaders, Misses Helen Baldwin, Farnsworth and Glaw, have broken all records, and at the finish every night they are bunched, with Glaw usually a wheel or 1in. ahead; there are usually about 2in between the wheels of the middle one and those ahead and behind her. Glaw and Farnsworth do most of the spurting, with Baldwin occasionally in the lead, but Baldwin rides in the best form and is "pulling a waiting race." Experience has shown that in such cases "th' opposed may beware."

There seems to have been a competition between the judges at this show, one and all, apparently as to which would produce the best impression on exhibitors; presumably because they are infatuated with the place, and want to come again. Or perhaps it is only the "brisk Minnesota weather." When the prizes were exhausted and reserve and vhc. as well, there was an inexhaustible supply of hc., and especially c. But that's all right. A great many of these were local dogs, and no master of any of them—or mistress—but has been made the fast friend of the judges and the management and bench shows for life; and when the N.W. K. C. holds its next show they will all devote time, money and influence to its support and aid—just what all dogs want.

In sporting classes the order of excellence was as follows: 1, pointers; 2, English setters; 3, Gordons; 4, cockers; 5, Irish setters; 6, Irish water spaniels; 7, Chesapeakes. All these classes were good except Irish spaniels and Chesapeakes.

The greyhounds were well represented—very well.

Borzois was only two in number, Petrosky and his mate, C. O. D., both winners of 1st, owned by Dr. R. G. de Puy. It does not seem as if they could master the gray wolf of the prairie, but their record is a proof that they think him only sport. The list of prize winners explains itself, but the excellence of them all can only be appreciated by those who saw them. COLEBROOK.

POINTERS.—PUPPIES—*Dogs:* 1st, O. B Clark's Clark's Keat; 2d, W. A. White's Brother Dan. *Bitches:* 1st, W. A White's Zoe.—OPEN—*Dogs* (55lbs. and over): 1st, A. G. Eberhart's (agt.) Niagara; 2d, N. G. Hansen's Trinket's Dick. Res., A. L. Belknap's Mark Sirius. *Bitches* (50lbs. and over): 1st, L. S. Weil's Devonshire Jennie; 2d, W. B MacLean's Nan. Res., J. A. Perry's Furn; 2d, W. A. Loveland's Queen.

CHESAPEAKE BAY DOGS.—OPEN—1st, R. W. Matthews's Chester; 2d, F. Whitcomb's Brownie.

FIELD SPANIELS.—OPEN—*Dogs:* 1st, Omaha Cocker Kennels' Darby. *Bitches:* 1st, Omaha Cocker Kennels' Dinah C.—ANY OTHER COLOR—*Dogs:* 1st, Black Hawk Kennels' Red Hawk Cork.—BLACK—*Dogs:* 1st and 2d, Nubian Kennels' Guy Silk and Willie Silk. *Bitches:* Nubian Kennels' Mollie Bawn; 2d, L. R. Day's Duchess.—RED OR LIVER—*Dogs:* 1st, Omaha Cocker Kennels' Barney.—ANY OTHER COLOR—*Dogs:* 1st, A. Mac Aulay's Major Jack.—LOCAL—*Bitches:* 1st, L. R. Day's Duchess.

Mr. Hugh Dalziel.

MR. HUGH DALZIEL, the famous English writer and author, died at Herne Bay, England, on April 8, aged sixty-two years. He was a voluminous contributor to the current canine literature of England, but in America he was best known through his most serious works, "British Dogs" and "The Diseases of Dogs and Their Treatment." The following is taken from an obituary notice in the *Stock-Keeper* (England): "In character, and this is written in a spirit of strong personal regard for an old friend now gone to his rest, Mr. Dalziel was a man of contradictions. Possessed of a most affectionate disposition naturally, he would not hesitate to alienate the sympathies of a friend, if in the course of a discussion—and he was engaged in many bitter ones during his career—he saw a chance of driving a point home; but though he never minced his words, he never intended to wound. Yet he could very seldom be got to withdraw a statement once made. Such an action, to his mind, would

have appeared to be an indication of indecision, and temporizing was abhorent to his nature. His *beau ideal* of all human perfection was Thomas Carlyle, and he emulated that great man in the robustnesses of his language and strength of his opinions. The persistent determination which he invariably displayed to get at the root of any difficulty is exemplified by his works, which are monuments of his dogged perseverance as they are of sound, plodding common sense, a little marred, perhaps, by prejudice here and there, and displaying occasionally a tendency to underrate the ability of opponents. Yet, taken all in all, the Fancy can ill spare a man like Mr. Dalziel; for though his rugged independence of nature may have led him into committing errors of judgment, his hatred of persecution and tyranny, his utter disregard of personal interests when he considered he was in search of truth, his stanchness to his friends, and his devotion to the canine race, will unite to keep his name green in the memory of all who knew him, for many and many a year to come. Mr. Daziel was laid to rest at Herne Bay on Monday afternoon beside his wife, whose sudden demise on the 4th of the month undoubtedly hastened the end of her most devoted husband, whose state of health rendered it impossible for him to withstand the shock."

DOG AND THE LAW.

THE following exposition of the status of dogs as viewed by the law is of special interest to all dog owners. Coming from the highest authority, it may be accepted as final under the existing law and usage. There is in it much of warning to the owners of valuable dogs, who desire to have their dogs recognized as property; that is to say, it warns them that the laws made specially for the protection of good dogs must be strictly observed. An owner who ignores license and registration of his dog, cannot hope for the benefits of them when the day of canine trouble comes.

The case was discussed by Justice Brown in the Supreme Court, Washington, D. C., on April 26. The case was as follows: George W. Sentell's Newfoundland bitch, while following him in the street one day, stopped on the tracks, and was killed by an electric car of the New Orleans & Carrolltown R. R. The bitch was registered, was kept for hunting purposes, and was claimed to be valuable. Among other things, it was set forth that she did not see the car, and "being in a delicate state of health, and not possessing of her usual agility, she was caught by the car and instantly killed." In the District Court Sentell sued the railroad company for $250 damages, and won his suit. The case was appealed, and the Court of Appeals reversed the decision of the lower court on the ground that the plaintiff should have complied with the State laws and city ordinances governing the ownership of dogs. In giving his decision Justice Brown said:

"By common law," said Justice Brown, "as well as by the law of most, if not all, of the States, dogs are so far recognized as property that an action will lie for their conversion or injury, although, in the absence of a statute they are not regarded as the subjects of larceny. This shows that property in dogs is of an imperfect or qualified nature. They are not considered as being on the same plane with horses, cattle and sheep, in which the right of property is perfect and complete, but rather in the category of cats, monkeys, parrots, singing birds and similar animals, kept for pleasure, curiosity or caprice. They have no intrinsic value—that is, common to all dogs and independent of the particular breed or individual. Unlike other domestic animals, they are useful neither as beasts of burden, for draft (except to a limited extent), nor for food.

"As it is practically impossible by statute to distinguish between the different breeds, or between the valuable and the worthless, all legislation on the subject, though nominally including the whole canine race, is really directed against the latter class, and is based upon the theory that the owner of a really valuable dog will feel sufficient interest in him to comply with any reasonable regulation designed to distinguish him from the common herd. Laws for the protection of domestic animals are regarded as having but a limited application to dogs and cats; and, irrespective of statute, a ferocious dog is looked upon as *hostis humani generis* and having no right to life which man is bound to respect."

The laws of a number of States relating to dogs and decisions of the courts thereunder were quoted, going to establish the principle that regulations for the keeping of dogs were a part of the police power of the States. The opinion then proceeds:

"Although dogs are ordinarily harmless, they preserve some of their hereditary wolfish instincts, which occasionally break forth in the destruction of sheep and other helpless animals. Others, too small to attack these animals, are simply vicious, noisy and pestilent. As their depredations are often committed at night, it is usually impossible to identify the dog or to fix the liability on the owner, who, moreover, is likely to be pecuniarily irresponsible. In short, the damages are such as are beyond the reach of judicial process, and legislation of a drastic nature is necessary to protect persons and property from annoyance and destruction. Such legislation is clearly within the police power of the State. While these regulations (in Louisiana) are more than ordinarily stringent, and might be declared to be unconstitutional if applied to domestic animals generally, there is nothing in them of which the owner of a dog has any legal right to complain. The statute really puts a premium upon valuable dogs by giving them a recognized position and by permitting the owner to put his own estimate upon them. The judgment of the Court of Appeals is affirmed."

Ethan Allin Setters.

NEW HAVEN, Conn.—*Editor Forest and Stream:* You inquire about Ethan Allin setters. I think Mr. Lester A. Pearle, of Hampton, Conn., can give you as much information about a certain strain of Ethan Allin setters as any one, for he had the last that I have seen.

It always makes me laugh and then sigh when I hear about Ethan Allin's setters. I have seen a hundred and one that claimed to have an Ethan Allin setter, but they always have been of entirely different characteristics and color. Upon my visits to his kennel, I remember only his blue or steel gray, black and whites, and some that looked like half or three-quarters Gordons, and only one lemon and white; yet there are some who claim that the lemon and white ones are the only true and original Ethan Allins. These lemon and white ones originated from a bitch that I think came from Norwich, Conn., or near there, and had her first training by Ed F. Botham, of Hampton, Conn., which town adjoins Pomfret. After Ethan Allin got her he showed her at Springfield, Mass., at a chicken and dog show, and it was said that he took a prize on account of her pointing a chicken while standing upon an elevated plank while the chicken was upon the other end. She then was called Ethan Allin's premium bitch, so far as she was known.

I have had considerable experience with these lemon and whites, and do not think them worth the powder to dispose of them. Their heads looked more like a collie, with crooked hocks and straight stifle, and they were so headstrong that it was almost impossible to well train them. They had good nose and were stanch as rocks when worked alone, but in company they would never come to a point until they got ahead, even though they flushed the bird. Every one that ever bought a dog of Mr. Ethan Allin always claimed to have an Ethan Allin setter, no matter what its size, shape or color; and as proof, would explain in unmistakable language, "I bought him from Ethan Allin myself." I must not forget to add, that many have vowed in full faith that Ethan Allin used to train from thirty to forty dogs in a season.

E. K. SPERRY.

POINTS AND FLUSHES.

AND now comes a contradiction of the daily press report of Owney's death. He has mange, is ill tempered and travel, worn, but not dead. He possessed extraordinary skill in peacefully dozing on a mail sack aboard a car, and eating such lunches as were offered him. By persisting in this, it became his life work, and thereby he won great fame. Having distinguished himself as the champion tramp dog of America, he now retires on his honors, that is, if there is not a later contradiction of the news. The *Sun* says: Owney, the postal dog, is not dead. He is in St. Louis, at the home of J. H. M. Elvin, a postal clerk, and will be cared for there until he dies. Owney has been the subject of official correspondence recently between the Post Office Department and some of its officials. When Capt. White, the General Superintendent of the railway mail service, read the despatch form Cleveland telling that the dog had been killed by a policeman in the Union Station there for attempting to bite a man, he wrote a letter to George W. Pepper, Jr., Superintendent of the service at Cleveland, requesting an official report on Owney's demise and information whether his skin could be mounted to be placed in the postal museum here. Mr. Peppers's official response was recieved by Capt. White to-day. It is as follows: "Respectfully forwarded to the General Superintendent of the railway mail service, Washington, D, C., with the information that the dog mentioned in this clipping was not Owney. A policeman killed an everyday, ordinary cur at the Union Station and a reporter did the rest. The last heard of Owney was that he had gone to Cincinnati to meet the new Superintendent, from which point he was 'routed' to the exposition at Nashville." Postal Clerk Melvin saw the story of Owney's death a few days ago, and to-day Capt. White received from him a letter saying that the postal dog had been in his possession for three weeks. He joined Mr. Melvin while returning from the Postal Clerks' Convention at San Francisco. Owney was suffering from a severe attack of mange, and Mr. Melvin determined to hold him untill he was cured. The cure has been accomplished, but Owney has developed some ugly traits, due to his advanced years. He tries to bite everybody he does not know. Mr. Melvin said in his letter that he would like to keep Owney until he dies, and Capt. White has written an official communication granting the request.

The rules, standard, stakes, list of officers and members, of the Irish Terrier Club of America, can be obtained of the Secretary Mr. O. W. Donner, Milton, Mass.

The fifth annual field trials of the New England Beagle Club, will be held at Oxford, Mass., beginning on Nov. 1. For particulars, address the Secretary, Mr. W. S. Clark, Linden, Mass.

Under the date of April 29, Mr. C. E. Buckle writes us as follows:

"The Charlottesville F. T. Kennels have sold to Mr. Bores Wostriakoff, of Moscow, Russia, the black and white pointer dog "Yankee" by champion Rip Rap ex Queen III, whelped March 10, 1896. He is a very good looking and promising puppy Mr. Wostriakoff, whom it will be remembered attended the U. S. field trials held at West Point, Miss., last Jan., intends to run him in the Russian field trials held on "snipe," and he will compete in their Derby next fall He was shipped to Savannah, Ga., April 26, where he will take steamer direct to St. Petersburg, and from thence to Moscow by rail. It may be interesting to know that this is the first dog that has ever been exported from the United States to Russian soil, and the first black and white pointer that has ever gone there at all."

In our advertising columns this week Mr. W. S. Bell announces the Blue Ribbon Stake (formerly the Derby) In a letter he requests us to say that "the entries close on May 15, and those wishing to enter should do so by that time. Any one to whom blanks have not been sent can have them promptly forwarded on application to the secretary, 431 Wood street, Pittsburg."

Mr. M. Guruceaga, care of Mr. F. de Guruceaga, commission merchant, Puerto Cabello, Venezuela, writes FOREST AND STREAM that he desires to purchase two large dogs, and to that end requests that breeders will mail him their catalogues

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address. Prepared Blanks sent free on application.

BRED.

Mr. T. T. Ashford's Balsora, pointer bitch, April 21, to Von Gull
Mr. R. J. Vadant, Jr.'s, Harrietta, pointer bitch, April 24, to Von Gull.
Mr. W. T. Love's Fritz's Fay, pointer bitch, April 28, to Von Gull.
Mr. G. G. Williamson's Dan's Lady, English setter bitch, April 9, to champion Count Gladstone IV.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

Wheeling.

Communications for this department are requested. Anything on the bicycle in its relation to the sportsman is particularly desirable

THE BICYCLE AND THE ROD.

IT would be strange if the universal wheel, which has revolutionized so many aspects of social life, had not left its mark on angling, and as a matter of fact it has in many places had a very noticeable effect. Not a few North country anglers combine the wheel and the reel very judiciously. To run a few miles with the rod in an evening, fish an hour or two at the most effective part of the day, and spin back home about lamp-time, is becoming a common thing. Night fishers, too, hitherto deterred by the long tramp home at midnight, find a new pleasure in the pursuit by reason of the handy bicycle, which can be left at the nearest farmhouse or inn. The angling bicyclist is independent of time and trains. He can go long distances to waters hitherto debarred except to those who could afford to hire the expensive trap, and his journeys there and back, instead of being tedious, are an added pleasure.

The possibilities of the bicycle in this direction were first brought home to me as I was pedaling gently along between West Hartlepool and Seaton Carew. A scorcher came past me like the wind—if I had not known that about thirty miles an hour was the maximum speed, I could have sworn he was going fifty—and as he flew past I perceived that he had a trout rod. Where was he off to? Why, going at that speed, the trout waters of the Tees were within his reach in little over an hour, and in considerably less time than he could have reached them by train on the jog-trot Northeastern Railway. As I rode I pondered, and the result was that when I reached home I purchased a ticket of a local angling association, whose lowest waters were about seven miles from my home—waters which I calculated, from the sparseness of the population about them, must be pretty well stocked with trout, seeing that they were beyond the probable circuit of the town poacher and only liable to be fished with the worm in floods by a neighboring laborer or two. My anticipations were realized, and, thanks to the bicycle, I had a nice little preserve to my own rod for the best months in the years 1895-6, and hope to have again. For purely selfish reasons, I do not specify the exact locality.

There is a great pleasure in combining the two sports. The bicyclist enjoys something of the "one crowded hour of glorious strife" of the poet, for he can have many adventures in a little time, and seems to have gone through a good deal in an hour when he looks back on it. The dog which threatened to upset him, the flock of sheep which he rides through with a wary eye, the many moments when he has to decide on his course of action in a fraction of a second; these and innumerable other possibilities of peril are the life and soul of cycling. Often when I ran out to what I called "my water," it seemed to me to be incredible that after all I had only been forty minutes on the road when I remembered all the incidents of the spin.

One thing I am bound to admit—fishing paraphernalia and the bicycle do not fit very well together. A rod and a bag are easily enough managed; if need be, the rod can be tied under the saddle and handle bar, on the under side of the frame, but when it comes to a capacious wooden creel, waders, brogues, rod and net—well, they are impracticable. Even returning with only a creel, holding some 8 or 10lbs. of trout, I found it to be prolific of painful jolts, arousing a conviction that some other method must be hit upon. With a little trouble I discovered a decent cottager's wife who for a trifling consideration allowed me to leave my rod and net, waders and brogues, creel and tackle book in her care, and I must say the good soul attended to my instructions as to turning the waders inside out when they were dry outside, and other little matters, with religious vigilance. A waterproof bag answered well for bringing my fish home.

One morning early in May, after a particularly delightful spin on the wheel, for the air was rather on the keen side, the mountain tops having a touch of fresh snow on them, the sun shone out warmly, and the birds were singing as I strolled down to the water after donning the waders and tying up the rod. The beck—for it was hardly big enough to call a river—was bright and clear. At one or two points there were rather long walks, perhaps a quarter of a mile, between the streams, but the streams were turbulent and lengthy, and many of them afforded an hour's fishing. I was provided with a particularly nice sample of creepers, and with a supplementary supply of well-scoured worms in case the creeper did not take very well, the season being rather early, on account of the low night temperature, for that branch of the sport. It was now 11 A. M.

"'Twas a day of cloudless skies,
When the trout neglects to rise,
And in vain the angler sighs
For a bite,"

I murmured; adding inwardly, "Much dear old Calverley knew about it!" At the end of an hour, however, I did not feel so cocksure. The first stream was generally good for five or six trout; for although short, it was lively, and ran into a deep pool overhung by an oak, which pool held a large stock of trout that loved to run up the stream in search of the larvæ of the stone fly. On this occasion two nibbles was all it yielded, and two mangled creepers all I had to show for them

I suppose every angler has at some time found the trout in a wrong-headed mood, doing those things they ought not to do, and going contrary to their customary use and wont. So it was on this occasson. The month was May, the waters were clear, the sun shone hotly, everything, in short, was auspicious—they ought to have taken the creeper, and they would not. They seemed to say, "No creeper, thanks! We don't mind a worm if you will allow us to take it our own way." And as a matter of fact I only caught one with the creeper, and the rest all—with scarcely an exception—took the worm on the Stewart in the pick of the creeper water, namely, just in the rough and tumbly water at the head of the streams. The rest of the streams seemed deserted; the heads seemed to have got all the fish in the river. It was a unique experience for me, and another curious thing was that when I gave up at 4 P. M. I had the most evenly-sized lot of fish I ever took—twenty-three, weighing 8½lbs. Shortly before 4 o'clock they stopped dead, and I was not surprised when a cloud came over and a cold blast, iced by the snowy hilltops, sprang up. As luck would have it this was the very wind I would have wished for, for it blew on my back and made the spin home on my Humber a delicious ending to a very pleasant day.—*Fishing Gazette, London.*

Grant Day.

THE bicycle has advantages for sight-seeing that are not always appreciated. Under certain conditions no better means for viewing parades could be devised.

On the occasion of the Grant parade, at the dedication of Grant's Tomb, in which an army of men marched equal to that which Greece has in the field against the Turks, the bicycle was peculiarly adapted for gaining an insight into the most interesting features.

On the west side of Riverside Drive the new cycle path runs to within a very short distance of the tomb, and is also, along its whole extent, within a few feet of the top of the bluff overlooking the Hudson, thus affording a view of the naval parade as well as the land pageant. While the cycle path was crowded with pedestrians before the parade began, the moment the first horsemen appeared, the spectators rushed to the edge of the main driveway, and the path was comparatively deserted. The cyclist then had half a mile or more of unobstructed riding. As a rule, he could see over the heads of the crowd; but where this was not possible it was an easy matter to secure a better view by leaning his machine against a tree and standing on the seat.

When tedious delays occurred, he had something to sit on, with tree or fence for brace, and when any particularly interesting feature came along he could follow parallel with the course and see as much as he desired.

The best part of the parade, in the opinion of a rider who gives his experience, was President McKinley, taken both subjectively and objectively. The wheelman followed him and noted how the roar of applause from the nearest of the million odd spectators burst out and kept pace with his advancing carriage, while the President bowed and smiled, and looked as pleased as a boy who has received a flattering compliment. Grover Cleveland, who followed close behind, looked *blasé* and relieved. No doubt the next best thing to being a newly-elected President in the first blush of conquest is to be a new ex-President with a freedom from the responsibilities of office just attained.

Riverside Drive was an extremely bleak and chilly place during the parade. The wind blew with the force of a hurricane, and it had a bitter rawness suggestive of pneumonia. Ambulances were frequently called for to carry away persons suffering from chills and like complaints, and some of the half-frozen spectators remarked, "Grant will kill as many at this dedication as he did before he died."

As a general thing, the people who suffered were those who had to keep still to retain advantageous positions. The bicycle rider who could wheel up and down was not troubled with congested circulation.

WHEELING NOTES.

CARTER HARRISON, the recently elected mayor of Chicago, is a member of the L. A. W., and an enthusiastic wheelman. No doubt a part of the tremendous majority with which he went into office is due to this fact. Chicago has a large bicycle vote, and the wheelmen gave enthusiastic support to the man who, as a cyclist, rode 4,400 miles last year, including twelve centuries, and who pledged himself to keep the streets clean.

Already the new mayor has shown appreciation for this support by using his influence to bring to a favorable issue the State Bicycle Baggage bill, which had become shelved in the Legislature, and seemed fated to meet an untimely end.

Yachting.

THE result of the yacht conference of last week is doubtless disappointing to many who participated in it, as much less was done than was possible, and, as we believe, desirable. At the same time such positive action has been taken as to assure the continuance of the work through the summer, with its probable successful completion, so far as the first stage is concerned, in the early fall.

The opportunity that, though not lost, was by no means fully utilized, was a rare one; the gathering being most satisfactory in point of numbers and the character of the representation. New York was represented by several of the men who are directly responsible for the very successful organization and maintenance of the Sound Y. R. A., by the organizer and head of the older New York Y. R. A., and by able and inflential representatives of the two large clubs not connected with the Union. The New York Y. C., of course, was not represented; but that was not to be expected. But one representative was present from Boston, but he, both personally and as the President of the Massachusetts Y. R. A., was in every way qualified; and he took an active and useful part in the discussion. Canada was represented by Com. Jarvis, of the Royal Canadian Y. C., President of the Y. R. U. of the Great Lakes, and by Mr. Ambrose of the Royal Hamilton Y. C., President of the Lake Y. R A. of Ontario; these gentlemen having had a double experience in similar work both in the Lake Y. R. A., organized in 1884 as a union of the yacht clubs on the Canadian and American sides of Lake Ontario, and last year in the organization of Union of the Great Lakes. The American representatives from fresh water were ex-Com. Berriman, of the Lincoln Park Y. C. of Chicago, owner of Vencedor, representing the Lake Michigan Y. A., and Com. Richardson of Toledo, representing the Interlake Y. A. of Lake Erie. From the Far West was Mr. Macdonough of the Pacific Y. C., representing the Pacific Inter-club Y. A. The Delaware River was represented by Mr. Bancroft of the Corinthian Y. C. of Philadelphia, a veteran in club work, and by Mr. J. W. Jeanes, and the Great South Bay was also represented. Practically the only localities not represented were the Gulf and Southern coasts and the smaller interior lakes of the middle West.

Nearly all of those present were specially qualified by experience in the line of club work and interclub organization, as well as by familiarity with the wishes and needs of their clubs, for the task in hand.

It was plainly evident that the feeling of the majority was in favor of immediate action to the extent of forming an organization with a name and the necessary officers; many believing that the real work of securing satisf ctory rules could be better accomplished in this way than by deferring until the rules were made by a committee. Had a vote been taken on any of the different motions to organize at once, the motion would have had a decided—probably a two-thirds—majority. At the same time there was an obvious disinclination to press the matter in the face of the limited, but very positive, opposition to immediate action. It is worth noting that the men who had traveled from 500 to 1 000 miles in sleeping cars to attend the meeting were in favor of action, while those who had merely come up town after lunch by the Broadway cable cars were strongly against anything more than the appointment of a committee to report in the future.

In the course of the meeting a very decided difference of opinion became apparent. On the part of some, the main end in view is the adoption of uniform racing rules by individual and separate clubs, with no more of an organization than is necessary. This much was done ten years ago in the conferences of the New-York, Larchmont, Seawanhaka and Atlantic clubs, by which the uniform classification by waterline length was agreed upon, each club still being absolutely independent of the others.

In our opinion, such a loose coöperation as this cannot exist among the large number of clubs throughout the country, and it is a mere waste of time to attempt it.

With the best possible management, and with a reasonably good measurement rule in hand, an immense amount of work is still to be done among the body of the clubs before one measurement rule is universally accepted and enforced. This work can only be done by a strong and permanent organization, having the confidence of the clubs, and with a certain amount of authority that shall be recognized by all. If such an organization is not possible, then it is useless to labor for unity of action among independent and disunited clubs.

It is entirely too narrow a view of the subject to put the measurement rule in the first and only place, as the sole end and aim of yachting. Its importance cannot be denied, but there are many other things to be obtained by the intelligent coöperation of yachtsmen and yacht clubs. The true object of such an association as we hope to see should be to promote all the interests of yachting, to bind yachtsmen into one common fraternity, to promote intercourse and a good feeling between different sections, to utilize the combined skill, enthusiasm and intelligence of American yachtsmen for the advancement of the sport, both socially and technically.

The general affairs of such a body should be in the hands of a representative council or committee of a dozen or so; it should have, in this committee or another, a court of last resort to which the clubs would gladly appeal all disputes with a certainty of a fair and impartial decision that would relieve them of responsibility; it should have committees composed of experts competent to deal with such things as measurement formulæ, limitation of construction and knotty points in the sailing rules. We should be glad to see it go even further, and after the manner of many technical societies, such as the Association of Naval Architects in Great Britain and our own Society of Naval Architects and Marine Engineers, make its annual meetings both interesting and of permanent value by the presentation and discussion of papers on yachting topics. Such meetings in New York, Boston, Toronto, Chicago, Philadelphia, Toledo or Buffalo, from year to year, would make a fitting ending to the racing season and weld the yachtsmen of the country into a really national body.

There is nothing impossible or chimerical in such a plan; it is nothing more than is done to a greater or lesser extent by other associations devoted to sport or business. Great as the difference is between yachting and canoeing, the example of the latter sport, in forming a successful national organization for many of these ends is not beneath the notice of yachtsmen.

We are quite in accord with those who at the meeting counseled against hasty action and were in favor of going slowly; but at the same time, we believe that if any action is to be taken the time has come for it. There has been enough done in preparing the way for an organization; that way is now clearly open, and the sooner it is entered upon the better. The need for caution and deliberation only comes when the association is positively organized, with adequate, but simple executive and legislative machinery in operation. Then is the time to go slowly in the extension of the general plan as experience shall indicate, in the elimination of points of difference in phraseology, etc., in the sailing rules and the systematization of general racing methods; in the thorough consideration of the measurement question and the gradual adoption of a new rule.

We have no doubt whatever that the meeting in October will result in the formation of an associatian which will include the great majority of American yacht clubs, of course using the word in its broadest sense to include the continent of North America. Whether it will include practically all of these clubs except the New York Y. C., and what success it will meet with in the first year or two, depends now entirely upon the action of the new committee; whether it attempts too little in providing for a mere concert of clubs on the measurement question; whether it attempts too much in providing a scheme of elaborate and extensive details, some of which will be objected to by different clubs; or whether it takes a middle course in providing for a strong but simple organization that may extend itself as experience directs.

No professional stenographer was present at the meeting on Saturday, and no attempt was made to take down in full the continuous and animated discussion. Our report is compiled from notes carefully taken, and is, we believe, correct in substance; but if any of the speakers are misquoted, or any material errors have been made, we shall be glad to know the facts.

THE telegram from the commodore of the Philadelphia Y. C. expresses the sentiments of many yachtsmen and yacht clubs throughout the country; it is a pity that some of the views that found expression and carried much weight at the meeting were so much less broad and progressive.

The Yacht Conference.

NEW YORK, SATURDAY, MAY 1.

THE conference of representatives of the yachting associations and clubs of the United States and Canada was held as arranged, at the Fifth Avenue Hotel, New York, on Saturday, May 1. The meeting convened at 2:40 P. M., the following delegates being present:

Yacht Racing Association of Massachusetts.—Lewis M. Clark.

Yacht Racing Union of the Great Lakes.—Æmilius Jarvis.

Lake Yacht Racing Association.—E. H. Ambrose.

Interlake Yachting Association.—G. O. Richardson.

Lake Michigan Yachting Association.—E. C. Berriman.

Yacht Racing Union of Long Island Sound.—Stuyvesant Wainwright, E. B. Hart, Jr.; O. H. Chellborg, Charles T. Pierce, C. P. Tower, F. B. Jones and Oliver E. Cromwell.

Pacific Interclub Yachting Association.—J. M. Macdonough.

Great South Bay Y. C.—John R. Suydam.

Brooklyn Y. C.—P. H. Jeannott, Louis Wunder and William Cagger.

Hempstead Bay Y. C.—J. W. Williams.

Larchmont Y. C.—John F. Lovejoy and Oswald Sanderson.

Atlantic Y. C.—Vice-Com. Frederick T. Adams and Newbury D. Lawton.

Marine and Field Club.—Charles M. Brooks and W. S. Elliott.

New York Yacht Racing Association.—A. J. Prime, E. Langerfeld and George Parkhill.

Corinthian Y. C., of Philadelphia.—A. F. Bancroft and J. A. Jeanes.

New York Athletic Club.—Mayhew W. Bronson.

The invitations to the conference were sent to all known yacht associations and clubs, and to athletic and other clubs having yachting departments. The total number of clubs represented directly or through the various associations was 108. After the roll of representatives was read by Mr. Jones, secretary of the Sound Y. R. U., it was proposed that a chairman and secretary should be elected, Com. Jarvis suggesting that it be understood that these officers were only to serve for this meeting. Nominations for chairman were called for, and Mr. Cromwell was nominated and elected. Mr. Jones was nominated for secretary, but he declined and nominated Mr. W. P. Stephens, who was elected.

The chairman formally opened the session by a few remarks, after which the question of holding an open or executive session was then considered, and on motion of Mr. A. J. Prime it was decided to hold an open session, thus allowing the representatives of the various papers who were present to remain. The secretary read the following:

PHILADELPHIA, Pa., May 1.—*Chairman of Yachtsmen's Convention, Fifth Avenue Hotel:* The Philadelphia Y. C. will heartily coöperate in any movement for the advancement of yacht racing and the development of yachtsmanship. I expected to attend the convention, but am prevented by sickness in family. Please read to delegates.

(Signed) FRANCIS SHUNK BROWN, Com., P. Y. C.

Mr. Cromwell then spoke on the purpose of the meeting, the necessity for an organization, its name, and similar details, asking that all present would express their opinions. For some time no one seemed anxious to speak, Mr. Jones finally taking the floor. He spoke of the pressing necessity for uniform racing rules, and as the best means of attaining this end of the formation of some sort of union or association of the various yachting bodies; mentioning the existing differences, the difficulties encountered in the past, and the growing need of uniformity in rules at least.

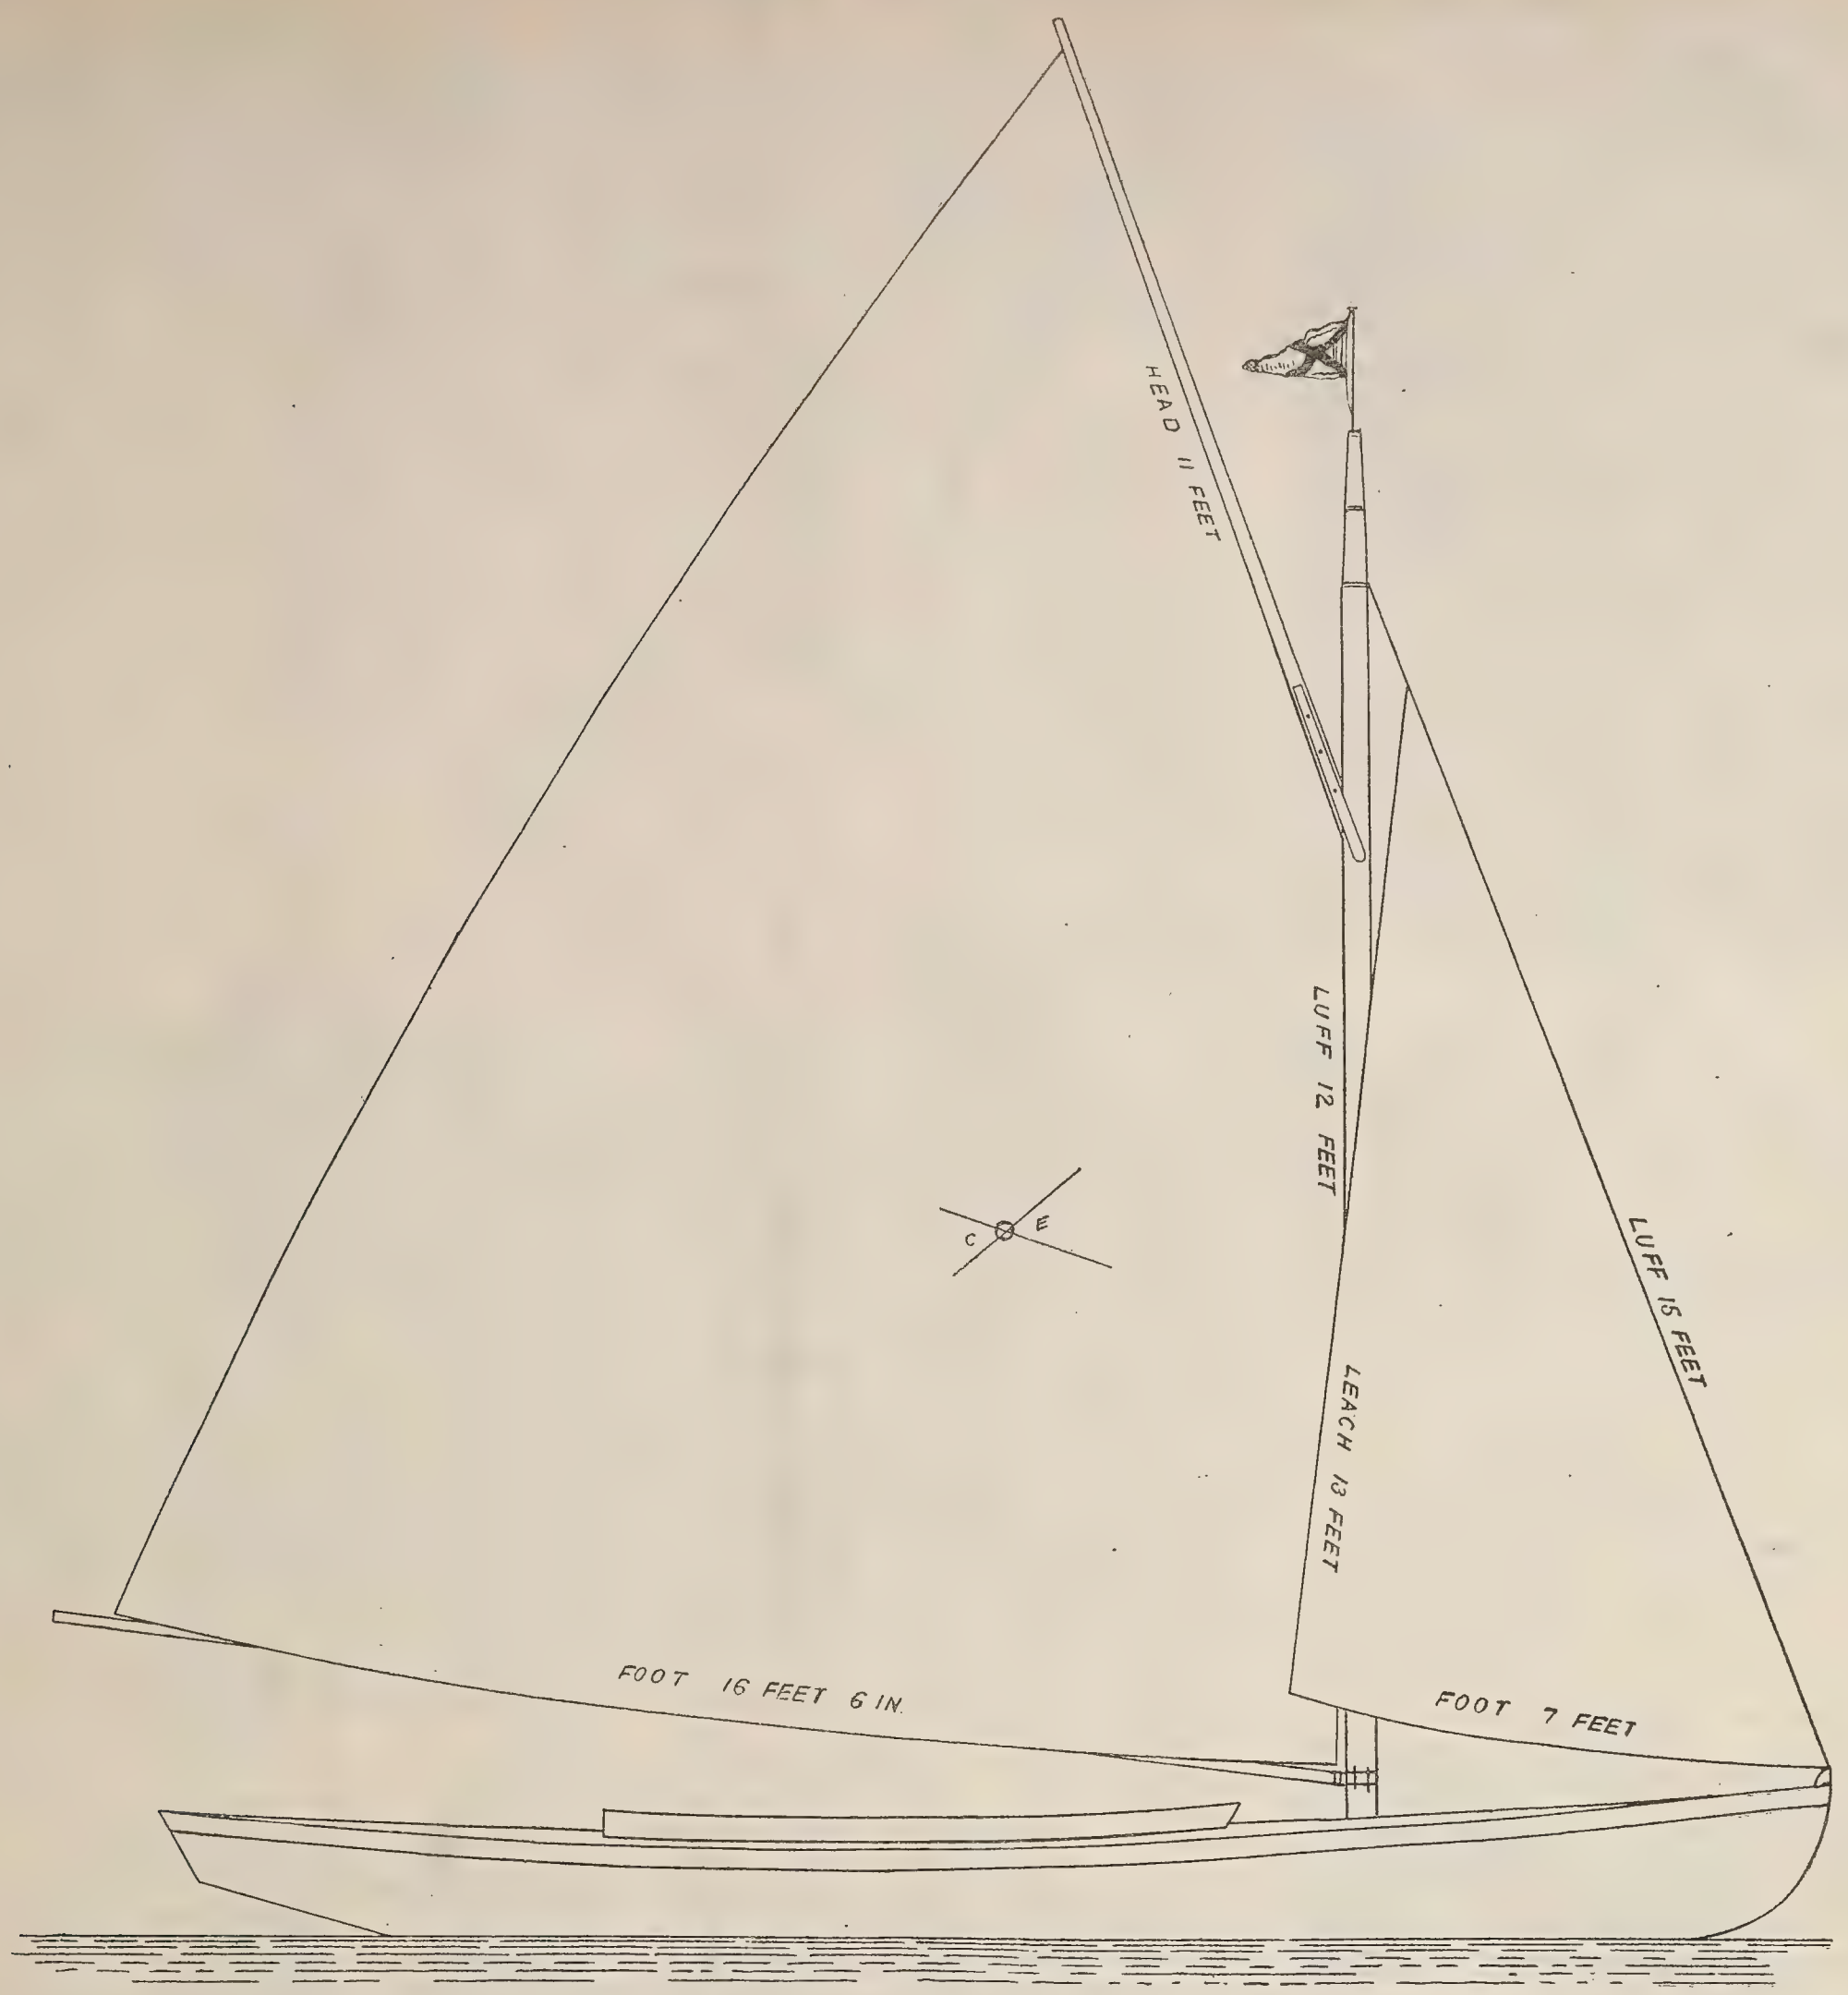
For a time no one was disposed to follow Mr. Jones. Finally Mr. Stephens took the floor. His remarks were to the effect that, while uniform racing rules, and in particular the measurement and classification rule, were most essential, there were many other directions in which the general interests of American yachting should be encouraged by the coöperation of all yachtsmen; that the condition of the measurement question to-day is such that there was little hope of immediate and successful action; but that the way was now open for the formation of a national association for the promotion of yachting in all its branches; that the first step was to organize and adopt a constitution, and that this might be easily done. The second step, of adopting uniform sailing rules for the general management of racing, was also easily possible; and that the third step, the formulation and adoption of an entirely new rule of measurement, was not only impracticable at present, but might well be left until the executive and legislative machinery of the new organization was complete.

Com. G. O. Richardson, of Toledo, moved that the meeting proceed to the organization of a permanent association. Mr. Sanderson, of the Larchmont Y. C., stated that his club was in favor of a uniform system of racing rules, but that its delegates were not instructed to go further than a scheme for mutual coöperation, and that they could not vote on a motion to organize an association. He also asked whether all clubs interested had been invited to representation at this meeting. Mr. Jones replied that invitations had been sent to all clubs in the United States and Canada that were known to the committee. Mr. Prime suggested that the roll of the clubs be called.

Com. Jarvis stated that he was not specifically instructed by the Royal Canadian Y. C. as to his action as its representative, but that the club was heartily in accord with the proposal, as understood, to form an association. He stated further that the delegates present were perfectly free to act as individuals and form an association which the clubs might subsequently join. He spoke of the necessity for some immediate action, and of the opportunity offered in the presence of so many representatives, finally offering a motion to the effect that the meeting should proceed to organize an association, and that to such end a committee should be appointed to prepare a form of organization and report at once to the meeting. He stated that he had prepared a draft of a constitution, and suggested that as others present had given attention to the same subject, they should present their ideas to the meeting and to the proposed committee. Mr. E. C. Berriman seconded the motion.

Mr. Jones suggested that it would be well to hear from those, if any, who were opposed to the formation of an association. Mr. N. D. Lawton, of the Atlantic Y. C., took the floor and urged that the meeting should go to work slowly, that nothing should be done at present beyond the appointment of a committee to prepare a scheme of organization and report in the fall at another meeting of delegates, at which a permanent organization might be effected. Mr. C. P. Tower, of the New Rochelle Y. C., spoke in favor of immediate action, but suggested that all of the delegates present should be heard. Mr. Sanderson seconded Mr. Lawton's amendment, speaking in favor of a temporary committee to prepare a scheme of organization which should be submitted to all the clubs prior to the fall meeting.

Mr. Prime offered a motion that it was the sense of the meeting that uniform racing rules could only be adopted through the formation of a permanent association. Mr. Berriman spoke, urging some immediate action while the delegates from a distance were present. Com. Jarvis spoke in the same strain, asking for immediate action in the formation of a permanent body with a brief constitution setting forth the main principles of the association, and leaving the completion and perfection of the rules, etc., until the organization was in permanent working shape. He spoke particularly of the opportunity now offered, and of the danger of losing it by failure to take positive action.



Mr. Jones offered an amendment to Mr. Lawton's motion, that an organization be at once formed and a committee appointed. Mr. Tower spoke again, suggesting a preliminary organization covering the main points, the details to be perfected later.

Vice-Com. Adams, Atlantic Y. C., suggested that the roll of delegates be called with a view to ascertain how many were qualified to act in the organization of an association. Mr. P. H. Jeannot, of the Brooklyn Y. C., stated that his club was in favor of an association, but that its delegates were not prepared to vote for it at the meeting. Mr. C. Y. Pierce, Riverside Y. C., spoke strongly in favor of immediate action. He remarked very pointedly that the delegates had come together at great trouble and loss of time to do something which they were now evidently afraid to do. Vice-Com. Adams stated that it was not possible for the Atlantic Y. C. delegates to vote for immediate action in the formation of an association.

Mr. Tower made a motion that a committee of five be appointed to retire and prepare a skeleton scheme of organization, reporting back to the meeting. Mr. Jarvis spoke again, and Mr. Prime urged the passage of Vice-Com. Adams's motion to ascertain what delegates were qualified to act at once. The chairman asked Com. Jarvis to withdraw his original motion for immediate organization and the appointment of a committee in favor of Vice-Com. Adams's motion, but Com. Jarvis stated that, without intending any discourtesy to the proposer of the second motion, he was not willing to withdraw his, as it was perfectly practicable for the delegates present to act as individuals in organizing.

Mr. L. M. Clark, President of the Y. R. A. of Massachusetts, offered the following motion: Resolved, That it is the sense of this meeting that uniform racing rules should be adopted throughout the United States and Canada; and that for this purpose some kind of a national association be formed. Mr. Jones and one or two others seconded the motion, whereupon Com. Jarvis and Vice-Com. Adams withdrew their respective motions. Mr. Clark's motion was put by the Chair and carried.

Mr. J. F. Lovejoy of the Larchmont Y C. offered the following motion: Resolved, That a committee of seven be appointed by the Chair to draft a plan of organization and

COLLEEN. SAIL PLAN.

submit such plan to the different clubs of America for their consideration; this plan then to be reported back to the said committee, which shall, after due consideration of them, formulate a final plan of organization to be acted upon at a meeting called during October of the present year: said final plan having been first submitted to the different clubs so that they can instruct their delegates with power as to the action or position they desire to take. Mr. Jones seconded the motion.

A general discussion followed, involving several points, especially the difficulty of any committee preparing a complete set of rules, etc., that would be accepted by all the clubs as a basis for an organization. During the discussion the secretary was repeatedly called upon to read the original motion. Mr. E. Langerfeld moved to amend by adding the word "associations" after clubs throughout the motion, which amendment was accepted.

Mr. Prime objected to the motion and offered an amendment, that a committee of seven be appointed to draft a constitution for a national association and to submit it to the meeting after a recess; the motion was not seconded. Mr. Lovejoy's motion was finally carried unanimously, after which Mr. Langerfeld moved that the date and place be fixed by the same committee.

Mr. Jones moved that a committee of five be appointed by the Chair to consider the question of the racing rules, in connection with the original committee. A general discussion brought out the fact that some of the delegates, in accordance with the idea that the main object in view was the adoption of a uniform system of racing rules, interpreted Mr. Lovejoy's motion to mean that the committee of seven should prepare not only a constitution and by-laws, but a new measurement rule that, after being submitted to all the clubs for their scrutiny, would be accepted by them as a satisfactory basis for such a union, league or association as might be formed. It was stated by some of the delegates from about New York that their clubs would have nothing to do with an association unless it were positively known beforehand what the measurement rule was to be.

Much diversity of opinion was manifest in connection with this discussion as to the form of the organization, a few of the delegates expressing themselves strongly against anything more than a loose union of the clubs in an agreement to use uniform racing and measurement rules. Mr. Clark spoke very strongly against the idea of framing a rule between now and October which would be generally accepted, and stated that such a movement would preclude the possibility of bringing in the Massachusetts clubs. Mr. Stephens spoke at some length, urging that the work of the committee be specifically limited to the preparation of a scheme of organization, that the work at the fall meeting be limited to organizing with a suitable constitution, by-laws and officers; that the matter of unifying the general sailing rules be then taken up, and that nothing whatever be done, for the present, with the measurement question. He spoke of the absence of a satisfactory rule at the present time, the difficulty of any committee in addition to the other work framing a good rule during the summer, and the absolute impossibility, even if a good rule were found, of securing its immediate acceptance by a majority of the clubs.

Mr. Lovejoy finally offered the following resolution: Resolved, That it is the sense of this meeting that the plan of organization referred to in the original motion shall include a constitution, by-laws and sailing rules. This provoked another discussion as to whether the term "sailing rules" covered merely the general rules of the road in sailing and the methods of starting, etc., or whether they included a measurement formula Mr. Lovejoy explained that he intended the motion expressly to include the formula. This was opposed by several, and Mr. Jones offered an amendment, that the committee be instructed to omit the measurement and classification rule. This was seconded by Mr. Clark and carried, after which the motion as amended was carried unanimously. The chairman announced the following committee: Messrs. N. D. Lawton, Atlantic Y. C.; C. T. Pierce, Riverside Y. C.; A. Emilius Jarvis, Royal Canadian Y. C.; L. M. Clark, Hull Y. C.; J. M. Macdonough, Pacific Y. C.; A. J. Prime, Yonkers Y. C., and F. B. Jones, Indian Harbor Y. C. After an understanding that the committee was to fix the date for the October meeting, the meeting adjourned. In the evening a number of the delegates were entertained at a mess dinner at the Seawanhaka club house. It was intended to take the visitors up the Sound on Sunday, and they were invited to luncheon by the Larchmont Y. C., but a storm from the east interfered with this plan.

The America's Cup.

The great majority of rumors and reports of challenges for the America's Cup are of one or the other of two kinds, either with an after-dinner origin, like the noted case of Mr. Rose and the Distant Shore, or with no *bona fide* origin at all; the plain product of certain Anglo-American fake mills, specially manufactured when real yachting news is scarce. We print the following merely because it has obtained a wide circulation through the daily press, it evidently belongs to one of the above classes. The three gentlemen mentioned are not racing men, we are not aware that Mr. Wollf is even interested in yachting, while Lord Dufferin has been known for over a generation as peculiarly a cruising man. The Royal Uster Y. C. is little likely to undertake so momentous a venture as a challenge for the Cup. One version of the story is to the effect that Mr. Sibbick whose work has been entirely confined to yachts 20-rating and under, is to design the new challenger.

BELFAST, April 27.—It has been decided to build an Irish yacht to compete for the America's Cup. The boat is to be constructed in Hilditch's yards, Carrickfergus, upon the order of a syndicate composed of Gustav Wilhelm Wolff, M. P. for East Belfast and a member of the Belfast shipbuilding firm of Harland & Wolff, the Marquis of Dufferin and Ava, and the Marquis of Londonderry. She will be sailed under the auspices of the Royal Ulster Y. C., of which the Marquis of Dufferin and Ava is commodore.

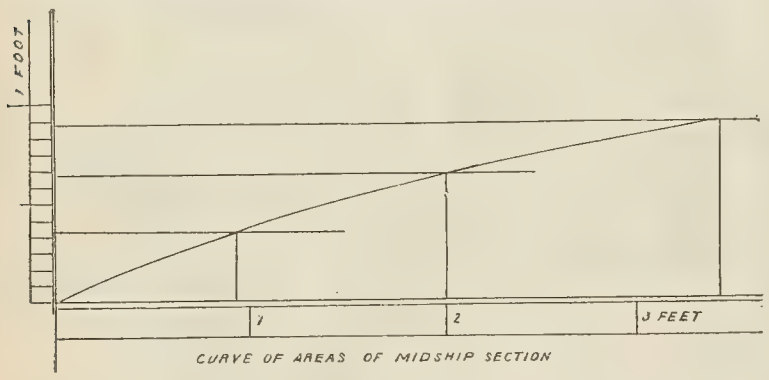
BELFAST, April 29.—Mr. Gustav W. Wolff, M. P. for East Belfast, and a partner in the firm of Harland & Wolff, the well-known shipbuilders, says there is no truth in the story that he is connected with a syndicate contemplating building an Irish yacht to challenge for the America's Cup or the Queen's Cup.

It is further stated that no member of the Royal Ulster Y. C., of which the Marquis of Dufferin, whose name was also mentioned in connection with the alleged syndicate, is commodore, intends to challenge for the America's Cup.

Beverly Y. C.

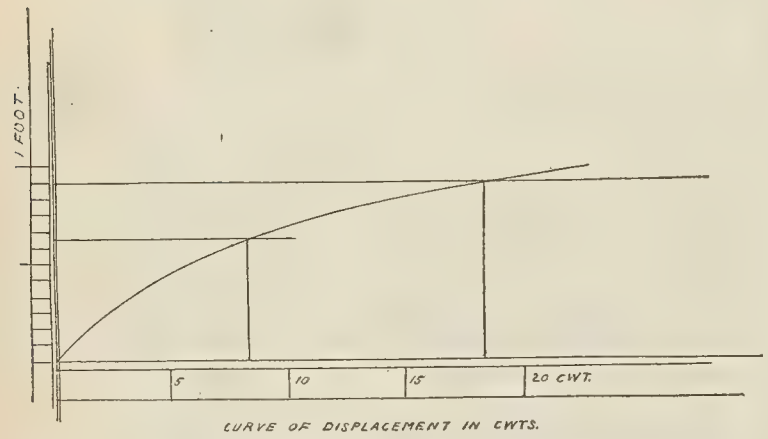
THE Beverly Y. C. announces the following races for 1897:

No. 246, June 17.—Club house, Wenaumet; first open sweep.
No. 247, June 26.—Club house, Wenaumet; first championship.
No. 248, July 3.—Club house, Wenaumet; second open sweep.
No. 249, July 5.—Club house, Wenaumet; second championship.
No. 250, July 24.—Club house, Wenaumet; third open sweep.
No. 251, Aug. 3.—Marblehead; first open regatta.
No. 252, Aug. 7.—Club house; third championship.
No. 253, Aug. 14.—Club house; fourth championship.
No. 254, Aug. 21.—Marion, A. M.; Van Rensselaer cup.
No. 255, Aug. 21.—Marion, P. M.; second open regatta.
No. 256, Sept. 4.—Club house; fourth open sweep.
No. 257, Sept. 6.—Club house; third open regatta.
No. 258, Sept. 11.—Club house; fifth championship.



The Indian Harbor Y. C. has now under headway a new club-house on the site of the old Rockport Hotel, on Rocky Point, Greenwich. The work will be pushed so that the house may be available this season.

The Dublin Bay S. C. Colleen.



A SHORT time since we made mention of a new class established this year by the Dublin Bay Sailing Club under the name of Colleen, and now, through the kindness of the designer and builder of the boats, James E. Doyle, the yacht-builder, of Kingstown, Ireland, we are enabled to present the lines.

The Dublin Bay Sailing Club, whose station is at Bullock, Kingstown, Ireland, has long since made a reputation among yachtsmen and boat sailors as the especial patron of open boat sailing and the parent of some notable restricted classes. Founded in 1884 with the object of promoting racing and sailing in small boats, at a very early period in its experience the necessity for special restrictions to prevent speedy outbuilding and to preserve the general interest of its members became apparent. As in all other clubs, the tendency soon developed on the part of a few to outbuild in both size and cost, thus discouraging the majority of owners, who were not willing to add a new boat to the fleet each season. To meet this difficulty the original classes have been long since surrounded with rigid restrictions, and at the same time, to meet the demands for new and different craft additional classes have been created. One of these, the Mermaid, is very widely known, while the Water Wags, a class liberally patronized by the club, is even more famous. Both the Mermaids and the Water Wags have plumb stems and sternposts, or practically the same length over all and on the waterline.

In 1895 the club requested designers to submit plans for a new class, to be 19ft. over all, 18ft. l.w.l., 6ft. beam and 2ft. 6in. draft, with 5cwt. of lead on the keel, a ⅜in. centerboard of not over 1cwt. weight and with an exposed area of 6sq. ft.; a gaff mainsail, with loose foot, of 200sq. ft. area and a jib of 50sq. ft., spinaker boom not over 9ft.; the boats to be clincher built, copper fastened, planked with ⅜in. pine, with wales, transom and seats of teak. Mr. Doyle, in answer to this tender, submitted plans for a somewhat different boat, with 1ft. less length on waterline and 1ft. more over all, 17ft. and 20ft. respectively, and with less draft and 6in. more beam. Nothing was done at the time, but last fall the subject of the new class was taken up anew, and another request for plans

CURVE OF AREAS OF MIDSHIP SECTION

CURVE OF DISPLACEMENT IN CWTS.

sent out. The drawings of 1895 were again submitted by Mr. Doyle, with the addition of 2ft. aft, making a neat counter, and they were adopted by the club. The contract price, on condition that six boats were ordered at once, was £52 10s ($262.50), and about 10% more for a smaller number. Mr. Doyle is now at work on quite a fleet of the new craft.

The drawings need little explanation; the official specifications being very complete. The club is provided with full-size body plan and a set of internal moulds; the measurers, Messrs. Hargrave and Stephens, applying the moulds to the inside of each new boat before she is decked. The full specifications are as follows:

Dublin Bay Sailing Club.

SPECIFICATION FOR BOATS OF B CLASS TO BE KNOWN BY THE NAME OF COLLEENS.

DIMENSIONS.

Length over all	22ft.
L.W.L.	17ft.
Beam	6ft. 6in.
Draft of water	1ft. 6in.

DESCRIPTION.

Boats to be built as shown on the club drawings, with round stem, square transom, clincher built, and sloop-rigged.

MATERIALS OF HULL.

KEEL.—Of American elm, sided and moulded as shown on body plan; greatest width 6in., tapering fore and aft as shown on drawings; thickness 2in.

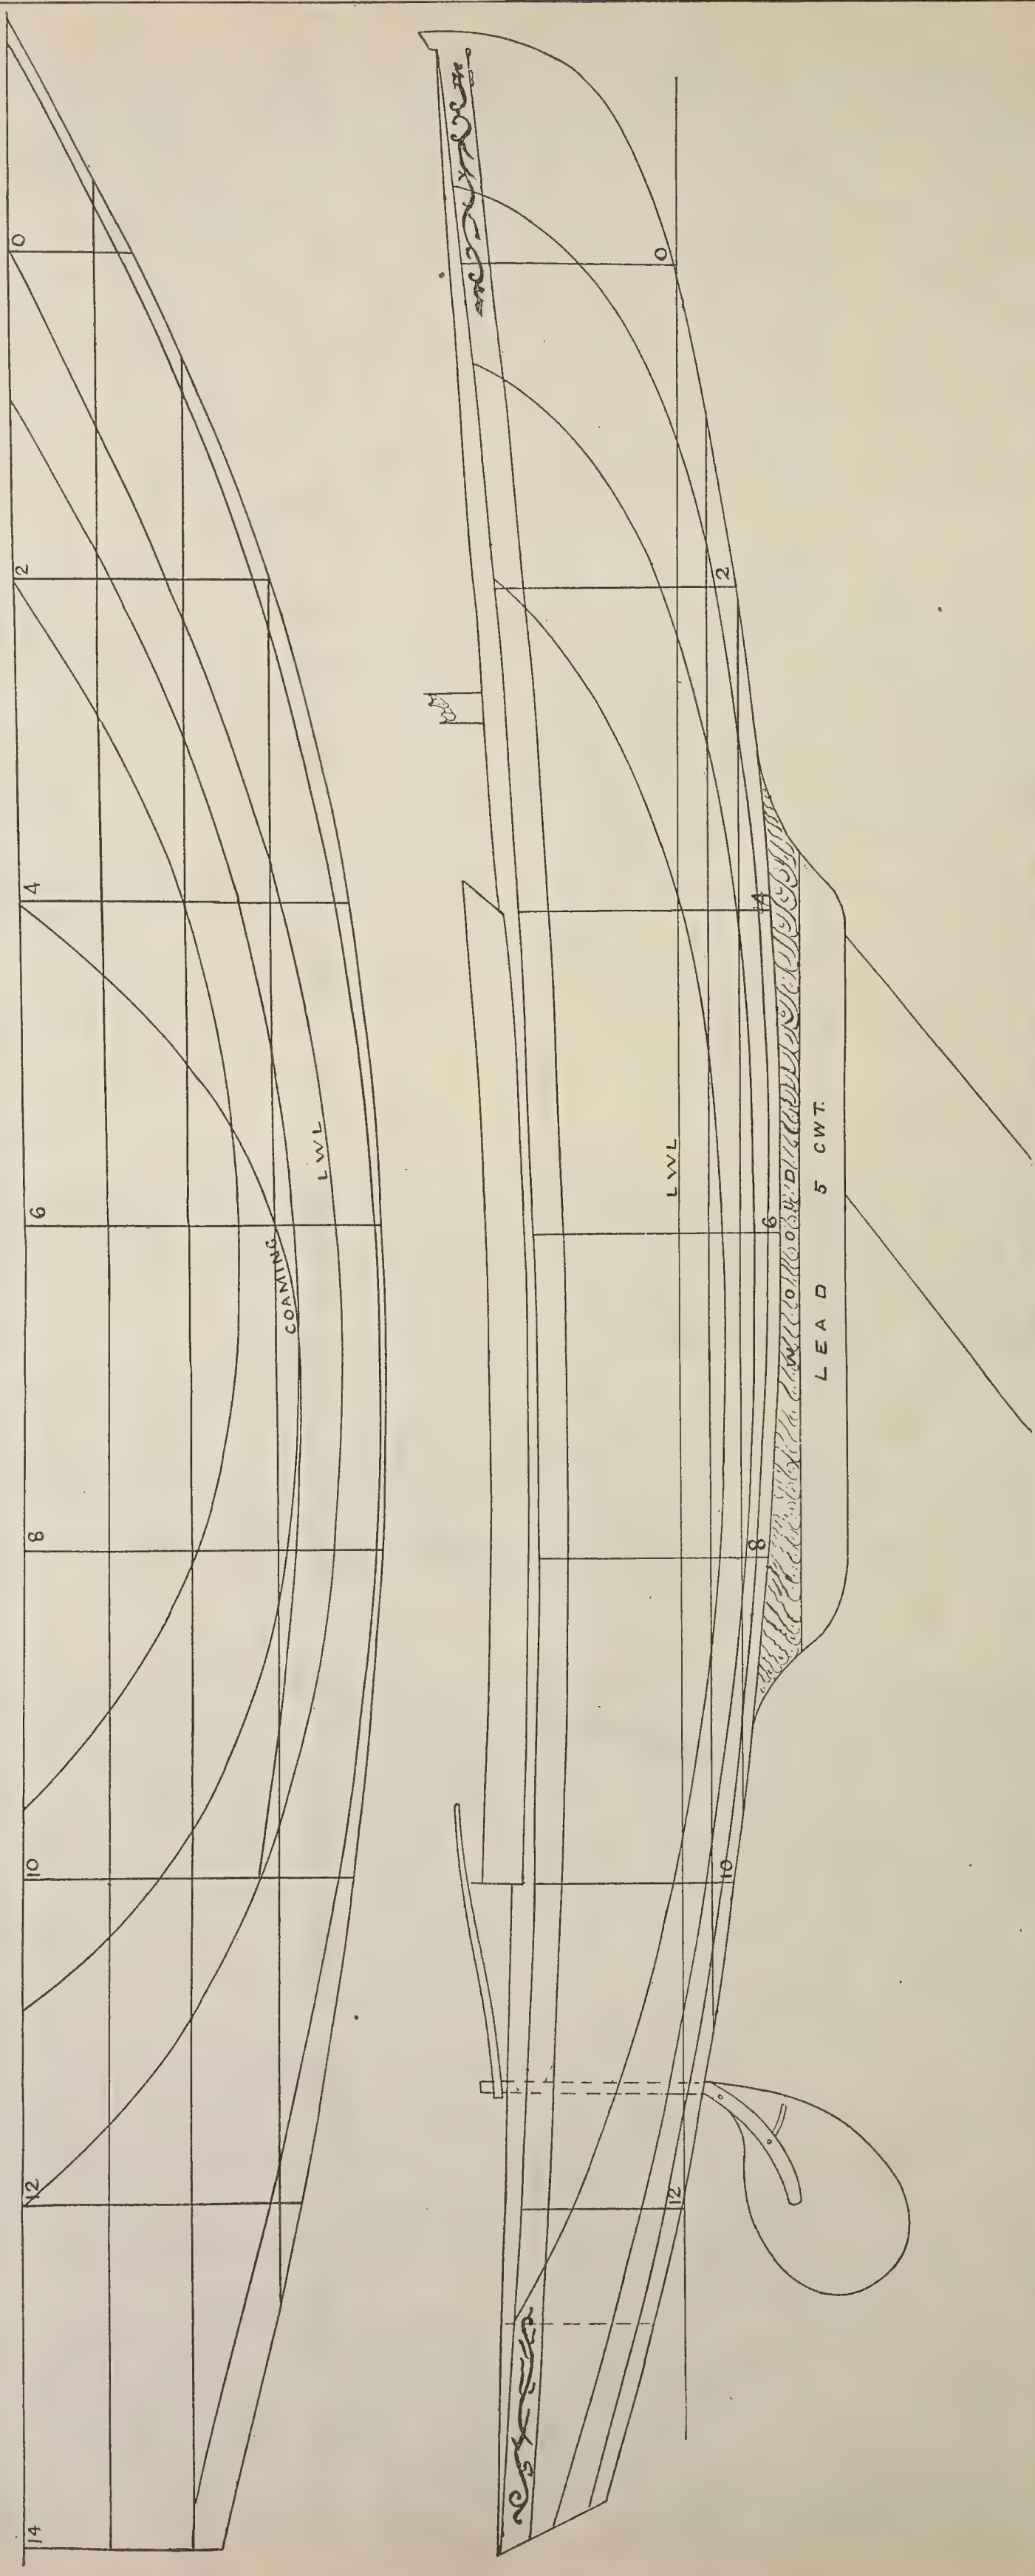
FALSE KEEL.—Of either red, yellow or pitch pine, or memel (pine).

STEM AND STERNPOST.—Of oak, to be of natural growth as near as possible to the curvature required, free from sap or other defects. Stem sided and moulded as on drawings, i. e., sided at keel 3in. and at head 2in.; sternpost, sided 2in., and moulded as on drawings. Sternpost and dead wood may be in one piece.

DEAD WOODS.—Of oak or American elm, free from defects. moulded 1¼in., sided to fit stem and keel.

PLANKING.—Of best selected, seasoned yellow pine, free from all defects, thickness ⅜in. (Teak top streak), widths not to exceed 5in. in broadest part, the planks (except 18in. from hoodends at bow and stern) shall overlap with the outside lands the entire thickness of the plank itself, but an arris not exceeding ⅛in may be taken off outside edge of plank. Top streak grooved for stripe. No plank to have more than one scarph.

BENT TIMBERS.—Of American elm, sided ⅞in., moulded ½in. spaced 6⅞in. from center to center with an ⅛in. arris off top edges. Timbers to be joggled into keel.



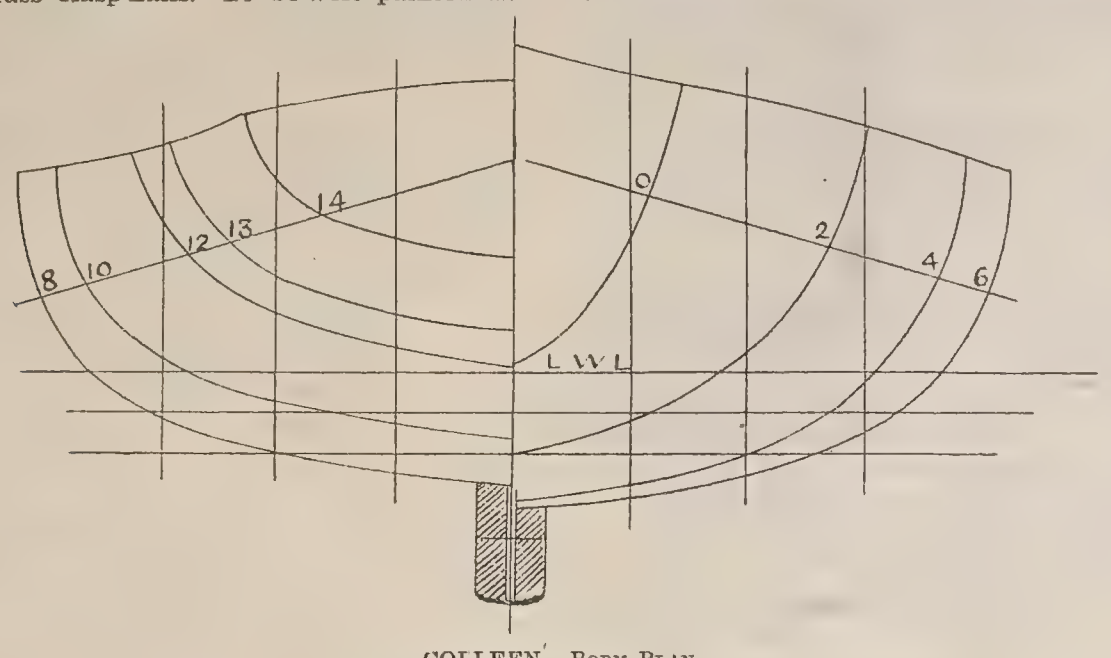
FLOOR TIMBERS.—At stations 2, 6, 7, sided as frame, not less than 1½in. moulded across keel, and not less than 12in. on each arm.

GROWN TIMBERS.—At stations marked on plan, 1in. sided, moulded at keel 2in., at L.W.L. 1½in., and 1in. at head. Sufficient check out of head to admit shelf or stringer to fit home to bent timbers.

GUN METAL OR STEEL FLOORS.—Length of arm to be 8in. to C.B. case, and 12in. on frames. Section, moulded ½in., sided 1in., and ¾in. at throat, tapered to ¼in. at point. To be placed on frames Nos. 3, 4 and 5. Four No. 12 screw fastenings in each arm.

STRINGER OR CLAMP.—To be 3in. × ⅞in. yellow pine, fitted close up to deck.

HANGING KNEES—Of oak to be of natural growth, as near



COLLEEN CLASS, DUBLIN BAY SAILING CLUB. DESIGNED BY JAMES E. DOYLE, 1896.

as possible to the curvature required, 1in. thick, fitetd at each end, and at center of cockpit, also at mast beam. Lodging knees at transom, and breast-hook of oak. Oak bitt, 2½×2in., standing 5in. over deck, mortised into keel.

DECK BEAMS—Of best Norway spruce, spaced 13¾in. center to center. At mast and end of cockpit, sided 1in., moulded 2in. Short beams at cockpit, ided 1in., moulded 1½in. Other beams ⅞in.×2in.

COAMINGS—Of American elm, ½in. thick, moulded as on drawings.

DECK.—To be ⅜in. best seasoned yellow pine or Norway spruce, fitted underneath with 1½×⅜in. ribbands, fastened with copper or brass clasp-nails. To be well painted and

COLLEEN. BODY PLAN.

covered with calico or linen, also painted, as per general condition.

CENTER BOARD CASE.—To be of yellow pine, 1in. thick. Side keelsons of oak, or American elm, not less than 1½in. thick, to take bolts of lead keel, all to be square-jointed to keel. A piece of flannel to be laid in the joint, with a mixture of genuine red and white lead and copal varnish, thick enough to be put on with a knife. Copper fastenings to go through the keel and side keelsons, and to be properly clenched on copper rings or washers.

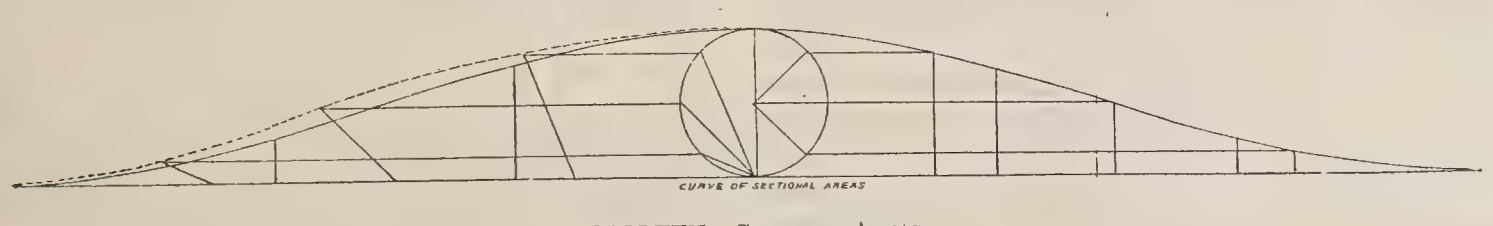
FASTENINGS.—To be copper and Muntz-metal, no iron or galvanized nails to be used in any portion of hull or fittings. Nails through bent timbers to be properly rooved, and two nails between the timbers. All through fastenings to be properly rooved. Deck to be fastened to beams and clamps with brass clasp-nails. Beam ends to have a brass screw into clamp. Clamp to be through fastened and clenched on rooves.

FLOORING.—Boards of best Norway spruce ⅝in., laid level on carlines not less than ¾×2½in. across the boat, fitted to and on the timbers.

SEATS.—Of teak, not less than 36in. in length, 14in. in width, framed in lattice-work, and supported by turned uprights on floor or timbers.

IRON AND BRASS WORK.—One gun-metal chainplate each side, to be fixed on timbers placed in position to receive same, said timbers to be not less than 18in. long, 1½in. sided, by 1in. moulded. Gun metal casting on stem for fore-stay and stay-sail. Hook for mooring, spider-band, gooseneck for boom, and leads for jib-sheets to be gun metal. Traveler for boom, horse for main-sheet and masthead fittings to be galvanized iron.

LEAD KEEL AND CENTERBOARD.—Boat to have lead keel 5cwt., with ⅝in. slot for center plate, to be fastened with ten Muntz-metal bolts of ½in. diameter through keel and keelson



Ballast on keel, 5cwt. of lead. Centerboard not to exceed 1cwt., ⅜in. thickness. Gaff mainsail loose at foot.

Working sail area, 250sq. ft., divided into mainsail and jib.

Spinaker boom not to exceed 9ft. No balloon jib allowed.

Boats to be clincher-built; that is to say, the planks (except 18in. from hood-ends at bow and stern) shall overlap with the outside lands, the entire thickness of the plank itself, but an arris not exceeding ⅛in. may be taken off outside edge of plank.

Boats to be precisely similar in design and construction, and to be built in accordance with drawings and specifications marked A and AA, respectively, which shall be deposited with the Hon. Secretary, who shall charge a fee of 10s. for a copy of same.

COLLEEN. CURVE OF AREAS.

pieces, screws and nuts on inside. Center plate of exact area allowed on drawings, of ⅜in. steel, galvanized, the leading edge to be V shaped. To be lifted with tackle and pennant.

RUDDER.—To be ⅛in. steel plate galvanized, pivoted as shown on plan. An iron tube to be fitted as rudder case. The rudderhead to be made in such a way as will keep the rudder in its place.

TILLER.—Of galvanized iron.

SPARS.—Hollow spars not allowed. Mast and boom of best Norway spruce. Gaff and spinaker boom of white pine. Jaws on gaff and spinaker boom of oak or Irish elm.

Mast at deck not less than 3½in., main boom at thickest part not less than 3in., gaff at thickest part not less than 1¾in.

STANDING AND RUNNING RIGGING.—Sizes and quality optional, to be agreed between member and builder.

BLOCKS AND MAST HOOPS.—A sufficient number of ash blocks (internal bound) or iron blocks, and the required number of wooden mast hoops.

OARS, ANCHOR, ETC.—One pair of ash oars 12ft. long. Boat hook about 9ft. long. One pair galvanized rowlocks. Anchor 22lbs. weight, and 20 fathom of warp.

PAINTING.—To be painted with genuine red lead under the floor, varnished above floor, the outside to have three coats of either paint or varnish. If painted, to have three coats of genuine white or red lead, colored as required in last coat.

All iron and steel work to be galvanized, save steel floors, where it is optional.

All dimensions given refer to finished sizes, and all materials are to be of the best selected quality.

SAILS.—The oject of the limitations of this class being to keep the price of boats, etc., within moderate limits, it has been determined that no sails will be allowed at higher prices than the following:

Mainsail	£5	0	0
No. 1 jib	£1	2	6
No. 2 jib	£0	17	6
Spinaker	£1	0	0

also that no sails can be used, the specifications for which has not been approved of by the committee.

The sails to be made in accordance with the sail plan of the class, and so-called balloon silk shall not be allowed in the mainsails. Sails must be numbered, branded and certified by the committee before being used in club races.

JAN. 1, 1897.

RULE 15—B CLASS.

The B Class boats shall be known by the distinctive name Colleens, to be centerboarders, and with following dimensions:

Length over all	22ft.
L.W.L.	17ft.
Beam	6ft. 6in.
Draft (with board up)	1ft. 6in.

Boston City Regatta.

DORCHESTER—BOSTON HARBOR.

Saturday, April 24.

THE first race of the season in Eastern waters was set for April 19, but owing to a gale so heavy that the yachts could not face, was postponed to the Saturday following, when it was sailed in a reefing breeeze from S.W. There were 28 starters, the times being:

	Length.	Elapsed.	Corrected.
SEVENTEEN-FOOTERS.			
Ripple, C. B. Pear	16.00	1 20 12	0 48 31
Glide, G. D. Silsby	15.06	1 20 15	0 48 32

Souix, Ixel, Panaora, M. Y. O. B., 2200, Curlew, Cuttysark and Katydid did not finish.

The Committee of Arrangements included Alderman Franklin L. Codman, Alderman Josiah S. Dean, Councilman Oliver F. Davenport, C. Edwin Backus, Massachusetts Y. C. and J. F. Small, Dorchester Y. C.

Punjaub.

The third launch of the season at the Gas Engine and Power Company and Seabury Works took place at 10:30 A. M. on May 1, the steam-yacht, Punjaub, designed and built by Seabury & Co. for F. M. Masury of the New York Y. C. being slid off. She is a sister ship to the Raynham, recently launched; her dimensions being, over-all, 85ft.; l.w.l., 72ft.; beam, 13ft.; draft, 5ft. The machinery includes a Seabury triple expansion engine, 7, 11 and 17 by 10in., with Seabury boiler. The yacht is schooner-rigged.

YACHTING NEWS NOTES

Crack 15ft. boats of Illinois and Wisconsin will meet in a test of superiority during August, if the plans, suggested at the annual meeting of the Fox Lake Yacht Club, at the meeting on April 22, bear the promised fruit. The winner among the Fox Lake 15-footers will meet the best boats of all other clubs in the State for a trophy, as she will represent Illinois in a race at Green Bay against the best boat in Wisconsin. The dates and starting points for the Fox Lake regattas were adopted as follows: July 3, Minneola Club; July 5, Dr. Brophy's Cottage; July 17, East Side; July 31, Dr. Tooker's Cottage; Aug. 7, Island; Aug. 14, East Side. The following officers were elected: Com. Dr. Truman W. Brophy; Vice-Com., Benj. Felix; Sec., John A. Putnan; Treas., C. J. Patterson; Chaplain; Rev. George W. Wright; Fleet Surgeon; Dr. Corlett; Measurer, Robert Tooker, Jr.; Regatta Committee, Dr. Bentley, Clark Bennett, Sumner Sollitt, Harry Weber, W. H. Lyford. Retiring Com. Oliver Sollitt received a vote of thanks for efficient service. A motion was carried providing for a tax on overhang. The boats will race in three classes: Sloops, half-raters, limited to 15ft. length, and cat-boats. There will be about ten new boats on the lake this year, the total fleet approximating forty. The Secretary's Cup, offered by Benj. Felix, for half-raters, will be competed for this year.—*Chicago Times-Herald.*

A meeting of the Executive Committee of the Lake Michigan Yachting Association was held at Racine, April 24, the following representatives being present: E. C. Berriman and George Warrington, Lincoln Park Y. C.; M. D. Payne, Columbia Y. C.; H. A. Coleman, Milwaukee Y. C.; E. P. Heineke, Milwaukee; E. J. Baker and George Martin, Chicago, and W. J. Reynolds, Racine Y. C. It was decided to apply for membership in the Yacht Racing Union, and Messrs. Berriman, Martin and Coleman were selected as delegates to the Union. Mr. Berriman was selected to represent the Association at the Conference in New York. The date of July 5 was selected for the next regatta of the Association at Racine. No action was taken in the matter of taxing overhangs.

Com. Morgan of the New York Y. C. has appointed J. Beavor Webb as Fleet Captain for the season of 1897.

Theodore A. Havemeyer of New York, a member of the New York Y. C. since 1870, died on April 26. Of late years Mr. Havemeyer has been more closely identified with coaching, golf and land sports than with yachting, but his steam-yacht, Ideal, built in 1873, was one of the first steam-yachts in American waters. The 15-footer, owned by his son, H. O. Havemeyer, Jr., last year, was named from this yacht.

The following dates are proposed for the Lake Y. R. A. racing circuit: Toronto, July 19; Hamilton, July 21; Niagara-on-the-Lake, July 24; Charlotte, July 27; Cobourg, July 30.

Rifle Range and Gallery.

A New Rifle Cartridge.

The Stevens Arms Company has brought out a new cartridge, manufactured by the U. M. C. Company, which will be known as the .25-.21-.86 Stevens straight. This is a modification of the .25-.25 cartridge designed by Capt. W. L. Carpenter, who gave his idea to the public through the columns of FOREST AND STREAM. The .25-.25 Stevens was the first straight-shell cartridge in this caliber. The .25-caliber was recommended to riflemen several years ago, after considerable experimenting on the part of experts. The originator of this caliber in rifles, Mr. F. J. Rabbeth, was obliged to neck down .20-caliber shells to secure his cartridges, as no .25 caliber rifle shells were on the market at that time. The merits of the experimental .25-caliber rifles were so marked that a demand was created for them, and the rifle manufacturers began their manufacture. Ammunition for the rifle was also made by the cartridge companies; but, unfortunately, the old shell, which was first made with a bottle neck, from necessity, was imitated without attempting to improve on its shape. While the .25-20 cartridge has proved to be one of unusual merit, it has been apparent to American riflemen for a long time that if the shell were straight the cartridge would be improved, for then it would be easier to load; the necessity of resizing the shells with a special tool would be avoided; reduced loads could be made readily; in fact, a bottle-necked shell is not wanted by American riflemen, and the only excuse is for one to shorten an excessively long shell. A cartridge to become popular and retain its popularity must be straight, or nearly so, especially straight inside.

Presque Isle Rifle Club.

ERIE, Pa.—*Editor Forest and Stream:* At the last meeting of the Presque Isle Rifle Club, of this city, it was decided to send a letter to our friends giving them a brief history of the club and its present standing. It was organized Jan. 24, 1895, with a charter membership of 22. At present we have 35 members. The club is in a prosperous condition, there being no debts and a surplus in the treasury.

Our range of 200yds., with handsome shooting pavilion and two rifle butts, is located on the Berkenkamp farm, one-half mile east of the city. The season opens the first Saturday in May and closes the last Saturday in October. Weekly shoots are held every Saturday P. M., and prize shoots on all legal holidays. A handsome list of prizes are given each season.

We are desirous of increasing our membership to a limited number during the coming season, and it is for that purpose this letter is sent. For a copy of the by-laws and application blanks apply to the secretary, Mr. Sidney Ormsby, city. J. G. GERMANN, W. J. LEYER, DR. A. C. WHEELER, } Committee.

Trap-Shooting.

FIXTURES.

May 11-13.—PEEKSKILL, N. Y.—Annual tournament of the Peekskill Gun Club. First two days, targets; last day, live birds.

May 11-14.—WATERLOO, Ia.—Tournament of the Waterloo Gun Club. E. B. Walker Sec'y.

May 12-13.—CONNERSVILLE, Ind.—Tournament of the Connersville Gun Club. Live birds. T. F. Thomas, Sec'y

May 17.—WILLMAR, Minn.—Tournament of the Willmar Gun Club Targets. D. N. Tallman, Sec'y.

May 17-22.—KANSAS CITY, Mo.—Annual tournament of the Missouri State Game and Fish Protective Association. Fred T. Durrant, Sec'y.

May 18.—ALBANY, N. Y.—Annual spring tournament of the West End Gun Club. Horace B Derby, Sec'y.

May 18.—RUTHERFURD, N. J.—All-day shoot of the Boiling Springs Gun Club. 100 target race, $5, targets extra. Open to all; no handicap. W. H. Huck, Sec'y.

May 18-19.—FOREST CITY Ia.—Hill City Gun Club's second annual tournament; $100 added. J. W. Mahoney, Sec'y.

May 19-20.—SAVANNAH, Ga.—Tournament of the Interstate Association under the auspices of the Forest City Gun Club. $200 added.

May 19-20.—ELIZABETH, N. J.—Tournament at Astfalk's Oakwood Inn. First day, targets; second day, live birds.

May 19-21.—CANTON, S. D.—South Dakota Sportsmen's Association annual. C. S. Seely, Sec'y.

May 20.—GREENVILLE, Pa.—Second tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones, Sec'y.

May 25.—FINDLAY, O.—Tournament of the Magautrap Gun Club. Targets Chas. E. Steen, Sec'y.

May 25-27.—MARLIN, Texas.—Tournament of the Marlin Gun Club. E. K Herrings, Sec'y.

May 25-27.—JOPLIN, Mo.—Tournament of the Joplin Gun Club. Added money announced later.

May 26.—BROOKLYN, N. Y.—Tournament of the Brooklyn Gun Club. Targets. Grounds at Liberty avenue and Enfield street, Brooklyn.

May 26-29.—EAST ST. LOUIS, Ill.—Annual tournament of the King's Smokeless Gun Club.

May 31.—CANAJOHARIE, N. Y.—Eastern New York Trap-Shooters' League tournament, under the auspices of the Canajoharie Gun Club. Charles Weeks, Sec'y

May 31.—PORTLAND, Me.—Spring tournament of the Portland Gun Club. Targets. Added money announced later.

May 31-June 1.—GRAND RAPIDS, Mich.—Tournament of the Michigan Trap Shooters' League, under the auspices of the Valley City Gun Club.

June 2-3.—HACKENSACK, N. J.—Anniversary tournament of the Bergen County Gun Club. *Recreation* cup shoot on June 2. C. O. Gardner, Jr., Sec'y.

June 2-4.—SPRINGFIELD, O.—Annual tournament of the Ohio Trap-Shooters' League, under the auspices of the Springfield Gun Club

June 7-8.—PARKERSBURG, W. Va.—Tournament of the Mountain State Gun Club. Targets. $350 added. Leon J. Epstein, Sec'y.

June 8-9.—Tournament of the Trap-Shooters' League of Indiana

June 8-11.—AUBURN, N. Y.—New York State Sportsmen's Association tournament. C. W. Tuttle, Sec'y.

June 9-10.—MONROE, La.—Tournament of the Interstate Association, under the auspices of the Monroe Gun Club.

June 10.—NEWCASTLE, Pa.—Third tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones. Sec'y.

June 15-18.—CLEVELAND, O.—Fourth annual tournament of the Chamberlin Cartridge and Target Company.

June 16-17.—FARGO, N. D.—Third annual tournament of the North Dakota Sportsmen's Association. Targets. W. W. Smith, Sec'y.

June 22.—OGDEN, Ill.—Second annual tournament of the Ogden Gun Club. Wm. McKinley, Sec'y.

June 22-25.—OIL CITY, Pa.—Seventh annual tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Oil City Gun Club. Targets and live birds. Black powder barred. Special event: 25 live birds per man, $25, $1,000 guaranteed. Send entries to H. C. Reeser, Sec'y, Oil City, Pa.

July 1.—SHERBROOKE, Quebec.—Sherbrooke's grand annual. Inanimates. Open to all amateurs. C. H. Foss, Sec'y, Sherbrooke, P. Q

July 3-5.—MITCHELL, S. D.—Tournament of the W. J. Healey Hardware Co.

July 14-15.—NEW HAVEN, Conn.—Tournament of the Interstate Association, under the auspices of the New Haven Gun Club. Wm. H. Hazel, Sec'y.

July 20-23.—PINE BLUFF, Ark.—Seventh annual tournament of the Arkansas State Sportsmen's Association. Added money announced later. Paul R. Litzke, Sec'y, Little Rock, Ark.

July 22.—MEADVILLE, Pa.—Fourth tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones, Sec'y.

Aug. 4-5.—LEWISTON, Me.—Tournament of the Interstate Association, under the auspices of the Androscoggin Gun Club.

Aug 17-19.—TORONTO, Canada.—Tournament of the R. A. McCready Co., Ltd. Targets. $1,000 guaranteed. Open to all. Write for programmes.

Aug. 19.—WARREN, O.—Fifth tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones, Sec'y.

Aug. 25-26.—MONTPELIER, Vt.—Tournament of the Interstate Association, under the auspices of the Montpelier Gun Club.

Sept. 15-16.—PORTSMOUTH, N. H.—Tournament of the Interstate Association, under the auspices of the Portsmouth Gun Club.

Oct. 6-8.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association. First two days, targets; third day, live birds. $50 average money to three high guns in all programme target events. Open to all.

Oct. 13-14.—GREENSBURG, Ind.—Shooting tournament of the Greensburg Gun Club.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

The following is from the New York *Sun* of April 30: "A meeting of the Carteret Gun Club was held at Delmonico's yesterday afternoon for the purpose of changing the constitution of the club and creating the office of vice-President, and making an honorary member list limited to five persons. Judge Henry Gildersleeve was elected vice-president, and the honorary members elected were George Floyd-Jones, R H. Hunt, W. F. Potter and G. L. Hubbell The management of the affairs of the club was put into the hands of two committees—a shooting committee, composed of G. S. McAlpin, J. B Knapp and H. B. Gilbert, and a house committee, consisting of C. H Chapin, C. H Mackay and W. A. H. Stafford. Mr. Watrous, of the building committee, reported that the grounds had been fenced in, foundations for the house ready, traps were finished, and the carpenters had started framing the house. The treasurer reported that the financial condition of the club was in a satisfactory condition. Five new members were elected, and $1,000 worth of cups were given to be shot for next season."

Since we wrote last week in regard to the proposed organization of a State Sportsmen's Association in New Jersey, the committee in charge of the meeting has received additional assurances of support from several clubs in the State. The meeting will be held at 2 P. M., May 19, in Room 1009, Nos. 377-379 Broadway, the rooms of the Sportsmen's Association. The efforts to organize an association befitting the State of New Jersey are now sure of success, and a tournament early next fall seems a certainty. An interesting item of news was furnishod us on Monday of this week by W. R. Hobart, corresponding secretary of the old league. It seems that the Forester Gun Club mentioned in the minutes of the meeting of September, 1889, is not the Forester Gun Club, of Newark, one of the most energetic and active gun clubs in the State. This reduces the list of eleven clubs in good standing at the above meeting to the meager number of three alive at the present date!

The new conditions governing the Du Pont trophy are printed in full in Mr. Hough's report of the Budd-Winston match. We have also received a copy of the same from Mr. Rice, accompanied by the following letter: "At the Winston-Budd match for the possession of the Du Pont trophy and Smokeless Powder Championship, which took place this day (May 1), Burnside grounds, this city (Chicago), new rules (copy herewith) to govern hereafter holder of the Du Pont World's Championship Trophy and matches to be shot therefor, were promulgated. It will be observed that the condition requiring exclusively the use of Du Pont Smokeless powder in contests for this trophy has been waived—this in order that an oft-repeated objection shall no longer be made."

Phil Daly, Jr., informs us that on Friday, May 14, the special event on the programme is at 15 pairs of live birds, $25, 25yds. rise. For Friday and Saturday of this week, May 7-8, he has provided the following programme: Friday, May 7, at 12 noon—Byrnes Handicap, 15 birds, $15 entrance, high guns, handicaps 25 to 30yds., bird allowances: 27yds. and under, two misses as no birds; 29yds. and under, one miss as a no bird; allowances do not run on ties. Saturday, May 8, 1 P. M.—Kinnekeet prize, 10 birds, $10, high guns, 30yds. all, amateurs only. The management at Elkwood Park also announces that there will be live-bird shooting every Friday and Saturday during the year, with target shooting from the magautrap every Wednesday.

The members of the Forest City Gun Club, Savannah, Ga., won't do a thing to the boys in the way of hospitality during the Interstate Association's tournament in that city, May 19-20. This shoot should be an extremely pleasant one, and should do lots of good in the way of helping trap-shooting in the South. The Palmetto boys, from Charleston, will visit Savannah in force, and will be worth watching when it comes to breaking targets. Colonel Anthony should go to Savannah and try and kill the hoodoo which he developed last week at Richmond; John W. Todd might be of some assistance to the Colonel.

The Glenwood Gun Club, the new club organized in Newburgh, N. Y., will hold an all-day shoot on Decoration Day, May 31, at its grounds, Glenwood Park. All targets will be charged for at 1 cent each, and all will be thrown from the magautrap. Ten per cent. of each purse will go to form a fund for average money for the four high guns in all programme events. Electric cars run every ten minutes to the grounds, and the trip is only twelve minutes from the ferry. The Rose system of dividing purses will be used.

Owing to Tuesday, April 27, being Grant Day and a general holiday in this city, we went to press for our last one day earlier than usual. This caused us to receive a great deal of good matter too late for insertion in that issue. Last week, also, was a busy one in the trap world, and a flood of material came to hand as a natural result of the activity in the tournament line. These two causes combined have rendered it impossible to get in everything this week, so secretaries of gun clubs and other correspondents to our trap columns must not feel hurt if certain items sent in by them do not appear until next week.

The members of the Androscoggin Gun Club, of Lewiston, Me., do not mean to let the visitors at its Interstate shoot—Aug. 4-5—carry off all the honors, if hard work and regular practice can do anything. At its last club shoot thirty-one members turned out for practice and some capital scores were made, even if it did blow hard from the northeast. Personally, we know that Rich Hunnewell is hunting for a few scalps—Noel Money's among the number—and he won't be happy until he's got them at his belt.

A two-days' tournament will be held at Connersville, Ind., May 12-13, under the auspices of the Connersville Gun Club. Each day's programme consists of nine target events and one live-bird event. Shooting will commence at 9:30 each day, and targets will be charged for at the rate of 3 cents each. All purses divided into three moneys, 50, 30 and 20 per cent. The tournament will be managed by T. F. Thomas and James Shipley.

On April 24 George Work and W. S. Edy shot a race with H. A. Butler and T. D. Hooper, 100 birds per man, 30 yds. rise and 30yds. boundary, on the grounds of the Westchester Country Club. After a close and exciting match, Work and Edey were declared the winners by the score of 178 to 176. The scores were: Work 91, Edey 87, total 178; Butler 91, Hooper 85, total 176.

The gun club of Columbia University defeated the Princeton University Gun Club in a team shoot at targets on the Williamsbridge grounds, April 24. Each team consisted of five men, and each man shot at 25 targets. The scores were: Columbia—Tilt 23, Mittendorf 23, Coffin 21, White 18, Wadhams 17; total 102, Princeton—Kendal 19, Canning 17, Paine 16, Young 13, Brower 11; total 76.

A new club has been organized in Newburgh, N. Y., under the title of Glenwood Gun Club. The club starts off with seventeen charter members, and will hold its shoots on the brow of the hill northwest of Glenwood Park. The grounds are easily accessible by electric cars. The club has a magautrap in position, and will hold regular shoots. The prospects for the success of the Glenwood Gun Club are first rate.

The first shoot for the handsome stein presented to the Brooklyn Gun Club by its president, J. S. S. Remsen, of Flatbush, will be held on the club's grounds, Liberty avenue and Enfield street, Brooklyn (terminus of the King's County Elevated), on Saturday afternoon next, May 8. The event is a 50-target handicap race, open to all. All shooting will be done from the magautrap.

We learn that J. A Penn, for many years connected with the gun club of Wheeling, W. Va., has left that city and gone into business at Cincinnati, where he will practice law in partnership with his brother, Julius Penn. Mr. Penn will reside at Lockland, and become a member of the Lockland Gun Club, an organization that will find him quite an acquisition.

The Maplewood (N. J) Gun Club held a target shoot on April 24, some excellent scores being made. In the main event—50 targets, unknown angles—W. N. Drake and Warren Smith each broke 44 out of 50. Other scores were: O. L. Yeomans 46, E. M. Canfield 43, D. W Van Iderstine 42, J. Williamson 36, Soverie 33, D. Adams and A. B. Tillou 27 each.

W. Tell Mitchell, who was present at the Richmond Interstate last week, spoke very bitterly against the Rose system. We informed him that FOREST AND STREAM'S columns were wide open to him, and guaranteed not to use the blue pencil. The same offer stands for everybody who wants to say a few words in defense of the "old system."

Nate Astfalk will hold a shoot on his grounds, Oakwood Inn, near Elizabeth, N. J., on May 19-20. First day, targets; second day, live birds.

Messrs. Von Lengerke & Detmold have placed two new shells on the market, the green "Lightning" and the red "V. L. & D.," both manufactured by the W. R. A. Co., of New Haven, Conn. These shells have the corrugated brass reinforcements which are now the distinguishing marks of all Winchester shells.

Richmond's Interstate brought out more new faces before the traps than any other tournament of the same kind that we have ever taken part in. Evidently trap shooting was not dead in Richmond; it was only waiting for an opportunity to show itself.

We understand from Phil Daly, Jr., that the party who offered to back Brewer against Dr. Carver for $1,000 has withdrawn his offer, feeling that Dr. Carver has now had plenty of time to accept the offer, and evidently does not want to shoot.

Charlie Budd did not make much of an example of J. L. Winston after all. Our Western correspondent, Mr. E. Hough, gives a good account of the match of May 1, under the head of "Western Trap." 85 to 85 does not sound much as if either Charlie Budd or his antagonist were in form.

The largest shipment of any nitro powder to this country arrived in the Upper Bay on Monday last. It consisted of 1,400 cases of Schultze powder from England, and each case contains 100 cans!

On Thursday, May 13, there will be a team shoot between the Freehold (N. J.) Gun Club and the Endeavor Gun Club of Jersey City. The shoot will be the first of a series of three, and will take place on the grounds of the Endeavor Gun Club, at Marion, N. J.

Irby Bennett was in the city on Monday *en route* for Cincinnati and the South. As usual, Irby was too full of business to be good company; the best thing he can do is to take up his abode in New York, so that we can see him sometimes, and get ten minutes quiet talk with him.

Monday, May 31 (Decoration Day), the Boiling Springs Gun Club will hold an all-day shoot at targets. Sweepstake shooting will commence at 9:30 A. M., and in the afternoon there will be a merchandise event, 25 targets per man, club handicap allowances. This event will be open only to members of the club.

Ben O. Bush, of Kalamazoo, Mich., and vice-president of the Michigan Trap-Shooters' League, writes us that a tournament of the Michigan Trap Shooters' League will be held at Grand Rapids May 31 and June 1, under the auspices of the Valley City Gun Club, of that city.

This week there will be quite a delegation from New York at the annual spring tournament of the West Newburgh Gun and Rifle Association, of Newburgh, N. Y. Next week the boys will be on the other side of the Hudson, at Peekskill. The dates of the Peekskill tournament are May 11-13.

The W. J. Healey Hardware Company, of Mitchell, S. D., will hold a tournament at Mitchell, July 3-5. Cash and merchandise prizes will be offered for competition, full details being given in the programme, which will be issued in a short time.

On April 24, at Elkwood Park, Phil Daly, Jr., defeated J. Elmer Applegate in a 50-bird match, for $50 a side. Daly shot in good form and won easily, with 47 to 41.

MAY 4. EDWARD BANKS.

Western Traps.

BUDD-WINSTON.

CHICAGO, Ill., May 1.—Charlie Budd to-day defeated J. L. Winston in the contest for the Du Pont trophy by a score of 86 to 85 on a mixed lot of birds, after a race in which both men displayed streaks of the most amateurish sort of shooting. The men were tied four times during the race, at so late stages as the 75th and 93d holes, and the event was really a matter of luck, for Winston lost his last unscored bird over the wire by a bare majority, whereas Charlie scored the last bird he shot at by a sheer scratch, as it wobbled almost up to the wire before it stopped, flying directly in toward the score. The longest run was one of 24 by Budd. On the turn into the 50 stretch, from his 35th to his 40th birds, Winston lost 4 out of 5 birds, and gave Budd a long lead. This apparently he did not want, for a little later he lost 4 in succession, and went out at the 50 hole only 1 bird ahead of Winston. It was hammer and tongs then to the next turn, the men being then tied on 64 out of 75. They kept up interest to a warm pitch by closing up still again at 82, after Winston had left an opening for Budd to keep ahead, and once more at 93 they ran neck and neck. Then came the bit of luck above noted, and Budd came in 1 bird to the good. The race was a pretty one to watch as a near thing, but when Winston stepped up to Budd at the close of the shoot and shook hands with him, saying, "Well, Charlie, we both shot like farmers," there was a general consensus of belief that he was close to the truth, provided that farmers ever shoot that badly.

It is no use trying to give reasons or explanations for any given results in a pigeon race, for there is no game more puzzling to follow. These men might both step out to-morrow and run over 90 under the same conditions. No man can tell what goes on under a man's skin. Our doctors know nothing about nerves. True, any doctor or any individual would probably have selected a different day for a good display of pigeon shooting by anybody. A choice brand of Chicago weather was on tap—a cold, chilly, raw and dull day, with a mean, northeast wind moving in from behind the score. Had the day been bright, the birds would have been about as hard to stop as they would be expected to be on these grounds, but as it was, they did not go out always as though they were ticketed clear through. Some were strong and very fast, yet again the men would each get a string of easy ones—pop-ups, high-flyers or slow-qarterers. This made the question of time an impossible one to solve, and perhaps either man would have made as good or a better score on birds far faster or more regularly fast. As it was, Budd took more kindly to the conditions, and his style of shooting was more regular and steady than Winston's, who was at times quick as lightning and again excruciatingly slow. Of course, both men made many long, hard kills, and these brought out a generous and impartial applause from the large number of spectators who had assembled to see the fun. Among the out-of-town visitors were Chan. Powers, of Decatur; A. B. Pentz, of New York; and P. L. Murphy ("One-Barrel Pete"), of Philadelphia. The Chicago talent was fairly represented.

The Victor in the race received his congratulations with his usual modesty, and the defeated one said he was not saying a word. Any man who shoots a race with Charlie Budd at Chicago has a shade of the spirit of luck to fight, for Charlie has always been lucky here. He was lucky to-day in rather a larger number of birds than was Winston, if there can really be anything such as luck in a 100-bird race at pigeons. Charlie had several birds wobble almost up to the line before they dropped to stay, whereas it seemed that his opponent was doomed to see his bird in such cases get just over on the wrong side. But all this sort of thing is really to no purpose, and to the victor, of course, belongs the glory of his win. Budd shot a Parker, with U. M C. factory ammunition, and Winston an L. C. Smith, with New Leader shells. Under the existing conditions of the Dupont trophy contest they were compelled to use Dupont powder, though before the shoot began it was known and announced that this clause of the conditions had been modified, to take effect after this race, the trophy then being thrown open with no restrictions as to powder. This latter will make it a still more popular and representative emblem, and was, in the opinion of those present, a wise step to take. The new conditions follow;

RULES GOVERNING MATCH FOR DU PONT TROPHY.

"This trophy to remain the property of E I. Du Pont de Nemours & Co. to be held in trust by winner of same, bond to be given if required.

"The winner of championship trophy is subject to challenge for championship and trophy from any shooter in the world, who is a member in good standing of any organized gun club. Match to be at not less than 25 live birds nor more than 100, American Shooting Association rules to govern, and on part of challenger a purse of $100.

"Both contestants to stand at 30yds. rise, regardless of position in grand tournament event; boundary, 50yds.

"The holder of trophy to name time, giving challenger not less than ten days notice, number of birds—if in excess of 25—and grounds upon which match is to be shot.

"Match to take place within thirty days of challenge, $25 forfeit to be deposited by challenger with *American Field*, *Sportsmen's Review*, Chicago; FOREST AND STREAM, *Shooting and Fishing*, New York; *Sporting Life*, Philadelphia, or E. I. Du Pont de Nemours & Co., Wilmington, Del., when challenge is made; remaining $75 to be deposited with one of the parties above named, or referee of match, by challenger on date of match, holder of trophy to put up trophy on same day.

"If either contestant fails to appear on day set for match, unless in case of sickness, or for other reasons which are satisfactory to the referee, he shall lose his forfeit, holder of trophy forfeiting trophy.

"In case holder of trophy is not in condition to shoot the race on receipt of challenge, he must immediately notify challenger and Messrs. Du Pont & Co., stating his reasons for not being able to shoot the match, which will be considered by Messrs. Du Font & Co. If satisfactory, same will be accepted; if not, holder of trophy must shoot match or forfeit trophy to challenger.

"In case of bad weather on day of match, match to take place on first favorable day thereafter.

"No challenge will be accepted or recognized until after the winner or party challenged shall be so declared and known.

"All challenges must be made in writing, accompanied by forfeit, and filed with one of the several parties heretofore named as stakeholders. If holder of trophy attempts to take any unfair advantage of challenger, such as naming unreasonable place for match to be shot, by setting time of match on the Lord's Day, or resorts to any scheme to prevent an honorable and fair contest, he shall forfeit trophy, Messrs. Du Pont & Co. reserving the right to say what shall be done with it.

"Immediately upon lodging challenge as herein provided, notice of such challenge shall be promptly forwarded to E. I. Du Pont de Nemours & Co., who will then name referee; trophy to be redeemed from holder thereof for $100 cash, the redemption of trophy to take place on the first day of each succeeding Du Pont Grand Smokeless Powder Championship Handicap Live Bird Tournament, or such other time as Messrs. Du Pont & Co. may elect."

The scores were as follows:

Trap score type—Copyright, 1897, by Forest and Stream Publishing Co.

Immediately after the close of the shoot both men hastened uptown to take their trains out of the city for home. Charlie Budd goes direct to Des Moines to prepare for the State shoot there next week, an event which could not by any possibility come off without his presence. Jack went home to Washington, Ind., will be in Cleveland the week following, and will then go East. He says he is not going to shoot any more matches this summer, but is going to be a good boy now and set a pace selling shells.

THE INDIAN TOURNAMENT.

There will be a unique tournament given at Clear Lake, Ia., about the middle of next July, a kind of department-store shoot with ten Indian partners in the enterprise, all of whom are known of old to the shooting men of the country. Part of them are of the original Sagwa gang, and others have been added to their circle. The *personnel* of the gang is now given out as follows: Tom Marshall (Chief Make-Lightning), Chan. Powers (Chief Clean-Stick), Dick Merrill (High Kick), Fred Gilbert (Young-Man-afraid-of-his-Boss), Charlie Grimm (Moon Face), Jack Parker (Des-chree-shoska Jack), Frank Parmelee (Big Chief-afraid-of-the-water), Loomis (Chief-that makes-the cars-go), Charlie Budd (Charley Horse). Each of these Aborigines will dig fifty for the shoot, which is to say there will be $100 added. There will be one live-bird day—at 25 live birds—and three target days, with a good programme, the events named after the chiefs above mentioned, respectively. Moreover, this is to be a regular occurrence every year hereafter, this being the "First Annual Indian Shoot." Who shall say we have not somewhat of interest concealed here which in the future shall yet be uncovered? The "yearly Indian shoot" sounds well, and it should prove famous.

RUMORS.

It is spoken of as a strong possibility that Mr. E. S. Rice will be presented as a candidate for the presidency of the Illinois State Sportsmen's Association at the next June convention, and it is mentioned as a possibility that in case of his election he would throw in the Du Pont trophy at the next yearly shoot, and bend all efforts toward making the Illinois annual a great event, a tournament something like the Du Pont shoot of last August. We shall have a new club or two in the State shoot this year, strong ones at that. All the above is mere speculation, and of course leaves no one in the position to either affirm or deny anything in regard to it; but it is a rumor which may or may not indicate some fore-falling shadows of events, and is worth noting as a sort of semi-prediction which is resting in more minds than one. E. HOUGH.

1206 BOYCE BUILDING, Chicago.

The Kansas City Tournament.

THE programme for the twentieth annual tournament of the Missouri State Game and Fish Protective Association, May 17-22, is a book in itself. It consists of fifty-six pages and the cover, and is consequently something to handle.

The tournament will be held under the auspices of the Federation of Gun Clubs of Kansas City. Two thousand dollars will be distributed in prizes and added money, and $1,000 in gold will be guaranteed in one event "to decide the American Wing-Shot Championship."

On the fifth page of the programme is the call for the annual meeting of the Association, which is worded as follows: "The annual meeting of the Missouri State Game and Fish Protective Association for the election of officers, selecting a place for the next tournament and transacting of such other business as may come before it, will be held at the Wisconsin Building, corner Grand avenue and Seventh street, on Tuesday evening, May 18, at 8:30 P. M. The association is composed of individual sportsmen, or of two or more members from each organized club throughout the State. Each club is entitled to five delegates. The initiation fee for each club is $5. For each individual $2.50. Applications for membership should be addressed to the president or recording secretary, accompanied by the proper fee, or can be made at the annual convention. A list of officers and members of the club making application should accompany the same. All organized clubs are invited to send delegates to the convention, and teams to participate in the State shoot. For further information in regard to the tournament, address W. S. Halliwell, secretary."

Page 7 contains the rules and conditions, the most important of which are the two last: "All inanimate target prizes are to be divided into five equal moneys, divided 20, 20, 20, 20 and 20 per cent., excepting those otherwise stated. Shooters in all target events will be classified to be known as Class A and Class B. Entrance in all inanimate target events will be $2.50 for Class A and $2 for Class B." A special notice on the same page states that "the O. K. Gun Club, of Kansas City, offers to the shooter of Missouri making the highest average on live birds during this tournament, participating in not less than seven events, a gold medal especially designed and made for this purpose."

The programme for the five days contains a schedule of live-bird events, and also of target events for each day. The most important event of all is the contest for the Kansas City *Star* cup, 25 live birds, 30yds. rise, $25, including birds, $1,000 in gold guaranteed; six moneys, 30, 25, 15, 15, 10 and 5 per cent. The winner to take the cup now held by J. A. R. Elliott, valued at $250.

There is too much matter in this programme for us to give it all as it should be given to do justice to the compilers of the same. The above brief review, however, shows that the management of the twentieth annual State shoot in Missouri has not been asleep during the winter months. With such a programme, too, nothing but success can attend the efforts of that management.

The Western Team at Elkwood.

BUFFALO, N. Y., April 22.—*Editor Forest and Stream:* I suppose, since Mr. Rice has dignified me by answering my honest criticism of his letter in the polite manner that he has, that it is at least incumbent on me to make some sort of a reply. Placing myself in the position of attorney for the Commonwealth, and considering Mr. Rice in his true capacity as attorney for the defense, I can best reply by quoting the following story of how Abraham Lincoln is said to have acted under similar provocation:

Lincoln was for the Commonwealth, and his opponent for the defense having closed his address to the judge and jury in behalf of the accused, had taken his seat. As Lincoln did not rise as usual to address the Court, the judge called his attention to the fact that the field was now open to him; whereupon Lincoln arose and said to the judge: "Your Honor, I have nothing to say." "What," said the judge, "have you nothing to say to the Court in behalf of the Commonwealth?" "Yes, your Honor," said Lincoln, "I have; but I am afraid that were I to say it, I might spoil the effect of the eloquent argument of my learned brother, who has plead the Commonwealth's side of the case far more ably than I could do it. Counsel for the Commonwealth therefore prefers to remain silent with your Honor's permission." And Lincoln won his case. 42GRS.

Philadelphia Trap-Shooters' League.

PHILADELPHIA, May 1.—The third tournament of the Philadelphia Trap-Shooters' League was held to-day under the auspices of the Forest Gun Club, on its grounds, Twenty-seventh street and Lehigh avenue.

The League has become very popular with the trap-shooters of this vicinity, and has come to stay.

As was expected, the attendance at to-day's shoot was very large, and preparations had been made to throw 10,000 targets from the two sets of traps, but about 9 o'clock the wind was blowing a gale directly in the faces of the men; and at times blew strong enough to drive the targets back over the screen, and twice they fell back over the score line. To make it more uncomfortable, heavy showers, with 10-minute intervals, began about 1 o'clock. In the face of the high wind and driving rain the team race began at 2 o'clock, and because of the efforts of the men to dodge the drops, was not finished until nearly dark. Some of the teams had a very long handicap, and the Wayne Gun Club, "to-day's winner," shot at 114 extra targets and finished with the total of 143. The Independent Gun Club team, now shooting from scratch, finished in ninth place.

New handicaps are arranged for each team race, and are based on the percentage plan, all previous scores being used in making up the average. The team having the highest average at each time of calculation to shoot from scratch, 150 targets. In the three tourneys to date this has fallen to the lot of the Independents, and the probabilities are that they will continue to shoot at the same number and no more. The scores follow:

Wayne Gun Club: Kane (19) 20, Soistman (19) 28, Cheyvez (19) 27, Emery (19) 24, McCownel (19) 13, McMichael (19) 36; total 148.

Southwark Gun Club: Woodstager (12) 28, La Rue (12) 28, O'Brien (12) 24, Stoffer (12) 22, Reed (12) 17, Ford (12) 24; total 143.

Frankford Gun Club: Cameron (13) 24, Crowther (12) 13, Myers (12) 21, George (12) 27, Lesher (12) 22, Bults, (12) 31; total 138.

Florists' Gun Club: Allen (5) 24, G. O Bell (5) 24, Anderson (4) 22, A. B. Cartledge (5) 19, W K. Park (5) 19, Burton (5) 18; 126

University Gun Club: Kistler (10) 24, Singer (10) 25, Freed (9) 26, Steel (10) 22, Cooper (9) 21, Myers (9) 8; 126.

Silver Lake Gun Club: Vincent (4) 23, Mink (4) 23, Hahn (4) 20, French (4) 19, Apker (4) 19, Lane (3) 16; 120.

Roxborough Gun Club: Pepper (7) 24, Lancaster (7) 21, Taggert (7) 20, Free (7) 19, Gilmore (7) 19, Giles (7) 16; 119

Penn Gun Club: Kohl (3) 20, Cassel (3) 19, J. R. Yost (3) 18, Gross (3) 18, Ritter (3) 17, J. P. Yost (2) 17; 109.

Independent Gun Club:* W. H. Wolstencroft 20, J. Wolstencroft 20, H. Ridge 19, Wade Wilson 17, H. Landis 17, H. Thurman 15; 108.

Forest Gun Club: Hothersall (12) 21, Morgan (11) 22, Morison (11) 18, Van Nort (11) 17, Bender (11) 17, Hancock (11) 11; 106.

Glen Willow Gun Club: J. Hopkins (8) 21, J. Cowan (9) 21, W. Cowan (8) 18, C. Stumm (9) 17, C. Weinman (9) 16, J. Innis (9) 10; 103.

J. K STARR, Sec'y.

Hill Top Gun Club.

AUSTERLITZ, Ky., April 22.—Inclosed please find scores made to-day at the shoot given by the Hill Top Gun Club. The weather was fine, the only fault being the strong wind which was blowing. Mr Alfred Clay gave a free dinner, and that was one place where the boys killed straight, no dropping for place, and all ties shot off in this race. The grounds looked fine with the American flags floating from the top of the club house and the boundary stakes.

Although there were few shooters present, they all had a good time. It was the first time a magautrap was used in Kentucky. Jay Clay was present, shooting Winchester shells loaded with Blue Ribbon; J. H. Mackie, representing the Peters Cartridge Co. and the King Powder Co., was also present and showed up the Peters New Victors in great shape. Tom Clay won first average, thereby receiving a picture entitled "Quick Shot," donated by the King Powder Co., of Cincinnati. Jay Quincey Ward won second prize and 100 New Victor shells, donated by the Peters Cartridge Co., of Cincinnati, O. Scores were as below:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14

GEO W. CLAY

Haverhill Gun Club.

HAVERHILL, Mass., April 25.—Monday, April 19, was Patriot's Day, and we held our opening shoot for the season of '97 on that day, two facts that made it a notable day for the members of the Haverhill Gun Club.

The weather was something awful, from a trap-shooting point of view; a strong southwest wind blowing across our grounds with the force of a young hurricane, causing the targets to perform all sorts of antics and making good scores an impossibility to inexperienced shooters, such as comprise the bulk of our members.

The shooting opened at 9 A. M. and continued all day, and most of the boys shot through the programme, which consisted of the usual proportion of 10-bird events at unknown and regular angles, two "snipe" shoots, two events at reversed traps and two handicaps for prizes, the first a 30-bird, distance handicap, and the second a 50-bird handicap for the silver canister W-A powder presented by the Laflin & Rand Powder Co., with a handicap allowance of birds as broken to members competing.

Herewith are the scores made in the handicap:

Fifteen targets, regular angles, distance handicap: Short (18) 2, Leighton (18) 4, Wright (18) 10, Stevens (18) 4, George (18) 9, Merritt (18) 6, Webster (18) 5, Brooks (16) 3, Ingham (16) 3, Griggs (16) 5, Sprague (16) 3, Philbrick (16) 3, Brown (15) 6, Tozier (15) 6, Osborn (15) 6, Shute (15) 1.

Fifteen birds, unknown angles, distance handicap; Short (18) 4, Leighton (18) 7, Wright (18) 5, Stevens (18)6, George (18) 10, Merritt (18) 8, Webster (18) 10, Brooks (17) 6, Ingham (17) 7, Griggs (17) 8 Sprague (17) 4, Philbrick (17) 5, Brown (15) 4, Tozier (15) 5, Osborn (15) 5, Shute (15) 3.

First prize, a box of cigars, won by Mr. George, with a score of 19. Messrs. Wright and Webster, each scoring 15, shot off their tie at 10 birds, unknown angles. Score: Wright 6, Webster 7. Second prize, a tobacco pot filled with smoking-tobacco, won by Webster.

Fifty-bird handicap for L. & R. powder trophy:

	25 regular.	25 unknown.	Allowance.	Total.
D S Short	1	7	5	13
George	23	18	0	41
Leighton	9	7	9	25
Wright	18	16	1	35
Fernald	13	10	9	32
Philbrick	9	5	5	19
E B Short	11	14	1	26
Ingham	14	6	10	30
Brooks	16	10	15	41
Merritt	12	13	7	32
Stevens	13	13	2	28
Sprague	13	8	9	30
Osborne	8	10	4	22
Tozier	10	4	14	28
Blake	9	8	12	29
Griggs	6	3	14	23
Brown	12	5	14	31
Webster	18	7	8	33
Miller	17	8	5	30

Messrs. Brooks and George settled their tie by tossing a penny, and Mr. Brooks won the trophy; second prize, split-bamboo fly-rod, was won by Mr. Wright with a score of 35. Mr. George won first prize, Bristol's eel fly-rod, for best average for the day with a percentage of 73; Mr. Wright won second prize, canvas hunting coat, for best average for the day with a percentage of 58; Mr. Merritt won third prize, Hendryx click reel, for best average of the day, with a percentage of 51.

Saturday, April 21, was held the regular practice shoot of the club, but only six of the members put in an appearance. Below are their scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
Targets:	10	10	10	10	10	10	10	10	10	10	10	10	10	10	10
Miller	4	4	8	6	6	8	7	5	6	7	4	8	7	7	..
Osborne	2	4	3	5	8	7	5	3	..	..	..	..	..	..	..
Stevens	6	6	4	5	7	..	..	..	5	6	7	6	6	..	..
D S Short	..	..	..	..	..	..	..	..	..	..	5	4	5	6	4
E B Short	..	..	..	..	..	..	..	..	..	..	6	7	8	4	..
George	..	..	..	..	..	..	7	9	6	8	7	6	7	3	6

The first eight events were shot at expert rules, with traps set at unknown angles, all the remainder at unknown angles, rapid fire system.

GEORGE F. STEVENS, Sec'y.

IN NEW JERSEY.

BERGEN COUNTY GUN CLUB

April 24.—The sixth shoot for the E. C. cup was held to-day on the grounds of the Bergen County Gun Club. The race is a handicap affair, 50 targets, allowance of extra targets to shoot at. The cup was won by Bob Snyder, of Schoverling, Daly & Gales, with 49 out of 63 shot at. Scores for the cup were:

Snyder (13) 49, Herrington (1) 48, Van Dyke (0) 47, Banta (13) 47, Raymond (13) 44, Adams (14) 44, Taylor (7) 43, Steele (12) 42, Warner (12) 42, Everett (14) 42, Van Keuren (12) 41, Stern (15) 41.

Other scores were as below:

Events:	1	2	3	4	5	6	7	8	9	10	11	12
Targets:	25	10	10	10	10	10	10	10	10	25	25	10

Everett	..	..	..	..	..	..	8	..	..	..	..	..
Banta	..	..	..	..	..	..	..	4	..	..	..	..

April 27.—A holiday shoot was held to-day on the grounds of the Bergen County Gun Club, Hackensack. Team races, sweepstake events, souvenir spoons and a high gale of wind were the order of the day. Twenty men faced the traps, and their scores, which are given below, show that the shooting was very creditable, especially on the part of the new members of the club, as will be seen by a comparison of their scores with the scores of George Piercy, Capt. Money and L. Piercy, whose proficiency in target smashing is of the highest order. The honors of the day were very evenly divided. John R. Banta, the new captain of the club, and President George P. Griffiths conducted the shoot admirably and without the least evidence of friction, and the day closed on one of the most satisfactory shoots of the season. The following is the score:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16
Targets:	20	20	20	20	20	15	15	15	20	20	10	10	20	10	20	25

DE WITT.

Androscoggin Gun Club.

LEWISTON, Me., April 16.—Below are the scores made to-day at the annual Fast Day shoot of the Androscoggin Gun Club. There was a good attendance, thirty-one shooters being present. We shot under a good, stiff northeast wind, which made the targets go along some. The fourth and fifth events were for merchandise prizes; No. 7 was at 25yds. rise. We had a jolly, good day's sport, and the boys are all warming up with great interest for the Interstate shoot, Aug. 4-5. We shall no doubt have a large attendance at that shoot from this State, and hope to make a good showing to our friends from other States. Below are to-day's totals:

Events:	1	2	3	4	5	6	7	8	9	10
Targets:	5	10	10	25	25	10	10	10	10	15
A E Doten	4	7	9	21	20	9	5	8	7	12

G. R. HUNNEWELL.

Eureka, of Chicago.

CHICAGO, Ill., April 23.—A special meeting of Eureka Gun Club, of Chicago, was held at the Sherman House this evening with small but business-like attendance, President Carson in the chair and Secretary W. A. Jones at the desk. The affairs of the club were reported as being highly prosperous, with a great interest evidenced in the opening days of the shooting season. Numerous applications for membership were on file, and the following new members were elected: Messrs. A. C. Borroff, W. H. Cornwell, G. W. Murrow, W. F. Reber, C. E. Felton, R. Kuss, A. A Walters, H. A. Boedker, W. H. Prickett, W. Stanley, F. H. Lord, Robert Clark, Charles C. Hess. All the foregoing will be notified to morrow and several will shoot at to-morrow's shoot. Dr. A. W. Morton was reinstated to membership, and the resignation of E. C. J. Cleaver, now located at Joplin, Mo., was accepted. A letter from Hon. Thomas Marshall was read. It inclosed dues for the year and stated that the writer had had pleasure in

The Rose System and Its Friends.

A VERY popular saying is "Save us from our friends." Could the Rose system talk it would probably make use of that expression in connection with Will Park's recent definition of its merits. In his description of the Baltimore Interstate tournament he says this: "The money is divided under the Rose system, which is supposed to give the amateur a chance to win, and prevent the experts from carrying away more than their share of the money."

In this short sentence there are three things to find fault with; first, the word "supposed;" second, the term "amateur" as distinct from "experts;" third, the phrase "prevent the experts from carrying away more than their share of the money."

THE TERM "AMATEUR" USED INCORRECTLY.

To consider these three points intelligently we shall have to discuss the term "amateur" first. In using the word as he has, Mr. Park has made a very common error, one which FOREST AND STREAM has done its best to correct. As we have often pointed out, trap-shooters are to be divided into two classes, *professionals* and *amateurs*. These two classes must again be divided into three sub-classes: expert, semi-expert and novice.

Now, the expert amateur is as well able to take care of himself, in the matter of division of purses, as is the paid or professional expert. The Rose system is not for him; the "old" inequitable system would suit him far better, for he is numbered among the crackerjacks, and can pretty nearly break 'em all, as the saying is. The Rose system is really a benefit for semi-experts and novices of both classes, professionals and amateurs. But whereas there are twenty amateurs to one professional in the latter classes (perhaps even a larger proportion), it is possible that Mr. Park thought the percentage of professionals in these classes to be too small to take into account, but at the same time he totally forgot the expert amateur, a class that is increasing yearly as the sport grows more popular. As Rolla Heikes puts it: "There are a whole lot of good ones now."

NO SUPPOSITION ABOUT IT.

The word "supposed" is evidently inserted for a purpose. In other words, our friend is on the fence. He leaped it not so very long ago, and whooped it up for the Rose System and his "amateurs." Since the crackerjacks have complained so long and so loudly (save in print) about the system, his opinion has wavered and he has climbed back to the top of the fence, where he may now be "supposed" to be watching and waiting for a chance to get down on whichever side proves to be the right one.

There is no supposition about the matter at all. By dividing up the purse in an equitable manner, and not on a gambling basis, the big winnings of the expert, professional or amateur, have been knocked silly. Big winnings under the Rose system are not possible; they were not only *possible* under the old system—they were absolute certainties for one or two men. And big winnings mean proportionately large losings, and the losings came out of the pockets of the semi-experts and novices of both classes. Of course the same subclasses are the producers under the Rose system, but to a less degree because winnings are proportionately less. Semi-experts, if they shoot up to their average, can always come pretty close to having their fun for nothing if purses are divided under the Rose system. Many times they will come out a few dollars ahead. Under the old system they had only the gambling chance of "a good hole" in one event to pull them out clear, and every shooter who has attended tournaments for any length of time knows that the semi-expert's chance of such a piece of good luck is the slimmest of the slim.

Novices always have to pay for experience. They must expect this; it is the case in everything, and in every business or sport. We maintain, however, that under the Rose system the novice pays less for experience than under the old system. And this is no mere "supposition."

"THEIR SHARE OF THE MONEY"

A more extraordinary phrase than that from which the above is taken we never saw used in similar connection. Mr. Park must have written the words without thinking. Neither FOREST AND STREAM, Mr. Rose, the Rose system, nobody, in fact, not even Mr. Park, wishes for one moment to "prevent the experts from carrying away their share of the money." On the contrary, FOREST AND STREAM in particular maintains that the experts shall always be entitled to carry away "their share of the money"—but it must be "their share," not *more* than their share, nor *less* than their share.

The Rose system pays a man for what he does: it pays him equitably, for the highest score always receives more than a lower one. But the old system does not regard skill to any great extent; it favors luck largely. A man can break 18 or 17 out of 20 and receive more than a man who went straight. Can an expert who broke straight under such circumstances be said to have carried away "his share"? Or put it this way in a similar event of four moneys: One 20, five 19s, six 18s and one 17. The 20 takes 40 per cent of the purse and the 17 takes 10 per cent; each 19 takes 6 per cent, and each 18 takes 3 33 per cent. Does every man take away his share of the money?

The Rose system does *not* "prevent the experts from carrying away their share of the money." But the old system almost invariably does—either *more* than their share or *less* than their share. The sooner this fact is recognized the better it will be for trap-shooting.

Bridgeport Gun Club.

BRIDGEPORT, Conn., April 23.—Early on Fast Day morning the Bridgeport Gun Club members were all astir on their grounds making ready for their shoot. The programme consisted of 12 events, all but three at unknown angles. Representatives were here from Stamford, Norwalk, Hartford, New Haven and the Naugatuck Valley. From 15 to 25 took part, and kept it up well during the day. The targets were empires, thrown 57yds., from bluerock traps, at about 15ft. in the highest elevation. Sixty-eight was the highest average made, and that by Mr Sanford, of this city. Our grounds seem to be too hard to make high scores on, yet there are no finer in New England, with sky background. Three thousand targets were thrown, and a good time was had. Following is the score in the events, while there was much shooting before and after.

The $15 for three best averages, divided 40, 30, 20 and 10 per cent., went to the following shooters: First, Sanford 68; second, Lewis 65; third, Beers and Burbridge 63; fourth, Hendry. The events for averages were from 3 to 11 inclusive, making 100 birds:

Events:	1	2	3	4	5	6	7	8	9	10	11	12

Something to Interest "Flinchers."

CLEVELAND, O., April 30.—*Editor Forest and Stream:* I notice your request for a cure for flinching; and would say that for the past year or so I have had a bad case of "fudging"; so much so, that I have fallen off in my shooting so badly that I am ashamed of myself.

At Rochester, N. Y., a week or so ago I happened to mention in the presence of Jack Winston that I was fudging badly, and he told me to put on a kid glove and it would stop me. Following his advice, I put one on, and in the next 20-bird race I broke 18 and did not fudge once. The two that I missed being low left-quarterers from No. 1 position, shooting over a magautrap.

Have found since that I can shoot without any fudging to speak of, and hope the good advice given me by Winston may aid some other unfortunate shooter. PAUL NORTH.

W. G. Sergeant, of Joplin, Mo., writes to us that the Joplin Gun Club will hold a three days' shoot, May 25-27, the week immediately following the State shoot at Kansas City. The Joplin shoot is "open to the world," and Sergeant will see to it that everybody gets all the shooting he wants, as well as a fair show to get some of the silver dollars floating around Joplin. Paul Litzke writes us in regard to the Joplin shoot as follows: "There will be a three days' tournament at Joplin Mo., the week following the Missouri State shoot. W. G. Sergeant and C. M. Sumner are the promoters of it. This will be a target shoot and added money to the amount of $300 (or perhaps $500) will be hung up. The amount will be definitely announced in the programme, which will be issued shortly."

Texas State Shoot.

THE twenty-first annual meeting and tournament of the Texas State Sportsmen's Association was held at San Antonio, Tex., on April 20, 21 and 23. While the attendance was small, it was one of the most interesting meetings ever held in the State. One feature was noticeable—the improvement in the shooting of many of the members.

Of the Association medals, Capt. Foster, of Fort Sam Houston Gun Club, captured the target medal on the good score of 48 out of 50. The team medal went to Joe George and Oscar Guessaz on the score of 48 out of 25 each. The individual championship medal on live birds was won by Lieut. Pegram Whitworth, of the Fort Sam Houston Club, with 19 out of 20. While Mr. Whitworth rather had the best luck in drawing easy birds, he gave a splendid exhibition of nerve and skill.

Next year the State Association will again meet in San Antonio. The force that has hitherto been devoted to giving the famous "Midwinter tournaments" will be thrown with that of the State organization and the two combined will arrange for a tournament on a large scale.

At the meeting, Wednesday, the 21st, the question of handicapping the experts, so as to give the rising amateur a chance, was the all-absorbing topic. The Rose system also was thoroughly discussed, and the consensus of opinion was that the Rose system and some system of handicapping should be adopted. Mr. A. B. Cutzer was chosen for President, Albert Steves Vice-President, and Ole. Guessaz Secretary, all of San Antonio.

First Day, April 20.

Events:	1	2	3	4	5	6	7	8	Extra

NOTES.

The dates for the big shoot of Texas for 1898 are April 21, 22, 23 and 24. The attention of the shooting world is directed to the above dates.

Wallace Miller and his pump made a great many friends. His shooting is away up yonder, and if he keeps up his gait Texas will place him in Holzapfel's shoes.

One sad thing about this meeting was the vacant place hitherto occupied by John Ellis. He died in the city of Mexico on the 2d inst. after a short illness. Pneumonia carried him off. Mr. Ellis came to Texas about ten years ago, and his affability, fairness and shooting qualities endeared him to every one with whom he came in contact. Peace to his ashes.

Lieut. Whitworth won the individual championship on live birds with a handsome Parker gun, which he handled with rare dexterity.

As usual, E. C. powder is on top in the averages. TEXAS FIELD.

Sherbrooke Gun Club.

SHERBROOKE, P. Q., April 16.—This club's opening tournament came off Good Friday as advertised. A good number of visiting sportsmen turned up, making, with the home team, 29 shooters. Traps were kept fairly busy from 9 until 6. Everybody appeared satisfied with the way things went, and Sherbrooke hopes to see all these faces and many more at their grand annual on July 1, Dominion Day. Scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12

Boston Gun Club.

WELLINGTON, April 21.—What the Boston Gun Club's weekly meet lacked in point of attendance to-day was more than balanced by the enthusiasm of the nine shooters, who, as usual, alighted from the 1:45 train at Wellington. On these grounds the fun and enjoyment is hardly dependent on size of crowd, and, whether, one squad or three, the same pleasure is extracted from the extermination of the Ethiopian saucer. The afternoon was a fine one, from a weather point of view, a variable wind being the only excuse for not breaking all the targets thrown. Events below:

Events:	1	3	3	4	5	6	7	8	9	10	11	12	13	14	15
Targets:	10	10	6	5	10	10	5	6	10	5	6	20	5	5	10

April 28.—The twelfth weekly shoot of the Boston Gun Club, at Wellington, Wednesday, April 28, turned out fully as enjoyable as all the previous eleven, and being favorably treated as regards weather, the regular coterie of enthusiasts faced the five traps with their usual equanimity. Mingled together were the novice, in his initial attempt at wing shooting, and the veteran, who had fired his 1,000 shots and over, both at the trap and in the field. Both were having the same good time, though success much more often crowned the efforts of the latter and as the more fortunate one he would be called upon to share his knowledge and give to others the benefit of his experience. This he would readily do, and the afternoon was all too short for the necessary practice entailed by the valuable tips. A high and variable wind interfered with the arrangements many had made for straight scores, yet two were captured by Sheffield and one by Gordon. Others were satisfied with less, or had to be. Summary as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
Targets:	10	10	5	6	10	10	5	6	10	5	6	10	10	10	10
Gordon	7	7	2	2	6	8	2	3	6	4	5	5	10	9	8

Buffalo Audubon Gun Club.

A SPECIAL shoot was held by the Audubon Gun Club on April 23 and 24. Several old members were in attendance. The live-bird team shoot was the chief event. The losing team was to banquet the visitors. The shooting in the target events was superior.

Following are the scores in the team shoot:

Team No. 1; Kirkover (captain) 7, Geisdorfer 6, Hoyt 4, Braden 7, U. E. Storey 6, J. J. Reid 7, McCarney 5, Snyder 3, Reinecke 7, Stacey 5, Hankins 6, Krolz 6; total, 69.

Team No. 2: C. S. Burkhardt 7, McArthur 4, Hurley 4, Zoeller 4, J. P. Fisher 3, Scheibert 5, George Stauber 2, E. C. Burkhardt 6, E. P. Reynolds 5, P. G. Myers 3, Dr. Sauer 3, J. E. Lodge 6; total, 52.

Individual scores made were as follows in the target events:

Events:	1	2	3	4	Events:	1	2	3	4
Targets:	15	15	15	15	Targets:	15	15	15	15
C S Burkhardt	12	14	13	15	Kirkover	14	14	15	12
McCarney	12	10	..	..	McArthur	13	14	14	15
Hurley	9	..	..	..	Hayseed	9	..	..	..
U E Storey	12	13	14	13	Myers	13	12	13	..
E C Burkhardt	14	15	14	13	Stacey	11	12	15	..
J J Reid	12	11	10	12	J Beck	11	11	..	..
Zoeller	10	15	..	..	Hoyt	7	6	..	..
Reinecke	11	..	..	..	Braden	13	13	13	14
Dr Sauer	7	..	..	..	Snyder	10	..	12	..
Reynolds	10	12	12	..	J E Lodge	..	9	10	..

On the second day seven events were on the card of the Audubon Gun Club at its weekly club shoot, and were taken part in by 26 members. The third event was the club badge shoot. H. Kirkover won in Class A, McArthur in Class B, and W. R. Eaton in Class C.

The fourth event, the monthly cup shoot, proved the most interesting of any of the seven series already shot, and turned out six ties: Kelsey 25 out of 28, McArthur 25 out of 31, William Hines, Jr., 26 out of 31, Dr. Sauer 27 out of 33, Alderman 25 out of 29, and Norris 26 out of 29. The ties were shot off at one-half of the original handicap, which resulted in all being shot out except Kelsey and William Hines, and in their shoot-off Kelsey won by 1 bird. The scores:

Events:	1	2	3	4	5	6	7	Events:	1	2	3	4	5	6	7
Targets:	10	15	20	25	15	15	25	Targets:	10	15	20	25	15	15	25

ROBT. W. EWALT, Sec'y.

The Richmond Interstate.

THE second target tournament on the Interstate's circuit for the season of 1897 was held at Richmond, Va., April 28-29. As to the success or otherwise of this tournament, there can be but one opinion; it was as nice a shoot as any we have ever attended, while the number of *new* shooters present showed that the missionary work of the Interstate Association was sowing good seed in the South. Of course there were a few of the old stand-bys present, but the ammunition and gun men were conspicuous by their absence. Of the 40 or more shooters on the grounds during the two days of the tournament not more than four could be classed as manufacturers' agents. These were; H. P. Collins, of Baltimore, the Southern agent of the Du Pont and Hazard powder companies; U. M. C. Thomas, of the Union Metallic Cartridge Co., Bridgeport, Conn.; Ferd. Van Dyke, Dayton, N. J., representing the Winchester Repeating Arms Co., of New Haven, Conn., and shooting W-A powder to the front; T. H. Keller, Plainfield, N. J., representing King's Smokeless and Peters's Victor shells.

MANY NEW FACES.

Of the other three dozen shooters, many had never been to a tournament before; and this is just the class that the Interstate wants to catch and make converts of. It made many converts in Richmond and added to the band of disciples which it can lay claim to in the Sunny South. Without fear of any charge of flattery, we can state safely that the work of the Interstate Association during the past three or four years has done more to boom the sport of trap-shooting in that section of the country than all other causes combined. And as it has helped the sport in other cities, so it is in Richmond; the West End Gun Club and the local shooters will feel the influence of the impetus given to the sport by the tournament of April 28-29 will be felt for many months to come. Before that influence has died out, it is to be hoped that the club will try again, and give the local boys a chance of trying their hands against some of the best shots in the adjoining States.

THE WEST END GUN CLUB.

The West End Gun Club, the local club under whose auspices the tournament was given, has never held a tournament prior to this effort. It was absolutely new to the business, but it handled its guests in a manner that reflects considerable credit upon the tact of its members. Somehow or other there was a homelike feeling about this tournament; everybody seemed to know everybody else, and everybody seemed to be good friends with everybody else. Also this shoot seemed to be a shoot for sport, no money-grabbing and no kicking—at least not much, and that little quite uncalled for, but not altogether unexpected. Some people never are satisfied, and the West End Gun Club never hoped to please everybody; it did, however, please the vast majority of its guests by the manner in which it treated all alike, playing no favorites.

To people accustomed to attend tournaments, it may seem a simple matter to get up a shoot and run it successfully. Such, however, is far from the case, and it is no small feather in the cap of the management of the West End Gun Club that the two-days' shoot on April 28-29 turned out so satisfactorily. We believe the bulk of the credit is mainly due to the efforts of President W. A. Hammond, Secretary E. L. Hewitt, Messrs. W. C. Lynham, J. C. Tignor and Harper Deane, Sr. If we have omitted anybody's name, the omission is unintentional, and an apology for such must be taken as going with the above remarks.

On the first day all shooters and spectators were invited to be the guests of the club at lunch. This lunch was served by Bill Snellings, a caterer of no mean repute in the city of Richmond, and who now resides at Blandon Park and has charge of the club house there. Another good feature of Mr. Snellings's *menage* is the plethora of mint, cracked ice and strawberries within his domain. To a Northerner the above may sound like an enigma; Southerners (and particularly "members of Pickett's brigade," as Col. Anthony would say) will need no explanation.

GROUNDS AND ARRANGEMENTS.

The grounds of the West End Gun Club can be reached from the center of the city in less than half an hour. Frequent electric cars run to the terminus of the Broad street line, at Blandon Park, within a quarter of a mile of the grounds. The background is quite deceptive, and many a target was dropped through being momentarily lost sight of in "those cedars to the right," "that high tree yonder," or "in those trees to the left." To look at the grounds without a gun in your hands, you'd say that the background was a good one; so it would be if the targets were "skyers." But with low-thrown targets it needed close watching and strict attention to business to make good scores.

The trees above referred to were a long way off, and at first one would not think they could cause any trouble. The field, however, beyond the traps sloped off to a high board fence, weather beaten and weather stained. From that fence the ground rose gradually for perhaps 400 or 500yds., and was finally fringed on the right with cedars, a few high trees and some houses; on the left with trees—just trees and nothing else. When the targets left the traps they skimmed over the dip in the field and climbed the gray fence and grassy slope; then, if a right-quarterer, it was mighty apt to be lost for a moment in "those cedars;" if a left quarterer, "in those trees;" if a straightaway, it went up against the sky and was a pudding. We had lots of excuses for missed targets, and several of us needed those excuses badly.

THE MAGAUTRAP WAS THERE.

The above remarks refer solely to the background for the set of bluerock expert traps placed in position in the club's pits by Manager Shaner. Oddly enough the background for the magautrap, which was located only a few feet to the right of No. 5 trap, was a good one.

But the magautrap was not used for any of the programme events. Manager Shaner decided, and we think decided wisely, that it would be rather unfair to make those who had never shot over the magautrap, stack up against those who had had considerable practice at that style of shooting. He announced that all programme events would be shot on the set of expert traps, and that when the programme was completed extra events would be shot over the magautrap. As no more than nine events were shot on the first day the magautrap stood idle all day, much to the disappointment of many who had come out to see one trap do the work of five. One event being left over from the first day, this necessitated eleven events being decided on the second day; and after these eleven events were disposed of, there was only time and opportunity to finish one full extra on the magautrap.

It may sound queer that only 9 15-target events were shot on the first day, with an opening extra to start the ball—a total of 150 targets per man. But this tournament was not like others. Here the West End Gun Club was not particular about throwing several thousands of bluerocks, so as to come out even, or maybe a bit ahead. On the contrary, it requested Mr. Shaner to go slow and not to hurry anybody, so that shooters might feel that they were having some fun and not merely attending to business. As a result, things moved slowly and the programme was not finished.

The accommodations for shooters were ample provided the weather was fine; and fine and warm it was; warm enough for the middle of June; delightful weather to shoot in, provided you were not hurried. No preparations had been made, however, for putting the cashier in a cage, where he might be looked at but not surrounded and plagued to death, as an unprotected cashier always must be. This little matter caused some trouble, and Mr. Hewitt's scores suffered on the second day in consequence, as he and Edwards acted as assistants to Mr. W. C. Lynham in the absence of the cashier of the first day—Mr. Stokes—who was scared from his post by the number of questions of all kinds that he was required to answer while totaling three or four columns of figures. Pres. Hammond also worked too hard on the second day for his figures to show up well.

PREPARATION DAY.

Tuesday afternoon, April 27, was not marked by much shooting. Quite a late start was made, but a few events were shot off over both the magautrap and the set of expert traps. H. P. Collins, W. Tell Mitchell, of Lynch's, Va., and F. S. Edwards were the only strangers at work on this afternoon. Several members of the home club were present, and good scores were made by W. H. Colquitt, E. L. Hewitt, W. A. Hammond, A. Krouse and the Deanes, both senior and junior. Harper Deane, Jr., shot very nicely and will surely make a good shot in the near future. As it is, he shoots as well as any lad of his age we know of, and can hold down many a man who has had treble his experience both in the field and at the trap.

The weather on this date was exceedingly warm, and several men shot in their shirt sleeves, coats and sweaters being almost unbearable. The preliminary work on the magautrap showed up favorably against that which was done on the regular traps, far better scores as a rule being made on the magautrap than at the other set. The background above referred to had much to do with this in our estimation.

AMONG THE VISITORS.

Among the visitors at this shoot were the following, in addition to the four manufacturers' agents mentioned above: Col. Anthony, of Charlotte, N.C.; Hood Waters, J. M. Hawkins, Dr. Lupus, Jim Malone, Ed Coe and Gent, from Baltimore; Billy Wagner and A. S. Mattingley, Washington, D. C.; Watkins L. Moorman and C. W. Scott, Lynchburg, Va.; W. N. White and J. Thomas, Portsmouth, Va.; W. Tell Mitchell, Lynch's, Va.; Dr. Wayman and Summerson, Staunton, Va.; the FOREST AND STREAM representative, New York city.

The home club turned out in good force, and the showing made by many of them gives evidence of strong talent among the members of the West End Gun Club.

GENERAL AVERAGES.

The table of general averages, made up of those who shot through the programme on the two days of the shoot, is always interesting. Although only fourteen shooters went through all twenty events, shooting at a total of 300 targets each, there is still something worth noting.

Ferd Van Dyke was, as might be expected, high for the two days with only one break less than 90 per cent. His work on the second day was rather an enigma, as it was curiously erratic at times. But then—"there were others." Edwards was second with three breaks less than Van Dyke and a percentage of 88.6. Hawkins was third, and led the "Oyster Squad," as Tom Keller termed the Baltimoreans, by one break over Malone and Hood. Mitchell was sixth, Hewitt seventh and Harper Deane, Sr., eighth. The totals for each day, and the averages made, are given in the following table, each man, as stated above, having shot at 300 targets:

	1st day.	2d day.	Total.	Av'rage.
F Van Dyke	138	131	269	89.6
F S Edwards	139	127	266	88 6
J M Hawkins	131	128	259	86.3
W Hood	125	133	258	86
J M Malone	130	128	258	86
W T Mitchell	123	131	254	84.8
E L Hewitt	132	117	249	83.3
H Deane, Sr	123	117	240	80
A S Mattingley	119	118	237	79
W Wagner	121	113	234	78
U M C	114	119	233	77.6
Col Anthony	112	115	227	75.6
W A Hammond	114	96	210	70
H P Collins	81	93	174	58

First Day, April 28.

This was a regular steaming hot day in the opinion of the Northerners; and even the natives found it just about the right thing to hunt for a shady spot and a cool drink at odd times. The light was trying to the eyes, and caused the loss of several targets.

Prior to the commencement of the shoot, Manager Shaner announced that the home club desired to take things easily, as it did not care how many targets were thrown so long as its guests had a pleasant time. This was a novel feature in the way of tournament-giving, as most of those present had been accustomed to be hustled along at shoots on account of the clubs desiring to make all the money they could by the sale of targets. Novel as the feature was it was a pleasant one, and showed the spirit of the West End Gun Club.

True to his instructions Manager Shaner did not push things, and the result was an unfinished programme, event No. 10 having to be carried over to the next day. Entries ruled higher than was expected; but this was largely due to several shooting "for birds." The figures given below show that thirty-eight shooters took part in one or more events, but as a matter of fact the entries for money would average about twenty-four in each event.

A GOOD ENTRY LIST.

A total of 4,020 targets were thrown on this day, which, together with the 315 thrown in No. 10 on the morning of April 29, made a total of 4,335 for the ten programme events. The entries were as follows: No. 1, 33; No. 2, 33; No. 3, 35; No. 4, 34; No. 5, 34; No 6, 30; No. 7, 23; No. 8, 25; No. 9, 21; No. 10, 21. At the close of No. 6 event an effort was made to finish the programme, and all those "in for birds" were cut out of the remaining events, unless there was another man or two wanted to fill a broken squad. This accounts for the falling off in the entry lists. The average for each of the ten events was 28.9.

The race for first place was close all the way through, Van Dyke making a strong finish. At the end of the ninth event, when shooting stopped for the day, Edwards and Van Dyke were tied, with 11 misses out of 135 shot at. The result in No. 10, shot, as above stated, on the morning of April 29, put Edwards 1 target in the lead for first average on the first day's programme. E. L. Hewitt, secretary of the home club, won third place with an average of 88 per cent., the result of some consistently good shooting. Fourth and fifth places went to Hawkins and Malone, respectively, with averages of 87.3 and 86.6. Hood made a poor start and never came fully up to his form, ending up in sixth place with 83.3.

OTHERS WERE IN IT, TOO.

Another member of the West End Gun Club who shot consistently well was Harper Deane, Sr., who tied W. Tell Mitchell for seventh and eighth places with an average of 82 per cent. Billy Wagner, who shot a regular gait in the first seven events, fell down badly in the last three events and spoiled his average. He was the only other shooter, in addition to those mentioned above, to finish with 80 per cent. or better for all the programme events. Col. Anthony was in nothing like his old form, and besides that he had a hoodoo on No. 4 trap that worried him badly every time he faced that trap. Du Pont Collins, although suffering from a raging headache all day, shot in every event rather than show the white feather. The result of that headache may be noticed in his scores. Mr. Moorman, of Lynchburg, had the bad luck to break his gun in the first event, and spent the rest of the day experimenting with other guns of different makes. This naturally did not give him much of a show.

Although all events were at 15 targets each, unknown angles, straights were scarce, which shows that there was something tricky in the background. Personally we think that fully 90 per cent. of the lost targets were the result of over shooting. This, with the peculiar background, was very liable to occur.

Below are the scores and averages for the first day:

SCORES OF APRIL 28.

Events:	1	2	3	4	5	6	7	8	9	10	Shot at.	Broke.	Av
Edwards	14	15	13	13	15	13	13	14	14	15	150	139	92.6
Van Dyke	14	14	14	14	11	15	12	15	15	14	150	138	92
Hewitt	12	14	13	15	13	12	14	14	13	12	150	132	88
Hawkins	13	13	15	12	14	11	13	14	15	11	150	131	87.3

Second Day, April 29.

This was a hotter day than any of its three predecessors. There was almost absolutely no breeze at all, and every condition was apparently favorable for large totals. But, as often happens, the unexpected took place, and no shooting of any great excellence was done. Hood's work, after his first two events, was by far the best record, and he honestly deserved his place at the head of the list for the second day. Mitchell and Van Dyke tied for second and third places, Hawkins and Malone tieing for the next two places.

The absence of a cashier had a demoralizing effect on the scores of one or two shooters, working and shooting not being good companions. Lynham, Hewitt and Edwards ran the cashier's office, and it is perhaps worthy of note that so far no shortage has been discovered in the accounts to date! As on the first day, W. J. Lynham acted as referee, while Robt. F. Banks marked down the 1s and 0s on the score sheets. The blackboard work and the pulling was done by so many different people that it would take up too much space to credit all who helped with due notice.

The shooting in many of the events was a curiosity. In No. 1 there was no 15, and only one 14—Coe. In No. 3 there was only one 15—Hawkins, but six 14s. In each of Nos. 5, 6, 8 and 9 there was only one straight, as follows: In No. 5, Colquitt; No. 6, Van Dyke; No. 8, Hood; No. 9, Van Dyke. In No. 7, there was no 15, but four 14s and seven 13s.

The table below will show what else was done, and how the boys finished:

SCORES OF APRIL 29.

Events:	1	2	3	4	5	6	7	8	9	10	Shot at.	Broke.	Av.
Hood	12	11	13	14	14	13	14	15	12	15	150	133	88.6

BRIEFS.

Col. Anthony was not himself at all. In the first place, he came to the shoot with a load that was eminently fitted for quail shooting, but worse than useless for smashing bluerocks when used by the Colonel, who never takes a mean advantage of targets, but lets them get away off, as a rule. The rule at this tournament was "three targets at each score, then move up." The Colonel always started at No 3 trap, but on only one occasion out of his twenty efforts did he get past No. 4 trap without losing at least one out of the three from that trap. He had a hoodoo at work somewhere, but couldn't locate it. He tried all sorts of loads and all sorts of powders, but the result was the same. The hoodoo stayed by him until the end.

On the second day the average entry per event was just 24.1. This average would have been much larger, but in order to finish the programme all those who shot "for birds only" had to be cut out in the last four events.

Three thousand six hundred and fifteen targets were thrown on the second day, making a total for the two days of 7,950.

Tom Keller shot in his old form on the second day; 93 breaks out of 105 shot at is not to be sneezed at. We respectfully call Milt Lindsley's attention to the figures.

E. L. Hewitt shot a very steady gait on the first day and landed in third place with 88 per cent. On the second day he fell off considerably, but there was good reason for this: he was working hard, and two days of shooting is enough for anybody, except the most hardened crackerjack. The strain of shooting is more than most people imagine, and a man must be seasoned to stand it day after day.

Harper Deane, Sr., and Harper Deane, Jr., are both good shots and both enthusiasts. They are made of just the right sort of material to help along any club, and the West End Gun Club has reason to pat itself on the back for numbering among its members the two above named—father and son.

Pres. W. A. Hammond thought more of the success of the shoot and the comfort of the club's guests than of his own scores. His willingness to lend a helping hand at all times did more than anything else to keep his average below the 80 per cent. mark.

Du Pont Collins says that he doesn't mind a headache if he can only get a straight now and then; but to suffer from a bad headache and then get out of the money doesn't amount to much in his opinion. And that was the combination of affairs he had to face all day on the 28th. On the 29th, in event No. 4, he had his revenge. Squad No 1 finished thus: Van Dyke 11, Edwards 10, Anthony 11, U. M. C. 13, and Collins 14. "The scrubs beat the cracks," chortled Collins; and he went to lunch.

The "Oyster Squad" was pretty nearly always sure to furnish one or more claimants for first and second money. Hood made a great finish on the second day, breaking 110 out of the last 120 he shot at.

U. M. C. was, as usual, one of the most popular men at the shoot. The boys fairly hated to see him leave, and extracted a promise from him that he'd be with them at their next shoot.

At the close of the shoot on the last day Col. Anthony made a short speech, tendering a vote of thanks to the home club on behalf of its guests. When he had finished he called for three cheers for the West End Gun Club, and it was astonishing to hear what a noise voices, hoarse from calling "Pull," could make when there was a worthy use for them.

One of the pleasant features of this tournament for us was the acquaintance we made with Comrade Walls, a veteran Confederate soldier, now an inmate of the Richmond Soldiers' Home. Many years ago Mr. Walls was a correspondent of FOREST AND STREAM and wrote an excellent series of articles on "Camp-hunting in Florida," a subject he was well qualified by experience to treat of in this manner. Mr. Walls was an interested spectator at the shoot on both days.

Messrs. Moorman and Scott came from Lynchburg to represent that city's gun club. An unfortunate chain of circumstances prevented the presence of Col. Terry and Mr. Dornan. Mr. Moorman had the bad luck to break his gun on the first day, and in the first event, but he never whimpered, sticking it out to the end, and using strange guns all the time. Mr. Scott found "the cedars" to the right too much for him on many occasions, and failed to come anywhere near his true form at targets.

Wagner and Mattingley ran over from Washington, D. C., and shot all through the programme. Billy shot consistently in the first seven events on the first day, and then fell from grace in the last three. Mattingley evinced a strong affection for the 12-hole on the first day, but was fickle enough to switch off on to the 13-hole during the second day's shoot. They finished close together in the general averages, Mattingley beating Wagner by 3 breaks in the 300 targets.

R. Powers shot "for birds" in Nos. 1, 2 and 3 on the second day, and came out with two 13s and one 14, an average of 88.8.

W. H. Colquitt does not shoot as well as he used to, but he managed to get in a straight on the last day.

Ferd Van Dyke was No. 1 in No. 1 squad, and was No. 1 in the table of general averages for the two days. This ought to be enough for any man, and we understand that Ferd was satisfied, but would still like to know "How in thunder that target, etc." EDWARD BANKS.

Saccarappa Gun Club.

WESTBROOK, Me., April 24.—First regular shoot of the Saccarappa Gun Club took place to-day, and, though the weather was good, small scores were made, as members have done no shooting at the trap since last fall, and were therefore out of practice. There is no better material in the country than we have here to make good trap-shooters, and before the season is gone some good scores will be made. You will also hear from us at the Interstate shoot at Lewiston, Aug 4 and 5:

Events:	1	2	3	4

E. G. MAYBERRY, Sec'y.

Auburn Gun Club.

AUBURN, Me., April 25.—The Auburn Gun Club was started this spring with a small membership, but lots of enthusiasm. The average amount of room is around the flying targets when shot at, as the score of some of the shooters proves, but as we are all green at the business, we hope for better results before fall. The first shoot was held April 22 at forty-five birds, and the score was as follows:

F Francis	101100110111001111101110101110001010011100111—28
P Barker	101100010011101111011000111010011100011010111—26
L Barker	101010001100000111111101111110001010100001000—22
H Fletcher	000000011101010101110001010010001011100111101—20
A Cushman	010011010110101101011101000011010 —18
L White	010101000010000010010101111000000100010001000—13
C Conner	000001010000101100000000100000010100100101000—11

Conner says he is going to have a gun made on the Vena Contracta plan, only have the barrel reversed, and call it the Vena Expansia, from twelve gauge to about four, and see if he can find the birds any better with that. C. E. C.

Nebraska State Sportsmen's Association. Tournament.

LINCOLN, Neb., April 21.—One would naturally believe that the twenty-first annual tournament of the Nebraska State Sportsmen's Association, following right after the Atchison shoot, and with such inducements as $1,000 added money, would draw a large gathering of shooters. In this respect at least the anticipations of the promoters were scarcely realized. However, it must not be inferred that the tournament was not a success; quite the contrary.

With such weather as that experienced at Lincoln the past week, nothing in the way of outdoor sports could be a pleasure This no doubt affected the attendance. Also, the high water, which made railroad connections uncertain from a number of points, served to keep others away.

The rain on the first day caused a postponement of this day's programme until Saturday. The rest of the programme was carried out as announced excepting the State championship, which was postponed also till Saturday, as the 15-live-bird event, which came first on the programme, consumed so much time on Friday.

The tournament was held at Lincoln Park, which is also the race-course. There was ample room. Three sets of target traps were in position facing north, with an almost perfect background. To the right of them, facing east, were the live-bird traps of rather antique make and not calculated to make the birds fast. This was the only crude part of an otherwise well-arranged shoot. Pigeons should never be shot at a tournament from anything but the best traps, and especially so at this season of the year when the weather conditions are unfavorable. The wind here at times blew a perfect gale from the northeast, diagonally across the traps. Thus most of the birds were rightquartering incomers, if not directly so, and nearly all lingered at the traps.

The management consisted of George Rogers, R. M. Welch and H. H. Harley. Mr. Rogers looked to everything on the outside and shot in every event but the last one Mr Welsh was cashier; he handled all the money as well as attending to the duties of secretary of the Association. Mr. Harley was chief squad hustler, being always on hand when most needed. It was their maiden effort at holding a tournament. Anything that may have been left undone or neglected in the way of preparation must be attributed to this. A tournament of any magnitude has never been held in Lincoln before, and it is only natural that everybody should be new at the business.

The guests in attendance were Messrs. R. O. Heikes, Dayton, O., and J. A. R. Elliott, Kansas City, representing the Winchester Arms Co; Fred Gilbert, Spirit Lake, shooting Du Pont's; Chas. Budd, Des Moines, with a Parker-Hazard Blue Ribbon combination; C. M. Grimm, Clear Lake, shooting Du Pont in a U. M C. factory load; Frank S. Parmelee, Omaha, pushing Remington goods and shooting a $35 ejector; J. W. Barre, Louisiana, Mo., Austin Powder Co.'s representative; Jack Parker, Detroit, Mich., shooting Victor shells and King's Smokeless. Then there was the Omaha delegation, as follows: Krug, Townsend, Whitener, Carmichael, Blake, Loomis, Brucker, Hughes and Plumber Read; McDonald, Brooks, Airy Lou Hardt and B. O. Running, Atchison; W. T. Den, Brownville, Neb.; W. G. Sergeant, Joplin, Mo.; C. D Linderman, Adams, Neb.; Dan Bray, Syracuse, Neb.; C. L. Greene, Manhattan, Kan.; W. S Dun, Hastings, Neb.; Jake Cranill, Carinda, Ia.; F. Miller, Berwyn, Neb.; E. W. Hamilton, Pawlet, Neb.; G. J. Savage, Leigh, Neb.; W. A. Waddington, Beatrice, Neb.; M. T. Miller, York, Neb.; Wright, Chicago, Ill.; Jacob Alvord, Cortland, Neb.; G. E. Trent and Watson, Medina, Minn.; E. A. Leach, Tripp, S. D.; A. R. Gavey, J. W. Den and F. Boehner, Arapahoe, Neb.; A. A. Glade and Servers, Grand Island, Neb.; C. D. Hagerman and A. D. McCandless, Wymore, Neb.; George Peterson, Coon Rapids, Ia.; Dr. J. B. Hungate, Weeping Water, Neb.; G. Hulsizer, Seward, Neb.; Geo. Nicholai, Sutton, Neb.; J. S. Smith, Minden, Neb.; W. J. Organ, Beaver Crossing, Neb.

The general average of those who shot through the entire target programme is as follows:

GENERAL AVERAGE.

	Shot at.	Broke.	Av.		Shot at.	Broke.	Av.
Gilbert	700	662	94.2	Running	700	614	87.7
Heikes	700	657	93.8	Duer	700	603	86.8
Budd	700	648	92.5	Linderman	700	607	86.7
Barre	700	645	92.1	Loomis	700	594	84.8
Grimm	700	642	91.7	Leach	700	587	83.8
Parmalee	700	626	89.4	Hagerman	700	586	83.7
Sergeant	700	617	88.1	Den	700	581	83
Parker	700	615	87.8				

Third Day, Friday, April 23.

This was the day set for the State events to be shot, and was also to be live-bird day. The State events consisted of two team races at targets, and one live-bird event for the individual championship of the State. In the two-men team race, Rogers and Linderman each scored 10 straight and won the trophy. That strong pair, Loomis and Parmalee, were only one behind, Loomis losing the only bird credited to them. The four-men team event had but two entries, Lincoln and Omaha. Lincoln won by a good margin and now becomes the permanent possessor of the Plattsmouth Cup.

The live-bird events consisted of a 15-bird open event, $10 entrance, and the 10-bird event for the State championship. The first one was started but not finished owing to a rainstorm that came up, and also to the late start that was made. In addition there were four 20-target events with $25 added. These were shot, as well as a number of extras. In the target events Greene, a young amateur from Manhattan, Kan., led the procession with 95 per cent. Then came Heikes and Gilbert, with 94.5 per cent. The wind blew an awful gale, which made the target shooting very hard. Straights were few and paid well; in fact, only four appear in the score. In the first Smith took all of first money on such a score, while Heikes duplicated this feat in the second. Then in the next Gilbert and Barre divided first, as each made a straight. In the last one no one could reach that number, though 19s were numerous.

THE SCORES.

Evans, Brucker and Servers shot only in one event.

Events:	1	2	3	4	Shot at.	Broke.	Av.

Garey	1010011111— 7		
Den	1111110011— 8—15		

Fourth Day, Saturday, April 24.

Nearly everything was slow on this day. The pigeons, the trappers, the squad hustlers, the management and the weather—everything but the few remaining shooters. The class was fast enough, and the pace was equally as fast. It had virtually resolved itself into a wolf-shot, as some would say. There was scarcely a lamb left and no producers. But there was $250 added money and the professionals could very well afford to stay, even if they had to go up against one another. This they did in great shape. Just look at the averages—only two birds difference between the first five. Notwithstanding the hot company, three times it occurred that first was won without a tie. Gilbert did the trick in the fourth, Elliott in the seventh and Den in the ninth. Once only did fifteen get in for money; that was in the ninth event, not because there were no straights, but because no one scored 16. The place-hunter had evidently overlooked this, as he was by no means absent. This was really the programme for the first day that had been postponed on account of rain. Here is where the management made a mistake. They should have begun the programme with this, and not shoot each day as it appeared on the programme. The entries could have been much larger had it been done. After four days of shooting the amateur is generally absent, as was here the case.

The target programme of this day consisted of ten 20-bird events, with $25 added in each. The 15 live-bird event began on the previous day, remained to be finished, and the State championship was also to be decided.

THE SCORES.

Hulsizer, Boehner, Welch and Clyde each shot in one event.

Events:	1	2	3	4	5	6	7	8	9	10	Shot at.	Broke.	Av.
Gilbert	19	19	17	20	18	18	20	19	18	19	200	187	93.5

STATE CHAMPIONSHIP.

This was a 10-bird event, for the E. C. Maine's diamond badge, and there were nineteen entries, which would have been increased had the birds been better. That they were very poor is evidenced by no less than nine scored straight, and most likely others could have been in the tie had they so desired. Had they not been wet, the birds would have been good. The atmosphere was moist and murky, not a breath of air stirring until after the shoot off began. Then a fresh lot of birds and a good breeze made it at least interesting.

In the shoot off the sympathies of the spectators were all with Den (seventy-nine years old, the oldest member of the Association), and Clyde, the two oldest shooters. Everybody survived the first round. Plumber went out in the next, as his bird, a fair one, fell dead out of bounds. Not until the 5th round did any one miss, then Garey's died out of bounds, and Clyde missed his. Loomis was the next to go out, but not until the 9th round; this, too, was a fair bird. Rogers's 21st was one of the same kind, and put him out of the race. Now only Linderman, Hamilton, Duer and Den remained. Every kill that "Grandfather Den" made was applauded. He drew several very hard birds and made some excellent kills far out with his second; but fate was against him, as he lost his 22d, a circling incomer, hit lightly with the first, but he fudged with his second and under-shot. A groan went up from the crowd when this bird had to be scored lost. Linderman, Hamilton and Duer now agreed to shoot it off from the 33yds. mark. Duer's 24th was a good, fast one, and went off with the loss of a few feathers; Hamilton's 29th was only a fair bird, but it got away. Linderman killed his bird and won the trophy. Last year he tied for it, and it required exactly the same number of birds to decide the tie, but, like Hamilton, he lost his 28th. Duer, who was in this tie, then being the winner.

STATE CHAMPIONSHIH FOR DIAMOND BADGE.

NEBRASKA STATE SPORTSMEN'S ASSOCIATION ITEMS

The annual meeting of the Association, which was held at the Lindell Hotel, Thursday night, April 22, was called to order by President George Rogers.

The first business transacted was the adoption of a new constitution, after which the following clubs were admitted to membership: Grand Island Gun Club and the Atkinson Gun Club. It was then decided that the four-men team contest be annulled, and that the Plattsmouth cup trophy, emblematic of this contest, become the permanent property of the team winning it this year

The next thing in order was the selection of a place for holding the next annual meeting and tournament. Omaha wanted it, providing there were no other applicants. No other city desiring to assume the responsibility connected with holding the annual meeting and tournament, Omaha was unanimously chosen. Then followed the election of officers, which resulted as follows: President, W. H. S. Hughes, Omaha; Vice President, Ted. Ackerman, Stanton; Secretary-Treasurer, G. W. Loomis, Omaha

Mr. F. S. Parmelee moved that a vote of thanks be tendered the retiring officers and to the members of the Capital Gun Club, of Lincoln, under whose auspices the present tournament was held, the same to be spread on the minutes—carried. The meeting then adjourned.

TOURNAMENT TOPICS.

The Capital Gun Club captured all the State trophies. This includes the Plattsmouth cup for the 4-men team, the 2 men team trophy, and the live-bird championship medal, as Dick Linderman, the winner of this trophy, is a member of this club.

Rolla Heikes's 15 straight in the live-bird event was a most creditable performance, as he finished his score on Friday when the wind was blowing a gale. The other 15s only shot ten of their birds on this day, finishing on Saturday, when it was perfectly calm.

George Loomis says that it may not be generally known, but is a fact, nevertheless, that Frank Parmelee now cuts his own hair. Frank owns a safety razor and a pair of clippers.

Jack Parker tells us that, although "there are others," King's Smokeless is winning its share of money and trophies. W. T. Den was shooting the Peters load when he won the E. C. Cup. In fact he shot it through the entire tournament.

That Iowa contingent is a great trio. Just look at their standing in the general average; One, 3 and 5—Gilbert, Budd and Grimm—great representatives for the Hazard Dupont combination.

"Airy Lou Hardt" did not fire a gun at his own tournament; but he came to Lincoln, staid three days and shot in something like his old-time form. His average on the second day would have been much better only for the breaking down of his gun.

In one event four of the Indian squad went straight—Budd, Grimm, Gilbert and Parmalee.

It must indeed be a hard game when a man scores 98 out 100, and yet has nothing to show for it. This is what Fred Gilbert did in the E. C. Cup race. And this is the second time this year it has occurred to Fred that he has broke 50 straight, and still lost his entrance money. It will be remembered that Gilbert broke 50 straight for the E. C. Cup at San Antonio, and was beaten by Robinson in the shoot-off.

Everybody knows who "Li Hung Chang, the Pride of Nebraska," is. He is the man who has the reputation of having outrun a jack-rabbit. If you want to get the particulars of that rabbit story just ask him about it.

Old Grandfather Den, as usual, was on hand. In fact, a tournament of the Nebraska State Sportsmen's Association would hardly be complete without his presence. Although he is now seventy-nine years old, he is still as frisky as a colt and a good live-bird shot. It is a source of much pride and satisfaction to him that Roll Heikes is the "Daddy of 'em all," as it was he who first taught Roll the rudiments of this trap-shooting game.

PAUL R. LITZKE.

Eureka Gun Club.

CHICAGO, Ill., April 24.—The Eureka Gun Club held its regular club shoot here to-day. Adams won in Class A, De Wolf in Class B, and Walters in Class C. Two 25-target sweeps were also shot. Scores:

Answers to Correspondents.

No notice taken of anonymous communications

J. M., East Pepperell, Mass.—My puppy, four month old, is a setter. He has no desire to eat, and is poor in coat and flesh. He hasn't much life and wants to sleep most of the time. He has had lice, but is free from them now. Ans. Treat for worms. Give a teaspoonful of the syrup of iodide of iron three times a day and teaspoonful of cod liver oil twice a day.

H. B. C N., Ferrisburg, Vt.—1. What is the difference between a "Crown Steel" barrel and a Damascus barrel? 2. Which is the best, and why is it the best? 3. Why was J L. Brewer not allowed to enter in the Grand American Handicap? Ans. 1. Damascus barrels are welded, while steel barrels of the better quality, as a rule, are drilled from the solid bar. 2. Opinions vary. The steel barrels being harder, will wear better and retain their shooting qualities, if choked, longer. They are also less liable to be burst by falls or blows. 3. We cannot answer. The Interstate Association in its programme reserved the right to refuse any entries. So far as we know, no reason has been given for barring Brewer, though it is unlikely that his shooting ability had anything to do with it

PUBLISHERS' DEPARTMENT.

National in Scope.

AN advertiser using a half inch space in FOREST AND STREAM writes us that he receives from it on an average fifteen letters weekly.

Of course, returns vary with the nature of the advertisement.

Another advertiser furnishes the information that out of twenty answers received from an advertisement, thirteen different States were represented. The list of these States indicates the national scope of FOREST AND STREAM. Three replies came from towns in Massachusetts, and three from Pennsylvania. California, Illinois and Texas furnished two each, while single letters were received from Ohio, Nebraska, Maryland, Minnesota, New Jersey, North Dakota, Ontario, Can., and Virginia

Referring to a six-line advertisement published twice, Mr. T. B. Knapp, Windham, Conn., writes:

"From the adv. I had letters as far west as Ohio, as far north as Toronto, south as far as North Carolina, and from nearly all Middle and New England States"

The articles advertised were guns, boats and dogs.

Spring Fishing.

THE Bangor & Aroostook R. R sends a diagram of a 14in. brook trout, intended to convey information regarding fishing regions of Maine reached by the B. & A.

Among the celebrated, points for trout, salmon and togue recommended are: The Moosehead Lake region, Penobscott River region, Big Machias lakes, Fish River region, Aroostook River region, and the Katahdin ponds. The B. & A issues some handsomely printed books and circulars relative to the attractions of the wilderness tapped by their line, from the sportsman's standpoint, which will be sent on application to the General Passenger Agent, Bangor, Me.—*Adv.*

A Fishing Trip

ALONG the lines of the Chicago, Milwaukee & St. Paul Railway is the title of a beautifully illustrated pamphlet of thirty-two pages, the contents of which are devoted to practical methods of fish-catching in near-by lakes and streams.

One copy will be sent to any address on receipt of two-cent postage stamp. Geo. H. Heafford, General passenger Agent, 410 Old Colony Building, Chicago, Ill.—*Adv.*

Seal Shooters

Use Gold Dust Smokeless Powder, saying that they can depend upon it as being absolutely uniform under all conditions of temperature aboard ship on a season's cruise. Gold Dust Smokeless also possesses the advantage of being suitable for guns, not especially bored for nitro powders. It resembles black powder in that 1lb. is 16oz actual weight. Write to L. Colville, Eastern manager, Batavia, N. Y., for descriptive circular.—*Adv.*

Ouananiche.

IT is almost time for the northward pilgrimage of the anglers who go to Lake St. John for the first fishing. The lake, with its tributaries, including an area of 20,000 square miles, is free to the guests of the hotel reached by the parlor and sleeping cars of the Quebec & Lake St. John Railway.

Mr. Alex. Hardy, G. P. A., Quebec, Canada, will send a handsomely illustrated guide book free on application.—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, MAY 15, 1897.

VOL. XLVIII.—No. 20. No. 346 BROADWAY, NEW YORK

NOTICE TO SUBSCRIBERS.

ATTENTION is directed to the new form of address labels on the wrappers of subscribers' copies. The label shows the date of the close of the term for which the subscription is paid.

The receipt of the paper with such dated address label constitutes the subscriber's receipt for money sent to us for a new or renewed subscription. Unless specially requested to do so, we do not send separate receipts.

Subscribers are asked to note on the wrapper the date of expiration of subscription; and to remit promptly for renewal, that delays may be avoided.

For prospectus and advertising rates see page iii.

In my school days, a boy might have been envied, but not loved for proficiency in his studies; but he was most courted, who knew the best fishing holes, who had plenty of powder and shot, the best squirrel dog, and the use of his father's long flintlock gun. And I confess, as I write these lines with my spectacles on, that I have still a strong drawing toward this type of a boy, whether I meet him in my lonely rambles, or whether he dwells only in my memory. Thad. Norris.

The Forest and Stream's Platform Plank.

"The sale of game should be prohibited at all seasons."

NAILS DRIVEN IN 1897.—No. II.

INDIANA.

Chapter LXXXVIII, Laws 1897.—Sec. 1. That it shall be unlawful for any person to pursue or kill within this State any quail, ruffed grouse or pinnated grouse for the purpose of sale, barter, traffic or removal from the State, or to sell, barter, keep, expose or offer for sale, or remove from this State any quail, ruffed grouse or pinnated grouse caught or killed in the State of Indiana. [Sec. 2. Penalty $1 per bird.]

WILLIAM HALLETT PHILLIPS.

THE death by drowning of William Hallett Phillips, which took place last Sunday near Washington, carries sorrow to many hearts. Few men have had so wide an acquaintance among well-known persons and few so many devoted friends.

Mr. Phillips belonged to one of the oldest and best-known Washington families, and was about forty-five years old. To a pure, high character and a sturdy nobility of purpose he added a charm of manner which exercised an immediate attraction on those who met him even in the most casual way, and he was not only one of the best known, but one of the most popular men in Washington.

Mr. Phillips was a lawyer, practicing chiefly before the Supreme Court. He was a man of great ability and of high standing in his profession. He had edited one or two law volumes, and at the time of his death was engaged in revising for the State Department Wharton's Digest of International Law. He was counsel for the Cuban Junta in Washington, and had recently argued cases for them before the Supreme Court.

He was possessed of great breadth of character, and his interests took a wide range outside of his profession. He was a devoted angler, and spent his vacations in the enjoyment of that sport, sometimes in the Rocky Mountains, or again in Nova Scotia or northern New York. By temperament he was a naturalist, though an untrained one, enthusiastic in his love for wild things, deeply interested in ethnology, a lover of books, and ardently attached to the freedom of outdoor life. Indeed, his whole mental attitude was one of good natured hostility to the restraints of civilization, and he was never so happy as when in camp among the mountains, or by some lake shore. Next to that, he chiefly enjoyed sitting in his den, surrounded by collections gathered from many lands, and discussing with some intimate friend problems in natural history or ethnology, or memories of bygone days of freedom.

Mr. Phillips was a man of singular modesty. Although he wrote not a little, his writing was always unsigned; and though he labored long and earnestly for the public good, he preferred that his efforts should not be known, and that others should receive the credit for what he did.

Four years ago this month, on the occasion of the passage by Congress in 1894 of the bill providing a government for the National Park, the FOREST AND STREAM said of him:

"There is in Washington another person—a private citizen—who for many years has labored heart and soul for the best interests of the National Park. He has traveled backward and forward over it, has reported on it to the Secretary of the Interior, has watched legislation which threatened to affect it, and has contributed his legal knowledge to every movement for its preservation. It is not too much to say that he has done more than anyone else has done—and perhaps more than anyone could have done—toward bringing about the happy result that we announce to-day. This person desires to remain unknown; yet the few individuals who are acquainted with the facts and who know how great is the debt of gratitude owed him by the public, feel a sincere regret that they are not at liberty to make public acknowledgment of his services to the Park and to his countrymen."

Death has removed the prohibition, imposed by his modesty, which forbade us to speak with due praise of the services which he rendered to the National Park, and so to the people to whom that Park belonged. It is as the earnest and successful worker in behalf of the Park that we believe he would most desire to be remembered, and it is certain that the great services which he has performed for it are his most fitting memorial.

To make this recognition of such public services is here his due; and yet there are many, very many, who will long remember William Hallett Phillips, not for anything that he ever did, but just for what he was—because they loved him.

THE MINNESOTA TAG SYSTEM.

IF some ancient Rip Van Winkle of a hunter should about this time awaken from his long sleep and come down from the mountains to rub his eyes in amaze at the new order of things confronting him, he would find abundant occasion of wonder and bewilderment at the changed game conditions; and the probabilities are that when he comprehended them the first impulse would be to throw away his rusty old gun in disgust, for he would find that the game was not what it was when he went to sleep, nor the freedom of its pursuit such as he had enjoyed when the indulgence of his hunting instincts had lured him away to the Catskills.

We are making tremendous strides in the way of shooting and fishing restrictions. Things have already come to such a pass in some sections that we may not go hunting without a license, nor be guided in our hunting except by licensed guides, nor kill more than a certain amount of game or fish, nor, having killed it, make any disposition of it save as the law directs with reference to transportation, possession and disposal.

A new and interesting feature of what may be termed advanced game protection has just been incorporated in the game law of Minnesota, in certain provisions respecting the keeping of game in the close season. The Commissioners tell us that they have found opposition to the provision forbidding the possession of game in the close season on the part of persons who, having killed their game lawfully or having lawfully acquired it in the open season, have demanded the privilege of keeping it for their own use for such length of time as they might desire. The privilege is, of course, a perfectly reasonable one, and is never denied on any other ground than that to yield it would be to weaken the efficiency of game protection. Here in Minnesota Executive Agent Fullerton has devised a modification of the law, which removes from it this objectionable feature.

The foundation for the absolute control of its game by the State is laid in a special provision, which makes this statutory declaration:

SEC. 9. No person shall at any time or in any manner acquire any property in or subject to his dominion or control, any of the birds, animals or fish within this State of the kinds herein mentioned, but they shall always and under all circumstances be and remain the property of this State. By killing, catching or taking the same, however, in the manner and for the purposes herein authorized, and during the periods when their killing is not herein prohibited, the same may be used at the time, in the manner and for the purposes herein expressly authorized, but not otherwise; and whenever any person kills, catches, takes, ships or has in his possession, or under control, any of the birds, animals or fish mentioned in this act at a time or in a manner prohibited by this act, such person shall thereby forfeit and lose all his right to the use and possession of such bird, animal or fish, and the State shall be entitled to the sole possession thereof.

This reservation is so explicit, broad and comprehensive as to prepare the way for any restriction, no matter how stringent. It effectually denies, does away with and nullifies the "natural rights" claims of those who contend that they are endowed by nature or by the Creator with an inborn and inalienable right to do whatever they please to, by, for and with game and fish.

Having thus declared to be a privilege the taking and use of game, the statute prescribes seasons and methods of capture and use, and provides that persons who desire to keep any of the birds or animals mentioned in the law beyond the time named for their possession, which is five days after the close of the open season for killing, may do so upon the following conditions.

Sworn application in writing must be made to the Commission, giving the name and residence of the person in possession of the game, and stating the character and amount of the game, which shall not exceed 100 birds, five deer, one moose and one caribou for each applicant, and the applicant must bind himself to keep possession of the game for his own use and not to ship or sell or otherwise dispose of it.

Upon the receipt of such application if the Commissioners are satisfied that it is made in good faith, and that the applicant will keep the game for his own use and not for sale, they may issue official tags or seals to be attached to each bird or animal, and after such tags or seals have been attached to the game it may be retained in possession until consumed. A penalty is provided for any person who having in possession any tagged or sealed game, shall ship, sell or dispose of it in violation of the law.

There is reason to believe that in this law will be found a remedy for the dissatisfaction which has been encountered among those who have regarded it as a hardship that they could not keep for any period of time they desired the game honestly come by. We shall watch with much interest the working of the law. It is only carrying to a further development the provisions which require the tagging of game for tranportation and exportation.

SNAP SHOTS.

ON Monday last Governor Black signed the Ives bill, which changes the deer season for New York State, making it now from Aug. 15 to Nov. 15, and prohibits, for five years from June 1 next, the use of jack lights and of hounds in the pursuit of deer. The credit for the passage of this law is largely due to the enthusiastic and unceasing labors of Mr. Madison Grant, Chairman of the Committee on Game Legislation of the Boone and Crockett Club. For several years, as Chairman of this Committee, Mr. Grant has devoted much time and energy to pushing the work in question, and his final success is a great satisfaction to him and to all who are interested in game protection. In the Senate, Mr. Malby, and in the Assembly, Messrs. Sanger, Ives, Laimbeer and Hobbie, deserve credit for the assistance they have given in bringing about the good results. The enforcement of the new law will undoubtedly result in so great an increase among the deer of the Adirondack region that at the expiration of the five years term there will probably be only one opinion about the desirability of making this prohibition permanent. The State of New York has long been far behind the times so far as legislatien with regard to deer is concerned. It is gratifying to note that at last the Empire State has taken a step forward in this matter, even though it still lags far behind in permitting the sale of game at all seasons of the year.

By courtesy of Acting Chief T. S. Palmer, of the Biological Survey, we print, from advance sheets of the Yearbook of the Department of Agriculture, his article on the "Extermination of Noxious Animals by Bounties." The paper is the result of systematic and extended investigation, and presents an interesting and instructive chapter in the long warfare of mankind against harmful species of wild life. The facts and figures collected demonstrate the futility of bounty systems to do more than check, at enormous cost, the ravages of beasts and birds. Incidentally, in its account of the frauds perpetrated in claiming bounties, the paper gives us an amusing, or melancholy, insight into the frailties of human nature.

It is abominable that the anglers of the State should so often be put in suspense at the annual adjournment of a legislature as to fishing seasons. This year it is the black bass date. The present law opens the season on May 30; a bill passed by the Legislature makes the date June 30. The disposition of the measure by Governor Black is at this writing unknown. Meanwhile there is no making of plans for Decoration Day fishing.

The Sportsman Tourist.

FISHING IN BRITISH HONDURAS.

Camp, Puruni River, British Guiana.—*Editor Forest and Stream:* Many a long day has elapsed since I last sat down to tell the story of my adventures "by flood and field" for the delectation of your readers. "Story, God bless you, I had none to tell, sir." My last chronicles were of ouananiche fishing in the Lake St. John region; then not so well known as now, for it must be seven or eight years ago. On that excursion I made a false step in life which probably was not on the record. I tried to make a stepping-stone of a slippery-headed boulder; fell, and tore my "tendon Achilles" away from its bony attachment, severing it almost completely. The springy step which had carried me over many a mountain pass and up many a craggy cliff in pursuit of the chamois or the mountain sheep was gone, never to return. I turned my back on forest glade and bubbling stream, and for many a long day the solemn stillness of the one and the ever varying music of the other became as dreams of a forgotten past. But the whirligig of time brings its revolutions; the man born with the restless Arab foot cannot be long chained by any circumstances to one place, and now behold me in a land that is all forest and stream, or which at least has more forest and stream to the square mile than any land on which it had ever previously been my lot to set foot. Noble streams they are, too, these mighty rivers of British Guiana—the Essequibo, the Mazaruni and the Cayuni, flowing respectively from southwest and north to mingle their floods at the little settlement of Bartica, where the tide comes up some forty miles from the sea, to meet and escort them to the embrace of old ocean. There are other rivers to the south—the Corentya, the Berbice, the Demerara—to say nothing of the Barima and the Barama in the disputed northwest territory; but I wot not of these: my experiences hitherto have been confined to the lordly Essequibo below the junction of the three rivers, the picturesque Mazaruni, and its tributary, the Puruni. These are rivers to tell about, for there are fish in their waters, game fish, too, that rise readily to the fly, and pull and wriggle and plunge to get away with him, or even spring into the air and wrestle with him in his own element, as is the manner of the black bass, all so graphically and philosophically explained by Alice Demorest in your columns a few months ago. I cannot yet claim more than a bowing acquaintance with these rivers and their finny denizens, but the first acquaintance promises well for future opportunities, and if any idle fisherman among your readers is pining for fresh pastures or new worlds to conquer, to him I say, pack up your rod and gun and come and enjoy a summer outing here in a climate which, report says, is fever-laden, but which certainly is a very enjoyable one—rather hot in an open boat between 11 and 3, mornings and evenings delightful, and the nights cool enough to render a blanket a necessity—while for the hunter, the forest shade is always cool and pleasant to stroll through at midday. Let them come when he will, it is always summer here.

I stayed a few weeks in Georgetown, one of the most picturesque little cities in the world, for it was laid out in the days when sugar was king and the prosperous planters voted the State money liberally. Here I made the acquaintance of Mr. W., a gentleman who kindly invited me to go up with him and spend a few weeks at his camp on the Puruni, to which district he had just been appointed as gold warden. A temporary engagement prevented my accompanying him, but I promised to join him a few weeks later; and as soon as I was free I secured passage in an open boat. This boat had been chartered by an intelligent colored man who holds a gold placer claim on the Puruni, and was laden with a dozen men and supplies. These twelve men did the paddling, as is usual, the boat owner finding only captain and bowman, who must be certificated men; for the river, which is about three miles wide, is full of islands, which cut it up into innumerable channels, a knowledge of which is essential to safe navigation. Falls of 2 or 3ft. are frequent, and rapids regular features of the day's course. The forest along the water's edge is generally so dense and tangled as to be impenetrable to man without the aid of axe and cutlass. Gliding between these islands in the lower river, the water is sometimes so smooth that the eye loses all sight of it; the forest grows upward and downward from an invisible line, every leaf and twig being as distinctly outlined below as above. Quaint figures are frequently produced by fallen trees bending into the water, by buttresses of big trees at the water's edge, and by granite blocks rising out of the water. Their outlines are so perfectly reproduced, inverted, below water, that more or less regular geometric figures result.

It was near noon when we left Bartua, and there was no intention on the part of captain or crew to do much work that day. We went off with a good stroke, the men keeping time to the music of their quaint song; but a heavy shower, which lasted half an hour, soon dampened their ardor. The captain and bowman plied the rum bottle, and sang and joked boisterously. These river men are for the most part "Roviander" (the men from above yonder), a people who originated from the sojourn of the early Dutch settlers among the Indians. They are an energetic, daring, mirthful and passionate race, but splendid boatmen for these waters. We made only six or seven miles that day, camping before 4 o'clock; but the next day all was changed. Captain and boatmen were at their posts, sober as judges on the bench, and alert as became men conscious of their responsibilities; for we were approaching the first rapids, and although they do not look very formidable, boats with their cargoes are not infrequently lost. At such places the boat, generally aided by an eddy current, is pulled under the lee of a rock, when the men jump overboard with the ropes, wade through the shallows, and drag the boat over the difficulty. Progress is very slow; the course actually gone over may be ten or twelve miles day, but it is so devious that the actual advance amounts to no more than from five to eight miles. There are stretches of sluggish waters between the rapids, and the camping ground, whether at midday or at night, was generally at such places. The boatmen usually fished at night, baiting with pork or dough; but there was no temptation for the fisherman to cast his fly upon the waters.

The rapids, with their accompanying whirlpools and eddies, appeared the very ideal resort of fish; the water, although tinted, was clear as crystal, but not quite as cool as it looked. I put my rod together the third day, and occasionally, when we were going through rapids, I got out and made a few casts from the rocks; but as soon as I had taken up position the men with the tow-line were generally upon me, so I did not get a rise. But on Saturday we came early in the afternoon to the worst rapids of the voyage—3ft. of sheer fall, and 4ft. more in the rapids of the next 100yds. The boat had to be discharged; and here we made camp for the night, and in fact for the following day, for there is no traveling on Sunday. There was good fishing water all around, and I began operations by bending on an artificial minnow. In a short time I had on a good fish, and let him run away with a dozen yards or so of line; but I soon had him in hand, when two or three men rushed at the line to lend me a hand. I called them off pretty peremptorily, and in a few minutes there lay at my feet a fine specimen of a 3lb. trout—a genuine "spotted beauty." The surprise must have been mutual; his that the little minnow had such a big pull, mine to see a *Salmo fontinalis* in these Southern and not very cool waters. I have made no study of ichtyology, but the general outline of the fish; the great gaping, toothless jaws; the pure white throat, with the dark spots on a lighter ground, left me no doubt that he was a genuine *Salmo*. The only divergence from type I noticed was in the caudal fin, which terminated in a convex outline, which is, I believe, a rare exception in *Salmo*. But the most striking characteristic of my catch was the sun-spots, to which he owes his local name of sunfish. There are three of these spots on each side, one at the shoulders, one above the tail and one midway between. They are from ½in. to ⅝in. in diameter, and consist of three black bars inclosed in an imperfect circle of most brilliant yellow gold. I landed three of these, all about the same size, and then brought ashore a 5-pounder, which, like the others, had the sun-spots, but wanted the spots of the *S. fontinalis*. Sides and belly were a soft golden orange, which, bright though it was, detracted nothing from the brilliancy of the sun-spots. He resembled the salmon trout (*Lachs forellen*) of German waters. After a while I hooked another, but the line had taken a turn around the top of my rod, and, as I struck, the butt, which was of Himmalayan ash, cut twenty years ago, snapped off below the ferrule. I caught up the next joint before the fish had time to run away with it, and "giving him the butt" kept a steady strain upon him until his pull relaxed, and I was able to guide him into a little shallow pool in the rock. As he passed the entrance, I saw that he was just a duplicate of my preceding catch. There was no good landing place from the pool, and I had no net, so I let a couple of fellows go in to catch him, telling them not to touch the line. But the fish was in luck; he slipped the hook and got back into deep water.

It was now evening and I left off with the confidence that there was good fly-fishing before me on the morrow. I was down at the water side as soon as early breakfast was disposed of, and with a silver doctor and a coachman on my cast commenced operations. My first catch was a golden-scaled 5-pounder, my next a spotted 4-pounder. The fish were not rising greedily, but by 10 o'clock I had a basket of five weighing 18 or 20lbs., and left off at that. In the evening I went down again for a couple of hours, but did not get a rise.

The next day we camped for breakfast (11 A. M. to 1 P. M.) at some very pretty fishing water, and after breakfast I went out to try a cast. In about ten minutes I struck a fish which went away with a vigorous pull, and I estimated that he was a 6-pounder at least. I turned him and brought him half way back when he was off for a second run. I then reeled him in and brought him, fighting hard, to within 30ft. of shore, when he showed me a broad silver side, and I knew that he was no Salmo. He was a 3½lb. kata-back, and made a stouter fight than the biggest of my salmonoida. He had sharp teeth, but was hooked in the lip and failed to get hold of the gut. This fish is very much esteemed and is certainly excellent eating, so I have no hesitation in ranking him as a game fish—length to base of tail fin, 13in.; depth from back to belly, 8½in.

We made our destination the next day and there was no more fishing on the trip, and the Puruni is for the most part sluggish water near the camp, which stands on a hill about 50ft. above the granite ledge which forms the landing place. There are, however, some rocks in midstream a little lower down stream, and here I have occasionally cast a fly. On one occasion I took a 13oz. sunfish which somewhat shook my confidence in my classification of the family as Salmonoida. His dorsal fin was armed with stout, sharp-pointed spines, the first three or four of which rose 3in. above the hinder part of the jaw. He had the sun spots, but they were lackluster, due probably to the minerals in the water. He was spotted, but with white spots on a dark ground. He gave a good fight, twice jumping a yard at least out of water, and would have doubtless repeated the performance if I had continued to play with him, and this perhaps drew my attention to his resemblance to a black bass. As far as I can learn no icthyologist of note has investigated our river fish, and a great many of them remain unclassified.

Finally, to conclude my short fishing experiences here, I have been introduced to one other fish whose acquaintance I desire to drop in future. This is the perai, a creature which although not more than 3 or 4lbs. weight, is as powerful and savage as a bull dog. It is said that they are known to have taken a piece out of the leg of a man while bathing, and I am sure I have no reason to doubt it. They frequent the rock under the camp, and have cost me many a fly. A few days ago I hooked a small one, 1½lbs., in the nose, and brought him ashore. I held him up with his tail touching the rock, passed the rod to my left hand, took my captive under the gills, and was about to walk home with him when I found that my line was caught in a branch close to me. I passed my left hand across my right to free it, and as I did so I felt a nip in the arm. I thought nothing of it and walked up to the camp, but when I reached there I found a stream of blood trickling down my arm and numerous big stripes on my pants. Removing my coat, I found a piece of flesh cut out as clean as if it had been done with sharp steel nippers, and just dangling by a mere thread of skin. I washed the wound, put the flesh back in place and bandaged it tightly with a handkerchief steeped in vinegar. I used four such bandages in the course of an hour and failed to stop the bleeding. Then I remembered that my host, who was absent, had a vial of Fryar's balsam in his medicine chest. I applied that and soon stopped the bleeding. These fish keep in sluggish waters, generally lurking in some bed of river weed or under the branches of fallen trees.

C. F. Amery.

A STORY OF A MAINE STREAM.

It all happened on the banks of a wood-locked stream in southeastern Maine, still a woodsman's mecca, eighty miles from a summer hotel and two hundred from a $3-a-day guide.

Fifty square miles of "nature's own," which is as all Maine was once, where one can smoke his pipe out and see no stranger's shadow in his camp-fire light for weeks at a time if he so wishes it. I have hesitated long before unburdening myself of this tale, for a reputation for veracity is long in the making and short in the undoing. If any good woodsmen have passed through a similar experience they will stand behind me and we will face together the world of scoffers and M. A.'s and Ph. D's of physcology *et. al.* who say that the dumb brutes have no reason.

It was at the end of our first week in camp, a camp composed of one long, lean Californian, the most genial, big-hearted gentleman that it has ever been my good fortune to share blankets with, who has cast a fly in almost every ripple on the slope of the Sierras; little Tommy, the guide, whom we paid $1.75 per day, and who can cook as well and who will work harder than any two "experienced guides;" and last myself. One might observe a certain "soreness" in the above paragragh. There is soreness, and I never see a gentleman place himself at the mercy of a "latter day" guide but I offer up prayers for his family, who must stint themselves at home, forbear from all fall hats and he, his winter overcoat, to square himself after his experience. No class of men are so unreasonably paid. A lumberman's wage is never over $1.50 per day. Another man who comes of this class, whose work is not disagreeable, but more of a pleasure if he be a true woodsman, as he should be, and his wages amount to 50 cents or $1 more than an experienced mechanic or machinist who has served five or ten years of his life in acquiring that name. There is a spot reserved for the man who first paid his guide $3.50 a day.

The sun was tipping the firs, the Californian was just landing his tenth trout and I was handling the net, when Tommy, who was pitching the canoe, said, "Down, quick!" and we all dropped in the meadow grass. Following the direction of the pointing finger, we saw a deer—a two-year-old doe—coming up the center of the stream. She was 200ft. away and had not scented us. It was close season; we had no desire for meat, much less a doe, but the curiosity to see how close one can get to a wild creature which is always stronger in me than the desire for killing made us burrow deep into the grass and watch. She came slowly on, wading the shallow places and swimming the pools, apparently listening for some expected sound. When she stood on the end of the point we were on, not 15ft. away from the Californian, he snickered. That tickled his throat, then he coughed, and she looked down. There was a wild spring straight into our trout pool, a scramble on the opposite bank, and she was gone. I swore at the Californian. He said he caught sight of me and my mouth was full of grass, and he could not help it. He is the kind of a man who would find some humor in the eye of a six-shooter.

Fishing was out of the question now, so Tommy went back in the shade to boil the kettle and the long man took off his reel. Suddenly a black object broke cover just across the stream from us, a mongrel cur, half hound and half bull dog, and the mystery was explained. The doe had taken to the water to free herself from the dog, and he had been following the bank to find her landing-place. I was tempted to shoot, for the Maine law protects any one who kills a deerhound at any season of the year. This was an especially unpardonable case, for it was still warm weather and any one could have still-hunted his deer. We had seen seventeen since pitching camp. We all called but the animal had found the track, and was away and out of sight. We could hear him going around Fifth Lake Mountain "in full cry." The Californian said something much to the point, about the owner of that dog, and then we went over to where the kettle was boiling. The baying gradually grew fainter, died away, and then suddenly broke out on the east side of the mountain, coming toward us. I dropped my plate and took a shotgun and went over to the stream. The dog came on toward us.

A few minutes later there was a splash—two of them—in the bend above us, and round the point came the doe swimming—about gone—with the dog on her back. It was a sight to cause any true lover of the woods to boil over and run down the sides. I could not shoot for fear of hitting the deer. When she saw me she came as straight as possible to where I was standing in the shallow water, came so close that I knocked the dog off her back with the butt of my gun. The beast showed his bull dog blood, for he came for her throat harder than ever. I shot at the end of his tail, but missed, he being too close to me. He made for the bank, and then came my opportunity—it was duck shot. I would have given a week's campin' for buck shot, for then I would have made sure of him. He disappeared in the brush, traveling hard. And all this time, during the shooting and shouting, that deer stood 5ft. away from me, knee-deep in the water, with the most appealing look in its eyes that man could imagine.

Let all the gray-haired Ph. D.'s of Christendom hold forth, but if that look was not one grand, last appeal for mercy, then I be no judge of the soul in my eyes. Tommy came up and we drove her to the bank. She had been bitten several times on the hip. Speaking softly, we approached, stroked her neck, examined the wounds and found them only flesh cuts and nearly through bleeding. She showed no signs of fear, listening always and ever, in a tired and hunted way, for the sound of the hounds. Then the Californian took off his coat, got up on a stump and delivered a lecture on the inhumanity of hounding deer. He talked for ten minutes, and if the Solons of New York State had been there I am sure that all the money of the Adirondack region could not have prevented the passage of a bill to prohibit hounding now and forever.

As we got into the canoe to go down stream the doe took two steps out on the point toward us and remained a lone and solitary figure until we rounded the bend below.

William Todd.

Natural History.

THE FATE OF SOME CARRIER PIGEONS.

MR. R. B. POTTER has recently presented to the American Museum of Natural History the materials for a duck hawk group, consisting of an adult female and three downy young, together with the debris of the nesting site. The latter consists of various loose twigs and sticks, perhaps accidentally present, and the remains of the prey brought for the sustenance of the young birds. This includes feathers of the bluejay, grackle, flicker, robin and other birds, the foot of a woodcock and the feet of blackbirds and pigeons. An examination of this material revealed the presence of the feet of seven carrier pigeons, still retaining the little metal rings bearing the marks of former ownership. These may be transcribed as follows:

9970—S	EX. 705
16 96	6—1894
⊟63.77	C—20900
J. F. 52.	

Should these lines chance to meet the eye of any of the former owners of these birds, it would be of interest if they would report where and when the birds were last seen.

The duck hawk's nest was from the well-known breeding locality of this species: on the Palisades of the Lower Hudson, near Englewood, and was taken April 27.

We have here interesting evidence of the ability of the duck hawk to capture the swiftest-flying prey, his destructiveness to carrier pigeons, and doubtless of domestic pigeons in general, and the variety of his victims. J. A. ALLEN.

AMERICAN MUSEUM OF NATURAL HISTORY, New York City.

Mr. E. W. Bullinger, of this city, reports that at his home in Riverside, Conn., he has a strayed carrier pigeon, which is subject to the owner's order, upon giving its letter and number.

THE WEIRD SONG OF THE WOODCOCK.

ONTARIO, Canada.—*Editor Forest and Stream:* I fully endorse the remarks of your correspondent Mr. Geo. W. Dearborn in FOREST AND STREAM, March 20, concerning the woodcock's whistle, and will supplement them by a few more. When a party of us have been shooting woodcock in the moulting season, a time when the birds are not inclined to move about much, we oftentimes have remarked to each other, "those birds, owing to their slow flight, make no whistle when getting up, and as a consequence are out of sight before you can shoot at them," all being satisfied that the whistle was produced by the wings.

The lowly revolving saw emits no sound; the rapidly revolving one, the buzzing sound with which we are familiar. The slowly-flying woodcock makes no sound; the swiftly-flying one, the whistle which every sportsman loves to hear. Both sounds are due to rapid motion; the one to the rapid revolutions, the other to the swiftly-moving wings.

Another peculiarity of the woodcock which I have not seen mentioned in FOREST AND STREAM is its beautiful song while mating.

I will endeavor to describe it. The woodcock generally selects for this purpose a field bordering on a swamp, having in it a few scattered trees and bushes. The song begins in the gloaming, and is continued at intervals until near daylight. It is always prefaced by a sound similar to the word pāte (the a long) uttered by the bird on the ground, at intervals of perhaps a quarter of a minute. Then it rises in rapid flight at an angle of about 45°, the whistling sound being distinctly heard—until almost out of sight, when it stops its upward flight, and with a slow flapping of the wings begins its beautiful song, which at that elevation is plainly heard, describing at the same time a large circle. At the completion of the large circle the bird begins to descend, describing in its descent a series of concentric circles, each circle being smaller than the one above it; the beautiful song and the flapping of the wings being continued until within a short distance of the earth, when they cease, and with a sudden dart the bird alights on the ground, immediately uttering its pāte, pāte, pāte, as at the beginning of the song. The pāte, pāte is continued for a short time, when the aerial flight is again begun, and the song repeated as before.

The midnight hour, the pale moonlight streaming through the larger trees, the weird surroundings, the ethereal music of this bird, interrupted at times by the singing of the frogs, the cry of the night hawk or the whippoorwill, or perchance the drumming of the pheasant, form a combination of circumstances never to be forgotten by one who has experienced them. WILLIAM HOLLIDAY.

LOCKED MOOSE ANTLERS.

My brother, Mr. Frederick A. Cheney, made a visit to Ontario, Can., last year, and upon his return told me of some locked moose antlers, mounted, in the office of the Director of the Bureau of Mines, Mr. Blue, in Toronto.

I was so interested in what he said of the antlers that I wrote to Mr. Blue about them, and in reply received the following letter from Mr. Thomas W. Gibson, secretary for Parks of the Province:

"These antlers were taken from the heads of two bull moose, whose bodies were found in May, 1895, on the bank of a stream in the Algonquin National Park of Ontario. The animals had apparently engaged in a struggle during the rutting season of 1894, in the course of which their horns became interlocked to such a degree that it was impossible for them to extricate themselves. The ground on which the conflict took place was a steep bank overlooking the stream. After entangling themselves in this manner, the unfortunate combatants tumbled down to the edge of the water and lay there, unable to rise, until they died from exhaustion. Their carcasses were found in a good state of preservation when the snow disappeared the following spring, one lying in the water and the other on the bank; and two of the park rangers, who came across them, removed the heads, the horns still being firmly locked together. As they had only a canoe with them, and the place was far from headquarters, they cut off the antlers, leaving attached to them only the frontal bone on each skull. They have since been mounted and hang in Mr. Blue's office. I send you a photograph taken in the Park; it will show the manner in which the horns were interlocked. The lock is a very strong one even now, when the antlers have dried out. It bears mute evidence to the strength of these animals and the terrific shock of their combat. One pair of the antlers measures 35½in. from tip to tip, and the other 31½."

FOREST AND STREAM has reproduced this photograph in this issue of the paper, but my brother says the photograph fails to convey what the horns themselves do of the might of two bull moose fighting to their death.

A Pointing Horse.

Just about the time the ice was breaking up in Lake Champlain I was coming down on the Champlain Division of the D. & H. R. R., and my companion in the smoking car was Senator George Chaboon, member of the State Senate Committee on Forest, Fish and Game Laws. At one point he glanced out of the window and remarked that the mergansers had arrived, and then told me that the female mergansers remained about the lake all winter, while the males migrated in the fall only to return in the spring. This was new to me. A few days later I met the Senator in Albany as we were both making a social call, and the conversation turned to game and shooting, and he told our hostess that he had a pointing horse that was as reliable as a pointing dog, although the horse pointed by sight instead of by scent. It seems that in the fall, in driving about the woods, he carries

LOCKED MOOSE ANTLERS.

a gun in his buggy to shoot such partridges as he may come across. The first time he shot over this horse the animal was badly frightened, and instead of running simply sat back in the breeching, crouching near the ground on his hind quarters, and trembled at the noise of the explosion. This became a habit, until now, no longer frightened at the sound of the gun, he appears to be on the watch for birds and often discovers one before his master sees it, and at once sits back in the breeching and comes to a dead stand until Senator Chahoon shoots, when the horse resumes his normal upright position and goes on till he sees another bird. I told the Senator he should call his horse a setter instead of a pointer and perhaps he will accept the amendment.

EXTERMINATION OF NOXIOUS ANIMALS BY BOUNTIES.

BY T. S. PALMER.

First Assistant, Biological Survey, U. S. Department of Agriculture.

THE payment of rewards or bounties for killing noxious animals is not a new idea. This method of extermination was adopted by the colonies of Massachusetts and Virginia before the middle of the seventeenth century, and has been continued ever since, but neither the results nor the cost of such legislation seem to be generally known. Bounty laws have been passed by nearly every State and Territory, and in 1895 were still in force in about thirty States and in six of the Canadian provinces. The expenditures have increased in the last decade, and more than $3,000,000 have been spent during the last twenty-five years. Since the burden of the expense falls on the community at large, while the benefit is restricted to a comparatively small class, the question naturally arises as to how far the method has been successful, and whether the results warrant its continuance.

The Demand for Bounty.

More than a score of animals in the United States are considered sufficiently injurious to require radical measures for their extermination. Wolves, coyotes, panthers, bears and lynxes are very destructive, but perhaps do not cause greater loss than ground squirrels, pocket gophers, rabbits and woodchucks. A few birds also, such as blackbirds, crows, English sparrows, hawks and owls, are sometimes included in the category of noxious species. The most plausible and persistent demands for protection from the depredations of wild animals have come from owners of sheep and cattle, and many of the bounty laws have been enacted ostensibly to encourage sheep raising. No doubt this industry has many claims for this protection, but it may be noted that the most urgent demand for bounties in the West have come, not from the farmers or owners of small flocks, but from cattle and sheep men whose immense herds and flocks are pastured on Government land, and who claim that the cost of protecting their herds and flocks should be borne by the county or State. In some regions the losses on account of wolves and coyotes are so serious as to threaten the success of the sheep industry.

It was estimated in 1892 that in New Mexico, where the sheep were valued at $4,556,000, such losses varied from 3 to 7 per cent.; in Nebraska the value of sheep was about $2,000,000, while the losses amounted to 5 per cent., or $100,000; and sheep owners in central Texas suffered losses on account of wild animals to the extent of 10 to 25 per cent.* Farmers, too, have just cause for complaint. In eastern Washington the grain fields and orchards are damaged every year by ground squirrels to the extent of hundreds of thousands of dollars, and the losses are scarcely less in some parts of California, Montana and North Dakota, while in most of the Western States orchardists and vineyardists suffer from the depredations of rabbits and pocket gophers.

The value of bounties is not admitted by all, and those who are supposed to be the most benefited by them are often the ones who complain most of the failure of the laws and the lack of real protection which they afford. Just previous to the passage of the present bounty law in Iowa a prominent sheep owner of Grinnell stated that it was impossible to raise sheep in some parts of the State on account of the wolves, and he attributed the unsatisfactory conditions to the low rates and unequal bounties

Any scheme intended to bring about the extermination of a species must fulfill certain conditions before it can prove successful in practice: (1) It must be applied over a wide area practically covering the range of the species, otherwise the animals will increase in the unprotected region; (2) it should be uniform (*i. e.*, the rates should be the same) in all localities; (3) it should provide some inducement for carrying out its provisions; (4) it should be economical, for if expensive, the cost will exceed the losses which it seeks to avert; (5) it should provide so far as possible against fraud or the misappropriation of public funds. In order to see how far bounties have met these requirements, it will be necessary to review briefly the history of this legislation and to note the operation of some of the recent laws.

Under the bounty system a fixed sum is offered for each animal, and the reward is paid to the claimant upon delivery of the skin or scalp. The amount of money which an individual may receive therefore depends entirely on his own efforts or on the condition of the public funds. It is urged in support of this method that the State or county pays only for the animals actually killed, and that it suffers no other expense, as the rewards are drawn from regular funds of the county and are disbursed by county officers oftentimes without additional compensation. It is sometimes claimed that this inducement to capture animals furnishes employment to men and boys who do not desire or cannot get other work, and are thus encouraged to labor for the benefit of the community, and that by increasing the rewards the extermination can be hastened whenever necessary.

Simple and economical as this method appears theoretically, it has proved extremely unsatisfactory and very costly in practice, and the mere fact that between 300 and 400 laws have been enacted in the United States would seem to show that bounties have not accomplished all that was expected of them.

History of Bounty Legislation in the United States

The first laws providing rewards for the destruction of wild animals seem to have been passed in Massachusetts about 1630, and in Virginia about 1632. Bounty legislation has therefore extended over more than two centuries and a half—a sufficient length of time, it would seem, to test its merits or defects. But so little attention has been paid to the matter that almost every State has been compelled to experiment for itself, instead of profiting by the experience of others, and has learned the limitations of the method only after spending thousands of dollars.

The history of bounty legislation may be conveniently divided into three periods: (1) From 1630-1775; (2) from 1776-1865; (3) from 1866-1895 These three periods are unequal in length (146, 90 and 30 years), but the payments during the last period probably exceed those of the other two combined, although the number of years is only one-eighth as great. This is not due entirely to higher rates in recent years, for the payments in Maine between 1830 and 1865 were almost exactly the same as those from 1866 to 1895.

During the colonial period bounties were confined mainly to wolves, and in Virginia for more than a century and a half the rewards were paid in tobacco, which was the usual medium of exchange in that colony. The general bounties were supplemented by special rewards paid by the counties, and the Indians were encouraged to aid in the work of extermination. In some of the colonies, crows, squirrels and blackbirds caused so much damage that rewards were offered for their scalps, and in South Carolina means were taken to protect the planters from the depredations of rice birds. The necessity for such protection was quaintly expressed in the act of 1695, as follows:

Whereas, The planters of this province do yearly suffer considerable damage by birds and beasts of prey in their stocks and crops, whereby, notwithstanding their continual care, they are impoverished and discouraged, be it enacted * * * that every person or persons who shall kill and destroy the small blackbirds and rice birds shall receive half a royall per dozen; and for crows, jackdaws and larks, shall receive one royall and a half per dozen.

From 1776 to 1865 numerous laws were passed in the original thirteen States, and the bounty system was extended over most of the territory east of the Mississippi River. Most of the rewards were paid for wolves, and the work of extermination, begun in Ohio and Kentucky in 1795, extended gradually westward to Missouri, Iowa and Nebraska, and even to Washington.

As time went on and the country gradually became settled, attention was paid to getting rid of other animals, such as bears, panthers, wildcats and foxes. In New England great numbers of crows were killed, particularly in Maine and New Hampshire, and in the latter State the killing of hawks was encouraged at the expense of the public treasury. With the beginning of the war more important matters claimed the attention of legislators, and in most of the States little thought was given to bounties on wild animals.

Since 1866 bounty laws have been passed in increasing numbers by nearly all the States and Territories. With the development of the West and the increase in cattle and sheep raising, the necessity for exterminating wolves and coyotes has become more apparent. Immense numbers of these animals have been killed in Montana, North Dakota, South Dakota, Wyoming and Colorado; but they still seem to be very numerous. Several States have also offered premiums for foxes, wildcats, minks, and even weasels. The success of the sheep men in their warfare against predatory animals encouraged the farmers of the Mississippi Valley and the Great Plains region to demand appropriations from State and county treasuries for killing ground squirrels, gophers, and rabbits. This legislation has proved not only ineffective, but extremely expensive. The experiment has been tried in Minnesota, Montana, California and North Dakota, and in each case the result has been disastrous to the treasury; in fact, no State thus far has been able to pay a general bounty on ground squirrels and gophers for any length of time.

Bounties on birds, which were by no means uncommon in colonial times, have recently been revived in several States. Since 1875 an unusual interest has been manifested in the extermination of hawks and owls, notwithstanding the fact that it has been demonstrated that most of these birds are actually beneficial instead of injurious. Hawk laws were passed in Delaware, New Hampshire, Pennsylvania, Colo-

* Heath, Special Report on Sheep Industry in the United States, 1892.

rado, Indiana, Ohio, Maryland, Virginia and West Virginia. The law in New Hampshire was repealed in 1881, after being in force for four years, but was again revived in 1893; the bounty in Colorado remained in force eight years, while the Pennsylvania "scalp act" was enforced only a year and a half, costing the State about $90,000 for birds of prey alone. The extermination of crows was encouraged in New Hampshire from 1881 to 1883, and in Maine from 1889 to 1891. In the latter State 50,707 crows were killed at an expense of a little over $5,000. Illinois and Michigan have turned their attention to the English sparrow. Three acts have been passed in Michigan since 1887, and have cost the State $61,800, while the law in Illinois, enacted in 1891, has involved an expenditure of $55,600. Premiums for birds are perhaps the most pernicious of all bounties. Dr. C. Hart Merriam has estimated that the poultry killed by hawks and owls in Pennsylvania in a year and a half would be worth $1,875. But every hawk and owl kills at least 1,000 mice in course of the year, and therefore, estimating the damage done by a mouse at 2 cents, each hawk and owl would save the farmer $20 per annum. In other words, the expenditure of $90,000 caused the destruction of birds worth $3,857,130 to save a possible loss of $1,875 to the poultry industry.* Although the crow is almost universally condemned, it is by no means certain that it is responsible for all the damage that is usually attributed to it. In fact, recent investigations by the Department of Agriculture show that the crow is rather more beneficial than injurious. The English sparrow is recognized everywhere as one of the greatest pests which could have been introduced into this country, but the offering of rewards for its destruction encourages the killing of native birds, which are indistinguishable from it to the unpracticed eye of the officer who pays the bounty.

Expense of the Bounty System.

In 1895 laws providing bounties on wild animals were in force in about thirty States of the Union, but with the exception of New Mexico and Texas, practically no rewards were offered in any of the States lying south of latitude 37°. North of this line bounty laws were in force in all the States except Massachusetts, Connecticut, Delaware, Indiana, and possibly West Virginia. In some cases the expenditures were small, but in Minnesota, Montana and Wyoming the expense was heavy.

It is extremely difficult to obtain accurate statistics regarding the cost of this legislation, owing to the fact that in some cases the rewards are paid from the State treasury, in others by counties. State bounties are usually included in the reports of the treasurer or auditor, but reports of county officers are seldom published in detail, and it is necessary to secure the data from the original records. When a change occurs in the office of county clerk or treasurer, the new incumbent frequently finds difficulty in unraveling the old accounts, and he may be entirely ignorant of an expenditure of thousands of dollars under his predecessor. Old records are sometimes inaccessible and sometimes burned, so that it is practically impossible to obtain returns for a series of years.

Reports of bounty payments during the last quarter of a century have been collected in detail from twenty-nine States. As shown in the following table, nearly $2,400,000 has been spent, but the returns are more or less incomplete from all the States except Maine, Michigan, Montana, Minnesota, New York and Wisconsin. No attempt has been made to secure statistics from twelve other States in which relatively small amounts have been paid, and it is safe to say that the total expenditures aggregate more than $3,000,000.

BOUNTIES PAID ON NOXIOUS ANIMALS AND BIRDS FROM 1871 TO 1895.

State or Territory.	Bounty paid.*	Total amount.	State or Territory.	Bounty paid.*	Total amount.
Arizona	1887–1895	†$10,000	New Mexico	1891–1895	$6,645
California	1886–1895	210,345	New York	1871–1895	41,330
Colorado	1889–1895	93,827	North Dakota	1886–1895	79,565
Idaho	1878–1895	46,591	Oregon	1885–1895	67,748
Illinois	1877–1895	89,566	Pennsylvania	1885–1887	†150,000
Indiana	1875–1895	22,600	Rhode Island	1893–1895	3,935
Iowa	1871–1895	156,484	South Dakota	1887–1895	40,777
Kansas	1875–1895	126,955	Texas	1891–1892	50,000
Maine	1871–1895	49,500	Utah	1888–1895	3,129
Michigan	1871–1895	80,774	Vermont	1881–1895	32,039

Missouri	1879–1895	†36,000	Wisconsin	1871–1895	†313,500
Montana	1883–1895	175,367	Wyoming	1885–1896‡	31,803
Nebraska	1881–1895	28,148			
Nevada	1885–1895	26,831	Total		$2,387,361
N. Hampshire	1874–1895	56,728			

* Short periods show the years for which returns are available and do not necessarily include the whole time bounties were in force, except in Arizona, Idaho, Montana, Nevada, New Mexico, Rhode Island and Utah.
† Estimated.
‡ To March 31.

The cost of a law depends of course on the length of time that it remains in force; but it is probable that any act which offers a sufficiently high premium to insure its enforcement will involve an expenditure of from $5,000 to $20,000 per annum. In the following table are given six of the most noted bounty laws passed during the last decade, and it will be seen that while all but one remained in force less than two years, the expenditures varied from $50,000 to nearly $200,000. Such an expense as this could not long be maintained by any State, and, with the exception of the Illinois sparrow act and the Montana bounty law of 1895, all the laws have been repealed.

PAYMENTS UNDER SIX RECENT BOUNTY LAWS.

State.	Act.	In force.*	Total bounty	Ave. per month.
California	Coyote act	18 mos.: March 31, 1891–Sept. 30, 1892.	$187,485	$10,416
Illinois	Sparrow bounty act	15 months: Dec. 1, 1891–Feb. 29, 1896.	55,651	3,710
Montana	Ground squirrel act	6 months: March 5, 1887–Sept. 13, 1887.	54,578	9,096
Do	Wolf bounty law.	14 months: Feb. 26, 1895–April 21, 1896	89,871	6,419
Pennsylvania	Scalp act	23 months: June 23, 1885–May 13, 1887.	†150,000	6,521
Texas	Protection of farmers	16 months: April, 1891–Aug. 31, 1892.	50,000	3,125

* The time represents the period during which payments were actually made; for example, the California coyote law remained in force until January, 1895, and the claims amounted to nearly $400,000, but payments ceased on Sept. 30, 1892, and only $187,485 was actually paid. The Illinois sparrow law is in force only during December, January and February.
† Estimated.

Objections to the Bounty System.

The difficulties encountered in carrying out the provisions of bounty laws are so great as to give rise to serious objections to such legislation. No rewards for killing wild animals are paid by the General Government in this country, for each State has jurisdiction over its noxious as well as its useful birds and mammals, and must make its own laws for each species.

Bounty laws may be divided into three main groups: (1) Acts providing for the payment of premiums from the State treasury; (2) acts permitting rewards to be paid from county treasuries; (3) local acts maintained at the expense of township treasuries. Some States have found county bounties most effective; others have relied entirely on State bounties. In Michigan all three kinds are in operation; bounties for wolves are paid by the State, rewards for English sparrows from the county treasuries, and premiums on woodchucks, hawks, crows and moles by townships. Each method has its advantages, and each its defects. The advantages claimed for the State bounty are greater uniformity and efficiency; if the bounty is paid by counties, its maintenance depends entirely on the interest manifested by each county, and the law is seldom enforced in all. A more serious defect lies in the varying rates which are sure to be paid, and the consequent danger that scalps will be carried where the highest rate is paid, and thus increase the expense in counties which offer high premiums. The objection of inequality may be urged even more strongly against township bounties. Trouble is sometimes caused in States which have large forest or Indian reservations where animals can increase, as the adjoining counties are almost sure to receive scalps taken on the reservations, and are thus compelled to bear an expense which does not belong to them.

Considerable difficulty is sometimes experienced in raising sufficient funds for paying rewards. In some States the premiums are paid from the general fund without limitation; in others the bounty law carries a specific appropriation. The latter method has been adopted in Colorado, Minnesota, Montana, New Mexico and Wyoming, but payments have not always been kept within the limit, and in case of an excess a deficiency appropriation is necessary. To obviate this, a clause was inserted in the Texas law of 1891, providing that the act should become inoperative as soon as the appropriation of $50,000 was expended. This had the desired effect of limiting the payments, but it practically repealed the law, as the fund became exhausted some months before the next meeting of the legislature. Payments from the general fund are open to the objection that the counties which contribute least toward the expenses of the State are usually the ones which draw most heavily for bounties. As such a burden is not only unequal, but the benefit which it confers is restricted to a comparatively small proportion of the taxpayers, some States require a special tax for the bounty fund.

In Montana, where bounties benefit the cattle and sheep men almost exclusively, the law of 1895 authorized a special tax of one and one-half mills per dollar on the assessed valuation of all horses, cattle and sheep, in addition to the regular proportion of taxes, set aside as a State bounty fund. The same principle has been adopted in Ohio and some of the counties of Virginia, where the rewards are paid from a dog tax or some other special fund.

One of the most difficult matters to regulate in connection with bounty legislation is the rate allowed for scalps. If the reward is too low, there is no inducement to destroy noxious animals, and the law becomes practically inoperative. This was the case with the Montana act of 1879, which apparently failed entirely, as the reports of the county treasurers fail to show the expenditure of a single dollar for bounties during the four years the law remained on the statute books. If, on the other hand, the rate is too high, the results are most disastrous. No treasury can stand the drain caused by a high bounty for any length of time. The coyote act of California went into effect March 31, 1891, but payments were stopped Sept. 30, 1892, after $187,485 had been expended. The prairie dog and squirrel bounty law of Montana, passed in 1887, remained in force but six months before the funds in the treasury were exhausted. The coyote bounty of 1892 not only exhausted the regular appropriation of $12,000, but necessitated a deficiency appropriation of $17,343 to pay the claims which were presented against the State. The Colorado bounties of 1889 involved such a heavy outlay that other appropriations from the same fund could not be paid, and the law was finally declared unconstitutional by the Supreme Court of the State.

Inequality in the rates offered in adjoining States or counties is almost as bad as a high premium, since scalps are likely to be taken from localities where the rewards are low to the nearest county which pays a high premium, and which is thus compelled to pay for animals which do not belong to it. In 1895 bounties on wolves and coyotes varied from $1.50 to $5 in the Black Hills region of South Dakota, while the rewards were $2 in North Dakota, $3 in Montana and Wyoming, and $5 in Iowa. Not only were scalps sent from one county to another, but rewards were claimed in Iowa for coyotes taken in South Dakota. While the coyote law was in force in California the premium was $5, but in Nevada only 50 cents was allowed. Nevada reported the destruction of comparatively few coyotes, but thousands of scalps were presented for payment in California, and it was notorious that many were imported from neighboring States, and even from Lower California.

Not less important than the rate is the proof (which must be submitted before the bounty is paid) that the animal has been killed as claimed.

Many States require the scalps, including the ears, to be produced as evidence, and it is important that these scalps should be sufficient to identify the animals without question in order to leave no chance for fraud. It will suffice merely to mention a few of the ways in which rewards have been obtained fraudulently. Skins of dogs or other domesticated animals have been turned in for scalps of wolves or coyotes, and in the case of small species, when the heads have been accepted in one county and the tails demanded in another, the bounty has been collected on the same animals twice. One of the counties in North Dakota, which paid considerable sums for ground squirrels, first required the heads as "scalps"; then the tails; a year or two afterward all four feet, and finally withdrew the bounty altogether. Ignorance on the part of the bounty official sometimes results in the payment of premium for species to which the law was never intended to apply. Dr. B. H. Warren, who has made a careful study of the "scalp act" of Pennsylvania, states that the heads of domesticated fowls, partridges, pheasants, cuckoos, butcher birds, and even night hawks were accepted in some counties as those of hawks and owls.

Such cases as these emphasize the importance of protecting the State against imposition. If the bounty is paid by county officers, it should be limited to species which are readily recognizable. New Hampshire offered rewards for hawks supposed to be destructive to poultry and other birds, and endeavored to meet the difficulty of identification by requiring the selectmen of the town to certify that the hawks were injurious before the bounties were paid, but as the State Treasurer remarked in a recent report, it is not likely that boards of selectmen were elected on account of their proficiency in ornithology! British Columbia, which claims almost complete immunity from fraudulent payments, restricts the premiums to wolves, coyotes and panthers, and requires the skull of the animal to be presented at the Provincial Museum, where it is examined by the curator before the bounty is paid. In some States the law demands the entire skin to be brought in for examination; such skins are canceled to prevent them from being presented a second time, and then returned to the owner. In practice, this method is likely to increase rather than diminish fraud, for the reason that skins are not canceled uniformly. In Vermont wolf skins are marked by punching two holes ¼in. in diameter in the ear; in Wyoming a single hole ½in. in diameter is punched in the ear, or sometimes a small hole in the foot; in Utah the skins are canceled by cutting the letters B P 1½in. in length in the neck. Thus, Wyoming skins, which had been canceled by a hole in the foot, might be presented in Utah if the feet were removed, and the heads could then be cut off and sent to a State which required only the scalps. It is true, the applicant is usually required to state under oath where the animal was killed, and in Montana he must also file affidavits of two resident taxpayers of the county who are acquainted with him and who believe the animal to have been killed as claimed.

The Montana law of 1895 declares the alteration or counterfeiting of scalp certificates to be forgery; swearing falsely to affidavits, perjury, punishable by imprisonment from one to ten years, while patching or presenting punched skins is defined as a misdemeanor punishable by a fine not exceeding $500 or imprisonment for not more than three months. With all these precautions against fraud no reference is made to raising animals for bounty, a matter which has sometimes given rise to serious trouble, but which is expressly mentioned in the laws of only a few States. Cases have been recorded in which eggs of hawks and owls were taken from the nest and hatched under hens in order to secure premiums on the young birds. It was said to be more profitable in Iowa a few years ago to raise coyotes for the bounty than to raise sheep, and Kentucky and New Mexico, recognizing the possibility of breeding wolves, required affidavits showing that the animals had not been raised for the rewards.

What Have Bounties Accomplished?

Advocates of the bounty system seem to think that almost any species can be exterminated in a short time if the premiums are only high enough. Extermination, however, is not a question of months, but of years, and it is a mistake to suppose that it can be accomplished rapidly except under extraordinary circumstances, as in the case of the buffalo and the fur seal. Theoretically, a bounty should be high enough to insure the destruction of at least a majority of the individuals during the first season, but it has already been shown that scarcely a single State has been able to maintain a high rate for more than a few months, and it is evident that the higher the rate the greater the danger of fraud. Although Virginia has encouraged the killing of wolves almost from the first settlement of the colony, and has sometimes paid as high as $25 apiece for their scalps, wolves were not exterminated until about the middle of this century or until the rewards had been in force for more than 200 years. Nor did they become extinct in England until the beginning of the sixteenth century, although efforts toward their extermination had been begun in the reign of King Edgar (959–975). France, which has maintained bounties on these animals for more than a century, found it necessary to increase the rewards to $30 and $40 in 1882, and in twelve years expended no less than $115,000 for nearly 8,000 wolves.

Attention has already been called to some of the requisites of a successful method of extermination, and particularly to the fact that rewards should be paid wherever the animal is found. The bounty on wolves and coyotes most nearly satisfies these conditions, as it has been more generally paid than that on other species.

Every State and Territory west of the Mississippi, except Arkansas and the Indian Territory, has enacted laws for the destruction of these animals, but the results have not been altogether satisfactory, and the rates have frequently been changed. High premiums have been tried in California, Montana and Texas, and found impracticable. Each of these States offered $5 for coyote scalps for some time, and the outlay aggregated hundreds of thousands of dollars. Iowa and Minnesota are the only Western States which now pay more than $3 per scalp, and in Iowa the rate on young wolves is $2. It has, moreover, been impossible to secure the active coöperation of all the States, and where the bounty depends on the order of the board of county supervisors it may, as in the case of Idaho, become inoperative.

The larger animals are gradually becoming rare, particularly in the East, but it cannot be said that bounties have brought about the extermination of a single species in any State. Wolves are now almost extinct east of the Mississippi River except in Florida and a few other States, but their present rarity is due rather to the settlement of the country than to the number killed for rewards. On the Great Plains, where civilization has not yet encroached on their domain to any great extent, they have not decreased rapidly nor even perceptibly in some places, notwithstanding the high rewards for their scalps. It is perhaps safe to say that coyotes have increased in California in the four years which have elapsed since bounties were withdrawn, and that the effects of the law of 1891 are hardly perceptible.

Maine has encouraged the killing of bears ever since 1830, but the returns of the last five years do not show any decided decreas in the scalps presented for bounty. New Hampshire has been paying for bears about as long as Maine, but in 1894 the State treasurer called attention to the large number reported by four or five of the towns, and added that should the other 234 towns "be equally successful in breeding wild animals for the State market, in proportion to their tax levy, it would require a State tax levy of nearly $2,000,000 to pay the bounty claims." Even New York withdrew the rewards on bears in 1895, not because they had become unnecessary, but because the number of animals killed increased steadily each year.

If this is the result when bounties on large animals are paid by many States, what can be expected in the case of squirrels, gophers and rabbits, which are immensely more numerous than wolves or bears, and against which legislation has been at best extremely desultory? Ada county, Idaho, waged war on rabbits for seventeen years, but after destroy-

* Report Commissioner of Agriculture, 1886, page 228.

ing more than 1,000,000 abandoned the bounty method. Iowa, Minnesota and South Dakota have tried to rid their lands of pocket gophers and ground squirrels, but the effect of the laws was far more evident on the county treasuries than on the animals. The destruction of 1,000,000 ground squirrels in one county in Washington did not exterminate the species, and Montana, in killing 712,192 squirrels and 189,678 prairie dogs in 1887, probably made little impression on the total number in the State.

In the early '70s California authorized the levying of special taxes at high rates for killing gophers and ground squirrels, and later enacted laws providing for the division of certain counties into squirrel districts in charge of inspectors, and required owners to kill the squirrels on their land or pay for having them destroyed by the inspectors. Systematic efforts were made to exterminate these pests, but the attempt was abandoned on account of the expense. So little effect had these laws that to day squirrels are practically as abundant as ever, and not long ago an inquiry was received from a resident in one of the counties which was most active in the work of extermination asking whether anything had ever been done to check the increase of the Californian ground squirrel. Nearly 3,000 000 sparrows have been destroyed in Illinois during the last five years, and probably as many, if not more, have been killed in Michigan since 1887, but the laws have accomplished so little that some doubt exists as to whether the birds have perceptibly diminished or not. Some ornithologists in these States assert that the decrease is quite noticeable, while others acknowledge that the bounties have had little if any effect.

On the island of Bermuda, which has an area of less than twenty square miles, an attempt was made to exterminate the English sparrow only ten years after the species had been introduced; but after two years the experiment, which had cost more than $2,500, was abandoned as impracticable. In India, where the loss of life and of domesticated animals on account of the depredations of wild animals and snakes is enormous, bounties are paid in most of the Provinces. The official returns for 1893 showed that 2,828 people and 85,131 head of cattle had been destroyed by animals, while 21,213 persons and 5,122 head of cattle were said to have been killed by snakes. In this year bounties to the amount of 117,448 rupees (nominally $58,724) were paid for the killing of 15 308 wild animals and 117,120 snakes. Although these expenditures have been maintained for twenty years, the number of animals annually killed shows no perceptible decrease, and it is impossible to estimate what the extermination will finally cost the Government. But if bounties have failed to accomplish the actual extermination of any species, there can be no doubt that they have secured the destruction of large numbers of noxious animals, and have done some good in checking the increase of such species as wolves and coyotes. If premiums are paid in several States, do not involve too great expense, and can only be maintained long enough, they will do much toward the accomplishment of the desired end and may be regarded as a legitimate expenditure of public funds.

Substitutes for Bounties.

The unsatisfactory results attained by the direct payment of rewards from public funds long ago led to the attempt to gain the same end by other means.

In colonial times the Indians were encouraged to kill wolves and other animals, and the planters were often required to kill a certain number of blackbirds, crows or squirrels each year under penalty of fine. Scalps of crows, squirrels, and even wild cats, were received in lieu of taxes, but as this method had some disadvantages in practice, the scalp certificates issued by county officials were accepted in payment of taxes.

Competitive hunts and prizes offered by gun clubs sometimes cause the killing of a surprising number of birds and animals In Ohio a few years ago nearly 1,000 sparrows were killed in one hunt, and the Sparrow Club of Stratford-on-Avon, England, reported that 19,000 sparrows were destroyed during the year 1887. The Virginia Field Sports Association distributed $100 in prizes for the killing of nearly 1,000 hawks in 1888; this was less than one-fifth what it would cost the State for bounties. Prizes offered by the Luzerne County Sportsmen's Club of Pennsylvania in 1895 secured the destruction of 378 animals, forty-two hawks and four owls. In the rabbit drives of California, which are sometimes paid for from public funds, as many as 20,000 jack rabbits have been killed in a day. The great danger in the case of prizes is that useful and injurious species will be killed indiscriminately; but under proper restrictions this could be avoided, and clubs might do much more toward the extermination of animals than is now accomplished by bounties.

Another expedient which has been resorted to, particularly in North Dakota, South Dakota, Washington and Manitoba, is the free distribution of strychnine or other poison. The results seem to be quite satisfactory, and it is said that more animals are destroyed at much less cost than under the bounty system. Reference has already been made to the ground-squirrel legislation of California, which promised so much, but accomplished so little on account of the expense, notwithstanding the fact that everything was done to render the laws effective.

Summary.

(1) Bounty legislation has existed in the United States for more than two centuries and a half, and has been thoroughly tested in most of the States and Territories.

(2) Rewards have been paid (*a*) on large animals, such as wolves, coyotes, bears and panthers; (*b*) on small mammals, particularly gophers, ground squirrels and rabbits; (*c*) on a few birds, such as crows, English sparrows, hawks and owls.

(3) This legislation has probably involved an expenditure of over $3,000,000 in the last quarter of a century, and the expense seems to be increasing instead of decreasing. Single laws have caused an outlay of nearly $200,000 in less than two years, and it is safe to say that any act which carries a sufficiently high reward to insure its operation will cost from $5,000 to $20,000 per annum.

(4) Objections to the bounty system may be grouped under four main heads: (*a*) Expense, which is usually out of all proportion to the benefit gained, and may be greater than the county or State can afford; (*b*) impossibility of maintaining bounties in all parts of an animal's range for any length of time; (*c*) impossibility of maintaining equal rates in all States; (*d*) impossibility of preventing payments for animals imported from other States, for counterfeit scalps, or for animals raised especially for the bounty. These objections have never been satisfactorily overcome, and most laws have failed through one or another of these causes.

(5) Bounties have not resulted in the extermination of a single species in the United States, and have failed even in the island of Bermuda, which has an area of less than twenty square miles.

(6) Rewards for wolves, coyotes and panthers are now so generally paid as to check the increase of these species to some extent, but premiums on ground squirrels, gophers and other small mammals have accomplished little or nothing, and bounties on birds may do great harm by encouraging the killing of useful species through ignorance.

(7) Extermination of noxious animals is usually slow, and can be accomplished more effectively and economically through the efforts of individual land owners than by the lavish expenditure of public funds.

Pinnated Grouse in Rhode Island.

WESTERLY, R. I., May 1.—*Editor Forest and Stream:* A cock pinnated grouse was brought into my office to day by a farmer, who, seeing the bird strutting among his ducks, thought it was an owl, and shot it. EDWIN R. LEWIS.

Game Bag and Gun.

A TEN DAYS' OUTING IN THE WOODS OF MAINE.

ON Oct. 25, 1896, a party of six left Haverhill, the City of Boots and Shoes, for a ten-days' outing in the woods of Maine. Leaving on the 7:20 P. M. train, we arrived in Bangor about 5 A. M. It was a frosty morning and our night's ride had given us keen appetites. We wended our way up town, accosted a policeman by the name of Jasper, through whose courtesy (?) we were informed where we could find a "hot sausage" at that early hour.

By 7, after a good breakfast, we were again on our way to the home of the moose, caribou and deer. We were pleased to find as we journeyed on that all the small ponds and streams were frozen; in many places snow had fallen. Now and then a glimpse of that wonderful Mt. Katahdin, with its snow tops glittering in the sunlight, would burst upon our view. Truly, it is a magnificent spectacle.

Our train was an express, and by 11 o'clock we stepped on to the platform of a 7×9 station, where our guides were in waiting. What did we see but a young buck cantering up and down the platform. I turned to speak to Mr. Nelson, when, lo! his rifle was out of its case and he was fumbling in his pocket for a cartridge. At that moment a guide touched him on the shoulder, saying, "That is a tame deer." The cook prepared a lunch. While we were doing justice to it the guides were getting our traps and provisions to the river. In thirty minutes' time we were ready far a canoe ride of eighteen miles up the Penobscot. It is a delightful ride; think it would add two years to a man's life. Part of the way the water runs still and deep; is as clear as crystal. Again it is shallow. There the river bed is covered with rocks and pebbles, with occasionally a boulder. The canoe is obliged to hug the bank. Again it rushes along at such a speed it would seem impossible for a canoe to pass, but the pike poles in the hands of a skillful guide insure a safe ascent.

By 4 P. M. we came to a log camp, where we were glad to eat a good supper, smoke, listen to a few deer stories from the guides, and turn into beds of hemlock boughs. We were sound sleepers, and the cook, after much shouting, succeeded in rousing us, saying it was 7 o'clock already, and were we going to sleep all day? We knew by the aroma of coffee, etc., what was expected of us, and soon were all seated at table, as we supposed, when there arose a yell from the river. Some of the party rushed out, while those who staid in were more frightened than they were willing to acknowledge. What a sight for our artist! Mr. Herman in the icy water up to his shoulders, wiping his eyes and mouth, trying at the same time to get the points of the compass that he might wade ashore. The canoe was floating down river, and the bow soon caught fast on the bank. He floated ashore, and the guides helped him to the cabin, gave him a good rubbing, some advice about a canoe, and later a few lessons in the use of the paddle. After the excitement caused by the mishap had subsided, we ate our breakfast, and were on our way up river again. At noon we came to the Bear Rip Falls. It is a sight never to be forgotten—the water tumbling down in immense volumes over those ledges and boulders. There is a carry about a quarter of a mile long. How they can get a drive of logs over such a place I cannot well conceive.

As we were rounding a bend two miles beyond we spied a buck and two does only about 75yds. distant. They looked surprised as well as we. It took Mr. Franklin a very few seconds to draw a bead on the buck with his .38-55. The guide fired at one of the does. Away they went into the bushes, the buck with his flag at half mast. Mr. F. thought he had missed the buck, but the guide said he was surely hit; consequently we paddled ashore, and not far from the river found blood spots. We followed the trail a half mile or so and lost it.

Look where we would, there was no sign of deer track or blood spots. The guide said he would take a small circle in pursuit, and in fifteen minutes we heard a shot. Making a hustle in the direction of the sound, we we found the buck dead, with his head resting on a log. It didn't take the guide long to dress him, and then what a lug to carry to our canoe. He was a 200lb. fellow, with eight points, the best specimen we found while in the woods. Notwithstanding the added weight to the canoe, we were at our destination by 4 o'clock. On the way up our game numbered four mink, seventeen partridges, five ducks, a hedgehog, an owl and the buck. The camp was 100yds. from the river in a little clearing surrounded on all sides by hemlock and spruce trees.

The next day it rained in torrents—no hunting that day—but on the next it was fine. We donned our hunting rig and set forth with the guides, going in four different directions. We expected great sport, as the day was just the one for hunting, and the leaves just damp enough to steal along noiselessly. We were not all in camp again until 3 P. M. The cook prepared a feast of good things: broiled partridges, venison, potatoes, biscuit and coffee. We took a long tramp that day, and for game had a lone partridge. Next day more hard work, but good luck. Mr. Nelson and myself took the old "bark" road that followed along the ridge. We kept to this for about three miles, jumping a number of deer. Leaving the road, we went directly east that we might not lose our way. We had gone only a short distance when we started, as near as we could judge, a half-dozen deer. What wind there was came from the direction of the trail, so there was no danger of their scenting us. We followed the trail until they came down from a run to a walk, then we slowed to a creep, and some of the way to a crawl, and soon the large ears of a doe came into view; then she stood head and ears in sight, in good rifle shot.

Soon, out of a fallen tree top, a buck's head appeared. After surveying the country he pulled himself together, and out he came. What a beauty, and a white one too! Not a minute later, and five were in full view—two bucks and three does. Mr. N. pulled on the white one, but before I could get sight on the other buck he was off; however, I got the Lyman sights in line on the largest doe, and pulled. Mr. N. dropped the buck almost in his track, shot through the heart. The doe traveled about 200yds. before she dropped. It was no small task for us to dress the deer, hang them up and blaze a trail out to the bark road. We reached camp by 2 P. M. The rest of the party returned soon with three deer, and a lot of small game. The next day was spent in getting the deer out to the river, and down river in canoe to camp.

None of us were inclined to hunt deer the day following, so took a short trip into the alders for partridges. We kept up a bang, bang until noon. We got twenty-six partridges, two rabbits and the wing of a bluejay; also Mr. Warren, who had not ventured far from camp before, as he was always there to look after our welfare, brought in a freak in the shape of a mottled doe that would weigh 125lbs.—great luck for the fat man of the party! Sunday was a day of rest. Monday we were up, breakfast eaten and off in the canoes before sunrise. After going about four miles together we separated, part on one side of the river, part on the other. We found it a rough country—the best place for game. On our return trip there were five deer hung up in different places along the river bank. It was dark as a pocket an hour before we reached camp. Mr. Edwards got the largest buck, and Mr. Herman hung up the only spike-horned specimen.

That night we decided to start for home the next day, as we had all the deer the law allowed us. Tuesday we broke camp, and by 10 o'clock we were five miles down river with the deer of the preceding day's shooting gathered in, making twelve in all, packed with ourselves in the five canoes. We pulled into our old camp by 4 o'clock, for the night. Next day we arrived at the little station with 1,740lbs. of venison—quite an express bill at $1.50 per cwt.

* * * * * * *

Now we meet to talk over the good time gone by and plan for a like trip this season, only further in the wilderness, when we hope to bring moose and caribou out.

45–70.

A BUFFALO ROMANCE.

CHARLOTTE, N. C., April 17.—I share considerable interest in the few remaining buffalo, and therefore take the liberty of inclosing a newspaper article relative to a band unknown to me. It strikes me as comical.

On my recent visit to the Washington (D. C) Park I found all the animals looking in excellent condition. One of the buffalo cows had calved three weeks previousiy and the youngster seemed strong and healthy. I have communed with your columns for so many years that I feel some liberty. Even while traveling I am not happy if I cannot find FOREST AND STREAM each week. W. D. CLOYES.

This is the story our correspondent sends us, as told in the St. Louis *Globe-Democrat:* "The recent wedding of Myrtle Morrison, the famous Nowlin county girl broncho buster, and Frank Dupree, a part-blood Sioux, caused quite a sensation among the aristocracy on the Sioux Reservation and in adjacent territory. Miss Morrison is a handsome young cowgirl, noted far and near for her proficiency in the art of horse training. She has had many admirers among the frontier beaux, but always declared that she would never marry any man who could not ride, shoot and throw a lariat better than she could, and as such men are extremely scarce, it appeared probable Miss Myrtle was doomed to a life of single blessedness. However, last fall, hay being scarce on the upper Bad River range, her father removed his family and stock to Big Plum Creek, a tributary of the Cheyenne River. Here Myrtle first made the acquaintance of the good-looking, daring young half-breed who has since become her husband.

"Frank Dupree is a splendid horseman, a thorough cowhand, and apparently devoid of fear. The Duprees are among the wealthiest stockmen in the State, counting their cattle by the thousands, and Frank, like many other half-bloods in that section, has received a very fair education. Still, Myrtle was not much attracted toward the swarthy young youth until one day they happened to be riding together, and came in sight of a herd of sixty or seventy buffalo, which the Dupree family have raised on their own range from a few calves caught years ago, when buffalo meat was the principal article of diet for the entire Sioux nation. Although this herd is kept from straying far from the home ranch by Old Man Dupree's cowboys, they are fully as wild as their ancestors, who once blackened the prairie west of Chamberlain with their shaggy bodies.

"The young couple rode up quite close to the herd before the animals were aware of their presence, and Frank, in a spirit of bravado, urged his broncho alongside of a huge bull buffalo and sprang from his saddle to the animal's back; in an instant the whole herd was stampeding madly across the prairie, with the old bull leading the van. Dupree's foolhardiness had placed him in an extremely dangerous predicament. If he jumped or fell from the buffalo's back he would certainly be trampled to death by the pursuing herd, and if he retained his seat until the animal became tired and sulky it was equally certain that the brute would make a furious assault upon him the moment he dismounted. So all he could do was to cling to the animal's back and await an opportunity to escape. But it was not until the herd had run fully two miles that he saw the least chance of leaving the back of his novel steed and escaping alive. Fortune at last favored him, and the animal ran for some distance along a deep, narrow washout, with almost perpendicular sides reaching to a height of fully 20ft Here Frank sprung from his seat and slid down the bank of the depression just in time to escape being trampled by the closely following herd.

"Meanwhile Myrtle had lassoed her companion's horse and was hurrying after the rapidly retreating buffalo. She reached the spot where Frank had dismounted just as he

was climbing, dirty and bedraggled, to the top of the ravine. The cowboy did not feel very proud of his exploit, but, nevertheless, the little episode had touched a tender spot in the girl's heart, and a short time ago the bells of the Cherry Creek Church announced the wedding of this typical frontier couple."

GENESEE VALLEY ASSOCIATION.

THE annual meetings of the Genesee Valley Fish and Bird Protective and Propagating Association and of the Conesus Lake Fish and Game Association were held in the rooms of the Chamber of Commerce last week.

In the absence of President A. Emerson Babcock, of the Genesee Valley Association, First Vice-President Harry S. Woodworth presided at the meeting. Secretary Frank J. Amsden in his report of the work done by the Association during the past year, took occasion to pay a high compliment to the services rendered in the protection of fish and game by President Babcock, of the Fisheries, Game and Forest Commission. Mr Amsden said that he thought that some of the members of the association were unaware of the influence of an organization of this kind. He quoted as an instance that a number of poachers had been doing some illegal fishing in Hemlock Lake. The residents of Geneseo, becoming aware of the fact, made application for the appointment of a special protector. There being no organized club at that place, it devolved upon the Genesee Valley Association to recommend to the State Commission the appointment of a special protector, with the result that one had just been appointed.

"The situation in our section is probably apparent to you. Mr. Brooks and a number of special protectors have been quite active of late in arresting and securing the conviction of illegal fishermen. But their labors are ineffective, in that while they are working in one place, the illegal fishing is going on in another section of the three counties, over which Mr. Brooks has jurisdiction. I suggest that it would be well for this Association to put itself on record as favoring the increasing of the number of regular protectors. The present small force is inadequate to cover the whole State. The Governor has disapproved of the appointment of more protectors, so as to keep down the appropriations as much as possible This is poor policy, since the State is paying out large sums of money every year in keeping up hatcheries and stocking the streams with spawn, and then allows the fish to be killed indiscriminately by reason of not furnishing adequate protection."

Mr. Amsden's report seemed to meet with unanimous approval as regards the necessity for the appointment of additional protectors, of which there are but thirty-six in the State, including the chief protector and several deputies, who cover no designated territory. On motion of Mr. Redmond, the following resolution was unanimously adopted.

Whereas, Experience has demonstrated that the present force of game protectors is insufficent for the protection of fish and game in this State; be it

Resolved, That it is the sense of this Association that there should be an increase of twelve to the body of protectors now provided for.

Treasurer Thomas W. Fraine, as chairman of the bird committee, then presented the following interesting report respecting the Mongolian pheasants:

"The past season has proven successful and also fruitful; we have gained more knowledge and experience as to the care and handling of the young birds during the critical time, which is when the chicks are from one to fourteen days old. At this tender age they require to be fed every two hours Each brood must be placed with the mother in small movable coops and their feeding ground changed daily. They are very fond of fresh grass and will pick every blade within their quarters in a few hours. At night these small coops, with their occupants, are placed inside a building for safety. We had a great many chicks last summer and succeeded in raising thirty-five to maturity. These were distributed in Monroe county as follows: One pair in Henrietta, one pair in Irondequoit, one pair in Brighton, three pairs in Egypt, three pairs in Seneca Park, and three escaped from the coops.

"Fifteen birds were sold to help defray expenses of running the pheasantry at No. 641 Genesee street. Six of these were sold to the Forestry Commissioners, and sent to the New York State Hatchery at Bath, where the Commissioners are now breeding them for distribution throughout the State; the balance of nine were sold to private individuals.

"Our other pheasantry at Penfield has been abandoned for obvious reasons, and the four birds it contained have been transferred to Genesee street, where there are at present five cocks and nine hens. They are all in fine condition, and the hens laying daily. We have a good stock of Bantam hens on hand for brooder's, and three are now sitting on pheasants' eggs."

This letter was read from President Gavitt, of the State Association:

"LYONS, N. Y, April 26.—*Thomas W. Fraine, Esq.*—My Dear Sir: Replying to your favor of this date, it is with pleasure that I can inform you favorably in relation to my experience with pheasants Am now entering upon my third year in the breeding of these beautiful birds, and start this season with breeding pens numbering sixteen strong, healthy birds, now laying at the rate of six to ten eggs per day. Of course I have met with many unfavorable conditions and experiences in the handling of them, but now consider that I have overcome much that seemed to be in the way.

"For the benefit of those who may meet with the same obstacles which came to me, would call attention to the fact that one of the most serious troubles I had was in keeping several birds in same inclosure without fighting and eventually killing each other I now clip wing of each bird and have adopted open runs with 8ft. fence. Birds keep in much better trim and are not inclined to fight. In feeding am most successful in using a liberal supply of animal food. Maggots, bugs, worms and the like are to be fed in good quantities. Am very sure that the pheasants will stand any amount of cold and exposure that this locality is likely to muster. The only trouble will be in the case of deep snow, where they may be deprived of feed for a length of time; still am not so sure but they may adapt themselves to the circumstances and feed as do our grouse in such cases.

"I am much pleased to know that the Genessee Valley Association is being successful in its efforts in the rearing of these birds, and trust its efforts may be rewarded in creating a public sentiment sufficiently strong to give these grand game specimens a fair trial in western New York. I am very much interested in the matter, and shall at all times be glad to lend a helping hand in this direction. Yours very truly, W. S. GAVITT."

A vote of thanks was tendered by the unanimous vote of the Association to Commissioner Babcock for the good work done by him in the interest of the protection of the forests and fish and game.

A. B. Lamberton introduced a resolution to the effect that it be the sense of the Association that no spring shooting should be allowed in this State, and that the secretary of the Association forward the same to the State Legislature at its next annual session, and it was adopted. It was argued that if the spring shooting of ducks and other game was stopped, there would be plenty of fall shooting The experiment had been tried in the fall of 1895 and proved successful. The ducks would stop here and would breed, whereas when shooting was allowed in the spring, they would be frightened away by the guns in the breeding season.

Mr Lamberton spoke of the fact that many thousand of trout fry had been placed in the Fulton chain of lakes, but at an useless expenditure of money, for the reason that there was no protection afforded, the fish being taken out of season and before they had attained anywhere near the proper size. Mr. Lamberton stated that when proper protection was given there would be plenty of fishing in a few years, but the poachers must be kept away. Mr. Amsden said that the situation was the same in this section, Game Protector Brooks being obliged to cover three counties.

Bernard Dunn stated that over a million wall-eyed pike had been placed in the upper Genesee with good results. There would be good fishing there within a few years. Mr. Dunn suggested that a culvert or waste weir should be constructed from the Erie canal at the eastern widewaters to one of the creeks tributary to Irondequoit bay, so that the bass which come down the canal from Lake Erie and lodge in the wide waters in the fall when the water is drawn off could find a home for the winter in deeper water. As it was, if left to remain in the wide waters they would be netted and otherwise exterminated by the poachers.

The following ticket was unanimously elected: President, Harry S Woodworth; First Vice-President, H. M. Stewart; Second Vice President, James H. Brown; Treasurer, Thomas W Fraine; Secretary, Frank J. Amsden Executive Committee: J. B. Y. Warner, Daniel Bascom, Dr. David Little, Howard H Widener, A B Lamberton, Edmund Redmond, Charles B Richards and W. F. Brinsmaid.

The following officers were elected by the Conesus Lake Association: President, L. L Williams; Vice-President, Harry S. Woodworth; Secretary-Treasurer, William H. N. Bascom Executive Committee: Dr. John Zimmer, John Bramel and W H. Bascom. The Association is composed of cottagers at Conesus Lake. Secretary Bascom reported that there had been a decided change of sentiment among the farmers in this section, who were now aiding the Association in its work. Some of the most notorious poachers had also fallen into line.

CHICAGO AND THE WEST.

Victory for the Tolleston Club.

CHICAGO, Ill., May 8.—Tolleston Gun Club, of Chicago, won a practical victory this week in the result of the famous gamekeeper cases on trial at Crown Point, Ind., in which the club wardens were arrested on the charge of attempted murder As reported in FOREST AND STREAM at the time of the shooting, the club wardens were attacked by a band of over a dozen farmers who were finally fired upon, one of them being seriously hurt, though he did not die, as was widely reported. Great efforts were made to keep up the local excitement, and the feeling against the club was very bitter among the local poachers, who have always sought to break into the Tolleston preserves. It was hardly to be expected that the club would get much of a verdict in a town which was a perfect hotbed of enmity against them, but it seems that after nine hours of balloting the worst the jury could do for the punishment of the accused warden, Barnum Whitlock, was to find him guilty of simple assault and battery, and not of attempted murder. His sentence was fixed at six months imprisonment and a fine of $500. The others of the club wardens, Alfred Taylor and Charles Whitlock, were discharged, as no case could be made against them. Charles and John Blackburn are still under arrest and will be tried this coming week under the original charges against them Prosecution will set up that John Blackburn was the one who shot Frank Kostic with the rifle ball which passed through his body, whereas the defense will urge that this may have been done by Frank Whitlock, who made his escape and has not yet been found by the Indiana sheriff

The county commissioners of Crown Point have passed an order compelling all prisoners to work on the streets in ball and chain, and since the sentencing of Barnum Whitlock, as above, the Sheriff has undertaken to make him work in the chain gang with the rest of the prisoners. This humiliation in the presence of his enemies he refuses to undergo, and at last accounts he had not been forced to work.

The local farmers, who have been behind this movement against the Tolleston Club, have been much offended at the failure to make out their cases in court, and they are much worked up over the matter. They say they cannot get justice in their own town, and threaten all sorts of dark and bodeful things It is, indeed, matter of astonishment that this hard-fighting club should have done so well in this, its most bitter and most doubtful fight. Such contests take off much of the edge of sport at the Tolleston Club, and no one deplores this and kindred events more than the club members themselves; yet if they did not fight they must give up their entire property to those who want it of them. Criticism of this club should not be passed, at least until all the facts are known, and then not readily. The Tolleston Club is only doing the fighting on questions which will have to come up in the history of sport in this country. They are gradually proving things which will one day be held matter of course, gradually winning a fight for the sportsmen of America which after a while will be held no fight at all, so obvious will the principles then seem which now are upheld by this club only at the expense of much money and time and painful regret. The policy of the club—one of positive silence and dignified determination—is commendable in its tone, and seems to be a winning one.

Illinois Audubon Society.

Mr. Ruthven Deane, of Chicago, writes in regard to the recently organized Audubon Society of Illinois, calling attention to a work which has had all too little popular recognition, but whose purposes require no comment in the pages of FOREST AND STREAM. He says in his letter: "There has been organized an Illinois Audubon Society for the protection of birds; bearing particularly on the feathers of wild birds, which have been so extensively used for ornamentation. You are no doubt strictly in sympathy with this movement, and we are sure such action as has been taken already, is, and will do much good in dissuading the 'feather fad' among ladies, and also the wanton destruction of song and insectivorous birds and the robbing of their nests and eggs by the small boy, who as a 'rage collector' gathers them in the spring and summer and, as his interest flags in the winter, breaks or sells them."

Fecundity of Pheasants.

Now that we have another governor of Illinois, who may, perhaps, not be quite so bitterly opposed to game protection as was the late one, who vetoed the act protecting Mongolian pheasants in Illinois, it may not be too much to hope that we may have a law making it possible to introduce that bird in Illinois. It is something which ought to be done. A gentleman from Oregon who was lately interviewed here by FOREST AND STREAM upon the subject, speaks most enthusiastically of this bird as a game bird. He says that it now fairly overruns parts of Oregon where it has only been introduced for a few years, and bids fair to offer permanent sport in covers once shot out of native game. It stands any sort of winter, and will fight any sort of enemy, even to hawks and crows. It is alleged that the cock pheasant will actually fly up into the air and attack a passing hawk, fabulous as this seems to hear. The cock bird will fight any rooster, and drive it out of its own yard. Moreover, the bird is wonderfully prolific. This gentleman said that his sister had made a small business of raising and selling these birds, and she found that during one season a single hen of the Mongolian pheasant laid 172 eggs. With any proper kind of care, such a bird as this pheasant should furnish game for covers where the native birds have not been able to survive. The sport at the bird is described as magnificent, and the main drawback to it seems to be that the cocks have a way of running off and leaving the hens to lie to the dog, and so to meet the gun Shall we not have the Mongolian pheasant and a pheasant law? It need not be over five years in its closed season, for if this bird is to thrive in our climate it will multiply astonishingly in the course of that time.

Shooting Season Passing.

Our jacksnipe have now passed on for the most part at this latitude, and the shooting season may be called closed, barring a little shooting on golden plover. Out in Iowa this week I found the jacksnipe still lingering along the streams of the central part of the State. They have had a great season for snipe in that country this year, and many very good bags have been made.

Chickens in Iowa.

I was much surprised to hear that in the old settled parts of Iowa, such as Jasper and Polk counties, the prairie chicken has again showed itself. A liveryman at Mitchellville told me that each season of late there have been good bags of chickens made within a few miles of that town. One party of shooters last fall bagged seventy-two birds in one day. These shooters came from Des Moines, which is only about twelve miles distant Yet Des Moines is rated at some 60,000 souls, I believe, perhaps more, and has been settled since the 50s or earlier. This shows that we could have plenty of game all over the West if we wanted it. This Mitchellville country is all high, rich, black farming land, with almost no waste ground in it, and farmed up to the edge with grain, very little grass lands being left. Yet the birds hang around the edges of the fields and manage to raise their young in spite of the absence of their wonted prairies. In the opinion of my informant, there could be excellent chicken shooting in that country if shooters would observe the law, and let the birds get big enough before they began to shoot them.

Got Three Bears.

My friend Boak writes me this week from the Blackfoot Reservation that his partner, Scott, has already killed three bears this spring. This is near the country where we made our sheep hunt recently, of which more later. There is probably no better big game country left, and I feel sure that if any one has a wish to kill his bear, I can direct him to the spot where he can get him sure It was almost the only regret of our trip last winter that we were forced to leave before the bears had come out of winter quarters. It is hard to get within a few miles of the bear you have lost, and not be able to see him—a good deal like hearing your best girl talking in the next room when the footman is showing you to the door. This month, May, is the best bear month of the year, and the grizzly for the next twenty or thirty days will be an easy game for any one who goes after him aright. Scott and Boak usually get about twenty bears each year. They hunt for revenue only, and would rather kill a black bear than a grizzly, as its fur sells for more. But between the two in point of danger they make no distinction, having the contempt of experience for them both. The largest and most deadly grizzlies are those killed in books. The actual killing of a grizzly is something in the nature of a cake walk, according to these men.

E HOUGH.

1206 BOYCE BUILDING, Chicago.

About that Adirondack Irishman.

NEWARK, N. J., May 6.—*Editor Forest and Stream:* Since I have been able to purchase a copy of FOREST AND STREAM, more than ten years, I have never seen anything in its columns that has roused my indignation so much as a statement made by H. Stewart, writing upon "Wolves in the Adirondacks," in the current issue.

In speaking of "his" Irishman, he says: "He was positively trembling with fear, and gave little attention to the talk I gave him, which, you may be sure, was in vigorous terms, and not to be mistaken, even by an Irishman."

Now, what is Mr. Stewart's conception of an Irishman? Does he class him with a South Sea Islander, or is he wholly ignorant of the fact that the greatest statesmen in this world were, and are, Irishmen?

True, there are some people from Ireland's rural districts who are below the average in worldly intelligence, but I can safely state that there never was a son of the Green Isle in this country who could not understand when he was reprimanded.

Surely your copy reader made an error in allowing this sentence to pass, for I daresay it has aroused the indignation of many another Irish reader of your great paper besides yours, etc.,

EDWARD F. DUFFY.

The Birds in New Hampshire.

I AM over the State a great deal, and never heard so many ruffed grouse drumming as there are this spring. There was an uncommonly large flight of woodcock this spring.

N. WENTWORTH.

INDIANS AND DUCK EGGS.

Game and Fish Commission of Ontario.—Dunnville, May 1.—*Editor Forest and Stream:* I have just read a letter in your issue of this date from Mr. A. C. Trippe, of Baltimore, in which he describes a trip into Canada, where he found that the natives made a business of gathering duck's eggs for food, and cites this as a prominent cause of the diminished number of ducks now as compared with former years. Mr. J. H. Keene, too, has been investigating the cause of the diminished number of ducks which visit the Chesapeake, and he, too, has only directed his investigations to the Indians of Canada as the probable guilty parties. He does not seem to have found any definite evidence that such a nefarious trade exists, nor did Forest and Stream from its inquiries in the same direction some time ago; nor do I, who have had some opportunities in Ontario to know if such practice existed, believe that there is any regular traffic in duck's eggs. I have not the slightest doubt as to New York being capable of consuming all the illegally taken game in Canada; but I think that our game laws are too well administered to allow any such traffic to go on largely. That the Indians and others in real need of food may and do occasionally take a nest of fresh duck's eggs I have no doubt, but for this there is some excuse—necessity knows no law—and indeed our game laws exempt the Indians from their provisions where the game is taken strictly for their family use. Civilization could scarcely accord less to the former owners of the land and the game thereon.

In order to further the efforts of the afore-mentioned gentleman and of Forest and Stream in this inquiry, allow me to ask them if it has ever occurred to them to examine *post mortem* the bodies of the ducks which their friends, men of all degree, even up to the President, have shot in the spring. In former years I have examined ducks shot in the spring and almost invariably found in each duck the eggs which would under other circumstances have produced a flock of from ten to twelve ducks for shooting in the proper season. What can be said then of these duck nest robbers? They did not destroy a whole nest full of eggs because they were in want of food as the poor Indian, because they did not even eat them, yet I will venture to say that hardly any Indian in any one day ever secured or destroyed as many eggs as a spring shooter who bagged a dozen ducks.

In Ontario we never now think of shooting a bird in the spring, and I am glad to say that public sentiment is so advanced that even the boys consider it such a mean, contemptible trick that they very rarely touch a bird's nest. I am very fond of Forest and Stream, but I must confess that sometimes it makes me sick to read the able letters which some of your correspondents send you describing the slaughter of ducks, snipe, etc., in the spring, when they are nearly all paired and on their way to find a home in which to raise their young. Imagine the good such a writer as Mr. Hough could do were he engaged to write down spring shooting. It wouldn't take long to reason with sportsmen and arouse public sentiment against the chief cause of the diminished number of ducks and other birds.

G. A. MacCallum.

Bay Birds on the Eastern Shore.

Keller, Va., May 6.—Atlantic Coast birds are now very plentiful on our meadows; curlew, yellowlegs, graybacks, robins, snipe, blackbreasts, etc. Sportsmen are having the best of shooting. Dr. I C. French, who has been waiting for several weeks in anticipation of the coming of birds, is having fine sport, getting good bags every day out.

There have arrived during the week, Messrs. H. R Rogers, Brooklyn; A. Eddy and P. Kelly, of New York city, members of Accomac Club; and George Shiras, Howard Nimick, Howe Childs and Henry Browne, all residents of Pittsburg, Pa., and members of Revel's Island Club. Mr. Shiras returned to-day, and reports birds in abundance and shooting very good, although he believes that a couple of weeks hence the variety will be greater, curlew being more numerous just at present than the other sorts.

Those fond of fishing may find in our channels drum very plentiful; fifteen to twenty in a few hours to a craft not being unusual, while trout (weakfish) are in great abundance.

The weather being warm, no better time could be chosen for a camping party. There are plenty of high spots on our meadows where a tent could be pitched, shade erected, and every facility provided for a rough and tumble outing. We sometimes wonder that sportsmen do not hit upon this idea It would not be at all costly, if expense should stand in the way. Guides can be had for $2 a day, with the use of their boats (which are always comfortable) for fishing, and for moving the decoys, etc., around to good shooting or fishing places, all, in fact, being right at hand.

When a young man, with a company of companions, I used to sometimes camp out for a month at a time, returning to home fat and as brown as a ginger cake. After a month on the salt meadow one does not need pie to tempt his appetite. A side of fat bacon, plenty of fish, clams to waste, half a bushel of marsh hen and gull's eggs, always in camp, strong coffee made in the tea kettle, Indian corn meal, make up the bill of fare; nor will the mind wander to, or the appetite crave for better things. T. G. Elliott.

A Scottish laird was relating the story of a fine fish he had caught one day to his friends at his dinner-table! "Donald," said he to the servant behind his chair—an old man but a new servant—"how heavy was the fish I took yesterday?" Donald neither spoke nor moved. The laird repeated the question. "Weel," replied Donald, "it was twal' p'und at breakfast, it had gotten to achteen at dinner-time and it was sax and-twenty when ye sat down to supper wi' the Captain." Then after a pause he added: "I've been tellin' lees a' my life to please the shooters, but I'll be blowed if I'm going to tell lees noo, through my old age, to please the fushers."—*Angler's Basket.*

Proprietors of fishing resorts will find it profitable to advertise them in Forest and Stream.

BLACK BASS AND BASS LAWS.

Editor Forest and Stream:

I have read the article by Mr. Van Cleef on bass, in the Forest and Stream of April 17, with a great deal of interest, as it is in every respect in full accord with my own ideas.

The author is a veteran, well known in this State and in the Dominion of Canada, both as a most unselfish fisherman, of the most observing nature as to fish and their habits, and as the Counsel for the Senate Committee of this State, who, jointly with Mr Wakeham, representing the Dominion, framed Article XV., of the game law, commonly known as the special act for the Thousand Islands, and which by mutual legislation became the uniform law for the St. Lawrence from Lake Ontario to Ogdensburgh.

I am informed that an effort was first made to make the bass season in this State open on July 1, but so much opposition was encountered that it was compromised by changing the date to June 15.

I have fished for many years, and have probably taken my share each year, particularly in the inland waters of this State, and have learned a few things about bass, which I will briefly state.

First—Bass hibernate in cold weather and go substantially directly from that hibernation to spawning. That period of retirement is evidently one of preparation for that act.

My observation has shown me that the actual time therefor depends upon the temperature of the water. When the water arrives at the fixed-by-nature temperature, probably not yet actually determined by man, bass will spawn and not before.

The season regulates this temperature. In early spring they spawn early, and later in a late spring, because of the difference in the time when the water actually reaches the spawning temperature.

Second—I have found a further distinction as between still and running water, lakes and streams or rivers.

In lakes they spawn later because the water remains longer below the spawning temperature.

The ice leaves the running waters first; the sun of spring has greater effect upon the swift waters of their rifts or rapids; this continuous disturbance, or ebullition, causes a distribution and commingling of their warmed waters with the cold, all of which results in their sooner reaching the spawning temperature, and the bass spawn earlier in them than in the lakes.

The waters of the lakes, agitated only by the waves, warm up much more slowly. This is the precise reason for their spawning earlier in running waters.

Also the southern waters of the Delaware and Susquehanna rivers warm up earlier than those of the Seneca, Oswego and Oneida rivers in central New York, and these in turn earlier than those of the St. Lawrence or Niagara rivers, and all of these earlier than those of the lakes connected to or bisected by them.

Some years ago I saw bass taken at Binghamton prior to May 20 which had fully spawned and recovered their natural appetite and vigor.

I have fished a great deal on May 30 in the Oneida, Seneca and Oswego rivers, and have very rarely taken a bass which had not spawned and recovered.

I have absolutely failed to take any bass in Oneida Lake or Onondaga Lake on May 30, but on the same day, by going down the Oneida River from the lake to the rifts at Caughdenoy, have taken large numbers in the running water; or by going on the same day from Onondaga Lake to the Seneca River, and a mile or so up stream to the rifts, have made a good catch.

All of these bass have been fully spawned fish.

All of these were taken with fly or bait, mostly with the fly.

My observation has shown me that, as a rule, bass will not take a bait or a fly during the period of spawning, or while guarding their young. This is my experience based upon actual trials made for the purpose of testing my theory.

Of course there are exceptions to all rules. Once in a while, but rarely indeed, will an angler on May 30, take a bass which has not spawned. There are always exceptions, with fish, animals, or even human beings; some will hold over.

If I take twenty bass on May 30, and find among them one (which is possibly about the average) which has not spawned, this does not satisfy me that the open season should be changed, to open later. For some reason, or from some cause, there are late spawners, but the large majority should govern.

The fact is that I always return a bass which has not spawned, because I am able to distinguish it; but it occurs very rarely. I have also learned from personal experience, and from other sources, that bass which can run from a lake into a stream will spawn earlier in the running water.

On the other hand, I know from the same sources that it is a rare thing to take a bass with either bait or fly from any of the lakes of central New York before June 10, but in case of an early spring I have taken fully spawned fish in several of them on May 30.

As stated, I have read Mr. Van Cleef's article in the Forest and Stream last month, and know from him and other sources, that June 9 was agreed upon by the Canadian authorities as the proper time to open the season for bass in the St. Lawrence, although it is so far north, is the outlet for the cold water of Lake Ontario, and is almost a lake in itself on account of its size.

All of this has led me to the following conclusions:

1. That bass spawn much earlier in running water than in lakes.

2. That the season, early or late, exerts a controlling influence upon the actual time.

3. That the location of the waters, north or south, in this State causes a variation of the actual time.

4 That no law of a general nature can be framed which will fit all of these conditions precedent.

For the foregoing reasons I advocated the establishment of May 30 as the date for opening the bass season. I still believe I am correct. My opinion has not been changed by the article of Mr. Cheney in the Forest and Stream of May 1.

I know that June 15 was made the opening date in Ontario, and July 1 in Quebec, because of their climate, and because those dates were made a general and not a special law for each Province, the same as May 30 was made the general law for this State

In conclusion, I desire to simply say that Mr. Van Cleef and myself have labored for years to establish uniform laws for the entire State broad enough to cover the breeding seasons of all fish and game for the general good of all people.

We have been absolutely and teetotally opposed to all "special backyard" legislation.

We are willing to abide by the law, and neither of us has any desire, inclination or propensity for getting any "bulge" upon any other fellow-man.

Mr. Van Cleef, at least, is too well known to the true sportsmen of this State, and Canada also, to be accused of any such thing. C. W. Smith.

THE POTOMAC BASS.

Baltimore, May 6.—*Editor Forest and Stream:* Your readers will remember that the Maryland Game and Fish Protective Association has been energetically at work striving for the enactment by the legislators of Maryland, Virginia and West Virginia of a uniform law for the protection of black bass in the Potomac River. The Legislatures of Maryland and Virginia passed the law in 1896, and the Legislature of West Virginia passed the law Feb. 19, 1897. But, according to the provisions of the bill, the Governor of Maryland is required to issue a proclamation giving notice that the States of Virginia and West Virginia have passed the law; and before this proclamation can be issued the Governors of Virginia and West Virginia must give the Governor of Maryland official notification of the passage of the law by their respective States By some oversight these notifications were not sent the Governor of Maryland, and when the close season began—April 15—we were confronted with the fact that the law, legally, was inoperative, but morally every true angler was bound by a sense of honor not to take advantage of the situation.

The matter did not become known until April 25, when Gov. Lowndes, when asked whether he had received word from Virginia and West Virginia of the passage of the Potomac fish bill, answered in the negative, saying at the same time that his proclamation was all ready for publication as soon as he heard from the other States. In the meantime, Rev. Dr. Owen, of Hagerstown, was arrested for violating the law for taking bass in the Potomac at Williamsport on April 29, and was acquitted, for the reason that Gov. Lowndes had not issued his proclamation. Some lively hustling immediately followed on the part of the officers of the Maryland Association, and I am happy to tell your readers that Gov. Atkinson, of West Virginia, notified Gov. Lowndes May 4, and Gov. O'Farrell, of Virginia sent his notification to-day, and to-morrow Gov. Lowndes will finish the good work by issuing his proclamation, and every true and worthy disciple of Izaak Walton will be happy and the bass will have a rest till June 1.

Owing to heavy rains the Potomac has been muddy for a week, so that no fishing could be done. We only know of three persons who could not restrain their piscatorial enthusiasm and abide the proper season for taking bass.

It is refreshing to know that the hundreds of anglers who fish in the Potomac almost to a man refrained from being enticed to take advantage of the law. It demonstrates the influence exerted over a whole State by a thorough organization of the sportsmen and anglers into State and in county organizations. In addition the deputy game wardens now on duty along the Potomac, Game Warden J. Olney Norris has prepared a list of twenty-five more who will be commissioned at once, so that the river will be so well guarded as to make it next to impossible for anyone to violate the law and not be arrested. With these additional deputies we will have 200 on duty.

The Game Association has been assisting the State Fish Commissioner in distributing fry for the past three weeks. Eight hundred thousand perch and 350,000 trout have been distributed, and 3,000,000 shad will be put out next week, all in the western part of the State, mostly in streams that have never been stocked before. The tributaries of the lower bay will receive many millions of shad. Our Association is increasing in membership very rapidly. A branch club was organized in Frederick recently, with fifty-three members. Geo. W. Massamere, Sec'y-Treas.

TROUTING IN MICHIGAN.

Editor Forest and Stream:

The Michigan trout season opened this year as usual on May 1, and as usual it might as well have opened on Feb. 1, so far as the comfort of the fishermen was concerned. Messrs. T. W. Childs, Noah Swayne and others, who have club interests there, went up to Evart to open the season, while the Mills party of Toledo performed a similar service on the Sable. They found, what all the local fishermen found in the lower peninsula, the streams high and discolored, and the weather bleak and cold enough to chill the ardor of the most enthusiastic angler. The Mills party, consisting of General Superintendent Mills, of the Clover Leaf road; Clarence Brown, its solicitor; John W. Oswald, the Castalia expert, and Dr. Frank Beebe, of Columbus, managed to get along very comfortably in Superintendent Mills's private car, but the Sable was nearly a foot higher than even the ordinary spring stage and as dark as Erebus, a most extraordinary condition for that sand-filtered stream But on Monday the river began to clear, and on Tuesday and during the remainder of their stay they enjoyed such fishing as seldom falls to the lot of mortals outside this ideal stream. The party reached home early on Friday morning.

The Sable River, formerly the finest grayling stream in Michigan, now affords exceptional trout fishing, the greater part of the fish taken being the *Salmo fontinalis*, although there is a very fair representation of the rainbow trout, which seem to live in perfect harmony with their Eastern cousins. It is an interesting fact that less than ten years ago there was not a trout of any variety to be found in the waters of the Sable, but since it was artificially stocked so admirably has it proved itself to be adapted to the requirements of the trout that they have thrived and multiplied beyond all expectation. From the village of Grayling, where the river crosses the Michigan Central Railway, to the south branch of the Sable, a matter of some twenty-five miles by stream, scarcely a single specimen of the fish of the rainbow dorsal is to be taken, but there are said to be still a number in the south branch, and in the main river a few miles further down. And this melancholly condition of affairs leads me to remark that if Brer Hough is really in earnest about the capture of his grayling he cannot afford to put it off

much longer. It would seem to be a fortunate thing that the few remaining specimens of this magnificent fish still to to be found in the Sable are so relatively inaccessible, and the trout fishing so much better and so much more convenient, that they may last till the trout have literally eaten them out of house and home.

And this reminds me that in a very recent letter, alluding casually to the Sable, Mr. Hough speaks of it as a dangerous, or at least a risky stream for the boats of the angler. In this he has evidently been misinformed. The Sable is a rapid stream nearly all the way down the thirty miles of water usually fished below Grayling, but it has no rapids, such as characterize the Brulé and similar streams. There is no place along the entire course mentioned where a boat may not lie at anchor with perfect safety to its occupants.

JAY BEEBE.

TOLEDO, O., May 8.

SOME OTHER CAMPS.

THE boys were talking over some of our camping expeditions the other night, after reading what I had written about Camp Bouillon, for that expedition was by no means the only one. Jack's brother, while no tenderfoot on a trout stream, did not know much about camping out, and he expressed a desire to shake off the mold that had accumulated on him from continuous dwelling in a banking house and to go with us the next time we went camping. Jack and I had planned a little expedition not many miles from town, so George was invited.

We had a little sheet-iron stove in one corner of our tent and thought it would be a mighty nice thing to take along a few pieces of cannel coal, for the nights were very cold and a sheet-iron stove cools off mighty quick, and it is not pleasant to crawl out in the night to replenish the fire with wood. We fixed up a very comfortable camp. The only thing I objected to was that Jack would spit on the floor, and quite an argument arose as to whether I, as cook and housekeeper of the institution, had not a right to boss the ranch, so to speak. We had one double cot and a single one. I had taken along a pair of new blankets and Jack immediately picked out the comfortable side of the double cot for himself, and for fear these blankets would be pulled off during the night, he, during the few moments that I was out of the tent, did then and there securely drive three or four nails right through those new blankets fastening them to the side, his side, mind you, of the cot.

The deed had been done, and there was no need of raising a row about it, but it was Jack all over. The light was put out, for we always carried a tin reflector lamp that we could fasten to the tent pole, and the last thing before retiring for the night a big piece of the coal was dumped into the stove. It was cold enough outside, but it was not long before it was warm enough inside. The stovepipe began to be a good sizzling red, and as the occupants of the double cot were on the opposite side and the stove was just at George's feet, we rather enjoyed his discomfiture. Finally he was roasted out; he jumped out of bed and emptied a cup of water into the stove, which cooled it down, and he went back to bed. But it did not take long for the coal to brighten up, and the stovepipe once more began to be red-hot, and I think poor George spent most of the night jumping out of bed, putting out the fire and getting back to bed. He finally soused it with a whole pail of water and put the fire out, then called the dog on the bed with him to keep his feet warm. We concluded that cannel coal was not a success in a sheet-iron stove.

Another time we went camping out near Freeland, not far from Section 37. We took along a bale of straw, and you know it pulls out in layers 3 or 4in. thick and makes a veritable mattress. We had the same cot beds, but there was a space left between the two that we had to cover over with this straw, and it made a very nice bunking place for a narrow man. We had gone up early in the morning and had the camp all ready; and Ferd and one of the other boys came up on the evening train and got a farmer to drive them out to where we were, about three miles from the station. We had gone to bed when we heard them calling in the distance, and as the night was cold we did not get up to welcome them. The bed made on the straw between the two cots fell to Ferd and I suppose had not been properly calculated for the occupant, for he groaned nearly all night, and long before morning awakened and wanted some one to change with him, saying he had been wedged in so between the two cots that he was unable to turn or move, and had to have some one help him before he could get up. So we rigged a derrick, hoisted him up, and as it was then nearly morning we concluded it was time to get up.

Another trip that Jack and I took was one of those trips when you come home without anything, and that is seldom told about. We went up the bay shore for ducks. Reports had come in that they were there in thousands. We were going to camp on a little island not very far from mainland and the water was not very deep. Jack was not much of a boatman and consequently his duck boat contained very little of the camping outfit. Mine had the camp stove, which was not the sheet-iron one at that time and among other things the tent poles. These were a little too long to put in the bottom of the boat, so they were put corner-wise and stuck out on each end. I remember we were going along carefully; I was standing up, paddling, the waves were quite choppy and there was a disagreeable cork-screw motion to the boat. I had just cautioned Jack to be careful when a wave came along with a little more force than the previous ones and gave the canoe such a jolt that one of the tent poles was caught by it and in a jiffy I was overboard. This was more fun for Jack than for myself, and several comments were made upon what a good boatman I was and how much better I could ride a cranky duck boat than he could. However, the outfit was not badly demoralized, notwithstanding I was wet to my chin and it was quite late in the fall. We soon got across to the little island and found a good camping spot, but by that time it blew great guns, and twice during the night we had to get out and fasten down the tent and put extra guys to keep it from blowing away over our heads.

That ought to have been just the place and just the weather for ducks, but the next morning we thrashed around all over the entire marsh without getting a feather. Along in the afternoon we packed up and caught the evening train home. On the way we negotiated a deal whereby we got a nice crock of fresh country butter, and upon our return Jack's father asked where the ducks were and Jack went on to tell what a nice time we had, what a fine camp, and how nice everything was. "Yes," his father said, "but why don't you say where the birds are, and how many did you get?" Jack said: "We got the finest crock of butter you ever saw." And from that day to this, whenever the old gentleman hears that Jack or I are planning a trip, he wants to know if it is to be a crock of butter expedition.

All of these things happened a good while ago, and we have not had one of our home camping-out expeditions in six or seven years. Not but what we would like to, just the same, and not that we are growing too old to do it, but somehow or other the old crowd has drifted apart, and I do not suppose we will ever again have one of the old-time camping-out expeditions that the members of the Saginaw crowd enjoyed so well.

W. B. MERSHON.

SAGINAW, Mich., May 5.

NEW ENGLAND WATERS.

New Hampshire Fishing.

HUDSON CENTER, May 6.—*Editor Forest and Stream:* I notice in an article over the signature of Hackle a statement that the open season for moose and caribou is from Sept 15 to Dec. 15. This is a mistake. They are protected in New Hampshire until Sept. 15, 1901.

The fishermen are having grand sport at New Found Lake with the salmon. I was at Dr. Fowler's cottage on the 2d and was quite interested in looking over a record of their catch for the last three years. In 1895, from April 24 to May 2 thirty-three salmon and one lake trout were taken; in 1896, during the same time, twenty-one salmon and three lake trout; in 1897 for the same time, thirty-five salmon. These fish were caught by Gen. Paul Lang, Col. Frank Noyes and Dr. Fowler. Three better fishermen it would be hard to find. It must be remembered that there are several other camps all having different degrees of success, also that the best part of the season both with salmon and lake trout is after May 2.

At Winnepesaukee they are having a good catch of lake trout and shad-waiters. I have heard of but one salmon being caught there, an 11lb. one. Mr. O. H. Daniels, of Laconia, tells me that no better catches have ever been made in Winnisquam Bay of whitefish and lake trout. I get reports of fair catches of brook trout from different sections of the State.

N. WENTWORTH.

Massachusetts and Maine and New Hampshire.

BOSTON, May 10.—Moosehead is clear; fishermen are off, and prospects are excellent. The Rangeleys are clearing. Richardson is clear. Mooselucmaguntic is clearing. Rangeley will be clear by Thursday.

May 8.—Some fishing is being done in the coves around Rangeley Lake, where the water is open, and some trout are being taken, but no large fish. A few Boston fishermen have already gone for this early fishing. Mr. Morse has gone to Rangeley. He will try the cove fishing. Mr. and Mrs. C. P. Stevens have gone to Rangeley. It will be remembered that Mr. Stevens broke the record on landlocked salmon there last year. He took two salmon on May 6 weighing 5½ and 7½lbs., and on the 16th a salmon that weighed 7½lbs. F. C. Belcher and Mrs. Belcher have gone to Rangely. Mr. Belcher is owner of the beautiful camps at Mingo Point. Mr. C. D. Lyford will go to the Rangeleys immediately on receipt of the news that the ice is out.

Salmon fishing at Bangor is not turning out well this year, or was not at last reports Mr. Archibald Mitchell with a friend from Scotland are just back from trying the pool at Bangor a week. They fished faithfully every day, but took only a salmon apiece. Mr. Mitchell's weighed 17lbs., a large one for that pool. Mr. Mitchell says that there was but one other salmon caught during their stay. He is the owner of a salmon pool at the Restigouche, where he will fish later. He had great luck there last year. Mr. D. H. Blanchard and his friend, Mr. Keeler, are already planning for Mr. Blanchard's salmon river, earlier this year than usual.

The landlocked salmon fishermen are much interested. R. O. Harding, E. E Wakefield, Jr, and Edward Brooks left Friday evening for Dan Hole Pond, Ossipee, N. H. They are to be met at the pond by Commissioners Wentworth and Hughes. Mr. Thomas Dickson is also expected to join the party for a day. Mr. Dickson writes Mr. Harding of great fishing at Winnipesaukee last week. He took five lake trout, weighing respectively 9, 7, 6, 5 and 4lbs. Good sport has been had at Newfound Lake the past week. Lake Webb, formerly Weld Pond, Maine, has been open for a week, and good luck with salmon and trout has resulted. A big catch was made there at first; fifty salmon and trout on Saturday, eight on Sunday, and forty on Monday. Mr. John Decker and party were the more lucky fishermen. Mr. Wilder K. Chase, of Pine Point Camps at that lake, sends F. E. Boothby a drawing of three of these fish. One is a brook trout weighing 4½lbs., the second a salmon of 4¼lbs., the third a brook trout of 5½lbs. This drawing has been on display in the window of the Washington street office of the Boston & Maine and Maine Central railways the past three days, and has drawn a crowd. Mr. Q. A Atwood and his friend Gen. Es Boss have gone to Sebec Lake, Maine, for salmon fishing.

Mr. Henry C. Litchfield, with Dame, Stodard and Kendall, received a letter on Thursday from Col. C B. Hazeltine, saying that the ice is out of Swan Lake, near Belfast, Me, and that as usual, Fish Commissioner Henry O. Stanley is taking trout there. At the time the letter was written he had taken a salmon of 8½lbs., a trout of 7½lbs., and other trout down to 3lbs. It will be remembered that these are the celebrated Swan Lake brook trout (those who think they know better need not smile at such a name) brought to light only a few years ago by Mr. Stanley and Mr. Hazeltine. They are perfect *salmo fontinalis*, only that they are in that lake; hard to get, and of a remarkable size and most beautiful coloring. Mr. Hazeltine suggests to Mr. Litchfield to come at once, but business prevents. Col. C. A. Hopkins is off for Grand Lake Stream. The ice left Grand Lake May 3. On Monday Mr. W. L Underwood was off for the Duck Lake camps in that region. His brother, H. O. Underwood, is treasurer of the Duck Lake Club. This club will be off for the Shoodics in a few days.

Landlocked salmon fishing at Lake Auburn, Me., has been proving uncertain this season. Several fine trout and salmon were taken there on Friday. The better weather has improved the fishing a good deal. The fishing season at Wilson Lake, Wilton, Me., opened on Tuesday with a catch of fifteen salmon, some of them very large. This lake is new to the general run of sportsmen, having been stocked for some years, but largely fished by local sportsmen. A late report says that Mr. John Duke, of Rumford Falls, has just returned from Lake Webb, where he caught twenty-six salmon, the string weighing over 40lbs.

SPECIAL.

"WHEN THE ICE GOES OUT."

Three Days with the Landlocked Salmon at Sebago.

"THERE goes the telephone! Hello! What is it?"

"The ice went out of the Sebago yesterday. Be ready to start at 8:45 to-morrow morning."

And so Monday morning we four met at the Union Depot. Anticipation for days had at last been satisfied. One dry goods man and three doctors tumbled ulsters, and fish boxes and rod cases and rubber overcoats and grips into as many seats, and then took the first long breath of leisure in many a day.

Sebago Lake is a nearly oval sheet of water, about twelve miles long, and sixteen miles north of the city of Portland, Me. One of the most sinuous rivers, the Songo—most charmingly sung by the poet Longfellow—connects it with its tributaries, Brandy Pond and Long Pond, further north. The series of lakes, with their various feeders, stretch out over a length of some fifty miles, survivals of the glacier that once covered our entire State. From out of the southern end of Sebago flows a broad, deep river, the Presumpscott, that supplies the motive power for the paper and cotton mills of Westbrook. Some twenty-five years ago Portland utilized the lake for its water supply. Few cities in the world are able to boast of purer water or one of more lavish abundance.

But with its attractions of scenery and utility, the lake has special charms for the angler. Brook trout (*Salmo fontinalis*) are caught in it, often of large size, and bass at certain seasons of the year. But Sebago is also the home of a true landlocked salmon, which long ago Agassiz studied and decided to be a species indigenous to these waters. He therefore gave it the name of *Salmo sebaginensis*. Because of peculiar conditions of habit and food supply, it is a difficult fish to catch; but once hooked, it fights hard enough to satisfy the heart of the most fastidious sportsman.

The hour's run to Mattocks was unnoticed in the gabble of fish talk. Drawn up to the platform of the station, the mountain wagon, which served the purpose of the daily stage to Naples, awaited us. Loading it up with paraphernalia enough for a month's camping, we stowed ourselves in and were off. The crisp April morning was bright with sunshine, though it needed no telling that all the winter's snow was not yet gone from the White Mountains, 'way off to the northwest. Through the little village of Mattocks, that unfortunate memento of the gentleman farmer, we swung along over a fairly good road. Here and there were mud holes, of course, for every roadside gully was full of snow water, and the snow itself still lay in patches among the trees and along the fences.

At Fitch's, Charley suggested that we put in for a supply of crackers and cheese, and these, with a bunch of bananas, were dealt out from the back seat to those ahead whose cigars had finally given out. Just beyond Sandy Beach, some six or eight miles from the station, Stillman met us with an open wagon and a spike team of three horses. After two hours of rattling over dry ground and floundering through mud we drew rein at Meserve's, our destination, at the mouth of the Songo.

Through the care of Charley, arrangements had been made for our use of Frank's own camp, and specially fortunate were we that we could get it. Ranged along this shore of the lake are some five or six little cottages. At the head of the line is a more pretentious house of two stories. Here mine host Meserve feeds his guests, the fisherman and guides, and lodges as many as his upper story can accommodate. "Roomers and mealers" is the proper vernacular. In one of the smaller cottages he lives through the entire year, and this, his proper home, he had resigned to us. A story high, with a single main room and an extension, fitted with bunks for the guides and bedsteads for the "sports," it was just about big enough to swing a cat in, with respect, of course, for the size of the cat. Small though it be, it is an ideal fisherman's camp, and we went to housekeeping at once.

And now a word in passing about this ice business. The season *par excellence* for salmon fishing at Sebago is the last of April, "when the ice goes out." The natural food here for the salmon is the smelt. During the winter both lie out in deep water. But immediately after the ice leaves the lake the smelt run in up the Songo to spawn. The salmon follow them from deep water, and feed upon the smelt along the northern shore of the Lake and around the mouth of the Songo. Curiously enough, for a few days immediately after this exodus, salmon will accept a troll of natural or artificial smelt along this shore. But after this time the daily catch grows smaller, until in the latter part of May and the first of June, when the smelt return to the deep water of the lake. Then for a few days also, salmon will take the bait, but these two periods comprise the year's fishing. Very rarely are the salmon ever taken at any other season of the year, or at any other part of these waters. So that after this explanation one can understand why the time to go a-fishing at Sebago is "when the ice goes out," and happy is he who can suit his needs for the occasion.

Our long ride had furnished good sauce for a hearty dinner, when our guides met us, and we discussed the situation. As we looked out seaward from the shore, the prospect of fishing was decidedly unfavorable. The main lake, as far as the eye could reach, was leaping in freedom from its fetters of ice. The strong south wind which has prevailed during several days had done its work well, so far as that greater part was concerned. But, unwisely for us, it had driven a mass of ice a half mile wide or so down upon our shore. And here we were shut off from the fishing grounds outside it by this grinding, crunching floe of dirty black material, too weak to bear the weight of a boat and showing no clear lanes for passage. There was nothing to do but to wait patiently for the power of the north wind to drive away the barrier for us.

Slow dragged the hours of that afternoon. We chanted in antiphony "Thou art so near, and yet so far," and tormented the lives of every would-be weather prophet in the neighborhood. One of the party was somewhat fainted as to the chances of successful fishing, ice or no ice. For had

he not, in times gone by, in vain spent days and dollars to get sight, even of one of these much lauded fish. "Wa'al," quoth John Plummer, "just come over to the cook house and praps you'll change your mind." Up we stalked in solemn single file, bent 'neath the low lintel, and there in the gloom in all its own magnificence lay a monster salmon! It had been taken the day before by a gentleman who had never previously caught one, and, as it afterward proved, it was his only fish. "Thirty inches long, 9in. broad and weighs 16lbs. 4oz.," says the owner. Such an introduction was satisfactory to all doubters! Congratulations poured in from all, with an occasional aside of, "fisherman's luck! the greenhorn always gets the best fish." So back we meandered to our own quarters, not exactly envious, you know, but with an air of dubious introspection.

How we did watch the weather-vane that swung upon the next cottage! That yellow fish vacillated from south to west, occasionally trifling with points of the compass further northward. Six o'clock came, and—glory be to Peter, the patron saint of all true anglers—it was steady at due north. But at that hour it needed no weather-vane to proclaim the change. After supper we began to fill up the stove with good, hard wood and pull on extra coats, for the freezing wind was roaring through every cranny and out of doors nipped noses and fingers as if it was the depth of winter. Frank looked in upon us just before we turned in. Fat and Jolly, his pipes wheezing with a horrid cold, he lightened the gloom of our spirits with a cheery "Good night, don't worry, Doc, there won't be a morsel of this ice here to-morrow mornin'."

We had not been together long enough as yet to establish that happy state of true comradery, which is the mark of all true fisherfolk. But in one thing we were entirely harmonious—the necessity of going to bed, "all standing," as the sailors say, if we expected to live till morning. It was confoundedly cold! The thickest of winter underclothing and stockings, and possibly a pair of trousers besides, were adopted as the fit robe of night, and we were none too warm at that. No pajamas for us, if you please! Once or twice during the night the pain of an almost frozen nose awoke me to make another grab for the thick comfortables, which I feared my bed-fellow was absorbing too generously.

At last a doleful howl from John in the front room awoke me. It was bright day again. The sun shone clear into the house, and the wind was piping merrily outside. "Too bad. Just our luck. There's that plaguy ice just where it was last night. No fishing for us to-day!" We all groaned in chorus, but as I was nearest the window on the lake side of the house, I mustered up courage for a look myself. Lo, not a vestige of our *bête noir* of the day before was there. The lake was as free from ice as it is in August. And this was only one of John Plummer's little jokes!

Off we started at half-past 6. Nansen, on his sledge journey, didn't begin to wear as many garments as we did. Never, in all my experience with Maine winters, did I feel the cold as I did during that morning's fishing. I simply could not keep warm nor even comfortably cold. Every drop of spray turned to ice; icicles hung to the oars; the lines iced up so that they would not slip through the guides of the rods. Our several boats cruised up and down half a mile or so parallel with the shore. Each used two rods, trolling from 150 to 200ft. of line, with an Archer spinner or blue-backed phantom for bait. The only relief from the biting wind was when we turned southward toward the sun, then Sumner, my guide, would improve the opportunity in trying to pound a little feeling into his stinging hands.

After an hour of teeth-chattering and no salmon I decided that I, at least, knew when I had enough. It seemed hours before we got ashore, and it was noon before I was decently warmed through. Charley had the only luck that morning, sticking to it until 11 o'clock, and being rewarded for his pains, or better, freezing, by two fish: one of 8lbs., and one 13lbs.

While we sat around the fire in the "settin' room" that night he told us how he managed to keep out so long: "The secret lies in being properly clothed. I had on, first, two pairs of extra heavy winter flannel shirts, and two pairs of drawers. Next, vest and two pairs of trousers. Then a heavy sweater; outside this a double wool-lined canvas shooting jacket, and over all a thick ulster."

"My body wasn't cold, but my feet were," says Bert.

"Oh, I looked out for that. I put on two pairs of hand-knit wool socks, and my arctics over my shoes. Then I tied my hat down with a big handkerchief and wrapped up my knees in a double pair of wool blankets. Lucky we didn't capsize—I should have gone straight to the bottom."

Neither Bert nor George caught anything that day, but after dinner I tempted Providence and the fish again and got a beauty of 8lbs. It was a female, long, slender, her sides burnished silver, set off with the peculiar black spots along the head and back. None can study such a creation without acknowledging that the salmon is the king of our Northern waters.

How Charley's eyes blazed as he lived over again the capture of his big fish. During the morning he found that the only way he could keep his line serviceable was by retrieving that part which lay on the surface of the water, breaking off the ice which would form upon it, and then paying out again. Just after one of these performances he had a good strike. He reeled in up to the ice which had reformed upon the line, but all attempts to make the rest of the line render were useless. The fish was then allowed to play until Charley could reach up and break off the ice collection. Then the reeling began again, when another difficulty appeared. This time it was the reel. Though a new one, the internal machinery had broken down, and, though Charley was grinding the crank vigorously, the salmon was slowly and surely getting further away. Quickly throwing the rod down into the boat he retrieved the line hand over hand with mittens on. This was not a perfect success, for while at times Charley had the fish, at other times the fish had Charley. Meantime the strong wind had driven the boat a mile or so out into the lake. He had the good fortune to have an accomplished guide, Mr. Oliver, the fish warden of the lake, who, by the way, is making a good impression upon both sportsmen and natives by his manly, common-sense interpretation of his official duties. "Don't give him up," yelled Oliver, "we'll hang to him, if he carries us to the foot of the pond."

After struggling for an hour, the salmon was brought near enough to net. The net was a new one that had become well frozen while lying unused in the boat. After making it serviceable by wringing off the ice, the guide slipped it under the fish at the first trial. But the instant the salmon felt the touch of the cord, to the dismay of both Charly and the guide, there was mad break through the net, leaving nothing but a few bloody strands hanging to the ring. "We must gaff him," cries Oliver; but there was no gaff in the boat. "Then I'll try to get my fingers into his gills." From an experience gained by long service as fish-keeper in the Sebago Fish Hatchery, he reached his arm full length into the water, thrust his fingers into the fish's gills, and with a mighty heave landed him into the boat. With less adroit handling or a single false movement, the salmon would certainly have been lost. A long, hard pull was necessary before the landing was reached, but it was a grand fight, and the fish was worth it.

Wednesday morning illustrated another of the phases of our fickle April weather. During the night the wind had shifted back again to the South. Along the edges of the shore half an inch of ice had formed, and at the first of the fishing the cold was nearly as intense as during the day before. But as the forenoon lengthened the sun grew hotter. Boats began to thicken as more and more fishermen came out. Backwards and forwards across the bar the long lines trailed, and strikes became frequent. The day was a perfect one for sport, and it was found that more than forty salmon, some quite large, had been taken during it. It was my good fortune to capture the third largest fish taken up to that night. In the morning I got one 4-pounder on a silver phantom; but during the afternoon, while others around me were successful, I was not. We hated to give up beaten, so Sumner and I stayed out until almost every other boat had gone in. It was growing dusk, but Sumner, faithful fellow, said, "Let's swing round once more," and at the last turn we got him. I knew it was a large one, and when I reeled him up to the net and saw the great greenish sides swinging up through the clear water, I felt that I had not lived in vain! Even Sumner's wonted placidness was ruffled, as he said, "Just 11lbs., and a beauty." And now his portrait in colors hangs above me, to remind me that "all things come to him who waits."

It had been a great fish day. Each of our party had taken at least one, and many of the other fishermen were jubilant over good catches. So, naturally, the post prandial talk was upon the general subject of landlocked salmon. Their habits and of course their weight were discussed. Each member of the quartette furnished his quota to the common stock of knowledge, and capped the last story by one a "leetle" bigger. By and by the door opened, and Levi came in with Charley, who had been on a rampage among the other camps, to hear them "swap lies," as he mildly put it. Levi is one of the veterans of this region. Years before the present game laws were heard of he had taken salmon out of the lake and river by every device then known. At night, under the glare of the pitch pine knot, he had speared them; he had shot them with his rifle as they lay upon the spawning beds; and nowadays, under the restrictions of the warden, his lines are trolled in surely pleasant places, for his good luck is proverbial. So, of course, he was at once accosted with "How big a salmon did you ever see?"

Slowly and in silence he drew up his chair by the stove, filled his corn-cob afresh, and scratched a match upon the leg of his trousers. How many times every one has witnessed that process! First the match is split off from the card, scrutinized carefully to find the sulphur end, drawn with two or three short strokes up and down the nether garment, and with the last stroke lengthened out to the arm's length, held up until the brimstone burns off. Then well afire and already half consumed, it is laid carefully upon the tobacco, a few deep puffs—and another soul is content with the charmed weed. Still silent, Levi took his pipe from his mouth, worked his jaws up and down several times to see if they were acting well, and like Ulysses before his hearers, "thus began."

"O' course, I've seed bigger fish than I ever hefted. Up in the weir we often find 'em better than 25lbs. But years ago I 'member one spring comin' down the river in the canoe. I see a big splashin' jest below the head of a rip. At fust I didn't sense what it was. I runs the canoe up ashore and runs down the bank opposite, and seen it was a big black spot aground in the shallow. The water war 'bout 2ft. deep, and the critter's back was stickin' out all of 1ft., an' he war thrashin' round with his tail tremenjus. I run back to the canoe for my spear, which I happen' to have with me. It had a middlin'-sized handle, 'bout as big as my arm, and I runs up and let him have it, as hard as I could drive, right onto his back. Next I knowed I was flat onto my back in the mud, the handle of the spear all busted to pieces and the iron bent double. I never hurt the feller a might, and he tore off up the rip inter deep water. He was shot the next day, and so I knowed jest how much he weighed."

"How much was it, Levi?"

"Waal, we didn't have nothin' to weigh him there, so we took him up to the Lock and put him on the scales, and he weighed jest 50lbs."

What a yell went up from the audience, and how the voice of George triumphed above all others, "I believe it, I believe it!"

Thursday was another hot day. What a contrast in forty-eight hours! Up to noon the lake was unruffled silver. Not even the softest breath of a summer's zephyr stirred its glassy surface. The sun burned our faces and blistered our noses, as it was reflected from the water. With such conditions of sky and river, few fish were taken, though just at noon, during a temporary roughening of the water, two fish rewarded our patience. But our furlough was over. After dinner came that saddest and happiest hour for the true disciple of Walton, when the rods are unjointed, the fish packed to carry out, and boiled shirts are necessary for the conventionalities of a more fastidious civilization. Our guides rowed us across the lake to Sandy Beach, where we met the afternoon stage for the station.

On the road we met a party of natives, one of whom was carrying under his arm a bundle, from out of whose wrappings protruded the head and tail of a large salmon.

"Where did you get him?"

"At the mouth of Northwest River, this morning, on a live bait."

"How much does he weigh?"

"Fourteen pounds and a half; and it took an hour to land him."

It was a fitting ending to a most successful trip. And when next day our fish were displayed in the city, one of their admirers voiced the general opinion, "the finest lot of Sebago salmon ever shown here in one collection."

Stanley P. Warren.

Portland.

ANGLING NOTES.

The Switch Cast.

Soon after the fly-casting tournament at Madison Square Garden in March, I received the following letter from a gentleman in Easton, Pa., and promised to reply to it, but have not been able to do so until now:

"Will you pardon my writing to you on the ground of a slight provocation, occasioned by a circumstance foreign to yourself.

"The fact is I traveled all the way from this place on March 18, to Madison Square Garden, in order to witness switch casting, something I had never seen, but had heard of, only to find when I ranged myself alongside of the tank that the event had been postponed, on account of the class not filling. The request I have to make is that you kindly describe as well as you can, how the cast is made, and in a public event what is barred. That is, what do you have to do, and not do, in order to keep within the lines where switch casting begins and ends. I have read a description of switch casting; but it does not seem possible that with some 70ft. of line lying in the water in front of you, that by simply describing a circle with the tip of the rod while over your head, and then threshing it forward and downward, the line is going to pick itself up and go rolling onward to a distance of 100ft. or more."

The best description I ever heard of a switch, or spey cast, as it is more generally called in Great Britain, probably because it originated on the river Spey in Scotland, was in *Land and Water* (I think) many years ago, and written by Geo. M. Kelson; but it had with it diagrams enough to illustrate a book of considerable proportions, and it seems like a formidable undertaking to even attempt to describe the cast without a single diagram of some sort or other. The cast is more easily made on a stream with sufficient current to produce a drag on the line. I know of but one or two printed descriptions of the cast, and the latest and simplest is by Mr. Marston, in a book which was issued last year, but it has the inevitable diagram, and does not make the cast much, if any, clearer to the comprehension than the description my correspondent gives, and perhaps I may not succeed any better. The angler stands on the bank of a stream with his line in the water extending down stream. The first movement is to lift the line to the surface of the water. This may be done by the time the rod points upward at an angle of 45°. The motion of the rod is continued upward, but quickly when the line is clear of the water, and to the right, the point of the rod stopping over and a little back of the angler's head. The idea of this part of the motion is to draw the line toward the caster and a little to his right in the form of a loop, without lifting the fly from the water. If the motion is properly made when the point of the rod is over and back of the angler's head the line has bellied, forming a loop like the curve of a letter D at the right of the angler's position, and the fly is still on the water in front of him. The motion is now continued by the rod tip making the straight line of the D downward with force, imparting impetus to the line, which rolls it out on the water in the direction in which the rod is pointed. The line is lifted from the water, not as in the recovery for a back cast, but with force simply to form the loop, while the fly remains on the water. The quick, sharp motion of the rod tip forward and downward gives a forward movement to the line nearest to the rod tip, and this naturally is communicated along the whole length of the line, and it is impelled forward in one long, continuous roll. You must have loop enough to feel the "pull" of the line when you make the sharp forward movement with the rod, and the momentum then given to the line constitutes the switch cast, as nearly as I can describe it in words.

The first switch cast I ever made was with a rope, and I did not know it was a switch cast at the time; but I believe I can do it better now with a rope than I can do it with a rod. A boyish pastime was to draw a rope on the grass until it was nearly extended, then pull up a little slack (the loop of the switch cast), and with a rotary motion of the slack impart momentum to the rope that extended clear to the end in undulating curves, finishing with a crack at the end if it was well done.

The one thing you may not do in switch casting is to throw your fly behind you. At the tournament in the contests for switch casting a screen of canvas was erected a few feet behind the caster, so he could not throw his fly back of it even had he wished to do so. Otherwise the contests for switch casting are not unlike overhead casting.

American Fisheries' Society.

President Whitaker, of the American Fisheries' Society, recently appointed a committee of prominent gentlemen in Detroit to arrange a programme of entertainment when the Society meets in that city, June 17, 18 and 19. One feature proposed is to have a fly-casting tournament at Belle Isle, and a sub-committee was appointed to make the necessary arrangements with the Park Board. President Whitaker is doing everything in his power to make the twenty-sixth annual meeting of the Society a notable one. I received a letter from him this morning in which he says in part: "I think I can assure you of the success of the social features of the coming meeting now. I have appointed the sub-committees on entertainment, etc., and as soon as they have definitely settled on their programme we will inform you. * * * We expect a large attendance from the Lake States, and I hope the Eastern members will be well represented. We hope to have some of the scientific men of the Middle West with us; men who have been interested actively in investigations connected with fish and fishculture. * * * We shall give you a good time socially after the work is done, and hope to show you something of what the officer in charge of the Spanish caravals saw fit to call the rival of the Mediterranean when he was on his way up the lakes bound to Chicago with his charges."

The meetings of the Society have generally been held in the East—New York, Washington or Philadelphia—in years past, but a considerable portion of the membership comes from the West and Middle West, and the Detroit meeting promises to be one that no member, no matter where he lives, can afford to miss. When the Western people set out

to accomplish an object they generally do it in such a manner as to make glad the hearts of those who are privileged to take part in it, no matter what it may be, and I know that Commissioner Whitaker intends that the coming meeting shall be a red-letter one in the annals of the American Fisheries Society.

Color of Trout Flesh.

Col. William L. Stone, of Mount Vernon, N. Y., in writing me concerning an article I prepared for the report of the Fisheries, Game and Forest Commissioners of New York, says:

"I was much interested in your admirable article in the report, but will you allow me to ask one or two questions. When you speak of the red tinge given to the trout by living on crayfish, how will you account for this fact? That in both the Upper and Lower Beaver lakes (in the Adirondacks) the male trout (or *vice versa*, I do not remember which) is deeply marked with a deep red while the female is white. Certainly one sex does not feed on crayfish to the exclusion of the other; yet this is a fact and I know you would like to have us tell you about these things, hence this letter." I assume that Col. Stone refers to the color of the *flesh* of the trout, not the color of the skin, for it was about the flesh of the trout, not its skin, that I referred to as being affected by a diet, not of crayfish, but of other crustacea, *gammarus, daphnia* and *cyclops*. I know, as all fishermen must know, that at the breeding season the male trout are of a red tinge outwardly, and the female are white on the body; but why the flesh of one sex should be red and the other white I cannot understand, as this is the first time that I have heard anything of the kind. The flesh of different trout in the same pond will vary greatly in color, from white to salmon color or deep red, but this is accounted for by the food—the more crustacean food the more coloring matter, and the deeper-colored the flesh. The more I think over Col. Stone's letter the more I am inclined to believe he refers to external coloring, and not to the flesh of the fish, for it scarcely seems probable that all female trout should have flesh of one color and all male trout flesh of another color; but external color in the sexes is quite a different matter, and not a matter of absorbing pigment from a diet of crustaceans.

"When the Ice Goes Out."

As I have had occasion to remark annually for a number of years, the fishing season in a region in northern New York seems to depend, in a measure, upon the time when the ice goes out of Lake George. (In April an Albany newspaper stated that the ice in Lake George would probably *sink* in a few days.) The season is early or late, depending upon the time when the ice disappears. The interest in this event is more than local, for the fishermen who visit the lake for the fishing come from various parts of the State and from other States.

Great is the preparation for the first day of May, when the fishing season opens legally, and whether the trout will be "up" or "down" is a momentous question. This year the ice went out on the 13th, five days earlier than last year, and the information was sent far and wide. The first day of May was an ideal day for trout trolling, as the lake was still and the air fairly warm. There are a few fishermen who try to think that the lake trout in this lake have diminished in numbers until the fishing is very poor, but that is because their thinking machinery is in need of repairs. When the season opened this year the trout were seen "boiling" at the surface in every direction. It is true that the big catches of a few years ago, when any one who put out a troll got trout, are not as common as formerly; but the trout are there, for all that. Two years ago it was said that the fishing was poor in the lake. I was there with Harry Brown, of the New York *Herald*, and Ed. Mott, the Old Settler of the New York *Sun*, and we saw enough trout at the surface to load a train of cars; but few of them, comparatively, would take a bait. My first fish weighed 13lbs., and was a "hoodoo," for the next went down to 7lbs. We were not fishing for market or to have the fish photographed, and so got all the trout we wanted. The trouble was, and is, that the lake is full of food, and the trout have no trouble to fill their stomachs without taking in many bait-fish loaded with hooks. The lake fairly swarms with whitefish, and they are not netted, and so increase beyond the fondest dream of the whitefish breeder, and it makes Lake George a fine body of water in which to plant the various species of *Salmonidæ*

Two carloads of yearling ouananiche have been planted, and another carload will be planted next fall; and when grown to adult size they will find food awaiting them in abundance. Forty-two adult Sunapee saibling or golden trout were planted by the State in the lake last year, and young whitefish will prove a delicacy for them.

On the opening day two men caught 75lbs. of trout, and three of the fish weighed 15, 13 and 12lbs., respectively. The veteran Capt. Elias Harris, of the steamer Horican, and Mr. E. R. Willerton, Asst. Gen. Pass. Agent of the D & H. R. R., caught five trout weighing 31lbs., and other good scores were made from one end of the lake to the other. The trout are fast enough if the fishermen can only catch them.

As an old railroad conductor said, "railroading and fishing is a very particular business." One year fishing in Lake George with my old friend Judge Ranger, he caught ten trout weighing 67lbs., and I caught five trout weighing 30½lbs. We were there about a week. Two friends who fished near us did not get a strike in ten days' fishing.

Another year there were four in our party at Ranger Island for about ten days. On what proved to be the best day of the entire time I did not fish, and at night was jeered most energetically for not going out, and thus missing the best day in years. On that day (the only day he fished) Billy Ranger caught four trout weighing 35lbs. The next day was raw, cold and windy, and I had to listen to what had been done on the day before. At the end of our stay Judge Ranger had caught fifteen trout of 60lbs., Mitchell fifteen trout of 71lbs., and I had caught fourteen trout of 73lbs., in spite of missing the best day. If it were not for the uncertainties of fishing it would lose much of its charm.

I have a note from the Sunapee Lake fishing. Snowdrifts 4ft. deep in the woods on the 1st, but the first ouananiche was caught on that day from a wharf, and weighed 8lbs.

Fly Fishers.

At the annual dinner of the Fly Fisher's Club, London, Mr. Basil Field, the retiring President, who retired upon the election of Mr. R. B. Marston to the chair, told in his speech about joining the Club: "I had been given to understand that the Club consisted exclusively of a body of experts, each and every one of whom could at will—when kneeling, sitting or even lying prostrate beneath the pendent and interlacing branches of a weeping willow tree, we will say—cast a fly in the teeth of a hurricane and place it lightly, and delicately cocked, in the circumference of a wine-glass at any given spot within a range of from 30 to 40 yards. This, in the privacy of self confession, I was constrained to admit, was rather beyond my form. But if I could not shine among the lights I could at least keep dark. I could, I thought, keep my ears open to the words, and my mouth shut to the words of folly, and thus pass muster without detection, so I joined the Club." Mr. Field was soon in trouble, for he confesses that although information flowed in a large stream within the Club that the past master of the art of fly-fishing gave advice that differed diametrically, and he was at sea as to which professor to follow. Then he found that the leading lights were not so narrow and bigoted as he had been led to suppose, for one of the masters admitted that he had seen a man fishing with two dry flies at one time and had not thrown the man into the river. The mention of this heresy within the orthodox walls of the Fly Fishers' Club came as a sweet balm to his senses and he breathed more freely. But it was not until the close of the season last year "that the perfect knowledge of the all-embracing sympathy of some of our typical dry-fly men for fishing in its lower and, as some purists might say, in its less legitimate forms, was vouchsafed to me." He wandered, on a peaceful afternoon, to the river, seeking his friends near the Old Town Mill House, but there was no sign of them until he heard a loud chorus of excited voices at the bathing pool behind the mill. "What could they be doing in that sacred spot, tabooed to us by general consent, and reserved for visitors only arriving by the evening train, too late to don brogue and wander further afield?

"I will tell you in confidence what I saw at that pool. I saw Southwest, of the *Field* newspaper (that is Major Carlisle), float-fishing for trout, with a live minnow for bait. He was, at the moment of my arrival, attempting, unsuccessfully I am glad to say, to land a lightly hooked and apparently undersized fish, acting under the confident, but contradictory, directions of an advisory committee, consisting of the angling editor of the *Field* newspaper (Mr. Senior); Detached Badger, of the *Field* newspaper (Frederic M. Halford, author of 'Dry-Fly Fishing in Theory and Practice,' 'Floating Flies and How to Dress Them,' and other works upon high class fly-fishing); Flycatcher, also a contributor to the *Field* newspaper, and a fourth gentleman, an ardent angler, but nevertheless not absolutely dissociated from *Truth*. All four of them, mark you, leading lights of the committee of the Fly-Fishers' Club! The moral is obvious. Should any visitor feel tempted to join our Club, let him be deterred by no idle fears that its members look with contempt on all fishing other than the flotation of fur and feathers on the surface of the water. Let him remember the object lesson of that peaceful afternoon. Let him take heart of grace and enter our brotherhood in perfect faith that, be he jurist or be he poacher, he will find kindred spirits in the fold."

Mr. Field's joke on the eminent fly-fishermen of the Fly-Fishers' Club was greeted with laughter and applause, as was to be expected; in fact, I laughed heartily over it in the cold type of the club's Annual. But, all joking aside, those who fish only with the fly (and I know a very few men who never would catch a fish if it could not be done with the fly) lose a lot of fun in this life. Any one who has ever fished with the fly will doubtless ever after prefer that method to bait-fishing; but that is no evidence that it does not require skill of no ordinary kind to be a successful bait-fisher for the species of fishes that are considered fly-fishes. There are times when fish will not rise to the fly and when they will take bait, and then it is a good thing to know how to use bait successfully. Most all fly-fishermen were first bait-fishermen, for that is the first step in the ladder by which a man mounts to become a finished angler. A man may discard bait fishing because, as he grows older, his time is limited and he prefers to occupy it in fly-fishing, and, therefore, selects the time and season where he can gratify his preference. I doubt if a country-bred man, who first began fishing perhaps with a cut pole on an alder-grown trout brook, where a fly of any sort would have no chance whatever, entirely loses his fondness for bait fishing, although he may gratify it only in retrospective fancy, but he never despises the days of small things and if it becomes necessary to use bait he knows how to do it to obtain the best results. Who has not heard some man declaiming that he never, never uses bait, that he catches all his fish with the fly? I am always suspicious that this man is not the genuine article, particularly when he declaims in a street car or other public place, and if I should meet him fishing and happened to be out of earth worms I would ask him for enough to bait a hook and expect to get them, if he had not exhausted his own supply, and was at all generous. The man who really fishes with nothing but the fly is as mum as an oyster about it, unless you dig into him with a corkscrew or something of that sort, for he does not proclaim it from the housetops, and as a rule he does not denounce other methods of fishing, for he is satisfied with his method and is willing that others should do as they like.

Fish Matters in Finland.

Mr. Alex. Hintze, publisher of the only angling and shooting journal in Finland, printed at Helsingfors, sends me a copy of the journal containing a colored plate of our rainbow trout. It may be a little strange, but with the exception only of the rainbow trout in colors in the Fisheries, Game and Forest Commission report it is the best illustration of the rainbow trout I have seen. The shape, the markings and general characteristics are perfect, and the coloring is excellent as well, failing only in the band of color along the side, and this may have been lacking in the example the artist used for a model.

A. N. Cheney.

Stocking the St. Lawrence.

The Anglers' Association of the St. Lawrence River deposited 4,000,000 wall-eyed pike fry in the river last week. Clayton and Alexandria Bay were the points selected. The fry were from the Clayton hatchery.

Wisconsin Fishing.

Three Lakes, Wis., May 3.—The season is now open for fishing, which is good. The season is much earlier than last. All inquiries answered. F. R. French.

CHICAGO AND THE WEST.

The "Forest and Stream" Sarsaparilla.

Chicago, Ill., May 8.—This week I was out in the country a little way on a brief railroad journey, and very beautiful the country seemed too, in its brave new coat of green. The trees are budding out and the grass is spreading a fine soft carpet and the waters are clearing up, in evidence of bass soon to follow the suckers on the run. On all hands lay displayed the testimonials of spring. If one needed further proof of the genuineness of the season, beyond even the balmy and consoling air, he might have found it in the many and variegated signs displayed on barns, fences and bulletin boards, advertising not only one but many "best medicines for the spring time"—as though in the spring one needed any medicine but spring itself Among these many boons to humanity emerging from hibernation were divers brands of sarsaparilla, each guaranteed to be the best and only remedy for ills of the flesh. Each of these was the best sarsaparilla on earth and the "best medicine for spring." Yet they did not in the entire list include the remedy of all others most to be depended upon for cure and comfort, that medicine prescribed by Forest and Stream these many years—the medicine of the open air. If my neighbor be sick let him go afishing, so shall he be whole again. Indeed, how can one escape the beckoning of the saving hand, this week of all weeks, the inaugural of May, when after many months of despair, life again begins to be worth the living. There are many fields, many streams, many green woods now wherein and in each of which may be found the herb counseled wisely in the practice of Forest and Stream, the one best medicine in spring. Doth it not now behoove all men to shake the bottle and to try a bit of the Forest and Stream sarsaparilla?

Waters Receding.

The present season has been one of extreme high water all over the West, and on that account the fishing will be far better this year than usual As soon as the streams have fallen to their usual levels the sport will be ready for the anglers, and even now the waters have receded so much that we should have good fishing in any one of a dozen streams near here within a week or so. provided that anglers would care to go out so early after bass. The spawning season is now on hand, and while the fishing is at that time always good, it is to be regretted that such undue advantage is sometimes taken of the fact. Thus at the old, fished-out, restricted water of Cedar Lake, right at the edge of Chicago, as one might say, there have been within the last week many heavy catches of bass made. One man was around this week boasting that he had caught over 200lbs. of bass in one day, and another said he had taken sixty bass at Cedar Lake in one day. To unthinking minds this seems like great sport, but not all anglers would care to put it so. River fishing is not so destructive to the spawning fish as that carried on over the visible spawning beds about the edges of the lakes, where the bass come in out of the deep water to spawn.

Fox River will be a good stream this year, and it is now only slightly too high to offer sport, though I think the big run of fish has now about passed on up

The Kankakee this spring is all out over the marsh, and the local fishermen predict a great lot of bass for this summer.

Fishing for bass will not be legal in Wisconsin until May 25, and by that time it should be especially good this year in the lower part of that State.

Out in Iowa the anglers are again jubilant over the prospect of a little fishing in streams which were once good, but which have been ruined in the times of low water. The old Skunk River has been on a rampage this spring, and already the result begins to be visible. Out on the high prairie near Mitchellville, in Jasper county, along a little creek which crosses the cornfields some half dozen miles from the river, and which would seem to be only a little trickle of water from the tide ditches, the farmers have been finding bullheads by hundreds. In some places the creek has fallen so rapidly as to cut off the bullheads and leave them stranded fairly out in the middle of the cornfields, on what in ordinary years is high, dry ground. If the water in Skunk River continues high enough to foil the efforts of the dynamite fiends, there will be hook and line fishing of good sort before long. Some years ago this once famous stream became very low, breaking up into a series of pools. Coal miners and others dynamited it for miles, and destroyed nearly all the fish in it, aggregating many tons. This ruined the stream, of course, but it is possible that it may now regain a trifle of its prestige.

Mr. Robt. Ainsley, of Westville, Ind., called at this office this week, and says that the fishing near that point will be fine this year, and that the bass are already biting. I mentioned last summer the peculiar and interesting features of the region around Westville, which is full of lakes and streams where bass grow big, and which has other things to make it pleasant beside the mere amount of fish one can take. I got wind last summer of a certain preserved trout stream, and it troubles me when I think of the havoc those trout may now be making with the native fish and insects; a havoc which none the less might be mitigated could I prevail upon a certain gentleman to enlist my aid, which I promise him gladly.

Fish at the Tennessee Exposition.

Everyone remembers the famous Fisheries building at the World's Fair, and the part which the Forest and Stream played in adding to its attractions. Now we are having another fair, down in Tennessee, and it seems there is a good fisheries exhibit there also. Some 18,000 gallons of sea water have been shipped in for this work, and there are two long rows of aquaria in a fine large grotto. The Fish Commission will show there, as at the World's Fair, models of fishing craft and miniature fish hatcheries. The native fishes will have a good showing, and in all there should be yet another of those extended object lessons, which serve to show the people the interest and value of the fish they own.

What the Value Is.

What the value of the fish product of a State may be can be witnessed by the statement of the veteran fishculturist, S. P. Bartlett, who is welcomed back on the Illinois State Fish Commission by many friends who knew him in the past during his incumbency on that board. Mr. Bartlett, in a recently published press dispatch, stated that he considers the annual catch of food fish on the Illinois River alone (one stream among many others), to amount to $1,000,000. This is equal to one-sixth of the value of the entire cattle industry of the State.

This week there was a case of drowning in one of the lakes

in a Chicago park, and the police force resorted yesterday to the questionable but time-honored expedient of exploding dynamite in the attempt to raise the body. The body of the victim, a boy who had been for some days missing, was not discovered, but many hundreds of pounds of perch and carp were destroyed by the explosions. The fish were taken home by the policemen; and now comes out an assertion that the latter used the dynamite with the purpose of killing the fish.

Interesting Fly-Tying Device.

Mr. L. H. McMahan, a newspaper man of Salem, Oregon, was in Chicago this past week on his way East, and called at the FOREST AND STREAM office in company with Mr. H. L. Stanton, of this city. Mr. McMahan has invented a curious and useful little device for the purpose of attaching artificial flies to the leader in a simple and speedy fashion. This is composed of nothing more than a little ring of fine wire built like a key ring, so that the loop of a leader can be slipped into it at once, just as one puts a key on a ring. This is made very fine and delicate, and is not so thick and not much heavier than a gut loop. It is wrapped on to the leader at just the places the gut loops would come, and the leader thus dressed is no more conspicuous, and perhaps not so much so as when tied in the ordinary way, nor does the wire show more in the water than a loop of gut. The anglers of Salem have used this device—which is now a patented one—and they claim that it makes casting easier and more effective, while as to the tying on of flies, it is nothing short of a boon. It obviates all tight knots and vexatious delays on that account. The snell can never by any possibility become fouled, and the fly thus attached to the leader always hangs straight down, with less tendency to foul the cast. The rapidity with which a fly can be changed, even in the darkest night, is the chief recommendation of this device. It may be seen on the market at some later day, though as yet the inventor has not put it to any use other than that of promoting morality and quiet in the ranks of anglerdom on the Coast. E. HOUGH.

1206 BOYCE BUILDING, Chicago.

ICE FISHING IN TROUT WATERS.

Editor Forest and Stream:

In his letter published in your issue of May 8, Mr. A. N. Cheney refers to the fact that several fine trout had been caught through the ice at the Giant's Wash Bowl in the town of Keene, under section 104 of the game law, which as it now stands limits the prohibition against taking any fish through the ice in waters inhabited by trout to the close season only.

For two or three years prior to 1895, the first clause of section 104 read as follows: "No fish shall be fished for, caught or killed through the ice in any waters inhabited by trout, salmon trout or landlocked salmon."

And when the fish and game law as redrawn was submitted to the Senate in the session of 1895, it contained the same clause without change, but when it came out of the hands of the Assembly Committee on fish and game there had been added to it the words, "during the close season for the taking of such fish," so that the first clause of section 104 now reads as follows: "No fish shall be fished for, caught or killed through the ice in any waters inhabited by trout, salmon trout or landlocked salmon during the closed season for the taking of such fish."

This is one of the many instances where the law has been amended in committee for the benefit of some particular locality or in the interest of certain individuals or clubs.

This change is the more to be deplored because the provisions against fishing through the ice was originally put in the law and retained in the revision for the express purpose of preventing the taking of fish at any time through the ice where the waters were inhabited by any of the fish specified in this section.

I can give one or two instances to show the necessity of absolute prohibition against fishing through the ice at any time in waters inhabited by trout and its kindred fish.

Balsam Lake, which is known to many of the readers of FOREST AND STREAM, is situated on the south side of and at the foot of Balsam Mountain in the Catskill region, and is about 2,400ft. above tide water and is frequently ice bound until in the month of May. Early in the '70s this lake came into my possession and I was then told by two or three persons whose statements I had no reason to doubt, that at some time between 1850 and 1860 they had visited this lake about the middle of April and had taken out through the ice and carted off two barrels full of trout, and that a large proportion of these fish were taken with little hand-nets where the fish came to the surface where holes were cut in the ice. It is not at all incredible that this number of fish should have been taken at that time for the lake had been but little fished and was absolutely alive with trout.

About 1875, while I still owned the lake, it was visited by two or three persons living in the neighborhood about the beginning of April, and nearly if not quite a bushel of trout were taken out in the same way and sent to New York for sale, and this fact was given to me in the course of the year by one or two persons who saw the catch, and, if I remember correctly, one of them was engaged in taking the trout.

It is not necessary to multiply instances, but I have no doubt that the experience of other anglers will fully coincide with my own.

This obnoxious amendment should be stricken out, and the first clause of section 104 made as it was in 1895

J. S. V C.

POUGHKEEPSIE, N. Y., May 6.

Adirondack Fishing Notes.

RAINBOW, N. Y., May 5.—W. P. Heath and party have been taking some very fine creels of trout from Rainbow in the past four days. Several were caught weighing above 3lbs. apiece. One was taken by Guy Duvey, of Malvern, the 4th inst, that weighed 4lbs 1oz. Another was caught weighing 3¼lbs. They are the speckled or brook trout. Sixty were brought in the 4th inst. The 4lb. 1oz. trout measured 21in. long and 13in. girth

At Loon Lake House, Loon Lake, fifteen fishermen from New York and adjacent cities are enjoying the finest of trout fishing on this lake. Over 200 trout were taken in the first three days. Finer fishing cannot be found at any place than at these five lakes. The average will not fall below 1½lbs. apiece. This is the legitimate result of fishculture.

C. McV. T.

SARANAC LAKE, N. Y., May 7.—A party of eight returned from a short fishing trip to the Slang, near Little Tupper's Lake with 146⅔lbs. of speckled trout. One dressed weighed 3½lbs. The total catch was taken in just ten hours' fishing. The total weight of all trout taken is not given in the above figures because trout were eaten at every meal and no weight was taken of them. One of the party in thirty minutes caught fifteen trout that weighed just 32 bs. dressed. These trout are the square-tailed, speckled trout, and the general verdict throughout the Adirondacks is that finer fishing has never been found here. I saw one that was taken from another body of water near here that weighed when caught 4lbs. 1oz., another that weighed 3¾lbs.

At Ray Brook, four miles from here, larger catches are being made every day than ever before. A party of three Montclair gentlemen are there enjoying the finest of fly-fishing. The stream flows through an open meadow, with plenty of room for casting, and with no fear of becoming entangled in the brush or the branches, that are often a necessary adjunct to brook fishing. There are several dams placed at the most available points, which give plenty of still and deep water.

A party of gentlemen came in over the A. & St. L. and they are stopping at Lake Placid. They are expecting the same success that others have met with in lakes near by, and it now seems that this season will take a high place in future history as being the beginning of the finest fishing ever found in these mountain lakes and streams. T.

Florida Fishing Incidents.

MR. C. M. LONG and Mr. Drigger's little boy were fishing in Yellow Fever Creek last Friday, and the catch made by the boy was a 7lb. bass. Upon dressing the fish a diamond rattle snake was discovered in the fish, measuring 3ft. in length and 11in. in circumference. This spoiled the appetite for that particular black bass.

Miss Anna Holloway, the little thirteen-year old daughter of Mr. and Mrs R. T. Holloway, of Lexington, Ky., proved herself a heroine yesterday in her father's choice sport, by landing a tarpon 1lb. heavier than herself. It was a beautiful fish and a thorough fighter, but Miss Anna reeled him to gaff in twelve minutes. It was 5ft. 6in. long, and tipped the beam at the 90lb. notch. The young lady receives the congratulations with becoming dignity, while the colonel rejoices over his daughter's fine catch.—*Fort Myers Press.*

Alvah Dunning—Sir William Johnston.

Editor Forest and Stream:

I have read with pleasure the discussion in reference to Adirondack history by Col. Fred Mather and others in the last two numbers of FOREST AND STREAM. The story of Sir William Johnston's Indian campaigns is charmingly and truthfully told by the late Dr Francis Parkman in his "Montcalm and Wolfe," Vol. 1, chapters IX, X. A careful reading of this work will repay any who may be interested in the early history of northern New York and the Adirondack region. CHAUNCEY P. WILLIAMS.

ALBANY, N. Y.

Editor Forest and Stream:

William Johnston was an Irish lad. He came to America while a youth under the care of an uncle, and became a clerk, an agent, a farmer, a fur dealer, a merchant, a contractor, a General, a Baronet, and the Chief Superintendent of Indian Affairs on this continent. He came to the front so rapidly that in the year 1757 he took the rank of Major General. At this time England and France, with the Indians divided, were contending for the possession of North America. William Johnston was entrusted with the task of capturing Crown Point. After its capture he defeated Baron Diesku, which victory was the only one during the whole year's campaign, and was so greatly esteemed by the King that he created him a Baronet, while Parliament presented him with £5,000.

In 1758 he effected a peace with fifteen tribes. In 1759 he defeated D'Aubrey and captured Fort Niagara In 1760 he assisted at the capture of Montreal. Then he became Chief Superintendent.

During these four years Alvah's father may have been under Sir William's command.

In the spring of 1774, Logan, the far-famed Iroquois chief, who was friendly to the whites, had his family shot down. Logan sent out runners to the Six Nations to rise againss the whites. It was among the Six Nations that Sir William ruled supreme, having a far larger authority over them than any of their own sachems. The news of Logan's loss was received by the Six Nations with alarm, as Logan was the son of Shikellimus, a distinguished Cayuga sachem, and therefore one of their own flesh and blood. The Six Nations desired Sir William to hold a congress with them upon this serious matter This was granted, and by July 6th 600 Iroquois had assembled. Sir William for some time had been hard at work to restrain the Six Nations from taking any part in the war, and when the congress assembled was so exhaused, as to bring on a sharp attack of dysentery. For a number of years he was subject to attacks of illness of a dysenteric character, often prostrating him on his bed for days. On the 8th and 9th the congress was in full progress. On the 11th he made a long speech on a very hot day. The great cause was gained, but it was at the expense at the life of Sir William, as he lived but a few minutes, dying from exhaustion. The closing scenes of his days were in harmony with all his previous years—that of success. He died July 11, 1774.

The fight at Lexington, which inaugurated the American Revolution, took place April 19, 1775.

Sir John Johnston, son of Sir William, fought throughout the war, and with him Old man Dunning may have fought the Indians.

Being one of the descendants of so remarkable a man, I have, time and again, searched our American history, and have gleaned the above facts. It is fair to inter that Dunning fought Indians with Sir William, and also with Sir John, and that my great-grandfather died from natural causes. BILL JOHNSTON.

LONDON, Ont.

New York Game Legislation.

THE following are the new laws of 1897:

CHAP 63. Forbids deer hounding in towns of Dresden and Putnam for ten years

CHAP. 64 Permits for wildfowl shooting use of floating devices in Long Island Sound, Great South Bay, Shinnecock and Peconic bays; boats propelled by hand in all Long Island waters, and sailboats in Long Island Sound, Gardiner and Peconic bays.

CHAP. 93. Forbids taking fish from a State net.

CHAP. 94. Makes the limits of the Thousand Island waters extend from Tibbit's Point Lighthouse to Saint Regis,

CHAP. 150. Opens trout season in Spring Brook Creek March 29.

CHAP. 151. Permits sale of Long Island caught trout on and after March 29 in New York city.

CHAP. 175. Protects mink, skunk, muskrat, fox, May 1 to Nov. 16, in Cattaraugus, Oneida, Madison and Otsego counties.

CHAP. 182. Permits use of set lines 60ft. long in Canandaigua Lake.

CHAP. 220. Appropriation for purchase of Adirondack lands.

CHAP. 250. Relates to Warren county. Forbids taking from Lake George and Glen Lake pike, perch, great northern pike, June 1 to June 15; bullheads, June 1 to July 1; or black bass or Oswego bass from any waters in town of Horicon, Jan. 1 to July 10. Perch may be taken from Lake George at any time.

CHAP 259. Relates to the Forest Preserve in Ulster county.

CHAP. 273. Appropriates $30,000 for the St. Lawrence River reservation.

CHAP. 280. Permits in Owasco Lake ice fishing for bullheads, catfish, eels, perch, sunfish.

CHAP. 322 Makes woodcock season in Richmond county open July 4 to Dec. 31.

CHAP. 346. Limits minnow nets to 40ft. length, 4ft. depth, and 30ft. hauling rope.

CHAP. 330. Permits drying nets on shores of Lakes Erie and Ontario, and Cattaraugus Creek.

CHAP. 342. Protects quail in Chemung county until 1898.

CHAP. —, signed May 10. Prescribes as open deer season, Aug. 15 to Nov. 15, both inclusive. One person may take only two deer in a season. Deer protected for five years in Ulster, Greene, Delaware and Sullivan counties. Jack lights and all artificial lights forbidden for five years. Hounding is forbidden for five years.

BLACK BASS SEASON.—Among the bills left with the Governor, but not signed at the time of our going to press (Tuesday), is A 1389 (McLaughlin), to make the open season for black bass June 20 to Dec. 31 inclusive; for pickerel, pike, wall-eyed pike, May 1 to Jan. 31 inclusive. Does not apply to the Thousand Islands, where the law is unchanged.

The Kennel.

ABOUT DOGS.

OTTAWA, Can.—*Editor Forest and Stream:* There is perhaps no more strongly marked traits in the character of a true sportsman than his love for those dumb, four-footed companions with which he has been accustomed to spend long, happy days on marsh, woodland and prairie.

None who have studied the habits of dogs will doubt the devotion to their masters of these faithful, affectionate creatures who, though dumb, are yet eloquent in their intelligent expression of good-will toward those who treat them kindly.

The writer has shot over many setters, pointers and spaniels and has had three Irish retrievers, all of whom showed an intelligence and affection which might well shame the hordes of street loafers who throng our street corners on sunny days.

Patient, tireless and at all times so easily pleased, there is something in the character of a dog from which our humanity may learn a useful lesson. I well remember a clear cold day in late October when my old friend Audrian Covalli and myself found ourselves between two small lakes in Wisconsin, which were connected by a narrow stream with boggy banks. The pin-tails and mallards were very busy flying from one lake to the other and we had but a single dog. He was of doubtful parentage, but possessed the heart of a hero and a cat-like activity which was beautiful to behold. In our eagerness to retrieve the fast-falling birds we forgot that poor Dash was not impervious to cold and hard work, and for a brisk three quarters of an hour we let him bring in dead and wounded ducks through heavy mud and icy cold water. When his task was done and we turned our faces homeward, Dash stretched his tired body on the moist green sward and devoted himself to sundry feeble wags of a much be-draggled tail. His pathetic eyes seemed to say, "I would like to go, but I can't." In the end I carried him four miles, and that night the dear old dog, surrounded by every care that loving hands could offer, closed his eyes in the sleep that knows no waking.

If there is a paradise for faithful dogs, who shall say that Dash had not earned an exalted place?

A dozen years ago I owned a pure-bred Irish water spaniel bitch. She had lived a few months beyond fifteen years, and starting out one morning with a younger dog, Dido, despite her age, insisted on joining the party.

We shot well into the afternoon with varied luck, and toward evening I started a pair of wood-ducks. The first-barrel bird fell dead on the hard land, the other came down fifty odd yards away, wing-tipped, in the long marsh grass. Both dogs disappeared, and in a few minutes the younger returned empty-mouthed.

The powerful dog whistle failed to recall Dido, and I wandered slowly ahead, and waited half a mile further on near a patch of snipe ground. An hour passed in waiting, and then I made out, far away, the weary Dido, plodding at funeral pace on my trail. I noticed that her head looked larger than usual, and in about twenty minutes she appeared, carefully carrying the still alive wood-duck to her master. This was the crowning feat of Dido's sporting life, for we sadly buried her three days later, a martyr to the sport she loved so well.

I once shot a woodcock which had risen a dozen feet above the cover, and saw it fall among some willows. On reaching the spot where the bird ought to have been, my cocker, Snap, showed no sign of getting scent, though twice I took him down wind and worked up in the required direction. The second time he insisted on getting on his hindlegs as if trying to work in the air. His next move was a sturdy attempt to climb a bunch of willows, and glancing upward I saw my woodcock caught in the crotch of a small limb about 10ft. from the ground.

I remember a curious incident which happened to me in Florida on a March day when the wind was blowing a furious gale. I had noticed my pointer bitch Dora drawing swiftly and steadily over a sand flat which was almost devoid of vegetation. Attracted by some object in the distance, I lost sight of her for a moment, and on turning to look for her found that she had disappeared. I could see clearly in any direction for quite half a mile. Dora when last seen was 100yds. away, clearly on hot scent, and in the twinkling of an eye had vanished as though the sand had swallowed her up. Following in the direction which she had taken, the mystery was cleared. Close to some low scrub I found an old well with sloping sides. Halfway down it and poised sideways on a narrow ledge was my agile Dora, her mouth moist, her eyes gleaming, and every muscle of her healthy body strung to tension in a rigid point.

Not less than eighteen quail were within a few feet of her eager nose, and presently they began to buzz out of their shelter in ones and twos, but all making down wind with indescribable speed while my Greener chattered spitefully. I don't like to say how many empty shells marked the spot, but in less than a minute I could count five dead quail dotting the sand, none of which were nearer than 30yds. from me.

During this fusilade Dora never budged from her rather precarious point, and after some trouble I routed out the last quail and winged it at a distance of nearly 40yds. Then my precious Dora climbed up the rocky side of the well and wagged her lately paralyzed tail in pleasant anticipation of more work.

No doubt what I am writing may seem trivial and commonplace to some of your readers, but those who know dogs and their habits, and are sportsmen in the true sense of the word, will find something in this sketch which will call to mind similar experience, and perhaps waken pleasant memories of hard days spent long ago.

As I write there is sleeping on the rug at my feet an Irish cocker spaniel who, during the last thirteen years, has been

my constant companion and faithful friend. During that period he has seen something over 3,000 birds killed, and has learned to understand my every motion; so that in windy weather, or when silence was necessary, no word was needed to keep him steadily at work. He will never again hear the sharp report of his master's gun, for the once agile limbs are cramped with rheumatism, and his kind, soft eyes are dimmed by time and hard use. But as long as his master lives he will always have good, clean food, a warm bed, and that kindness and consideration which, alas! are not always the reward of faithful service either of man or beast.

In closing, I am reminded of the pathetic words of a once famous brother sportsman, Mr. William Pittman Lett, who was long known as one of the most successful shooters of the Ottawa Valley, in former days the resting-place of countless game birds.

Writing of the death of a favorite hound, Mr. Lett thus speaks with poetic force and feeling of his loss:

Alas, poor Venus, noblest hound
That ever sprang with eager bound
The instant that the chase was found,
Thy final hunt is o'er!
Never again thy bugle note
Will on the breeze of morning float,
The matchless music of thy throat
Will greet our ears no more!

This finger holding now the pen
Was on the rifle trigger then,
When speeding swiftly down the glen
The buck in terror came!
Fierce in his wake, thy strides came fast,
And loud thy voice swelled on the blast.
Ah! little thought I 'twas thy last
Run with the noble game.'
* * * * * * *

Brave Venus! who will say 'tis wrong,
For thee to sing a funeral song,
Or censure sorrow keen and strong
For gallant beast like thee?
I would that every earthly friend
May prove as faithful to the end;
For even a dog a charm can lend
To proud mortality.

RIDEAU.

Action of Strychnine on Dogs.

KIPP, Mont.—*Editor Forest and Stream:* The dogs on this reservation became so numerous and were so often caught killing calves—particularly the stag and greyhounds—that the agent ordered the butcher to poison them. In a week more than 300 have been killed, and incidentally we have learned a great deal about the action of strychnine.

These dogs were fed liver, and the poison put into it was undoubtedly fresh and good. Some dogs died in two minutes after eating it, others were not affected for an hour, and the average time for the fits to come on was thirty minutes. This explains why our ranchmen say that strychnine has no effect on wolves nowadays. Where one dies by the bait the majority have ample time to go miles before the poison works on them.

In the old times wolves were so plenty that many of them were found dead by the baits, and in the light of our recent experience we can only conjecture the numbers that ate of the meat and then traveled off a long distance before dying. So I would say to all who are trying o get rid of these pests: put out the strychnine and plenty of it. If the coyotes and wolves eat it they are bound to turn up their toes.

J. W. SCHULTZ.

POINTS AND FLUSHES.

MR. W. S. Bell, Secretary of the Continental Field Trials Club, desires that we mention that the entries for the Blue Ribbon Stake (Derby) will close on June 1 instead of May 15 as announced in the programme; this change was made in consequence of delays in getting out the printed matter. All other of the club's dates remain as published. The club has issued an artistic brochure, containing the constitution, by-laws, regulations, stakes, rules, information to competitors, and portraits of the three judges, Messrs. Bell, Wallace and Osthaus. It thus is the most complete field trial club book ever published in this country.

As Mr. S. M. O. Huddleston, a tourist from Iowa, was walking out sightseeing he chanced to stop near the Sub-Tropical, looking at the pond south of the engine house, where "Jumbo," the large alligator, is making his summer home; saw a nice, sleek, fat dog wade out into the pond, when, all of a sudden, there was a commotion in the water and Mr. Dog was, with one draw of the alligator's tail, brought into his mouth, so quick he didn't have time to yelp, when both alligator and dog went down, Mr. 'Gator getting a good dinner at the unfortunate dog's expense.—*Jacksonville (Fla.) Times-Union.*

The nineteenth annual Derby of the E. F. T. Club close on May 20. Purse $600, divided into $300, $200 and $100. Ten dollars forfeit, $10 additional to start. The club has published the list of officers, stakes and conditions in a neat folder. All information can be obtained of the secretary, Mr. S. C. Bradley, Greenfield Hill, Conn.

The Bull Terrier Club of America announces its Produce Stakes to be competed for at the Westminster Kennel Club's show, 1898.

The quarterly meeting of the A. K. C. is called for May 20 at the office of the club, 55 Liberty street.

A Stray Shinplaster

Comes to us once in a while for a copy of "Game Laws in a Brief;" but shinplasters nowadays are scarcer than Moose in New York; and 25 cents in postage stamps will do just as well.

Wheeling.

Communications for this department are requested. Anything on the bicycle in its relation to the sportsman is particularly desirable

WHEELING NOTES.

THE question of storage for bicycles at ferries and railroad stations is one of growing importance. On Staten Island a storeroom has been provided, near the ferry at St. George, for the convenience of wheelmen who ride to and from their homes, and on the New York side of some of the Jersey ferries similar depots have been provided. An enterprising saloon keeper on Liberty street offers free storage for bicycles in his basement. In return, no doubt, he expects to get a share of the patronage that now goes to the country road houses.

At Wantagh, L. I., as a result of the united movement made by the wheelmen, the Long Island Railroad Company has granted permission for the erection of a "cage" for the storage of bicycles. The cage will adjoin the railroad station and will be protected by the station roof. The expense of the enterprise will be paid for by private subscription among the interested commuters. The idea is a good one, and will no doubt be copied by suburban residents in other parts of the country where wheelmen are present in sufficient numbers.

Powdered rotten stone, which may be procured from any drug store, is of value for removing rust from the polished parts of a bicycle. It is applied by means of a soft cloth, moistened with a little sweet oil and dipped in the powder. Being free from grit, there is no danger of scratching the metal.

For cleaning parts that cannot easily be gotten at an old leather shoe-string may be used to advantage. The friction from a few brisk rubs will remove dirt and rust in a way that is surprising.

We have received from Mr. Frank J. Amsden, of Rochester, N. Y., a map of the side paths of Monroe county. There are now in existence nearly 100 miles of cycle paths in good condition, radiating into the surrounding country from Rochester. Cycle paths have increased to such an extent in New York that it has been found necessary to pass laws for their protection. Subdivision 1 of Section 652 of the Penal Code of 1897 provides that, "A person who willfully, and without authority or necessity, drives any team or vehicle except a bicycle upon a side path or wheelway constructed by or exclusively for the use of bicyclists, and not constructed in a street of a city, is punishable by a fine of not more than $50, or imprisonment not exceeding thirty days, or both."

To aid in the enforcement of this law, the Rochester Association of the League of American Wheelmen have offered a reward for the conviction of any person violating it.

The following interesting history of the side-path movement is taken from Mr. Amsden's map:

"Because of the bad condition of many of the streets and roads in and around the city of Rochester, a bill was introduced in the State Legislature in the winter of 1895, to tax each bicyclist in Monroe county $1, to be used in the construction of side paths. Owing to the powerful opposition to it on the part of many wheelmen, as well as the public at large, the Mayor and Common Council refused their approval of the bill, thus defeating it.

"At once a movement was begun by leading opponents of the bill to construct the proposed paths by voluntary effort. The first step was taken by a small number of them in the southeastern part of the city. They organized the Southeastern Side Path Association, the first one ever formed, and raising a little money among the persons present at the meeting, began work the next morning on a path on Elmwood avenue from Mount Hope avenue to the Genessee Valley Park. With the assistance received from other persons interested in the movement they built the first mile of path in Monroe county. A second association was formed in the northeastern part of the city for the construction of paths on East avenue and Culver road. A third association was formed in the southwestern part of the city for the construction of a path on the west side of the river to Ballentine Bridge. At the same time other steps were taken to raise funds to prosecute the work thus favorably begun. The *Post-Express* newspaper began the collection of a fund, which amounted to nearly $1,500, and expended it on a path around the city. In the latter part of June a callithumpian parade or wheelman's carnival was held in the Driving Park, and about $2,500 more was raised. As a result of the united efforts of the wheelmen over $5,000 was collected and over fifty miles of side path opened. This spring the work was taken up again. A bicycle exhibition was held and $3,000 was obtained. This has just been expended in putting the old paths in order and adding forty miles of new paths to those already in existence.

"The secret of the phenomenal success of this movement is due to the fact that the wheelmen did not wait to raise a large sum of money before beginning work, or rely upon anyone else but themselves to look after the work when it was begun. Some of the ablest and most public spirited men in the city have had charge of it from the first, and every dollar of the money raised has been honestly and most judiciously expended. They have obtained the largest possible results with the smallest possible expenditure. Repudiating the absurd notion that a side path should be built like a road for heavy traffic, they did not try to build a firmer foundation than the earth itself or to make the paths conform with any other line than that of the natural undulations of the surface of the ground. A furrow was turned on either side of the path, toward the center, and cinders, the best possible material for the purpose, were laid on to the depth of 2 or 3 in. A heavy roller was then passed over them, and the path was thus made ready for immediate use."

Wheelmen who have in contemplation a European tour this summer, should send to the Department of State, Washington, for the advance sheets of consular reports for May, dealing with "Bicycle Regulations in Europe." The synopsis is compiled by Philip S. Chancellor, Deputy Consul at Havre.

In closing his report Mr. Chancellor gives a strong indorsement to the Touring Club de France. He says:

"It would be greatly to the advantage of American cyclists coming to France to join the Touring Club de France. This organization is similar to cycling societies in America. The advantages to members are numerous. The most important consideration is that a member can enter this and other European countries without obstruction from the customs officials. By simply exhibiting a card of membership, all annoying formalities are avoided. A large discount is given at certain hotels, especially in the provinces. The same applies to repair shops and dealers in cycling goods. By wearing the badge, one is assured of courteous treatment everywhere. The subscription is $1 a year, and 20 cents extra for an official guide, giving names of hotels, repair shops, etc., where liberal (generally 10 per cent.) discounts are allowed. The membership to-day numbers 40,000.

"The Touring Club de France has done more since its foundation for the encouragement of cycling in France than any one other organization. The money derived from the subscriptions is expended in repairing the departmental roadways and placing notices (danger signals) on the crest of all dangerous and rapid descents. In all the towns and cities in France a representative is to be found who will willingly give advice to strangers and aid them in trouble. The headquarters of the Touring Club de France are situated in Paris, Rue Coy-Héron 5, at which place application can be made for membership. Ladies are eligible to membership."

In Chicago a sixteen-month-old baby rides a bicycle for advertising purposes. His mount has a 7½in. frame and weighs 5½lbs. The wheels are 10in. in diameter.

There are laws now in many of the States prohibiting the carrying of babies on bicycles, but nothing, unfortunately, that will cover this case.

Connecticut Lawmakers.

THE other day a bill was introduced into the Connecticut Legislature providing a fine of $5 for wheelmen "having no lighted lantern on their wheels at night."

It passed the House after a lively debate in which the real merits of the case were often lost to sight in personalities and meaningless talk.

The bill applies to the country as well as to cities and towns (or boroughs, as they are called in Connecticut), and when wheelmen stated that no bicycle lantern has yet been devised that will stay lighted on rough roads they were told that lanterns "did not jolt out on locomotives and lumber wagons."

Here is a sample of the kind of argument used in the debate, as reported by a Hartford newspaper:

"Mr. C., of Beacon Falls, hoped the bill would pass. He had been struck in the back with a wheel. (Applause.)

"Mr. H., of Waterbury, said lanterns were uncertain, and the distance of the wheel could not be judged. Lanterns would, therefore, tend to increase, not diminish accidents.

"Mr. G., of Hartford, argued against the amendments and the bill also. Bicyclists, as a class, are safe people to meet.

"Mr. B., of Torrington: 'Would the gentleman from Beacon Falls have escaped being hit in the back if the bicycle had had a lantern?'" (laughter.) Etc., etc.

Of interest, as showing how the old leaven of Puritanism still works, were the remarks of a gentleman who favored the bill on the ground that it would assist in the preservation of the morality of the Nutmeg State.

"Every other business except lawmaking is understood to require some previous preparation, experience and study to qualify anyone to pursue it," pertinently remarks State Senator Young, of Kansas, "but every man is supposed to come into life fully equipped to undertake the most responsible duty in which it is possible to engage in a moment's notice."

Canoeing.

Buffalo C. C.

THE new Year Book of the Buffalo C. C. shows that this club is working for the front place in canoeing this year, with a large membership and fleet, a fine club house and the handsomest club book yet seen. The membership is 100, and the fleet will number seventy canoes and other craft when all the new boats are ready. The boat house is at Point Albino, on Lake Erie. The book contains the following invitation to canoeists:

AHOY, IN THE CANOE.

On the shore of Lake Erie, beneath two mighty maples,
Stands the summer home of the Buffalo Canoe Club,
Facing the south and the east, and the shimmering water,
And backed by marshland far extending,
Deep in the bight of the bay, from the public secluded,
And sheltered from winds by forest clad Albino,
Whose broken ledges extending far into the Lake
Form a breakwater firm and secure for the bay to leeward.
Here from May to October we gather,
As small-boat sailors and lovers of nature.
To every man who handles a tiller
Our hearts and the doors of our club house are open.
For him who lovingly dips a paddle
Ever a place at the fireside is waiting.
Whoever you are, and wherever you navigate,
We of the Buffalo Canoe Club greet you.

The book, which is purely a labor of love on the part of the secretary, Mr. Frank R. Rosseel, is well illustrated by sketches by him and others. It is beautifully printed and bound, and in every way a credit to the author and his club. The fixtures for the season include eight regattas for various prizes, including the Carrier trophy and the Crystal Beach trophy.

A. C. A. Membership.

APPLICATIONS for membership may be made to the purser of the division in which the applicant resides on blanks furnished by purser, the applicant becoming a member provided no objection be made within fourteen days after his name has been officially published in the FOREST AND STREAM.

CANOE NEWS NOTES.

The annual meeting of the Missawippi C. C., of Sherbrooke, Ont., was held on May 8. The following officers were elected for the ensuing year: Pres., F. E. Loomis; Vice-Pres., W. E. Paton; Com., J. G. Walton; Sec'y-Treas., J. P.

Wells. Committee: R. Macdonald, P. N. Boucher and G. E. Fraser.

The following officers were elected at the last meeting of the Yapewi Aquatic Club, Bordentown-on-the-Delaware: Pres., Robt. S. Murphy; Vice-Pres., N. Smith Buzby; Sec'y, J. B. Reynolds; Purser, Chas. E. Burr; Capt., W. R. Robbins; Mate, Louis W. Wiese. Directors; Fred. W. Taylor, Fred. G. Wiese, Samuel W. Beldon, Richard C. Woodward, Geo. F. Deacon.

Yachting.

As the yachting journal of America, the FOREST AND STREAM *is the recognized medium of communication between the maker of yachtsmen's supplies and the yachting public. Its value for advertising has been demonstrated by patrons who have employed its columns continuously for years.*

THE racing season in New York waters begins on May 15, the Huguenot Y. C., of New Rochelle, starting off with a race for the new 20-footers and catboats. On the following Saturday the New Rochelle Y. C. follows with a race for 20 and 25-footers, after which date the racing runs along regularly. The outlook is good for large entries and keen sport in all the smaller classes on the Sound.

OWING to the failure to receive a Raines law license, the Seawanhaka C. Y. C. was compelled to forego its proposed dinner on May 5. The Oyster Bay club house will be opened on May 29, with races for the 20-footers and other classes.

Whether ultimately successful or the reverse, the present movement for a national union of yachtsmen has progressed much further than any of its predecessors, and far enough to enlist the attention and interest of many American yachtsmen. That so much has been done is due mainly to the energetic and continued efforts of one man, Mr. F Bowne Jones, of the Indian Harbor Y. C., the secretary of the Sound Y. R. U., and chairman of the committee of yachtsmen which issued the invitation to the late conference. For a long time Mr. Jones has been interested in the scheme for uniform racing rules and a union of the clubs, and it was solely through his efforts that the first conference of the Sound yachtsmen was called, resulting in the organization of the Sound Y. R. U. The wonderful success of this attempt, for which Mr. Jones is largely responsible through his labors as secretary and member of the council, led him to the effort to extend the work in the uniting of the various associations, the result being the gathering of May 1 at New York. Only those who have had personal experience of such work can appreciate the demands which it makes upon one's time and patience, the correspondence and personal interviews involved. The part which Mr. Jones has taken is well known, and fully appreciated about New York; but it is only fair to him that those at a distance who are now interested in the proposed union, should also understand the origin of the New York conference.

Syce.

THE new 51ft. cutter Syce, designed by Gardner & Cox and built by Wood & Son for F. M. Hoyt, of Stamford, Conn., was launched at the yard, City Island, on May 4. The yacht was fully described in the FOREST AND STREAM of May 1. In launching she was slid out of the big shed and directly on to the railway, which was run down by the chain in the usual way, so that the launching was rather a prosaic matter. It was probably interesting and exciting enough for the builder, Mr. Frank Wood, as the boat is a ticklish one to handle ashore; her over all length of nearly 70ft., with 12ft. of bowsprit in addition, is poised on a base little more than 12ft. long; the mast, which was stepped and stayed, with topmast on end, being well forward of the fore end of the fin and, with the bowsprit and long forward overhang, looking to the eye as though it would pitchpole her on the ways. The yacht was very carefully cradled, to avoid the possibility of accident.

Barring the deep fin and the "nasty" drop rudder, the hull itself showed up very handsomely, with fair round lines in all directions, a good sheer line, with but moderate sweep; the topsides black, with gilt stripe and trail boards; the bottom green. The spars were decorated with flags in honor of the occasion. Just beside the yacht as she lay at the head of the railway was her older and smaller sister, Norota, built for Mr. Hoyt, and sold by him last fall; and beside her again was the older Gardner boat, Liris, the once famous 40-footer. The tide filled shortly after noon, but a wait was made for some of the guests, and it was after 1 P. M. when the ceremonies begun by the christening of the yacht by Mrs. D. L. Dresser, of Oyster Bay. The car was then started, and the yacht moved very slowly down the long incline necessary to float her draft of over 10ft. When she cleared the cradle, she floated very close to her designed waterline, a little high at the bow; practically everything was aboard except sails and ground tackle, so that she promises to come out very close to the designed line when in final trim. A number of yachtsmen were present to witness the launch and share the luncheon which followed in the boat loft. Among the many who have thus far seen her there is but one opinion as to the very high quality of the work which Mr. Wood has put in her. The new Fife boat will at once take the place of Syce in the shed; the keel, stem, sternpost and entire counter are now on the ground, and the mould for the lead keel was ready for pouring on the day of the launch.

Rear Admiral Meade.

THE Society of Naval Architects and Marine Engineers has lost a useful officer and an honored member in Rear Admiral Richard W. Meade, U. S. N., who died on May 4 at a private sanitarium in Washington from the combined effects of *la grippe* and appendicitis. He had been ill for some weeks, and had submitted to an operation for the latter disease a short time since.

He was born in New York city on Oct. 9, 1837, and was the eldest son of the late Capt. Richard W. Meade, U. S. N., an elder brother of the late Gen. Meade, who commanded the Army of the Potomac from June, 1863, till the close of the Civil War, and who fought the battle of Gettysburg in July, 1863. He was the great-grandson of George Meade, of Philadelphia, a wealthy merchant and shipowner of that city. He was third cousin to Frederick Maitland, the present Earl of Lauderdale, hereditary standard bearer of Scotland.

He was appointed midshipman from California Oct. 2, 1850, and attended the Naval Academy until Nov. 20, 1851, when he went to sea, being present at the "Koszta affair" in Smyrna, in July, 1853. In October, 1855, he returned to the Naval Academy, where he stayed about six months. He went through the grades of acting master, master and lieutenant, and from Oct. 29, 1861, to Jan. 3, 1862, served as instructor in gunnery to volunteer officers on board the receiving ship Ohio, at Boston. After this he served in the North and South Atlantic blockading squadrons as lieutenant commander, and then he was on duty in command of the ironclad Louisville. Here he did active and valuable service in breaking up guerilla warfare. Later he commanded the steamer United States in the search after the privateer Tacony, and during the July riots, in 1863 in New York, he commanded the naval battalion.

He commanded the Marblehead, of the South Atlantic blockading squadron, for six months, and on Dec. 25, 1863, he was in the battle of Stone River. During the battle the Marblehead was struck thirty times, and three of those on board were killed and six wounded. Three days later Meade landed with a force of 100 men, destroyed the batteries, and brought away two guns.

He next commanded the Chicora, of the West Coast blockading squadron, under Admiral Farragut. In January, 1865, he ran out of the Calcasieu River in the face of a much greater force and destroyed the blockade runner Delphina.

After the war he was kept actively employed. In 1868 he was commissioned commander, and negotiated a commercial treaty in the Samoan Islands.

When the yacht America was in the possession of the Government he was in command, and under his direction she was refitted and sailed in the second race for the America's Cup against Cambria, in 1870.

He became a captain in 1880. He commanded the Vandalia for three years. He was Naval Commissioner to the Chicago Exposition. In 1894 he was promoted to the rank of rear admiral, and soon after retired.

He married, in 1865, a daughter of the late Rear Admiral Paulding, U. S. N., and by this marriage had one son and four daughters.

Admiral Meade was associated with the Society of Naval Architects from its organization, being one of its vice-presidents. He read a very interesting paper at the opening of the session of 1894, and he was always ready to take part in the discussions.

The Solent Classes Racing Association.

THE Solent Classes Racing Association is an organization composed of the various yacht clubs about the Solent and the Isle of Wight, its object being to regulate the vast amount of racing which takes place every season in these favored waters. While racing under the Y. R. A. rules, the Association has certain regulations of its own, to cover points not provided for by the Y. R. A. One of the working members of the Association is Lieut.-Col. J. T. Bucknill, of the Royal Southampton Y. C. (Thalassa), who for the past five years has compiled and published a small handbook of rules and general information relating to the Association, under the title of "Almanac—Yacht Racing in the Solent Classes." The sixth edition of the book has just reached us.

The preface is novel and characteristic of the writer: "This almanac now enters upon its sixth year, and has therefore lasted for a period equal to one-tenth of her Majesty's reign to date. It continues to give satisfaction to many of her Majesty's lieges who sail on the Solent in yachts. An honest endeavor is made to raise the almanac each year to a higher level. This of course reduces the rating it receives, or, what is tantamount, enables us to increase the sale without increasing the rating.

The main points worthy of notice in 1896 were:

1. The consolidation of the new Solent Classes Racing Association.
2. The successful introduction of a class in which the hull sails and spars were as nearly alike as possible.
3. The failure of the new Y. R. A. rule of rating to produce the wholesome type intended.
4. The wrangling about measurements and certificates.
5. The owners' strike at Yarmouth on Aug. 20.
6. The introduction of distinguishing racing numbers on the mainsails of racing yachts in the Solent classes.

"The Almanac cup for 1897 will be given to the Redwing class, and will probably be raced for at Calshot on June 9, at the regatta of the Solent Classes Racing Association." Thalassa.

The Almanac contains a list of all the Solent clubs with their fixtures and courses, tide tables, charts of the various courses, and other useful matter.

The Royal Ulster "Challenge."

THE detailed report of the annual dinner of the Royal Ulster Y. C. shows it to have been a most enjoyable affair socially, with some very enthusiastic responses to the toasts. There is nothing in the report, however, to warrant the idea of a challenge for the America's Cup; as we surmised, it was merely another case of after-dinner talk. The *Field* comments as follows:

The dinner of the Royal Ulster Y. C. appears to have been a very striking ceremony, and the enthusiasm of the members even carried them so far as to talk about that Will-o'-the-Wisp, the America Cup, and building a yacht to challenge for it after she has won the Queen's Cup at Cowes. The quest of the grail was a trifle compared with the quest for the cup won by the America, and we trust that if the Royal Ulster Y. C. does back a challenge for it that it will be couched in some such terms as Sir George Newnes placed before the Royal London Y. C. This club, it is true, declined to forward the challenge, but then the Royal London Y. C., like many other English and Scotch, has made a strong opposition to the illegal document known as the "New Deed of Gift," and until that document is burnt there is little chance of any British yacht club backing a challenge for the America Cup again. Nobody actually knows what the conditions were that the Royal Yacht Squadron agreed to when the club forwarded Lord Dunraven's challenge to the New York Y. C., but it is understood that the squadron will not forward any more challenges for the cup—at least not without a more definite understanding than can be arrived at by cablegrams.

We shall be very glad to hear that the Ulster people really intend to build a Queen's Cup yacht, and that the builder will be Mr. Hilditch, of Carrickfergus, whose work is most excellent, and he is capable of putting into form any design, however elaborate it may be. We print in another column a summary of the speeches made at the Royal Ulster Y. C dinner by the Marquis of Dufferin and Ava, the Marquis of Londonderry, the Lord Mayor of Belfast, etc. It certainly looks as if a yacht of some kind will be built, but we hope that the after-dinner enthusiasm will not over-ride the judgment and discretion which we have learned by experience are necessary in challenging for the America Cup.

Corinthian Y. C. of San Francisco.

THE Corinthian Y. C., of San Francisco is a very lively and active organization, in which, fortunately, racing has not yet reached a point where it stops cruising and general yachting. The following lengthy programme for the season's sport shows that short cruises are deservedly popular in the club. The season opened on April 24 with a reception and review of the fleet:

April 24, opening day; 25, cruise in squadron. May 1 and 2, cruise to McMears; 8, open; 9, open; 15 and 16, cruise to Vallejo; 22, open; 23, open; 29, open; 30, open; 31, annual regatta. June 5, open; 6, open; 12 and 13, cruise to Petaluma drawbridge; 19, open; 20, open; 26 and 27, cruise to Marin Islands. July 3, cruise to Martinez; 4 and 5, Vallejo; 10 and 11, cruise to San Mateo; 17, open; 18, open; 24, open; 25, open; 31 and Aug. 1, cruise to Vallejo; 7, summer cruise; 8, accompanying yachts return; 14, meet yachts returning from summer cruise; 15, home; 21, open; 22, open; 28 and 29, cruise to McNears. Sept. 4 and 5, outside cruise, Drake's Bay; 6, open, national Labor Day; 9, interclub regatta, 11 and 12, Marin Islands—clam chowder; 18, open; 19, open; 25 and 26, Dillon's Point. Oct. 2, open; 3, open; 4, open, State Labor Day; 9, Corinthian Cove; 10, Corinthian games; 16, closing day; 17, cruise in squadron.

Important if True.

THE California Y. C. was to have had a banquet on Saturday night at its club house, on the other side of the estuary. It only had part of one.

When the guests sat down something was missing—there was no life to the feast. As the semi-banquet progressed, the absence of nut-brown ale became more and more painful. The guests drank glass after glass of Alameda water, and its weight on their stomachs was about equal to the depression of their spirits.

Finally one bold mariner could stand it no longer. He asked in good man-of-war language for something stronger.

Then the harrowing story had to be told.

When the material for the banquet was ordered, one of the most important items was a keg of beer. It was a good-sized, heavy keg, and it was duly delivered at the boat that was to convey it to the club house.

The man in the boat knew a great deal more of beer than he did of the law of gravity and displacement and relative buoyancy, and he at once concluded that it would be easier to tow the keg off to the club house than to take it in the boat. It would save a lift.

With great confidence he rolled the keg into the water and grasped a piece of rope with which to tow it. The keg sunk and the boatman waited for it to bob up again. But it didn't bob; and the boatman waited many minutes in vain. Then he realized that an iron-looped barrel full of beer will sink.

He procured some grappling irons, but that keg is still somewhere in the estuary, and the jolly tars did not splice the main brace at the banquet.—*Oakland Tribune.*

Pioneer.

THE so-called "steam house-boat," Pioneer, designed by H. C. Wintringham and built by Marvel & Co., of Newburgh, N. Y., for George E. Chisholm, was successfully launched on May 6, being christened by Mrs. Chisholm. The vessel is not a house-boat, but a veritable steam yacht, with twin screws and schooner rig. The name has been given to her merely because of her unusual beam and ample deck house. She is 125ft. over all, 30ft. beam, 10ft. 3in. hold, and 5ft. 6in. draft. The engines are triple compound, 6¼, 10½, and 16 by 10in., two in number, with an Almy watertube boiler. The maindeck is covered with a house which leaves only a small open space at the bow and stern, the forward part of this house containing the owner's rooms, guests' rooms, dining saloon, bath rooms, etc. The pantry is thwartships, about the middle of the deck house, and abaft it are the engine and boiler, the galley, officers' messroom, staterooms, etc. The sides of this house extend out to the rail, as in the ordinary river steamboat; on the upper deck are two houses, the pilot house forward and a saloon abaft, separated by a short space, but under the same roof; ample awnings have also been provided.

The hull is of steel, with four compartments, the auxiliary plant for electric lighting, ice making, refrigerating, etc., is very complete. Two pole masts provide for a moderate sail plan. Considering the special purpose of the yacht, comfortable life afloat on inland waters regardless of speed, the wide departure from the conventional dimensions and arrangements of the average steam yacht, are fully justified by the results obtained.

The Green Lake Y. C. Challenge Cup.

THE Green Lake Y. C., of Dartford, Wis., has just sent out invitations to the other yacht clubs on the Wisconsin lakes to participate in the contest for the challenge cup given this year by it. The full conditions of the contest appeared in the FOREST AND STREAM of March 13, but have since been slightly amended, the limit of crew being now, in addition to helmsman, one man for every 4ft. of racing length (in place of l.w.l. length) exceeding one-half of said racing length, and each man being represented by a weight of 150lbs. when the yacht is measured. The club is preparing for the liveliest season of its history; new racing boats are being built and new courses have been laid out.

Cockatoo.

THE first of the four Herreshoff "raceabouts" that were designed and built for C. S. Eaton, of Marblehead, to replace the famous Cock Robin, was launched on April 27 and had her trial trip off Bristol next day. On May 1 she started from Bristol around the Cape with Mr. Eaton on board and Mr. W. P. Fowle at the stick, Mr. Arthur Dean Foss joining the party at Newport. Cockatoo is 31ft. over all, 21ft. l.w.l., 7ft. 4in. beam and 5ft. 6in. draft, her lead keel being reported as of 3,500lbs. weight, the minimum limit of the class. She has a very low house, a mere roof on the coaming. The rig, of 500sq. ft., is rather higher than Cock Robin's and proportionately shorter on the base. Mr. Fowle will handle in her races. The three other boats of the class, for W. Q. Gay, H. M. Sears and D. C. Percival, Jr., are not yet completed. Messrs. Gay and Sears will race their boats around the Cape.

Hoodlum.

THE 24ft. racing yacht designed by J. R. Purdon and built by Fenton & White, Manchester, Mass., for Messrs. A. H. Higginson and Reginald Boardman, has been named by them Hoodlum. She is 32ft. over all, 24ft. l.w.l. with crew and 21ft. without crew, 8ft. 6in. beam, 9in. draft of hull, and 8ft. total draft with board down. Her sail area is 825sq. ft. She is rigged as a sloop, with a moderately long bowsprit. The overhang is mostly forward, the stern being cut off square. A special set of ways has been built for her at Manchester, and when not in use she will be kept ashore.

The White Bear Y. C. has definitely decided not to enter on the undertaking of a new club house this year, and will probably accept a proposal made by Col. W. W. Price, the receiver of the Ramaley property at Lake Shore. Times are hard and there is not enough money in the treasury of the club to prosecute the work of a new house, and the undertaking, while by no means abandoned, will be postponed until next year. The club will not take a lease of the old club house at Dellwood. Many of the members are opposed to the Dellwood house, on the score of inconvenience and the inadequacy of the plant. Col. Price has shown a liberal spirit in his proposition to the club. He will make no charge to the club, excepting for the use of the dancing hall, which will be called into requisition for dances and entertainments. Certain rooms and balconies will be reserved for the especial use of the club, including a room for the ladies. For the week of the interlake regatta, the pavilion will be the exclusive possession of the club. A new dock will be built for the accommodation of the club boats. The racing course on the lake will be a little changed to accommodate the new starting point. With the more convenient headquarters, the races this summer can be started at 3 o'clock. Peterson, of Minnetonka, is building for C. M Griggs and a syndicate a new boat to be called Akela, which is expected to beat Tartar, the winner of last summer. Messrs. Ordway and Elmer will sail Alfrida this season. Several other new boats are building, and the season is sure to be a lively one.—*St. Paul Despatch.*

The New York Conference.

THE list of delegates which we published last week gives a very inadequate idea of the nature of the representation at the conference of yachtsmen. Through the associations there given were really represented 110 yacht clubs in the United States and Canada. The full list of these clubs is as follows:

The following summary shows the clubs, 110 in number, which were represented:

Through the Yacht Racing Union of Long Island Sound—Seawanhaka Corinthian Y. C., American, Riverside, Yale Corinthian, Horseshoe Harbor, New York Athletic, Stamford, Indian Harbor, New Rochelle, Knickerbocker, Huguenot, Bridgeport, Corinthian Fleet, Harlem, New Haven, Douglaston, Sea Cliff, Huntington, Park City, Hempstead Harbor, Norwalk, Stamford Corinthian. Twenty-two clubs.

Through the Yacht Racing Association of Massachusetts—Massachusetts, Hull, Boston, Dorchester, Quincy, Winthrop, South Boston; Savin Hill, American, of Newburyport; Commonwealth, Chelsea, Jeffries, Manchester, Atlantic of Boston, Cape Cod, Duxbury, Lynn, Cohasset, Columbia of Boston, Revere, Squantum, West Lynn, Wellfleet, Old Colony, Mosquito Fleet, Plymouth, Kingston, Burgess, East Gloucester, Squam, Wollaston, Fall River. Thirty-two clubs.

Through the New York Yacht Racing Association—Pavonia, Yonkers Corinthin, Columbia, Jersey City, Gravesend Bay, Newark, Kill von Kull, Ossining, Hudson River, Audubon, Tappan Zee, Bayonne City, Tower Ridge, Yonkers, Greenville, New Jersey Athletic, Newark Boat Club. Eighteen clubs.

Pacific Interclub Yachting Association—San Francisco, Pacific, Corinthian, Encinal, California. Five clubs.

Lake Yacht Racing Association.—Bay of Quinte, Buffalo, Kingston, Oswego, Rochester, Queen City, Royal Canadian, Royal Hamilton, Victoria. Nine clubs.

Interlake Yachting Association—Citizens, Cleveland Y. A., Put-in-Bay, Sandusky, Toledo, West End, Buffalo, Detroit, Erie. Nine clubs.

Lake Michigan Yachting Association—Lincoln Park, Columbia, Chicago, Milwaukee, Racine, Green Bay, Manitowoc, Marinette and Menominee. Eight clubs.

Through the Yacht Racing Union of the Great Lakes—Three associations above.

Through separate representation—Atlantic, Larchmont, Marine and Field, Corinthian, of Philadelphia, Great South Bay, Brooklyn, Hempstead Bay. Seven clubs.

Letters from Southern, Carolina, Royal St. Lawrence, Royal Nova Scotia, New York, Eastern, Albany, Minnetonka, Philadelphia, Shelter Island, Rhode Island, Riverton.

In addition to the above, letters were received from the Rhode Island Y. C., Riverton Y. C., of Riverton, N. J.; Royal St. Lawrence Y. C., Keystone Y. C., of Long Island; Minnetonka Y. C., Shelter Island Y. C., Eastern Y. C., Southern Y. C., of New Orleans; Carolina Y. C., of Wilmington, N. C.; New York Y. C., Albany Y. C., and Royal Nova Scotia Yacht Squadron. The New York Y. C. wrote to the effect that it was impossible to be represented, as the matter could not be laid before the club until the meeting later in the month; the Eastern Y. C. was not disposed to send a representative, and one or two of the smaller clubs wrote to the effect that they were not in a position to take any action, for various reasons. Nearly all of the letters, however, were in accord with the telegram of the Philadelphia Y. C., printed last week, expressing an interest in the work and a desire for its success. The Minnetonka, Royal St. Lawrence and several others had appointed delegates who were unable to be present.

The expressions of opinion both from these letters and from the delegates at the meeting were almost uniformly in favor of some scheme of union; very few clubs have expressed themselves as opposed to the general idea. The principal issue at the meeting was as to the time for organizing, immediately or in the fall. This was settled in favor of the latter view, thus postponing the discussion of a still more important question, the character of the future organization.

On this point quite a difference of opinion exists, the majority of the clubs, including many that are noted for their active part in racing, are apparently in favor of a definite and permanent organization for the general regulation and encouragement of yacht racing throughout the country, on the plan of such organizations as are in existence in connection with other sports. On the part of some of the larger clubs, however, there is evident a feeling somewhat similar to that displayed in the recent report of the special committee of the New York Y. C. on this subject, an overwhelming sense of the importance and *prestige* of the particular club, and a fear to trust anything so fragile and delicate as this *prestige* to the rude jostling of smaller and less prominent clubs.

However natural this feeling may be on the part of those who by long exertions have built up a large and successful club, we believe it to be without foundation, and in no small degree unjust to the smaller clubs. We have enjoyed tolerably extended opportunities for observation throughout the whole country, and, so far as we have been able to gauge the general feeling of yachtsmen and of the clubs at large, there is no jealousy or envy on the part of the smaller clubs toward the large ones such as the New York, Eastern, Larchmont or Seawanhaka. That ill-feeling which is at times evident is purely local, the result of some small personal or interclub quarrel, and is not of the sort which would interfere with one national union of the clubs; in fact the tendency to such local differences would be diminished. The repeated successes of the New York Y. C. in the international victories of Puritan, Mayflower and the other great cutters down to Defender have developed no jealousy or rivalry on the part of other American clubs, great or small; on the other hand all have rejoiced in the triumph of the great metropolitan club.

We do not pretend to speak for the large clubs; the position of the New York Y. C. has been plainly and definitely set forth by its special committee, and the positions of the other clubs will be disclosed in time. As for the "small" clubs, however, by which we include all save the New York, Eastern, Larchmont, Seawanhaka Corinthian and Atlantic, we can say confidently that there is no disposition whatever to injure or interfere with the larger, or to presume in any way upon such positions as they might have through representation on a fair proportional basis. There is, in our opinion, no danger however remote of a coalition of the small clubs to pass rules merely to harm the large ones.

The future action of the "small" clubs depends entirely upon the position now assumed by the larger ones; if the latter hold aloof entirely, it seems certain that the new movement will be carried through without them. If they fall in with the movement, but attempt to run it themselves by right of size and standing, they will stir up the united opposition of all the other clubs. If they make it plain that they are willing to go in and work disinterestedly for the good of the organization, and the encouragement and extension of yachting, they will receive that deference from the smaller clubs to which greater efforts, proportionate to their size and higher standing entitle them. They must, however, leave their *prestige* at home for the decoration of their club houses, and come to the meetings of the Association simply workers for the general good.

The Kingston Y. C., of Kingston, Ontario, held its annual meeting on May 3, electing the following officers: Com., Frank Strange; Vice-Com., H. W. Richardson; Rear-Com., C. L. Curtis; Sec'y, J. H. Macnee; Treas., W. C. Kent. The club will request of the Lake Y. R. A. that the racing circuit of 1897 be opened with a race at Kingston on July 19.

The New Twenty-Footers.

So far as numbers go, the 20ft. class is likely to show up very well by the middle of June; comparatively little has been said thus far about new boats on this side of the line, and it looked for a time as though Canada was doing all the building; but quite a fleet, and a representative one at that, is now materializing, with bows pointed toward Oyster Bay. Whether the trial races will equal the record of the 15ft. class last year—twenty-nine boats at the line for the first race—is doubtful; but it is certain that the new class will be the main feature of the Sound racing and will provide some good sport by the middle of July, when the trial races will be sailed. It is too soon yet to discuss the advantages and disadvantages of the new boats, but there is every reason to fear that they will differ from the 15-footers only in being bigger, uglier, and more costly in proportion.

The winners of last year's trial races, Messrs. C. H. and D. M. Crane, will be well represented this year in the new class; Mr. C. H. Crane, the designer of El Heirie, will sail a centerboard boat of his own design, now nearly completed at Lawley's yard, where El Heirie was built. The new boat will be similar in a general way to El Heirie, but will carry the Scarecrow leg-o'-mutton rig. The boat is not a beauty, but her chances of success are so much the better on that account. Mr. Crane has also designed a second boat, also a centerboard, which is building by the Spalding St. Lawrence Boat Co. at Ogdensburgh, for a syndicate in which he is interested. Mr. D. M. Crane, who is living in Boston, has tried his luck with a fin-keel 20, also built by Lawley. This boat, Pioneer, also carries the Scarecrow rig; she has been under way for a couple of weeks about Boston Harbor, and is sailing very fast, as judged by the local fleet in the general scrapping about the harbor. She will come to Oyster Bay for the trial races.

The first boat launched about New York has been named Kenneu. She was designed and built by L. D. Huntington, designer of Question and Paprika, and is similar to the latter; she is owned by M. H. Clark, of New Rochelle, who will sail her in all the Sound races. Mr. Huntington has under way another 20-footer for Mr. Irving Cox, who designed her, following the model of Paprika, which he has been sailing for some time.

Mr. Sherman Hoyt, who sailed Paprika so well last season, will this year sail a fin-keel 20 footer, designed by Gardner & Cox, and now building by the Spalding St. Lawrence Boat Co. She will be owned by Com. Rouse and Mr. Colgate Hoyt. Still another fin-keel has been designed by Chas. Olmstead, designer of Riverside and Trilby, and built by the Montauk Construction Co., of which he is manager, at the old Mumm yard, Bay Ridge. She is for Philip T. Dodge, owner of the Olmstead 20 footer Eos, built last year, and will be named Asthore. Messrs. F. B. Jones and Irvine Zerega will sail with Mr. Dodge in the races. Mr. Olmstead has also another 20-footer under way at Bay Ridge.

Mr. William Willard Howard, now in this country, is building a 20-footer at Clayton, N. Y., the boat being designed and built by Fry, who did such good work on Mr. Howard's 15-footer Ulmec.

The Indiana Yachting and Boating Club, of Wawasee Lake, Indiana, will be represented at Oyster Bay by a 20 designed by Mr. H S Hicks, a member of the club, and now building at Racine, Wis.

Mr. Linton Hope has designed and built a 20-footer for an American owner, and she will probably race in the open events, though not eligible for the trial races. It is likely that another English boat will also be sent over.

The new boats are all built up to the limit, of 17ft. 6in. l.w.l. and 500sq. ft. of sail, with from 6 to 8ft. beam, and a number of them will use the Scarecrow rig.

The few existing boats in the 20ft. class, Bogie and Eos being the only modern ones, are practically outbuilt, having a waterline of 19ft., with but 440sq. ft. of sail. There is some talk of the Boston Rooster, owned by the Adams Brothers, being adapted to this class and entering the trial races. The English 1-rater Shrimp, a very fast Sibbick boat that was imported two years ago and altered to race in the 21ft. special class, with an enlarged bulb and sail plan, has recently been altered in the other direction to bring her into the 20ft. class, and she will be sailed in the regular races. It is almost certain that some boats as yet unreported will be added to the list, so that fifteen or even more starters may be looked for in the trial races.

Verona.

THE accompanying reproduction, from a photo by N. L. Stebbins, of Boston, shows the handsome cruising knockabout which was illustrated in the FOREST AND STREAM of Jan. 23-30. Verona, as she has since been named, was designed and built by the Marblehead Yacht Yard (W. B. Stearns) for C. B. Tucker, of Boston, and is 32ft. 9in. over all, 21ft. l.w.l., 7ft. 8in. beam, and 4ft. 11in. draft. She has lately been tried in both light and heavy weather, and has proved fast and very easy on her helm. As the plans showed, she has a great amount of room inside, which is disposed of to the best possible advantage for the comfort of owner and crew.

VERONA.

Knockabout designed and built by W. B. Stearns for C. B. Tucker, 1897.

YACHTING NEWS NOTES.

We have received the first number of a new monthly journal named *Marine Engineering*, published by the Marine Publishing Co., New York. It is devoted, as the subtitle sets forth, to "vessel construction, propulsion and allied interests." The new paper is of a convenient size for handling and reading, and contains forty pages, well printed and with numerous illustrations. Among the descriptive articles is one on the new steam yacht Marietta III., one of the new engines for the U. S. Cruiser Chicago, and one on the new Hamburg-American steamer Pennsylvania. Dr. R. H. Thurston contributes an interesting article on high-pressure steam for marine uses, and Col. E. A. Stevens writes of the origin and development of the ferryboat. We wish all success to the new venture, as there is room for it in the wide field of marine engineering.

Gleaner, sloop, has been sold by F. O. Wellington, of Boston, to L. F. Gates, of Oshkosh, Wis., who will race her on Lake Winnebago. She has been remarkably successful in Boston waters, last year winning the bronze medal and pennant of the Massachusetts Y. R. A. in the second class.

Telfer, schr., recently purchased by Mr. Wood, of Castine, Me., sailed from the Atlantic Y. C. at Bay Ridge, N. Y., on May 1 for Bangor, Me., with Capt. Trask, two seamen and a cook aboard, and also Harry Wood, the fourteen-year-old son of the owner. At a little after 1 A. M. on May 5, when off Faulkner's Island in a dense fog, the yacht was struck by the Sound steamer City of Fitchburg, and nearly cut in two, sinking in a few minutes. Capt. Trask and the cook, who were on deck, launched the dinghy, and the others, wakened by the crash, came from below, all reaching the steamer in safety, and coming to New York on her. Wivern was built in 1866, from their own model, by Pierce Bros., at East Boston. She was a keel boat, 52ft. 3in. over all, 48ft. 4in. l.w.l., 15ft. beam and 6ft. 5in. draft. In 1885 she was lengthened and renamed Telfer. She is well-known about New York, Boston and Philadelphia.

Penelope, steam yacht, ex-Sapphire II., *née* Cleopatra, now owned by H. S. Converse, of Boston, has been for some weeks in the West Indies, and reached Sandy Hook about 11 A. M. on May 5. As she came up the Swash she met the big monitor Terror coming down the Ship Channel, outward bound for five days' target practice at sea. Signals were exchanged, but the two vessels came together, the monitor losing her davits and the captain's gig. The yacht was less fortunate, losing her foretopgallant mast and smashing her bulwarks, with other minor damage. She proceeded to Tebo's for repairs.

Lorelei is the name selected by Chas. A. Schieren, Jr., of the Great South Bay Y. C., for his new sloop building at Greenport from a design by H. C. Wintringham. The new yacht is intended to race in the class with the Herreshoff sloop Bonnie Doon, owned by Messrs. Mills, a very successful boat. She will be 44ft. 10in. over all, 30ft. l.w.l., 13ft. beam, 2ft. 5in. draft, including a lead keel of two tons. The forward overhang is 6ft. and the after overhang 8ft. 10in. The mast is 42ft., boom 40ft., gaff 24ft., and bowsprit 9ft. outboard. The hull is double-skinned, of white cedar, the inner skin 7-16in. and the outer 9-16in. There is a permanent cabin 7ft. long, with berths, etc., and abaft it a "summer cabin" 8ft. long, the remainder of the cockpit being 13ft. long.

The Riverton Y. C. of Riverton, N. J., held its annual election on May 4, the following officers being elected: Com., William R. Ellison; Vice-Com., A. M. Taylor; Sec'y, E. B. S. Myers; Treas., James S. Coale; Meas., H. McIlvaine Biddle; Finance and Elective Committee: John C. S. Davis, Chair-

man; E. S. Showell, Charles C. Rianhard, Charles W. Davis and Harvey Mitchell; Regatta Committee: John S. Muckle, Chairman; Charles W. Davis and Harvey Mitchell.

Republic, schr., under charter, sailed from Charleston, S. C., for Mexican and South American ports on May 4.

Oneonta, steam yacht, F. C. Dininny, has been chartered to G. K. Clarke, Jr.

It is reported that George G. Tyson, of the Riverside Y. C., owner of Vorant I. and II. Trilby and Riverside, has placed an order with the Herreshoffs for a steam yacht 210ft. long, a seagoing craft with brigantine rig, intended for a cruise around the world.

Mr. J. F. Tams, who has for many years been associated with the Regatta, America's Cup, and other important committees of the New York Y. C., has been appointed as the third member of the regatta committee for the year.

Com. C. T. Wills, chairman of the building committee of the Indian Harbor Y. C., has signed the contract for building a new club house at Greenwich, Conn. The building is to be of wood, 70×30ft., and two stories high. The contract price is $15,000. The site is a prominent one at the mouth of Greenwich Harbor, a half mile west of E. C. Benedict's residence. The contractor is J. P. Crosby, of Greenwich. The building will be ready early in July. The total cost of building and grounds will be in the neighborhood of $20,000.

On April 29 there was launched from Webber's yard, New Rochelle, a new sloop designed by Mr. Webber for James Baird, of the Philadelphia Y. C. Surprise, as she was named, is 45ft. over all, 30ft. l.w.l., 13ft. beam, and 3ft. 9in. draft, with 5 tons of lead. She is a centerboard boat, with pole-masted sloop rig. She is intended as a generally useful boat, and is of strong and durable construction well fitted below, the trunk cabin giving a headroom of 5ft. 10in. Under sail in a hard blow she proved very satisfactory, both in stability and speed.

Paprika, 15-footer, has been sold by Gardner & Cox to E. A. Stevens, Jr., son of Col. Edwin A. Stevens, of Hoboken. Mr. Stevens has just joined the Seawanhaka C. Y. C.

The Burgess Y. C., of Marblehead, Mass., has arranged the following fixtures: May 29, club cruise; June 17, open race; June 26, first championship; July 5, open race; July 10, second championship; July 10, moonlight sail; July 24, ladies' race; Aug. 2, association open race; Aug. 21, third championship; Sept 4, club race; Sept. 11, championship sail-off.

Melicete, cutter, the Burgess centerboard 46-footer, has been sold to Rear-Com. W. O. Gay, Hull Y. C.

The Boston Y. C., at a recent meeting paid the following fitting and well merited tribute to the memory of one of its most valuable members: *Resolved*, That whereas Hon. Benjamin Dean, one of the original members of the Boston Y. C., died at his home in South Boston on April 9, 1897, this club does now put on record the following memorial of its distinguished member. Before yacht clubs were known in these waters, and nearly thirty-one years ago, he was one of the four choice spirits who, on board the old Violet, lying at Hull, conceived the scheme of the formation of this club. Now all but one of that party are sailing on celestial seas, where winds are ever fair and the breakers make no moan. At the first meeting of the voluntary association he presided. When, not long after its incorporation, the membership of the club seemed to turn rather to the pipe and bowl than to the tiller and sheet, he it was who did herculean labor in the successful efforts of reorganization, freshening it with new and influential members, who added character and respectability to the organization. From the beginning to the day of his death he was one of the trustees, except for such years from 1870 to 1875, in which he was its commodore, and when the membership list reached its high-water mark. To him the holding of office meant always the taking of the responsibility attached to it. There is no island in the harbor of any size but that, at some time, he has examined it with reference to anchorage and headquarters for the club. It is familiar to us all that the land and flats which are now used for yachting purposes and our present club house, and the more permanent wharf built after other structures had been wrecked by ice floes, are due to his thoughtful generosity, rare foresight and executive ability. In the later years of his life, though handicapped by serious physical ills which would have deterred even the strongest man, he showed no abatement of his fondness for the sea and his enthusiasm for yachting. His last letter, written to the secretary of the club the week before his death, closed in these words: "My dear fellow members of the Boston Y. C., you will always be dear to me and still sail in my company, inhaling health from the winds and courage from the storms." If we sought to make from all in this club the composite of that man who should be taken in all respects, as the ideal yacht club member, who would not say it is Benjamin Dean.

The Taunton Y. C., whose station is at Dighton, Mass., announces the following fixtures: May 31, club house, open to members' families and guests; club cruise to Thurston's for clam dinner; entertainment at club house in the evening. June 14, ladies' day and moonlight sail; entertainments to be announced later. June 26, first club race for championship cup. July 13, ladies' day and moonlight sail. Aug. 5-7, cruise to Newport. Aug. 11, Ladies' day and moonlight sail. Aug. 21, championship cup race. Aug. 26, open regatta and water events. Sept. 6, championship cup race. Sept. 10, ladies' day and moonlight sail. During July, August and September, there will be several smoke talks and stag parties given, dates of which will be announced later. The club will arrange several clam bakes this season at Assonet Neck and at Thuston's; dates and particulars to be given later. Regular club meetings are held at club house on the third Monday of May, June, July, August and September; annual meeting the last Monday in February. Limit of membership 200; membership for 1896 was 197. Admission fee $10. Annual dues $5. The janitor will be on duty at the club house, making preparation for the season on and after May 15. The house will be in readiness for members and their guests after May 29. Connected by telephone. The officers are: Com., Clinton V. Sanders; Vice-Com., C. Everett Evans; Rear-Com., Daniel L. Brownell; Acting Sec'y, Edwin N. Clark; Treas., Everett H. Waldron; Fleet Captain, Joseph S. Williams. Directors: Geo. E. Wilbur, C. V. Sanders, C. E. Evans, D. L. Brownell, H. S. Williams, W. W. Arnold, H. B. Baker. Regatta Committee: Edward L. Sargent, J. S. Williams, Geo. H. Phillips, W. H. Reed, Luther Dean. House Committee: C. Everett Evans, Edwin A. Tetlow, Charles P. Foster.

The annual meeting of the Royal Canadian Y. C. was held on April 24 in the town club house, Toronto, the following officers being elected: Com., Æmilius Jarvis; Vice-Com., J. H. Plummer; Rear-Com., George H. Gooderham; Hon. Sec'y, F. G. R. Seaver; Managing Committee: C. A. B. Brown, R. C. Donald, J. Gray Gibson, Frank M. Gray, G. R. Hargraft, A. Burdett Lee, H. E. Ridley, James E. Robertson, W. E. Sampson and James Scott. The retiring commodore, A. R. Boswell, has served the club for many years, as honorary secretary in 1869, '70, '71; as commodore from 1878 to 1883, and again, with the 20-rater Vreda as flagship, from 1889 to 1897. Mr. S. Bruce Harman has also served the club long and well as honorary secretary. The club has been laboring under serious disadvantages for several years past, the town club house on the water front, by way of which the island club house is reached, having been almost inaccessible from the city. The work of improving the water front has been carried on by the city authorities in the same dilatory and slovenly manner that characterizes most municipal work on this side of the line, and several years have been wasted in the construction of a bridge across the railway tracks. This bridge, which is open this week for the first time, will give convenient access to the club house from the city, and enable the members to enjoy once more the unusual advantages which Toronto affords, a man being able to spend an hour at the club house between business and dinner, or to get out for a sail within half an hour of leaving his office or house. The continued isolation of the club stations has had a natural effect in decreasing the membership of the club, and to counteract this a motion was passed to remit the initiation fee up to July 1. The present membership is: Honorary life members, 3; life members, 60; resident members, 365; non-resident, 365; junior resident, 50; total, 577. Ten new life membership certificates will be issued. The club offers special prizes for the 20ft. class and will be represented in the races at Montreal. Although the financial reports of the year show a balance of but $32.21, the club is in a very satisfactory position this year. Com. Jarvis, so well known through his connection with the building and handling of the successful Canada last year, is one of the most energetic and enthusiastic of Canadian yachtsmen, and no better selection could have been made for a leader at the present time. With free access to its houses and an added membership, the club has a bright future before it.

On May 7 an explosion took place aboard Viking, steam yacht, H. A. Hutchinson, which nearly resulted in the death of Louis Corbett, the fireman of the yacht. She was lying at Tebo's Docks, between Sultana and Buccaneer, with steam up, just preparing for commission, when a manhole cover blew off, filling the boiler room and other spaces below deck with steam. All hands escaped but Corbett, who was caught below, but was able to reach an open porthole. This was too small to permit the passage of his body, and he would have been scalded but for those on the dock, who ran a fire hose to the yacht and played upon him. Between the chances of being scalded by the steam or drowned by the hose, he was still in serious danger. Chief Engineer Heilbron, of the Buccaneer, made an attempt to go below but failed. Meanwhile men had been at work on the deck with axes, and a hole was finally cut by which Corbett was lifted out. He was taken to the hospital, but it is hoped that his injuries are not dangerous.

The Dock Department of New York has at last moved in the matter of a yacht landing at the south end of the city, and work will be commenced this month on a breakwater next to Pier A, North River, inclosing a protected basin with a landing stage. The improvement has been long needed by yachtsmen.

Emerald, schr., J. R. Maxwell, was launched on April 29 from Marvel's ways, Newburgh, where she has been during the winter. Her original trough keel has been cut off and cut up, the lead being recast in the new keel trough which has been built. This alteration has increased the draft from about 10ft. to the full limit, 14ft. The rig is practically new throughout, and of course of increased area to utilize the power gained through the lower ballast. The yacht has been towed to Tebo's, where her spars will be shipped and she will be fitted out for racing.

Helen, steam yacht, was launched at East Boston on May 1. She was built for Oliver H. Perry and is 87ft. over all, 68ft. l.w.l., 14ft. 6in. beam and 5ft. draft.

The Cricket Fleet, of Atlantic City, at its meeting on May 6, decided to change its name to the Absequan Y. C. The following fixtures are announced: May 25, race for half-raters in Cricket Bay; June 10, race for cricket boats; June 24, race for cricket boats and half-raters in Absecon Bay; July 8, open race in Cricket Bay; July 24, race for cricket boats and half-raters in Absecon Bay; Aug. 6, invitation race; Aug. 23, open race in the Thoroughfare; Sept. 7, race for cricket boats and half-raters in Absecon Bay; Sept. 21, open race. The invitation race, scheduled for Aug. 6, will probably be sailed with the Longport Y. C.

Lehemer, sloop, has been sold by Com. Francis Shunk Brown, Philadelphia Y. C., to Joshua R. Adams.

Mayflower, steam yacht, Ogden Goelet, has made nearly twenty knots on her speed trial on the Clyde. She will be delivered to Mr. Goelet very soon, and will come at once to New York. Both Mayflower and Nahma, Mr. Robert Goelet's new yacht, have been delayed by the furnishers and upholsterers.

Bedouin, cutter, J. Murray Mitchell, will this year, for the first time, appear with white topsides. She has been thoroughly overhauled and refitted at Tebo's. Her younger and narrower sister, Ileen, lies near her in the tier at Tebo's, neglected and in very bad condition.

Adrienne, schr., formerly of New Orleans, has arrived at New Haven, from which port she will hail in the future, her new owners being Chas. E. Graham and Israel Kelsey. She was designed by Stewart & Binney, and built by Lawley & Son in 1892. When enrolled in the Southern Y. C. she did a great deal of cruising in the Gulf and also in Cuban waters.

The Fox Lake Y. C., of Fox Lake, Ill., has elected the following officers: Com., Dr. T. W. Brophy; Vice-Com., Benjamin Felex; Sec'y, John A. Putnam; Treas., C. J. Patterson; Chaplain, Rev. Geo. W. Wright; Fleet Surgeon, Dr. Corlett; Meas., Robert Tooke, Jr.; Regatta Committee: Clark Bennett, Sumner Sollitt, Harry Weber, W. H. Lyford, Dr. Bently. The following amendment to the rules was passed: "Boats launched after July 4, 1896, with overhang shall be barred from first class unless one-third overhang be added to load waterline with crew aboard in competing length." The club has received a challenge from Wisconsin to sail for the championship of the State, and the winner to sail the winner of the Wisconsin State regatta at Green Lake. Five races will be sailed at Fox Lake. The first, July 3, starting at Minneola; July 5, starting from Dr. Brophy's cottage; July 17, starting from East Side; July 31, starting from Dr. Tooker's cottage; Aug. 7, starting from island; Aug. 14, starting from East Side.

The New York Yacht, Launch and Engine Co., of Morris Heights, N. Y., has issued a handsome catalogue descriptive of the yachts, launches, etc., built by it. The company is now well established in its new shops on the Harlem.

Rifle Range and Gallery.

Revolver Shooting in England.

LONDON, Eng., April 24.—At the North London Rifle Club the following revolver scores were made on April 21. Revolver series 1 (20yds stationary target):

Class 1:

Carter	777767—41	Maj Munday	477427 31
Tilbury	76567—38		

Class 2:

W Luff	657767—38	Dritton	673137—28
Lieut Johnstone	767656 37	Chicken	346545 27
Capt T W Brading	5 7776 37	Ward	556443 —27
Capt Evans	7 7754 35		

Class 3:

Lieut. Curley	677455—31	MacCormack	570073—22
Irvine	3774 4- 32	Saffell	272330—17
Saunders	633531—24	Dicker	0 5060 13

April 15.—South London Rifle Club, 20yds., stationary revolver target:

Howe	565765—31	Chicken	554746 31

There was no shooting at 50yds.

Cincinnati Rifle Association.

CINCINNATI, O., May 2.—Capt. Gindele again distinguished himself by making creditable scores on both the Standard and the German Ring targets. His scores were: 91, 89, 94, 86, 86, on the Standard target; 228, 226 and 218 on the German Ring target; he averaged 89⅛ on the former, 224 on the latter. Trounstine won the badge to-day for the fifth time, but must hold it for the balance of this month by virtue of most points to entitle him to final ownership. Scores made to-day were as follows:

Conditions: 200yds., off-hand, Standard American and German Ring targets:

Trap-Shooting.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for almost a quarter century.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

May 17.—WILLMAR, Minn.—Tournament of the Willmar Gun Club Targets. D. N. Tallman, Sec'y.

May 17-22.—KANSAS CITY, Mo.—Annual tournament of the Missouri State Game and Fish Protective Association. Fred T. Durrant, Sec'y.

May 18.—ALBANY, N. Y.—Annual spring tournament of the West End Gun Club. Horace B. Derby, Sec'y.

May 18.—RUTHERFURD, N. J.—All-day shoot of the Boiling Springs Gun Club. 100 target race, $5, targets extra. Open to all; no handicap. W. H. Huck, Sec'y.

May 18-19.—FOREST CITY, Ia.—Hill City Gun Club's second annual tournament; $100 added. J. W. Mahoney, Sec'y.

May 19-20.—SAVANNAH, Ga.—Tournament of the Interstate Association under the auspices of the Forest City Gun Club. $200 added.

May 19-20.—ELIZABETH, N. J.—Tournament at Astfalk's Oakwood Inn. First day, targets; second day, live birds.

May 19-21.—CANTON, S. D.—South Dakota Sportsmen's Association annual. C. S. Seely, Sec'y.

May 20.—GREENVILLE, Pa.—Second tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones, Sec'y.

May 25—FINDLAY, O.—Tournament of the Magautrap Gun Club. Targets. Chas. E. Steen, Sec'y.

May 25-27.—MARLIN, Texas.—Tournament of the Marlin Gun Club. E. K. Herrings, Sec'y.

May 25-27.—JOPLIN, Mo.—Tournament of the Joplin Gun Club. Added money announced later.

May 26.—BROOKLYN, N. Y.—Tournament of the Brooklyn Gun Club. Targets. Grounds at Liberty avenue and Enfield street, Brooklyn.

May 26-29.—EAST ST. LOUIS, Ill.—Annual tournament of the King's Smokeless Gun Club.

May 31.—CANAJOHARIE, N. Y.—Eastern New York Trap-Shooters' League tournament, under the auspices of the Canajoharie Gun Club. Charles Weeks, Sec'y.

May 31.—PORTLAND, Me.—Spring tournament of the Portland Gun Club. Targets. Added money announced later.

May 31-June 1.—GRAND RAPIDS, Mich. Tournament of the Michigan Trap Shooters' League, under the auspices of the Valley City Gun Club.

May 31.—NEW HAVEN, Conn.—Second tournament of the Connecticut Trap Shooting Association, under the auspices of the New Haven Gun Club. W. H. Hazel, Sec'y.

June 2-3.—HACKENSACK, N. J.—Anniversary tournament of the Bergen County Gun Club. *Recreation* cup shoot on June 2. C. O. Gardner, Jr., Sec'y.

June 2-4.—SPRINGFIELD, O.—Annual tournament of the Ohio Trap-Shooters' League, under the auspices of the Springfield Gun Club.

June 3.—BATH, Me.—Sixth annual tournament of the Bath Gun Club. Open to all. Geo. E. Thompson, Sec'y.

June 7-8.—PARKERSBURG, W. Va.—Tournament of the Mountain State Gun Club. Targets. $350 added. Leon J. Epstein, Sec'y.

June 8-9.—Tournament of the Trap-Shooters' League of Indiana.

June 8-11.—AUBURN, N. Y.—New York State Sportsmen's Association tournament. C. W. Tuttle, Sec'y.

June 9-10.—MONROE, La.—Tournament of the Interstate Association, under the auspices of the Monroe Gun Club.

June 10.—NEWCASTLE, Pa.—Third tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones, Sec'y.

June 15-18.—CLEVELAND, O.—Fourth annual tournament of the Chamberlin Cartridge and Target Company.

June 16-17.—FARGO, N. D.—Third annual tournament of the North Dakota Sportsmen's Association. Targets. W. W. Smith, Sec'y.

June 17-20.—ANACONDA, Mont.—Thirteenth annual tournament of the Sportsmen's Association of the Northwest and fourth annual tournament of the Montana State Sportsmen's Association, under the auspices of the Anaconda Gun Club. C. A. Tuttle, Sec'y.

June 22.—OGDEN, Ill.—Second annual tournament of the Ogden Gun Club. Wm. Mckinley, Sec'y.

June 22-25.—OIL CITY, Pa.—Seventh annual tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Oil City Gun Club. Targets and live birds. Black powder barred. Special event: 25 live birds per man, $25, $1,000 guaranteed. Send entries to H. C. Reeser, Sec'y, Oil City, Pa.

July 1.—SHERBROOKE, Quebec.—Sherbrooke's grand annual. Inanimates. Open to all amateurs. C. H. Foss, Sec'y, Sherbrooke, P. Q.

July 3-5.—MITCHELL, S. D.—Tournament of the W. J. Healey Hardware Co.

July 14-15.—NEW HAVEN, Conn.—Tournament of the Interstate Association, under the auspices of the New Haven Gun Club. Wm. H. Hazel, Sec'y.

July 20-21.—PINE BLUFF, Ark.—Seventh annual tournament of the Arkansas State Sportsmen's Association. Added money announced later. Paul R. Litzke, Sec'y, Little Rock, Ark.

July 22.—MEADVILLE, Pa.—Fourth tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones, Sec'y.

Aug. 4-5.—LEWISTON, Me.—Tournament of the Interstate Association, under the auspices of the Androscoggin Gun Club.

Aug. 17-19.—TORONTO, Canada.—Tournament of the R. A. McCready Co., Ltd. Targets. $1,000 guaranteed. Open to all. Write for programmes.

Aug. 19.—WARREN, O.—Fifth tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones, Sec'y.

Aug. 25-26.—MONTPELIER, Vt.—Tournament of the Interstate Association, under the auspices of the Montpelier Gun Club.

Sept 6.—MERIDEN, Conn.—Third annual Labor Day tournament of the Parker Gun Club.

Sept. 15-16.—PORTSMOUTH, N. H.—Tournament of the Interstate Association, under the auspices of the Portsmouth Gun Club.

Oct. 6-8.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association. First two days, targets; third day, live birds. $50 average money to three high guns in all programme target events. Open to all.

Oct. 13-14. GREENSBURG, Ind.—Shooting tournament of the Greensburg Gun Club.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

The Auburn Gun Club is going to introduce some new features at the New York State shoot this year. It has circulated among manufacturers and dealers of sporting goods the following note: "The thirty-ninth annual convention of the New York State Association for the Protection of Fish and Game, connected with which there is to be a four-days' tournament for shooting, which will attract a great many shooting and fishing men who use guns, rods, etc., and who talk them, will be held in Auburn, June 8–11, 1897, inclusive. It is designed to have in connection therewith a sportsman's exposition in the exhibition halls on the grounds of the Cayuga County Agricultural Society in Auburn. Floor space will be free, and will be assigned on application to Charles G. Curtis, president. No expense will be charged by the managers of the convention at all, and we invite you to come and show your goods to *bona fide* buyers, believing such a course will place you face to face with purchasers better than in any other way. We charge you nothing for exhibiting or for floor space, or for anything. Your expenses will be only what you are obliged to make yourself. Will you come?"

Ralph Trimble, who is at present representing the Du Pont Smokeless powder at shoots around New York, was shooting in great form at the Brooklyn Gun Club's tournament on Saturday last, May 8. Ralph and Remsen tied on 47 each out of 50 in the "stein" race, but the stein itself was won by C. W. Billings, with 50 out of 65, J. H. Swan with 13 extras, counting up 49 breaks. In the sweepstake events Trimble was well to the front. No. 1 squad in the first 25 targets of the stein race made the following record: Remsen 25, Brewer 24, Trimble 24, Edwards 24, Fanning 22; total, 119 out of 125 from the magautrap. In its second essay, with a little more wind and more speed to the targets, the squad stood: Trimble 23, Brewer 22, Remsen 22, Fanning 22, Edwards 22. The joint totals were: two 47s, two 46s and one 44, or 230 out of 250, an average of 92 per cent.

Mr. W. H. Sheldon, one of the enthusiastic trap-shooters of Rhode Island, who is doing a great deal of work to boom his favorite sport, writes to us as follows: "I regret to have to announce the death of Mr. Geo. T. Crandall, one of the pioneers of trap-shooting in this State. Mr. Crandall was eighty-two years of age, and has been closely identified with trap shooting in Rhode Island since its infancy. He left three sons, two of whom—Wm. G. and Geo. J.—are well known as trap and game shots. The third son, Alonzo, has more than a local reputation as a builder of speedy yachts. Every member of the Pawtuxet Gun Club will miss the kindly face of a friend."

As already announced in our Fixtures column, the West End Gun Club, of Albany, N. Y., will hold a shoot on May 18 at its grounds, Colvin avenue, that city. To get to the grounds, shooters should take the West Albany electric cars at Arcade to Watervliet avenue, where conveyances will be in waiting to carry shooters to the grounds. The programme consists of ten 15-target events, $1.25 entrance, the price for targets being 15 for 25 cents, deducted from the purses. The programme states that 10 per cent. of each net purse will be deducted for averages divided as in the regular events, viz., 4 moneys: 35, 30, 20 and 15 per cent. All targets thrown at unknown angles, shooting commencing at 10 A. M. Horace B. Derby is secretary of the West End Gun Club.

The second tournament of the Connecticut Trap-Shooting Association will be held on the grounds of the New Haven Gun Club, Decoration Day, May 31. The programme is the same as that shot at the first meeting of the Association, under the auspices of the Parker Gun Club, of Meriden. The team race, of course, is the main feature on the programme. All purses will be divided under the Rose system, except in the team race, when there is an optional sweep on each 20 targets (20 known and 20 unknown). Mr. W. H. Hazel, secretary of the club, will furnish any further information that may be desired.

Parkersburg, W. Va., should have a large number of shooters registered at her hotels the second week of June. The Mountain State Gun Club, of that city, as lively an organization as exists anywhere in the States, announces that it will hold a two days' shoot at targets, June 7–8, the Monday and Tuesday of the second week. At this shoot the club will add $350, a large sum as added money goes now. Elsewhere we give an extended notice of the programme, which has just reached us.

Two well known faces were missing from the ranks of the shooters at Newburgh last week—Messrs. J T. Mascroft and V. D. Kenerson, of Worcester, Mass. Many expressions of regret (that were far from merely formal expressions) at the absence of the two above-named gentlemen were heard during the tournament. Both had come to be looked upon as fixtures at the shoots of the Newburgh Club, and both had formed many friendships with those who regularly attend these affairs.

The Hill City Gun Club, of Forest City, Ia., has gotten out a programme for its tournament May 18–19. The events are all at 15 targets, and the prizes to be contested for are both cash and merchandise. The management states that the shoot "is no money making scheme, as sportsmen will see at a glance that the programme is arranged with a special view to pleasing the majority of trap-shooters."

Mr. C. A. Tuttle, secretary of the Anaconda (Mont.) Gun Club, writes us that the thirteenth annual tournament of the Sportsmen's Association of the Northwest and the fourth annual tournament of the Montana State Sportsmen's Association would be held jointly at Anaconda, under the auspices of the local gun club, June 17–20.

On Thursday of this week, May 13, a ten-men team race will be shot on the Endeavor Gun Club's grounds at Marion, between the home club and the gun club of Freehold, N. J. The latter is a strong organization and the Endeavors will have to get out their best material to do justice to the visitors. Lunch will be served on the grounds.

Among the passengers on board the American liner Paris, which arrived at New York on May 8, were Mr. and Mrs. R. W. S. Griffith. Mr. Griffith is head chemist and general manager of the Schultze Smokeless Powder factory in England, and his visit to this country is connected with business for the firm which he represents.

George S. McAlpin, who has of late become about as well known as any amateur trap-shooter in the country, has been secured to take charge of the members of the Yale College Gun Club, and train its members for the coming three-cornered match with Princeton and Harvard for the college championship.

It is a fact that the biggest kickers against the use of the Rose system in dividing purses are the professionals and those experts who shoot purely "for the stuff." What is the logical inference? And is it anything discreditable to the only equitable system of dividing purses in target events.

The company at Newburgh, N. Y., last week was quite warm. As a matter of fact, it is an easy thing to get up a hot squad around New York just now. Jack Fanning and Ralph Trimble help mightily when it comes to breaking targets.

Tuesday, May 18, is the day set for the 100-target race, $5 entrance, birds extra at 2 cent each, open to all, promoted by the Boiling Springs Gun Club, of Rutherford, N. J. There will be an optional sweep on each 25 targets.

Warwick, N. Y., one of the prettiest towns in the State, has just organized a gun club. Two of its members are J. B Ogden and John B. Rogers, both of whom were at the Newburgh shoot.

The Bath (Me.) Gun Club announces that it will hold its sixth annual tournament on Thursday, June 3, at its grounds, Woolwich, Me. Mr. Geo. E. Thompson is the secretary of the club.

The programmes for the Cleveland Target Co.'s tournament, June 15-18, are now ready for distribution. A letter to the company will receive due attention.

MAY 11. EDWARD BANKS.

Programmes for Coming Tournaments.

MOUNTAIN STATE GUN CLUB.

EARLY this year the Mountain State Gun Club, of Parkersburg, W. Va., held a tournament, which, although almost an impromptu affair, proved so entirely satisfactory that the club set to work at once to arrange for another tournament on a larger scale, claiming June 7–8 as its dates.

To make this shoot an attractive one, the club went down in its pocket, counted up its small change, and decided to offer $350 added money. Three hundred and fifty dollars added to the purses in a two-days' shoot is a good deal of money as things go now, and the club deserves all the encouragement possible for its enterprise. It need have no fears as to the number of entries; the boys will come out in force and shoot from first to last, because tournaments of this nature are few and far between nowadays.

On June 7, the first day of the shoot (and Monday by the way), the programme calls for 150 targets, six 15-target events and three 20-target events—at a total entrance for the day of $15; $15 is added to each purse in the 15-target events, and $20 to each purse in the 20-target events. The programme for the second day is precisely similar, with the exception that the $15 added to the purse in event No. 1 is donated by the United States (Gold Dust) Smokeless Powder Co. A special feature of the second day's programme is a six-men team race for State teams, all members of a team to be resident of the same State. The race will be at 25 targets per man, $12 per team, with $50 added to the purse by the Mountain State Gun Club. The purse will be divided into three moneys Rose system.

Among the notes of interest to shooters are the following: "All purses will be divided under the Rose system; four moneys in the 15-target events; five moneys in the 20-target events. All events at unknown angles. One set of nine expert bluerock traps with North's electric pull will be used. Shooting to commence at 9 o'clock. All guns and shells forwarded to Leon J. Epstein, secretary, will be cared for and delivered to the shooting grounds."

THE CLEVELAND FOURTH ANNUAL

We always open Paul North's programmes with a degree of eagerness that does not make itself felt under any other similar circumstances. The Cleveland programmes are nothing if not original, and every year Paul North springs something new upon the shooters, and keeps us guessing what will come next. This year he has had made strenuous efforts to help out the novices and semi-experts of the amateur class. We imagine that his efforts will meet with success, and that the above sub-classes will be well represented at his shoot.

And the paid expert, the unpaid expert, and the semi-experts and novices in the professional ranks will also be there; they will be on hand for business purposes. Taking it altogether then, the fourth annual target tournament of the Chamberlain Cartridge and Target Company should about show high watermark for the target tournaments of 1897.

The principal feature that is new in this programme is the system of taxation of the manufacturers' agents for the benefit of those who put up their own antes of all kinds—shells, guns, expenses, etc. Every event in which there is a sweepstake has the same entry fee, viz., $2.50, whether it is a 15, 20 or 25-target event. The $2.50 refers to the non-agent classes; for the agents the fee for each event is $3, and the extra 50 cents per event will go to form an average fund to be divided among the non-agent classes, being prorated at the end of the shoot among the members of the said non-agent classes, who have shot through the entire programme for the three days.

As was the case last year, bluerocks will be thrown free of charge; this would mean for a tournament of this size a sum of $1,000 or $1,500 prorated among those who shoot, supposing 3 cents a piece had been charged for targets. As the programme says: "We take great pleasure in inviting our friends to Cleveland once a year, and in throwing for them all the bluerocks they can shoot at for the three days of our tournament free of any charge for them, and in that way give them an opportunity to contest in the various events without the customary 'rake off' for bluerocks."

The first day's programme contains five 15-target events, two 20-target events, and one 25-target event, or a total of 140 targets in all, the entry fees for all day footing up to $20 for the non-agents and $24 for the agents. In all 15-target and 20-target events there will be five moneys; in event No. 6, the 25-target event, the purse will be divided into half as many equal portions as there are entries; thus one-half of the entries will receive $5 each, the other half "nit."

For the second day there are three 15 and three 20-target events, with the same conditions exactly as on the first day. There are also two 25-target events, entrance free, the prize in each one of these events being a watch charm, presented respectively by the Du Pont and the Hazard Powder companies. The only restriction in these events is that a shooter must use the powder manufactured by the firm presenting the badge, an optional sweep of $2.50 being made in each of these events, these purses being divided in the same manner as in event No. 6 on the first day. The third day's programme is an exact copy of that set for the second day, watch charm races, optional sweeps and everything. It is also stated that no shooter having won one of the four charms offered for competition is eligible to compete for another, and all ties for the charms are shot off in the succeeding events. So much for the schedule of events.

Expert amateurs and all other non-agents must bear in mind that if they make a 90 per cent. or better record on either the first or second day, they will march right up the following day with the upper ten and poney up their $1 extra per day, just the same as the agent classes do.

The most pithy part of the whole programme is the following definition of what constitutes the "$4 class": "By manufacturers' experts we mean any one that accepts *any compensation of any kind* from a manufacturer of articles used at tournaments for his services in introducing these goods."

We had nearly omitted all mention of the fact that all targets will be thrown from magautraps; and that the grounds of the Cleveland Gun Club, where the shoot will be held, will be open for practice sweepstake shooting on Monday and Tuesday, June 14–15, the club taking charge of all events shot on those days.

The list of average prizes, which are in addition to the dollars prorated among the non agents as above stated, is a healthy one, and contains many valuable articles and some cash, there being seventeen prizes in all. And the "manufacturers' experts" are barred from all participation in those seventeen good things.

The above will give a good idea of what Paul North and the Chamberlain Cartridge & Target Co. has in store for the boys at Cleveland, June 16–18. If there's anything else you want to know, write to Paul and get a programme.

The Pennsylvania State Shoot.

ABOUT six weeks have to pass before the annual State shoot of the Pennsylvania State Sportsmen's Association is due. The dates for this tournament are June 22-25, and although there is yet plenty of time between now and June 22, the management of the Oil City Gun Club, the club under whose auspices the shoot is to be held, has so far advanced matters in the way of preparations for the reception of its guests that it could, should it so desire, take things easily from now on until the word to commence firing is given on June 22. But the club and its management do not seem disposed to take things quietly, and will leave no stone unturned to make the State shoot of 1897 the banner one in the history of the State Sportsmen's Association of the Keystone State.

PROSPECTS FOR A BIG SHOOT ARE GOOD.

And it begins to look very much as if the shoot is going to be a big one. So far, of course, we can make no remarks on the probable programme of events for each day. No authentic copies of the programme, which is now being put through the press, have reached us, as such copies are not ready for distribution. We can say, however, that these programmes, when completed, will be of considerable interest, as they will contain much purely original matter. Oil City, too, is favorably located in western Pennsylvania, a great center for trap-shooting by the way; it stands to reason, therefore, that we shall see many new faces at this year's annual gathering. The "Old Guard" of the State will surely be on hand. Philadelphia and Harrisburg will both send their quota of shooters. Reading will also not be left out in the cold. York, Lancaster, Scranton, Wilkes Barre, etc., will all send delegations without question. But it is Pittsburg and her immediate vicinity that we look to for the bulk of the shooters at the State shoot; and a note in a letter we have received from Mr. H. C. Reeser, secretary of the Oil City Gun Club, and also secretary of the State Sportsmen's Association, tells us that a round dozen of Pittsburgers do not intend to get left out of the shuffle. There is so much of interest in this letter of Mr. Reeser's, that we will not only give the extract referred to but the bulk of the letter, as it will best serve our purpose so to do:

AN INTERESTING COMMUNICATION.

"By the way, the Pittsburg shooters have already engaged twelve rooms here at the Arlington Hotel for the week of the shoot and, judging from this, the Smoky City is going to be pretty well represented. About four weeks ago I wrote to about seventy-five men who participated in the Grand American Handicap and inquired whether they intended coming here for the special event, as I was anxious to know what the boys thought about it, and wanted to figure on birds. With two exceptions all the replies were favorable, and I expect not less than 100 entries. And why shouldn't there be that many? We offer the same inducements that the Interstate Association did at the Grand American Handicap, and I would not be surprised to see nearly the same number of entries. I would have written to all who were at the big shoot, but did not have the addresses of more than seventy-five. Even suppose that we only have 100 entries. That means $2,500 to divide, and surely that should be sufficient inducement for all the best shots in the country. We have selected the grounds for the tournament and think that the visitors will be very much pleased with them. They are about four miles from the city, at the famous sulphur springs and picnic grounds of the Oil City Street Railway, whose trolley cars run to the grounds every ten minutes. It is a delightful ride along what is called "Deep Hollow" Road, one of the most beautiful drives in the country, and the scenery and surroundings cannot be excelled. The shooting grounds are located on what only a few years ago were the best woodcock grounds in the country; even now those birds are quite plentiful in season, while ruffed grouse can be heard drumming in every direction, so that I feel sure everybody will be delighted with our selection. Our regular shooting grounds are altogether too small, and it is impossible to get a desirable place nearer the city. The trolley ride, however, will prove to be one of the pleasant features of the visit here, as the service is excellent. The road is well supplied with large, open observation cars, and they make very fast time. Mr. J. L. Winston was here last week and appeared to be very well pleased with the place. He said that some of the boys had an idea that it was necessary to wear red flannel shirts and high boots here, so, for fear (!) that you may be one of them, let me dispel that illusion. Wear the best that you have, and even a diamond or two will not be out of place. We will take good care of all the visitors and see that they are not blown up with nitro glycerine, run over by the cars or scared by the policemen."

LIKE THE GRAND AMERICAN HANDICAP.

The special event referred to by Mr. Reeser is the 25-bird race, $25 entrance, birds extra. $1,000 guaranteed, which will be commenced on June 24. The moneys in this event will be divided in a precisely similar manner to the way in which the purse in this year's Grand American Handicap was divided. This event will actually be another Grand American Handicap, as Mr. Reeser rightly says, and we do not think that he has placed his list of probable entries much too high.

A HINT TO PENNSYLVANIA GUN CLUBS.

While referring to the prospects for Pennsylvania's State shoot, it would not be out of place to urge upon gun clubs in that State who are not already members of the State organization, to lose no time in sending in their applications for membership. The State Association has worked hard for the betterment of the game laws of the State, and there seems a probability of its efforts this year meeting with the success it failed to achieve in 1895. Clubs and individuals should recognize, before it is too late to do any good, that only organized efforts can accomplish anything in this line. These words apply equally to every State association in the Union. If the game is to be preserved from practical extinction, it can only be done by organized efforts. And State Sportsmen's Associations are the best weapons with which to fight for the game and fish of any and every State.

Western Traps.

ANACONDA SHOOT.

CHICAGO, Ill., May 8.—There should be a good attendance at the tournament at Anaconda, Mont., June 17–20, for which the live shooting men of Anaconda are already making preparations. The club of that city will be host for the two big associations, the Sportsmen's Association of the Northwest and the Montana State Sportsmen's Association, and the event will bring together the flower of the mountain and coast shooters. Anaconda is a pleasant little city nestled among the big hills, and it is the home of an active and expert trap contingent, who are up to all the latest wrinkles in the modern shooting line, as witness their adoption of the magautrap for their tournament, with a full programme of highly attractive sort. In their local paper the shooters of Anaconda make the following announcements regarding their facilities, all of which is far within the facts, as from a personal acquaintance I can testify:

"The facilities offered by Anaconda for the tournament cannot be excelled. The grounds of the association where the tournament will be held are within a two minutes' walk from the electric car lines, and which run a half-hour service. For shooting purposes the grounds are all that could be desired, as they are a perfect flat, with a good clear background. They are substantially fitted to meet all requirements, with a commodious club house, scorer's stand and cashier's office, and a seating capacity for about 200 people, visitors and spectators. No pains have been spared to make everything convenient and up to date.

"In relation to trophies and prizes, the club has practically arranged for $1,500 added money. In addition to the merchandise prizes, there will be trophies to the value $1,000, the property of the two associations, and consisting of medals, cups and badges.

"Among the trophies which will be shot for in June will be the individual championship medal of the Northwestern Association and the individual championship medal at reverse angles now held by Dell Cooper, of Whatcom, Wash. Another Northwestern trophy is the 3-man team championship. The Hunter Arms Co. have loaned to the Association the Smith gun trophy, valued at $250. The *Globe* trophy is valued at $350, and will give an opportunity for one of the sharpest contests of the tournament.

"The Montana State championship cup for a 3-man team will also be shot for. It is now held by the Missoula Rod and Gun Club. The individual bluerock championship for the State of Montana, now held by D. D. Twohy, of this city, will also be up for contest. Among the other trophies is the live-bird championship of Montana medal, now held by M. Wright, of Butte, and the challenge medal of the State of Montana, now held by James Conley, of Anaconda. In addition to these, there will be many merchandise prizes put up.

"The Anaconda Club was organized in 1893, since which time it has held three tournaments, and all of them successful shoots. At the last meeting of the Northwestern Association, held at Spokane, there were about sixty entries, and from present indications the entries this year will exceed 100, assuring plenty of fine sport. It is the present object of the club to make this tournament open to the world, and sportsmen from all parts of the country will be heartily welcomed."

BUTTE ROD AND GUN CLUB.

Almost within a biscuit toss of Anaconda, if you can toss a biscuit far enough, is the sister city of Butte, which also supports a fine and skillfully conducted gun club. If any one thinks these men cannot shoot he should watch their scores, or himself try a whirl with them out in the glorious climate of Montana. Butte Rod and Gun Club holds the *Shooting and Fishing* trophy, and will to-morrow defend it against a team from the neighboring city of Anaconda. The selection of the team from the club was made last Monday in a club shoot which brought out a full representation of the membership. The match was at 30 singles and 10 pairs, and was shot with the following result:

	30 Singles.	10 Pairs.	Total.		30 Singles.	10 Pairs.	Total.
Smith	24	16	40	*Westphal	19	14	33
Wright	26	13	39	Morse	21	9	30
Christianson	22	17	39	Walker	17	10	27
Waters	23	13	36	Cowan	12	14	26
Jaeger	18	15	33	J M Steward	15	9	24
Anderson	21	12	33	J Steward, Jr.	13	10	23
Jones	20	13	33	Jams	12	8	20
*McGowan	23	11	34				

* Non-members.

Jaeger won in the shoot-off and made the fifth man on the team. The championship shoot next Sunday will be at 30 singles and 10 pairs.

The second event was a shoot at 25 bluerocks, known traps and unknown angles, and the following scores were made: Wright 25, Anderson 22, Waters 21, Walker 20, Cowan 19, Jones 18, Christianson 18, McGowan 16.

Mrs F. A. Anderson and Mrs. M. A. Wright then shot at 25 birds, the former winning by 2 birds. They made the following scores:

Mrs Anderson....1 4 3 2 5—15 Mrs Wright.....3 3 3 2 2—13

Mrs. Anderson broke her last 6 birds straight. Such shooting by ladies is very unusual.

E. HOUGH.

1266 BOYCE BUILDING, Chicago.

Pennsylvania and Ohio Border Gun Club League.

GREENVILLE, Pa., May 9.—The Greenville Gun Club has about completed arrangements for the second tournament of the Pennsylvania and Ohio Border Gun Club League, which is to be held here May 20. The shoot for the league trophy will be the most interesting event of the day. In the sweepstake shooting the programme will include ten regular events, all at 10 targets, with the exception of one 15-target race. Two sets of traps will be in operation and many special events will be shot. A large attendance is looked for. At last year's tournament the attendance averaged sixty shooters; and the prospects are that it will be much larger this year. The sweepstake events are open to all.

The club grounds and buildings have been given a general overhauling, and the club now has the best ground arrangements of any club in this part of the State.

Word has just reached here of the sad misfortune that has befallen Henry C. Fry, captain of the Youngstown team. Mr. Fry has suffered heavy financial losses lately, which have so preyed upon his mind as to cause it to become unbalanced. It is hoped that rest and quiet will restore his reason. Mr. Fry was one of the jolliest and best liked shooters in the League, and expressions of regret and sympathy are heard on every hand.

R. E. B.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Iowa Sportsmen's Association.

DES MOINES, Ia., May 6.—The twentieth annual tournament of the Iowa Sportsmen's Association closed to-day. The attendance was not as large as was expected. The weather was nice and pleasant and quite a number of spectators were on hand to see the shooting. The trade was represented by the following gentlemen: S. A. Tucker, of Parker Bros.; R. O. Heikes and J. A. R. Elliott, of Winchester Arms Co. and E. C. Powder Co.; F. S. Parmelee, of Remington Arms Co.; John Mackie, of Peters Cartridge Co. and King's Smokeless Powder Co. Owing to the small attendance on the last day only six events were shot.

One of the most interesting features of the tournament was the shooting of Mrs. Dr. Day, of St. Paul, who made an average of over 84 per cent. in the events she took part in during the three days. She used King's Smokeless powder, loaded by the Peters Cartridge Co., in their new Victor shell. At a meeting of the Association held at the Kirkwood Club, the following officers were elected: John G. Smith, Algona, President; Nelson Royal, Vice President; George McCartney, Secretary; A. C. Miller, Treasurer. The following gentlemen were elected Directors: Sam. Hoffman, Atlantic; L. C. Abbott, Marshalltown; C. M. Grimm, Clear Lake; C. W. Budd, Des Moines; C. F. Cole, Dayton. Des Moines was selected as the place for holding the next annual meeting.

Below are each day's records:

First Day, May 4.

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14

Mrs Day	..	..	12	..	11	..	...	...	....

GENERAL AVERAGES.

Only four men shot through the programme on the three days, with the result given below:

	1st day.	2d day.	3d day.	Total.	Av.
Gilbert	228	132	102	462	94.2
Heikes	228	129	100	457	93.2
Budd	228	128	96	452	92.2
Grimm	224	126	96	446	91

Each of the above shot at 245 on the first day, 140 on the second day and 105 on the third day, making a total of 490.

On the second day there was a 20-target race, $3.50 entrance, for the L. C. Smith cup. The cup went to the high man, 60 per cent. of purse to second place, 40 per cent. to third place. Scores were:

Grimm 20, Abbott, Corry, Gilbert and Budd 18, Milner, Cole and Trotter 17, Mahoney 16, Conger 14, Dunn, Hoffman, Densel 13, Coborn 9, Place 8.

The live-bird race for the 2 men State team championship trophy, 16 birds to a team, excited lots of interest, fourteen teams entering. Budd and Grimm, Gilbert and Abbott, and Corry and Cole, tied for the trophy on 14 each. On the shoot-off Budd and Grimm won. Scores:

Smith and Hoffman, 11; Budd and Grimm, 14; Gilbert and Abbott, 14; Corry and Cole, 14; Trotter and Howman, 10; Kersher and Kessler, 12; Coborn and Place, 12, Milner and Hayes, 13; Densel and Dun, 8; Quimby and Carter, 11; Burnett and McCartney, 13; Whitney and Macartney, 10; Vertrees and Ray, 13; Mahoney and Hamaker, 11.

HAZARD.

The Trap-Shooters' League of Indiana.

INDIANAPOLIS, May 1.—The Indiana Trap-Shooters' League attended a tournament of the Peru Gun Club, at Peru, Ind., April 28–29, and held a special meeting at the Bearss Hotel to take final action regarding a State tournament. After a spirited contest it was decided to hold the first annual tournament of the Association at Kokomo, Ind., June 8-9, under the auspices of the Kokomo Du Pont Gun Club, Mr. L. W. Cumberland, secretary.

The clubs represented in the State League are as follows: Crawfordsville Gun Club, Limited Gun Club, of Indianapolis; Muncie Gun Club, Greensburg Gun Club, Fort Wayne Gun Club, Peru Gun Club, Elkhart Gun Club, Kokomo Gun Club, Wabash Gun Club, Lake City Gun Club, of Warsaw.

By June 8 we expect at least a dozen other gun clubs in the State to join our League. The meeting at Peru was a very spirited one, and fully seventy-five trap-shooters from all parts of Indiana were gathered together, and all took great interest in the advancement of the League.

Sanction was granted for a tournament to be given at Warsaw, Ind., by the Lake City Gun Club, W. A. Wineberer, secretary, Aug. 18–19. Sanction was also granted for a tournament to be held at Greensburg, Ind., Oct. 13–14.

For further information regarding these tournaments please address the secretaries of these clubs. H. T. HEARSEY, Sec'y.

Montpelier Gun Club.

MONTPELIER, Vt., April 30.—Ten members of the Montpelier Gun Club took part this afternoon in the regular weekly practice shoot of the club. The weather was almost perfect for trap-shooting. Next week we expect to contest for the silver keg of W-A Smokeless powder, kindly donated by the Laflin & Rand Powder Co., of New York. The scores made to-day are given below:

Events:	1	2	3	4	5	6	7	8	9	10
Targets:	15	15	10	10	10	10	10	10	15	15

Mc	8	10	..	5	6	..	4	..	5	5
Count	..	5	3	6	..	..	..	..	..	..

Nos. 1, 2, 5 and 9, known; Nos. 3, 4 and 10, unknown; No. 6, expert; Nos. 7 and 8, reversed order.

May 7.—To-day's regular weekly shoot of the Montpelier Gun Club was made a little more interesting by a special handicap race at 50 targets, for the souvenir keg of W-A powder, donated by the Laflin & Rand Powder Co., with the following additional prizes: A picture, "Shooting over the Decoys," given by B. M. Shepard, and a revolver given by Wheelock Dawley. The score of this event in detail will show that some of the boys brought their shooting clothes with them and must have worn them before. Our friend Hoi ington landed 51, one point more than the law allowed him, was tied with Standish at 50 for first place, taking first and second prizes: Standish the silver keg and Hoisington the picture. The tie for third place and prize was settled between Tower and Barrett in events 7 and 8; Barrett took the little gun, and will probably be next heard from in some of the pistol tournaments. Our shoot was made doubly interesting by the presence of our neighbors and friends of the Recreation Gun Club, of Barre, Vt., Messrs. Hoisington, Eastman, Griffin, Reynolds, Bennett and Houghton, all gentlemen whom it is a pleasure to meet, and, as the scores show, can shoot a hot race.

The strong wind which prevailed during the entire afternoon stole not a few birds from those of us who are inclined to be deliberate in our shooting, and made it a case of hurry up or miss, sometimes both.

Trap No. 4 "slipped an eccentric" in the midst of the first squad's second round, compelling us to shoot remainder of race and events with but four traps, and at first caused a little confusion, but Capt. Barrett very quickly had things going straight again, with boy at trap No. 5 doing double duty.

Handicap race:

Figuring on the Rose System.

IN regard to the Driver and Twister on the Rose system and W. Tell Mitchell, which appeared in the last issue of FOREST AND STREAM, our attention has been drawn to the fact that the person referred to has spread himself in the pages of a contemporary on this very question in its issue of May 8.

We must compliment Mr. Mitchell on his figures, which are very nearly correct as to amount won by Heikes on the first day of the Cobweb Gun Club's tournament, March 16 last. The accuracy of these figures is all the more remarkable since Mr. Mitchell is wrong in his premises. He states that his figures are based upon Mr. Heikes's "scores at the recent tournament of the Cobweb Gun Club, at which $10 were added in all 15-target events, and $17.50 in all 20-target events." He also adds: "At this shoot Mr. Heikes scored 159 targets out of 170 shot at, or nearly 94 per cent."

For Mr. Mitchell's information we would state that the Cobweb Gun Club did not add a cent to any purse, but deducted the price of targets at the rate of 2 cents from each purse, donating $50 in gold as average money in six portions: four of $10 each and two of $5 each, the averages counting on all programme events for both days. We would also state that Mr. Heikes broke 155 out of 170 shot at, not 159, and that his average was 91.1 per cent., not "nearly 94."

As stated above, the correctness of Mr. Mitchell's figures, based, as they evidently were, upon very wrong premises, is remarkable. How he arrived at them is past our comprehension, unless they were furnished him.

Taking the figures as accurrate, what do they show? And what does Mr. Mitchell intend to prove by them? He says that they lead him to "believe the system is radically unjust," yet he adduces no other figures wherewith to draw comparisons. He is satisfied easily with a solitary instance of one man's winnings under peculiar circumstances, and condemns the system at once. The peculiar circumstances are these: No added money; an average entry list of somewhere about twenty-one, and the following shooters at the score every time: Heikes, Glover, Grimm, Budd, Fred Bennett, Dickey, Van Dyke, W. Bennett, Fulford, Bartlett, Leroy, Apgar, Edwards, Rike, Fairmount, M. H. Clark and Pringle; a total of seventeen shooters, from which two hot squads could be formed that it would take all the States in the Union to duplicate; and even then we think any one who attempted that feat would be badly left.

But Mr. Mitchell's argument is based entirely on his desire to make trap-shooting a means of livelihood and not a recreation. He would make it a business, while we would have it a sport. He wants the experts, paid and unpaid, to get big winnings, while we want the semi-experts and novices to get their fun as cheaply as possible. Mr. Mitchell is in favor of a system that will permit a man to drop for place and thereby get more for his score than a man who broke more than he did; we are not.

It is in the last paragraph but one of the letter above referred to that Mr. Mitchell really gives himself away. This is what he writes: "Well, some readers may ask, what are we going to do about it? Just simply agitate this subject until a judicious and equitable system of division of purses is adopted, and then shoot all races under a handicap of from 16 to 24yds., and throw your targets at more acute angles, when fewer men will get in the purses, and thereby make shorter divisions."

There's the rub: "Fewer men will get in the purses, and thereby make shorter divisions." It requires no prophet to foretell who those "fewer men" would be.

Pittsburg Trap-Shooters.

HAZELWOOD GUN CLUB.

PITTSBURG, Pa., April 28. The new grounds of the Hazelwood Gun Club were opened to-day, with a double programme of target and live-bird events. The target programme consisted of eight events at 15 targets each, forty shooters taking part, as below:

HOSTETTER BEATS GUTHRIE.

May 7.—Theodore R. Hostetter and C. S. Guthrie, both members of the Herron Hill Gun Club, shot a race to-day on the Davis Island grounds of the club, Hostetter winning by 1 bird with 88 to 87. The birds were furnished by L. M. Gilbert & Son, of Philadelphia, and were a capital lot. Below are the scores:

Trap in Buffalo.

AUDUBON GUN CLUB.

BUFFALO, N. Y., May 1.—To-day's weekly shoot of the Audubon Gun Club was well attended, twenty-eight shooters taking part in the club badge event, No. 3 on the list. C. S. Burkhardt won in Class A; William Hines, Jr., and F. N. Alderman tied in Class B, Hines winning on the shoot off; J. A. Kennedy won in Class C.

Owing to the near approach of the close of the club badge season, only six more events remaining to be shot this season, there is considerable interest manifested in the results. The Class A badge race seems to be the best contested, and it looks as though it will take the full fifty two shoots, if not more, to decide the winner. There are now six ties in this class, the following having won this trophy five times each: L. W. Bennett, L. G. Northrup, F. D. Kelsey, Alex. Forrester, E. C. Burkhardt and C. S. Burkhardt. In Class B George P. McArthur has the call, having won that emblem six times, with William Hines, Jr., a close second, with five wins, and E. Reinecke, Louis Fries and J. J. O'Brien, four each. Arthur Coombs seems to have a sure thing on Class C, having won that prize eleven times. The attendance prize also has a leaning toward him, he having an unbroken record to date for that prize. George Zoeller stands next in Class C with seven wins to his credit, and W. R. Eaton third, with six.

Following are to day's scores:

Events:	1	2	3	4	5	6	7	Events:	1	2	3	4	5	6	7

Trap at Norfolk, Va.

NORFOLK, Va., May 3.—In anticipation of a visit from T. H. Keller, a popular sportsman and representative of the Peters Cartridge and King's Powder companies, of Cincinnati, W. N. White and Pete Gallagher, two of the leading spirits of the Portsmouth Gun Club, arranged for a shoot for Saturday afternoon, but the elements prevented. By main force and a promise of a bountiful repast of soft crabs, Mr. Keller was persuaded to remain over until to-day; and as a further inducement a friendly match was arranged, and an "unknown" was matched against him. When the match was called the veteran Capt. Cramer stepped to the score as Mr. Keller's opponent, but good naturedly said he would not take advantage of the visitor, and his last miss looked very much like he intentionally pointed the gun in the wrong direction.

After the match a team race was arranged, Mr. Keller and Capt. Cramer picking the teams. A most enjoyable afternoon was spent in this manner. Mr. Keller is known throughout the country as a sportsman, and invariably

Newburgh's Semi-Annual.

THE semi-annual gatherings of the West Newburgh Gun and Rifle Association, of Newburgh, N. Y., are always thoroughly enjoyable, and the spring tournament of the Association held May 5-7 is to be counted among that number. There are two or three reasons why these gatherings should be pleasant ones. First, the scenery around the grounds of the Association can scarcely be surpassed anywhere; second, these tournaments are held in the spring and in the fall, just at the height of each season, when nature is wearing her prettiest dresses: third, Jake Gidney's unqualified success as a popular caterer on all occasions; fourth and last, but not least, the "glad hand" that is always extended to all visitors by the members of the Newburgh Club.

NOT A LARGE NUMBER OF ENTRIES.

The number of entries did not run large, twenty-six shooters taking part in the programme events on the first day, and two of the twenty-six only shooting in one event. On the second target day the number of shooters was increased to over thirty, but several of these shot "for birds only." But the *quality* was there; note a few of the names: E. D. Fulford and M. M. Mayhew, Utica, N. Y; J. S. Fanning, of San Francisco, representing Gold Dust Smokeless; Ferd Van Dyke, Dayton, N. J, winning the general average and being on top each day, representing the Winchester Repeating Arms Company, of New Haven, Conn; Ralph Trimble, Coving on, Ky, representing Du Pont Smokeless; J. S. S. Remsen, Brooklyn, N. Y.; H. M. Levengston, a rattling good shot from Saratoga Springs, N. Y.; Neaf Apgar, Plainfield, N. J.; Gus E. Greiff, New York, representing Von Lengerke & Detmold and Schultze powder; Captain A. W. Money, Oakland, N. J., representing the amalgamated forces of the E. C. & Schultze Powder Companies of America; M Herrington, New York, representing W-A Smokeless; J. L. Brewer, of New York; J. G. Lindzey, Dunellen, N. J; Dr. P. H. Mason, Peekskill, N. Y.; W. M. Stanbrough and Jas S. Taylor, Newburgh; etc.

And there were also others who were not far behind in the rush: Jack Halsted, Harry Dain and Frank Southard, of Peekskill, N. Y.; J. B. Ogden, Warwick, N Y; Beveridge, Fremont, Neb; Capt. J H. Wood, Harry Higginson and Dickson, of the home club; W. H. Hyland and his young daughter, who shoots remarkably well, North Tarrytown, N. Y.; C. H. Perkins, Troy, N. Y; J. Rhodes, of Fishkill, and his brother, T. Rhodes, of Marlboro, N. Y; M. F. Robert, Rupert, Vt.; John M. Philips (Commodore), Salem, N. Y.; Arnold, Albany; Joe Baker, Ridgefield, N. J., etc.

THE WEATHER WAS FAVORABLE.

The Association was decidedly favored in the matter of weather. Each day there was a brilliant sun, and it was warm enough, despite a breeze from the northeast, to sit around in the shade and enjoy life in general. With such a number of cracks on hand (and indeed there was a warm lot for semi-experts and novices to buck up against) good scores could be looked for with a certainty, as the background is A No. 1. But the shooting was not so easy after all, for the targets were thrown at varying heights, some quite low and others away up among the clouds, while straightaways were so scarce that they fairly took one's breath away when they did show up. Gil, the head trapper of the club, is a boss trapper, and takes a pride in the work he and his force have to do; it looked also as if he took a special delight in fooling the cracks, for the traps were not "changed every time," but *frequently*, so that one never could tell what angle was probable. It might be three right-quarterers in succession; then a left-quarterer; then two right-quarterers, and so on. Such a style of trapping means really "unknown angles," whereas if you "change the traps every time," it is scarcely unknown angles in reality.

Under the above conditions straights were not as numerous as one would have supposed from the company; but with the warm company facing the traps, it was a case of "everybody in for the money" almost every event. This, with no added money in the purses, cut up the purses into so many pieces that a man had to shoot a great streak to come out ahead.

THE ROSE SYSTEM WAS USED.

The West Newburgh Gun and Rifle Association adopted the Rose system of dividing purses at its tournaments last year, and sticks to it. While the system does not meet with the approval of the cracks, and for obvious reasons, it does meet with the genuine approval of the majority of shooters in this section. But this tournament at Newburgh was a hard test of its merits, being something after the pattern of the shoot given by the Cobweb Gun Club at Baychester, N. Y., last March, when so many crackerjacks took part in the tournament. In both instances it was a case of shoot hard to break even or come out ahead; while those who lost felt satisfied, because they lost less under the Rose system than they would have done under the old system. And it is worth while remembering that for one man who wins at such shoots there are four or five that lose; somebody has to pay for the targets and ante up for the money won by those on top, not to mention the expenses of running the shoot and putting a small surplus in the club's treasury.

But we do think the club made a mistake in dividing purses in the live-bird events on the same plan. For 5 and 7-bird races we have always held out for high guns; say one high gun for every four or five entries. For 10-bird races and events calling for a still higher number of birds, we believe in adopting the same plan, basing the moneys on the number of entries, just as the Interstate Association did in its programme for this year's Grand American Handicap. Our reason for urging this system is the fact that live-bird shooting is more expensive and quite as easy as target shooting, and that therefore, under the Rose system or under the "old system" it is quite possible for a man to kill them all and yet come out behind. We would rather see the "old dropping-for place system" in force for live-bird events than the Rose system. Make it nigh guns all the time.

The cashier's department was, as usual, capably handled by President Dave Brown; John B. Rogers, of Warwick, N. Y., taking his old position of entry clerk and squad hustler.

GENERAL AVERAGES.

In the general averages Van Dyke, by virtue of his steady shooting on both days, was easily ahead with 344 breaks out of 370 shot at. Brewer, who tied Van Dyke for first average on the second day, landed in second place for general average with 336 breaks. Fanning was third, 6 targets behind Brewer. Greiff came next with 328 breaks, Edwards and Levengston tieing for 5th and 6th places with 327 breaks to their credit. The above-named received the 6 average moneys given by the club—$13, $11, $8, $7, $6 and $5. The records follow:

	1st day.	2d day.	Total.	Ave.
Van Dyke	174	170	344	92.9
Brewer	166	170	336	90.9
Fanning	116	164	330	89.1
Greiff	165	163	328	88.6
Edwards	169	158	327	88.3
Levengston	166	161	327	88.3
Mayhew	163	157	320	86.4
Fulford	156	163	319	86.2
Lindsey (Henry)	158	160	318	85.9
Trimble	156	154	310	83.7

On the first day Fulford started off like a racehorse, breaking something like 40 straight in the extra events shot prior to the opening of the programme. His falling off in form after such good work was quite a mystery. Trimble, although badly out of form, shot pluckily along throughout the entire programme, making a straight or two now and then, just to show what he could do when feeling well.

Mould shot in No. 3, scoring 9 out of 20; Stebbins shot at No 8, scoring 4 out of 15.

Second Day, May 6.

This was a lovely day with everything in favor of high scores under ordinary conditions. The targets, however, were lined up and down the screen as on the previous day, and straighaways were remarkably scarce. With the aid of the good background the boys ground out the targets in great shape, and the result was that every man who shot through the programme made better than 80 per cent. Van Dyke and Brewer tied for first and second places with 170 breaks out of 185 shot at. Fanning was third with 164, Fulford and Greiff coming next with 163. Below are the records of the

In addition to the above, the following shot in one event each: H. C. H. in No. 8, scoring 9 out of 15; in No. 9 Sanders scored 13 out of 20, and Dowd 12 out of 20

NEW YORK VERSUS NEW JERSEY.

A special feature of this afternoon's sport was a five-men team race between New York and New Jersey shooters; the latter by virtue of their being guests of the New Yorkers were the challengers. Neaf Apgar captained the Jerseymen, Edwards selecting the New York team. Each man shot at 25 targets, unknown angles. The result was a win for New York by 6 targets, the totals standing 109 to 103. Fulford and Van Dyke for their respective teams led with 24 each while Apgar knocked out 23. Scores were as follows:

New York.

E D Fulford	1111111101111111111111111—24
F S Edwards	0111111011111111111111101—22

Gus Greiff	1101011101111101101011010—17—103

Third Day, May 7.

This was live-bird day and the club had provided some excellent pigeons for the occasion. The boundary at these grounds is quite short and varies from about 30yds. to 45 or 50. With a strong wind across the traps these grounds are about as hard as any we know of, but to-day there was scarcely enough breeze to do much toward helping the birds away from the traps.

The programme called for a 5-, a 7- and a 10-bird race with respective entrance fees of $5, $7.50 and $10. Fanning and James S. Taylor did good work with the gun, scoring all their birds in these three events, while Fanning added to his record by killing 9 more straight in a miss-and-out, thus making his total 31 straight. Capt. Money also made a good score, accounting for 29 of the 31 he shot at, using only his first barrel on 24 out of the 29 scored to him.

The handicaps affixed to each shooter's name applies only to event No. 3, the 10-bird race. In this event, as in all the others with the exception of the miss and-outs (Nos. 4 and 5) several of those whose scores are given shot only "for birds." Below are the scores in detail:

	No. 1.	No. 2.	No. 3.	No. 4.	No. 5.
Taylor (29)	22122—5	2222211—7	1222221222—10	..	.....

EDWARD BANKS.

Boston Gun Club.

WELLINGTON, Mass., May 5.—At last an entirely satisfactory day appeared to-day for the benefit of humanity in general and the Boston Gun Club in particular. A day at Wellington when the conditions are such that a lost target can only be accounted for by faulty marksmanship and nothing else is something of a rarity, and must be given prominence. Not a single miss to-day was laid to the wind—probably because not a zephyr was stirring that could come under so dignified a heading—and minus the stereotyped excuse a general sadness was noted, and the silence was painful as a target sailed serenely on.

The match to-day was productive of more fair scores in one contest than any during the series of fifteen shoots, of which thirteen have taken place. A shooter's best six scores count for the prizes; thus a faithful attendant benefits accordingly by throwing out low scores and improving each Wednesday, if possible. At present Spencer has 108 out of a possible 126 under these conditions, Miskay 97, Gordon 94, Woodruff and Winters 89, and so on, down the list of twelve, with four others who have scores that will admit of completion if desired. The last two shoots will quite possibly alter the complexion of the above situation, with exception of high gun, who is all but sure of his prize, the first.

Summary to-day as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16
Targets:	10	10	5	6	10	10	6	10	5	6	10	10	10	10	10	10
Gordon	9	10	5	3	8	10	5	9	4	4	6	8	8	10	7	8

IN NEW JERSEY.

FORESTER GUN CLUB, OF NEWARK.

April 28.—The Forester Gun Club, of Newark, held an all-day shoot to-day. Thirteen shooters took part in the various events, among the number being: Ralph Trimble, representing the Du Pont Powder Co; M. Herrington, representing the W-A Smokeless powder; C. von Lengerke, of Von Lengerke & Detmold; the McClintocks, from New York; Aaron Woodruff, of Elizabeth; Cahiss, from Branchville, etc. The club has just enlarged its shooting stand, and has put in a new set of expert bluerock traps. The scores in to-day's events were:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16
Targets:	15	20	15	20	15	20	15	25	15	20	15	10	15	10	15	20

Oneida County Sportsmen's Association.

UTICA, N. Y., May 1.—Below you will find scores of the regular weekly shoot of the Oneida County Sportsmen's Association. The conditions are 15 singles and 5 pairs, expert rules, with a handicap by allowing a number of dead birds. The prize this week was won by our president, H. L. Gates, from scratch. Trap-shooting is having quite a boom here at present, we having added twenty-two new members to our roll the past month. Scores:

H L Gates (0)	111110110111101 11 11 10 10 11	—20
E D Fulford (0)	111011110111101 10 11 10 11 10	—19

C. R. MIZNER, Sec'y.

Pawtuxet Gun Club.

PAWTUXET, R. I., May 1.—The Pawtuxet Gun Club held its fourth weekly shoot for W. A. silver trophy. A strong east wind blew in the shooters' faces, and low scores were the result. Sheldon and Greene each won a leg on the trophy, the others not shooting out their allowances, as they could not win. Sheldon now stands with two wins to his credit, and Greene, Mooney, Hawkins and Armstrong with one win each. Three wins decide the ownership:

Sheldon	111101100111111111101101 —18
Greene	010110011111111111110110110—18
Mooney	100101000110010100101111—12
Hawkins	111000110000001100110110 1—12
Armstrong	111001110010100000100101—11
Badmington	101010000000110110000J1011—10
Wilhams	000001010010110010100000 — 7
Brownell	001101100111010100110110 —12

Aldrich	000010110010000000001001— 6

* Guest.

Orange Gun Club.

ORANGE, Mass., May 5.—The Orange Gun Club held its weekly shoot this afternoon, commencing at 5 P. M. The following scores were made at 25 empires, unknown angles:

W. L. Mann 20, L. A. French and Geo. H. Thompson 18, E. C. Whitney 17, A. C. Parkinson and Arthur Sherwin 15, Charles Cobb 14 and Perley Whitman 11.

Our regular time for shooting is every Wednesday afternoon at 5 o'clock. We use empire targets and empire expert traps, a set of which we have just put in and find that five traps is way ahead of one trap, one man up. Our members use an assortment of guns consisting of Parkers, Smiths, Lefevers, Colt, Ithaca, Winchesters, etc.

W. L. MANN, Sec'y.

The Peru Tournament.

PERU, Ind., April 29.—Who said trap-shooting was dead? Will the gentlemen who have been slinging ink right and left within the past four years in the various sportsmen's journals, explaining what has killed trap-shooting, and also those who have been equally energetic in explaining how to revive the sport, please closely scan the names of the sportsmen who attended the "Amateur Tournament" held here yesterday and to-day, and then say whether or not they do not think that trap-shooting is a pretty lively corpse in this neck-o-the-woods. I am fully satisfied that after they have carefully counted the numbers and noted that the majority entered in all the events for both days (or nearly all) they will find some of their pet theories knocked "galley-west."

I am also of the opinion that some of the gentlemen who have been shouting that an amateur tournament was never a success, and others who have been positive that a shoot without added money was no tournament at all, and that no one but the paid experts ever went to tournaments and shot through the programme, will realize that mistakes do sometimes occur.

There is one gentleman to whose attention I would especially direct the account of the tournament, and that is Mr. "Paradise Lost," or Mr. "Lost his Entrance," or whatever his name is, who wrote quite a lengthy article some time since telling how dead this game of ours was. I trust that he will be convinced that there is one State in which she still flourishes. I wonder what some people will think of an amateur tournament where there was present in the neighborhood of 70 shooters, and where the ten regular events on the programme for the first day had an average of over 37 entries for the entire day, several of the events having 45 to 47 entries, and where the first event on the second day opened with about 30, nearly all of whom had participated in the programme of the previous day; and also where the second day had an average of more than 23 entries for the twelve regular events on the programme. A total average for the twenty-two events on both days of about 30. This, too, at an amateur tournament, where there was not a cent of added money, no merchandise prizes, and where the only inducement to enter was the entrance money of the shooter. Oh, yes, there was added money too. After charging the shooters 2 cents for targets there was an additional reduction of one-fourth cent for every target thrown in the regular events as an average prize for the two best averages, and there was still something left to the management. This was a personal tournament and the experts were barred.

Toward the close of last season, when a number of the shooting acquaintances of the promoter importuned him to open the season of 1897 with a tournament at Peru, and later, when announcing through the sportsmen's journals his intention of so doing, he stated that he expected the majority of them to fulfill their promise to attend. He then believed they would do so, but did not for one moment think they would bring along their friends, but this is just what they did. They were "all here" or nearly so.

On the afternoon of April 27 the trains began to bring in the shooters from the more remote parts of this State and some from the surrounding States The first arrival was Mr. Ben O. Bush, of Kalamazoo, Mich., closely followed by young Willard Thomas, of Logansport, who came in on the same train with that prince of managers, Mr. Jack Parker, who was just from the West, where he had managed the Atchison tournament and taken part in the State tournament at Lincoln, Neb. At 10 o'clock P. M. the register at the Bears Hotel indicated that there was going to be a shooting match in this city, as it contained the names of such well-known shooters as John A. Flick, the crack one-armed amateur, of Ravenna, O.; Fred. D. Alkire, of Woodlyn, O., just back from the Grand American Handicap; Mr. George Elliott and Fred. Cornelius (Smoke), of Rochester, Ind., and Messrs. Whisler and Kieley, of Marion, Ind.

Wednesday dawned bright and clear, and the morning trains brought in Mr. A. Burnison, of Huntington, Ind.; Messrs. E. V. and Ol. Wright, Charles and J. B. Rose, Uncle Jake (J. R.) Bruner, A. W. King, Bret and J. W. Dewalt, of Wabash, Ind., and Mr. Snow, a very pleasant gentleman and splendid shot, from Brooklyn, O. These gentlemen proceeded directly to the grounds, where they participated in some extra events with the arrivals of the previous afternoon and evening. The next delegation came in from the South on the L. E. & W. train from that section of the country. This train was very obligingly stopped right opposite the grounds for the convenience of the shooters, and the delegation which alighted from it was headed by the Indianapolis boys, consisting of the following members of the Limited Gun Club, of that city: Royal Robinson, T. F. Parry, J. W. Cooper, E. H. Tripp, L. C. Griffith, J. M. Lilly (S. Mark), H. T. Hearsey, secretary of the Indiana Trap-Shooters' League; G. C. Beck and Dr. O. F. Britton. These were accompanied by Messrs. G. E. Bruner, L. W. Cumberland (Lewis), Engles, Wallace, Benson; the Apperson Bros. and Mr. G. Smith, Kokomo; Messrs. E. C. and W. B. Cooly, Hilt Forbis and Byron Snell, Hartford City; Mr. Meyer Weiler, of their club, was already here visiting; Mr. C. Proctor, Union City; Mr. C. L. Bender, Muncie; and Mr. S. E. Voris, Crawfordsville, who has been a crack amateur for some years, and who was one of those who were entertained by Mr. E. S. Rice upon his recent triumphal trip to the Grand American Handicap with his team of Western cracks, among which Mr. Voris sustained his reputation by finishing among the 24s.

When the delegation from the train arrived the regular programme for the first day was started, but the ball had not fairly started before the East-bound Wabash train brought in Mr. Joseph Blistain (Slow), Lafayette; Mr. Pattison, of the Indiana Mineral Springs, and Mr. J. L. Winston. The other morning trains brought in Messrs. Albert Bussel, Leesburg, Ind.; C. A. Brown and C. W. Townsend, Knox, Ind.; and the "game" was on in earnest, though the afternoon trains brought in their contingent, consisting of Messrs. Garland, Waveland, Ind., a "stayer," and Squire Hosea (Bob White), Cincinnati, O., and one or two visiting spectators, who came to look on

The grounds that had been secured were first-class, and were within easy walking distance of the depot, and just outside the residence portion of the city. They were as level as a floor, with a background it would be hard to improve upon, and with a nice carpet of grass. Two sets of traps were used, and were kept going from the opening of the programme without cessation, except for some unfortunate breaking of traps; until the entire tournament was concluded. But there was never a complaint offered by any one, and Jack Parker was everywhere, and under his direction it did not take long to get things in motion again. The traps were set according to the W. G. Seargent system of three traps behind one screen about 8ft. long, and the shooting was done in squads of five men up, standing in a semicircle, as in using the magautrap. The system was entirely new to this part of the country, though I understand it has been used successfully in several of the Western tournaments, including the Atchison shoot. But it was very satisfactory, or at least if there was any complaint it did not reach the ears of Mr. Parker, the promoter. Something over 10,000 targets were thrown during the two days in the regular events, and about 2,000 thrown in the extra events and for practice.

Two large tents had been provided for the protection of the shooters should the weather prove inclement (which it certainly did not), and a smaller tent was provided and set half way between the other two for the use of the cashier and his assistant, which positions were ably filled by Messrs. J. G. Brackenridge, of this city, and O. C. Head, of Moberly, Mo., who was here on a visit to his brother, the promoter of the tournament. Mr. Charles Clark, proprietor of the Clark Hotel, had charge of the refreshment tent, and served everything in first-class style.

The refereeing was done by Messrs. Tim Dunn and George Wey, of this city, to the satisfaction of every one. Messrs. W. V. Turpen, Chas. Lamme (both old time shooters) and Leo Landauer attended to the scoring for both days, and it was only necessary to make one correction through the entire tournament.

The weather the first day was simply perfect; the entries large; the management by Mr. Parker perfect; and if any one failed to have a good time he has not been heard of here. The best shooting for the average on the first dap was done by young Willard Thomas, with a score of 157 broke out of 175 in the regular programme, closely followed by Messrs. Alkire, Griffith, Snow and Tripp.

I append herewith scores of the first day.

* Birds only.

Second Day, April 29.

The morning of the second day dawned with quite a shower falling, and this, coupled with the fact that the weather man had predicted thunderstorms for this day, made things look a little gloomy. The promoter called at the hotel at about 7:30 A. M. and informed the shooters that a large canvas could be secured and stretched over the score, thus enabling them to continue the shooting at one set of traps. "Get out with your tent. Do you suppose a little rain is going to stop this crowd from shooting?" was about all the satisfaction he could get out of them, and by 8:30 A. M. sixteen men had paid in their $328 and were demanding that the programme be commenced, rain or shine, as they wanted to shoot Three more shooters arrived on the morning train, including Messrs Parsons and Leach, Frankfort, and Dr. Deeds, Plymouth. By 9:30 A. M. every cloud had disappeared, making it another ideal shooting day except that there was a little wind.

The entries did not run quite as high as on the first day, but the interest kept up until the last, there being as high as 30 entries in the two first events, which was high for the day, and ranging down to as low as 16 in one of the 25 bird races, though there were few events with less than 20 to 25 entries. Some of the less expert shots (and justly so) concluded that they had contributed enough, and toward the close of the day were allowed to shoot for targets only. The programme was finished by 2:30 P. M., thus enabling nearly all the shooters to leave on the afternoon trains. Those that remained shot a couple of sweeps and the affair was at an end, thus closing what I have every reason to believe was the most successful tournament ever held in this State, in point of attendance and continuance of entries, and one of the largest amateur tournaments ever held anywhere where there was no added money. Mr. L. C. Griffith, of Indianapolis, proved the best shot of the second day, but did not quite wipe out the lead gained over him by Willard Thomas on the first day, for the geueral average, though only lacking 1 bird of so doing. Mr. Thomas thus won first average for both days with a score of 323 out of 375. Mr Griffith was a close second with 322.

Below are the scores of the second day, with the exception of a couple of sweeps, the scores of which were not preserved:

SCORES OF APRIL 29.

* Birds only.

NOTES.

As there were 10,080 targets thrown in the regular programme events, the average prize amounted to $25, which was divided between Messrs. Thomas and Griffith - $15 to the first and $10 to the second. These two gentlemen were probably the youngest shooters on the ground.

In sharp contrast to those two young men were noticed several gentlemen shooting right along, and at a pretty lively clip, too, who have all of them touched or passed their fiftieth year, and one of them has already passed his sixtieth These were Uncle John Whisler, J. R. Bruner, A. Burnison and Geo. C. Beck, to say nothing of Dr. Britton, whose age seems to be a question with everyone except E. H. Tripp, who says he has the record, and can tell to the day. But never mind Partington's age; he is still one of the best shots this State can afford, and is considered by many to be the most graceful shooter now before the traps.

The Ohio contingent—Messrs. Snow, Alkire and Flick came a long way to attend the amateur tournament, and certainly got what they came after. They are all o.k.

Dr. C. L. Thomas came up from Logansport on the afternoon of the first day and spent the evening with the shooters, but was called away by pressing business early the next morning. It is no wonder that Willard shoots well with such a sportsman as a father.

The local shooters did not take a very active part, not having practiced much within the past few years; they did not like to display their lack of skill before the visiting cracks. Some of them entered in several of the events until they discovered that there were plenty of shooters to make the affair a success without them, when they fell back, and kindly rendered such assistance as they could in other ways.

A noticeable exception to the above was Mr. John H. Cavanaugh. Jack has been so closely confined to his duties as train dispatcher for the Wabash that he has done very little shooting for the past six years. But this cut no figure with Jack; he was proud of the event, glad to participate with such a crowd of sportsmen, so paid his entrance for both days and shot in every event, extras and all. He shot very well for one having so little practice, and could he have gotten one or two more birds in each event would have hardly been out of the money in any of them

Messrs. Smoke and Elliott, of Rochester, Ind; Pattison, of the Mineral Springs, and Brown and Knox, of Knox, Ind., are all stayers. J. Blistain (Slow), of Lafayette, shot through the programme the first day, and was not so slow either.

Mr. John L. Winston, the representative of the Austin Powder Co., was one of the two manufacturers' agents present. He shot in most of the events for both days.

The winning of first and second average by Willard Thomas and L. C. Griffith was quite popular with the spectators and also with the shooters, who know them both. Willard is well known to the sportsmen of this and surrounding States, having been shooting for several years and in very fine form, but for some reason did not quite shoot up to his gait last season. He has a new gun, and he certainly hits them. Mr. Griffith, or Griff, as his friends call him, is the managing salesman for the Parry Mfg. Co., at Indianapolis, having charge of their business in the States of Kentucky and Tennessee. He is not only a crack shot, but is a business man and a polished gentleman.

The Limited Gun Club, of Indianapolis, was well represented, and their members made a splendid impression both with the shooters and the residents of our city. They were the founders of the Indiana Trap-Shooters' League, and were entitled to the first annual tournament of the League, but, being in a flourishing condition, they preferred to send it to some city where trap shooting interests has been a little latent. They will go there and will assist in making it the success they did this one. When they do give a tournament, every shooter in the State should make every effort to attend.

Messrs. Bender, of Muncie; Miley and Whicker, of Marion; and Proctor, of Union City, are "stayers." Mr. Proctor was far from well and did not take part in many events the second day, but did well during the first day.

Ed Veris did not shoot the "pesky mud pies" as like he did the sparrows last winter at Indianapolis, nor as he did live birds at the Grand American, yet his scores were very good, and Ed would be a hard man to beat in a race involving the three kinds of targets.

The Wabash, Ind., boys did not shoot in their "at home" form, as I have good reason to know, but they made a splendid showing, both in their scores and in the number in attendance. They have a fine club.

The Kokomo Club, but recently organized, is a splendid organization for all that, and gets the first annual league shoot. They were well represented, and with two such sportsmen as G. E. Brunot and L. W. Cumberland for president and secretary, they will surely flourish, and will make the State shoot a success.

Bob White was shooting a strange gun and did not get up to the top. Better luck next time, or after he gets accustomed to her "hang."

Al Bussell, of Leesburg, Ind., who is a member of the Warsaw Gun Club, was in attendance and took part in most of the events. Al is to give a tournament at his home soon and will doubtless have a good attendance, as he always goes to the tournaments elsewhere.

The Indiana Trap-Shooter's League held a very successful meeting at the Bears's Hotel on the evening of the 28th inst., but as that organization has a fine secretary the writer does not wish to deprive him of the pleasure of reporting the same.

The promoter of this tournament, not having time and opportunity to do so in person during the progress of the tournament, now desires to extend to every individual shooter who saw fit to attend, his sincere thanks and appreciation of his patronage, whether by participating in one event or in twenty-five; and to several he desires to extend his thanks for their kindly assistance in the promotion of this affair, which marks one of the most pleasant experiences of his life. Among them Mr. John Parker, whose name mentioned in connection with a tournament assures its success; the Limited Gun Club as a body, especially their most efficient secretary, Mr Royal Robinson; to the Indiana Trap-Shooters' League as an organization, but especially to its secretary, Mr. H. T. Hearsey, who would just about fit in Royal Robinson's pocket, but who, as a sportsman, weighs a ton, and who has the energy of the 999. Gentlemen, you have my sincere thanks.

As I have mentioned before, Mr. Jack Parker managed this shoot, and made many friends for the King Powder Company and the Peters' Cartridge Company, two firms that he ably represents at the trap.

The tournament has already had its effect on the shooting interests of our city, as several business men have signified their intention of joining our club, and it is understood that another club, composed entirely of new shooters, is being organized.

John M. Lilly and Thomas F. Parry, of the Limited Gun Club, of Indianapolis, are a good-natured pair, win or lose, and they go a great way toward keeping every one in good humor if in their hearing. They shot several individual races in the regular events for $1,000 (?) a side. Mr. Parry is the uncle of young Griffith, who won second average for the two days. Tom was satisfied, and just as proud as if he had won it himself

About a half hour after the arrival of the Indianapolis boys some one was heard to say, "I did not know you were expecting the Prince of Wales." But it was a case of mis aken identity. Instead of His Royal Highness, it was John M. Lilly John M says that he has not broken a straight since he had his whiskers "cut that way."

J. L. HEED.

Buckeye Gun Club.

Catchpole Gun Club.

WOLCOTT, N. Y., May 5.—Inclosed find scores made by the Catchpole Gun Club at its grounds this afternoon for the handsome can of W-A smokeless powder presented by the Laflin & Rand Powder Co., of New York. Each member was handicapped according to his ability. The result of the shoot was a tie for the trophy by Messrs. Foster and Seaman; the two dividing the prize, Mr. Seaman taking the silver can and Mr. Foster the contents. The shoot was at 35 targets, known angles, handicap allowance of misses as breaks:

De Witt (2)	11001101110011001101110100110000 11—	0	+2—22

D. GEORGE.

Connecticut Trap-Shooting Association.

MERIDEN, Conn., April 29.—The Connecticut Trap-Shooting Association held its first shoot of the season on the grounds of the Parker Gun Club, Meriden, Conn., April 29. The tournament proved a great success in every way. A good deal of interest was centered in the team race, which was the drawing card.

The Parker Gun Club members are good entertainers and plenty of shooting was had. The shoot started about 9 A. M. with a warming up event of 10 targets, 50 cents entrance, and thirty-eight shooters. (Scores not reported, as it was not on the programme.) The club furnished a luncheon free of charge, consisting of baked pork and beans, potato salad, ham sandwiches and hot coffee, which was well served and highly appreciated.

Among the visitors were O. R. Dickey, Boston, Mass.; Capt. E. B. Wadsworth (Puck), Boston, Mass.; R. L. Trimble, Cincinnati, representative of the Du Pont Powder Co.; Chas. Willard, of the Colt Gun Co., Hartford, Conn. Among the list will be found nearly all the old familiar names of the Connecticut shooters. Room does not permit naming them in detail.

The next shoot of the Association will be held on the New Haven Gun Club grounds, date to be made known later. The traps used are the bluerock traps, with North's electric pull (one set of five traps), and 5,975 birds were thrown during the shoot. Everything went well, and it is not too much to expect that the Connecticut Trap Shooting Association will prove a grand success for the season of 1897, if anything can be judged by the first grand opening, under the auspices of the Parker Gun Club, Meriden, Conn.

Scores follow in tabulated form:

Jamison and Hood Shoot a Tie Race.

BALTIMORE, Md., May 5.—Jamison and Hood shot a remarkable race to-day on the grounds of the Baltimore Shooting Association. The conditions were 50 birds per man, $50 a side, Hood at 30yds., Jamison at 28yds. The race ended in a tie, though shortly after the start it looked a walkover for Hood, who killed 18 straight to his opponent's 12 out of 18. Then Jamison ran 17 straight, while Hood lost 4 birds, thus leading by 2 with 15 more to shoot at. Both lost their 36th birds, and Jamison also lost his 38th. This gave Hood the lead by 3 birds. Jamison killed his last 12, but Hood lost 3, thus making it a tie race with 42 each, Jamison having shot a very plucky up-hill race. C. A. Macalester officiated as referee. The birds, which were furnished by Jim Malone, were a good lot. Hood's failure to win was a weakness which he developed on incomers. The scores were:

Jamison	2022022022020111•212212312—19	
	1212222121020121212122222—23—42	
Hood	1111221112112212110202011—22	
	1211222012022212220•211203—20—42	

ORIOLE.

ON LONG ISLAND.

CONEY ISLAND GUN CLUB.

May 5.—Ten members of the Coney Island Gun Club met this afternoon at Dexter Park and took part in the club shoot at 10 live birds per man. No straight score was made, but four men tied on 9 each. On the shoot-off, miss-and-out, for first money, Lair and Schevlin divided at the end of the second round. Scores:

William Lair (30)	2121012112—9	J B Vorhies (29)	2•122112•1—8
John Schliemann (28)	1111011111—9	William Hughes (27)	2211•02221—8

James Schevlin (23)	11•1112112—9	Dr Raynor (27)	2011001102—6
H Knebel, Jr., (30)	21111•0121—8	H McLaughlin (27)	1102021020—6

CRESCENT GUN CLUB.

May 6.—The attendance to-day at the Crescent Gun Club's monthly live-bird shoot at Dexter Park was very small, only three members being present. The scores in the club race were:

W D Gilman (28)	2101212—6	Jas Dykemann (28)	2022210—5
Geo Brunner (28)	1002111—5		

NEW UTRECHT GUN CLUB.

May 8.—The semi-monthly club shoot of the New Utrecht Gun Club was held this afternoon at the Dyker Meadow grounds. Gus Greiff was the winner in Class A in the club event, Dr. O'Brien winning in Class B. Greiff also won a heat for the Bennett cup with 23 out of 25, scoring in all 47 out of 50. Scores were:

Nos. 1 to 7 inclusive were 10 targets at unknown angles; Nos. 8–13 were miss-and-outs at unknown angles.

G. E. POOL, Sec'y.

Gilbert Defeats Brokaw.

NEW YORK, May 8.—One of the most important matches of the season, and probably about the last, was shot to-day on the grounds of the Larchmont Y. C. The conditions were 30yds. rise, 30yds. boundary, 200 birds per man, and the contestants were H. B. Gilbert and W. Gould Brokaw.

The match excited a good deal of interest, both parties being well known in trap-shooting circles. Gilbert in particular has had a most remarkably successful career at the traps this season, losing only match out of many that he has shot. Brokaw, on the other hand, has not been seen much at the traps of late, as he has been spending the winter for the most part at Palm Beach, Fla.; his practice work for this match, however, showed that he was in the best of form, as he scored 49 straight one day, and 177 out of 200 in a trial match. There was quite a little betting on the result of the match, Gilbert having the call. He was handled, as usual, by Capt. A. W. Money, while Geo. S. McAlpin looked after Brokaw. Col. H. A. Butter was the referee.

There was quite a gathering of club men when the race started, on the arrival of the 10 A. M. train. Among those present during the match were: Noel E. Money, Capt. A. W. Money, W. A. H. Stafford, G. S. McAlpin, John Boudouine, Charles Hibbart, Daniel Bradley, Fred G. Moore, Col. Butler Mayhew Bronson, Frank Hardy, Roger Lamson, E. Payson, Clifford Brokaw, C. U. Hamilton, George Ide, E. S. Hatch and D. B. Gilbert.

Gilbert won easily by 12 birds, his score of 175 being very good in view of the fact that the birds were a fast lot and that there was a strong breeze blowing across the grounds. The 30yds. boundary, too, must not be forgotten. The score tells how the match was shot:

H B Gilbert	0222222202222202222 22022—21

Rhode Island Trap-Shooting Club.

PROVIDENCE, R. I., April 29.—The first of the series of prize shoots arranged for the members of the Rhode Island Trap-Shooting Club was decided to-day. The prize was a silver can of W-A Smokeless powder, and four cans of the same powder, five prizes in all. Event No. 3 was the prize shoot; in this event P. H. Randall and R. C. Root tied for the silver can, which has to be won three times before becoming the property of any one member. The numbers in brackets after a shooter's name denote the number of extra targets allowed. Those who were not members of the club were not entitled to any of the prizes. Next week's contest will be known as the Gold Dust powder event, and there will also be another 25-target race for the silver W-A can. Below is a summary of the scores made to-day:

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6

Andrews	0201002200	— 4
Grassi	02210	— 3
Kissane	10012	— 3

Same date a 75-target match between Dr. Lane and Dr. Hungate resulted in a win for Dr. Hungate by the score of 51 to 37.

RAVELRIGG.

Kentucky Gun Club.

LOUISVILLE, Ky., May 3.—The Kentucky Gun Club opened its season on Saturday last, May 1, under adverse conditions so far as weather was concerned. The following clipping from the *Courier Journal* of yesterday gives a good account of the proceedings, and also gives the dates of the coming shoots of the club:

"Despite the cold, blustery weather, twelve members of the Kentucky Gun Club gathered on their grounds at Fifth and L streets yesterday, inaugurating the season, which lasts till the close of October. Those who participated in the first day's shoot were Messrs. W. W. Thompson, H. J. Lyons, W. L. Lyons, A. L. Phelps, Jr., A. P. Houston, J. B. Williamson, J. B. Alexander, Emile Pragoff, John Prins, H. T. Smyser, Sam Hutchings and Bland Ballard.

"The members of the club are divided into three classes, A, B and C, according to their proficiency in shooting. Every Saturday a contest will take place, and the member of each class who has won the greatest number of times by the close of the season will be given a gold medal. The birds are projected from five traps and always at unknown angles. In Class A, Mr. A. P. Houston won yesterday, making 22 out of a possible 25 points. In Class B, Messrs. W. L. Lyons and H. T. Smyser were tied, each making 17 points. On the shoot-off Mr. Lyons won. In Class C, Mr. John Prins won, hitting 14 birds.

"On Decoration Day, which will be the fourth anniversary of the club, a large attendance is expected at the shoot from all over the State, and on July 4 the annual meeting will be held for the championship of the State."

Missouri and Kansas Gun Club Tournament.

LITTLE ROCK, Ark., May 7.—Under this title will be given a tournament at Joplin, Mo., May 25–27 with $300 added money. The programme will consist of ten 20-target events each day, with four moneys in each purse.

W. G. Sergeant and C. M. Sumner are the promoters of this shoot, and they, in connection with the other shooters from Joplin, Mo., and Galena, Kan. (where the shooters composing the above club reside), are sure to give those who attend a good shoot. Sergeant is well known all over the country as one of the best amateur shots, and there has not been a shoot of any consequence in the West for the past two years that he has not attended. This alone should materially increase the attendance, as reciprocity and the promoters' popularity is frequently instrumental in inducing shooters to attend tournaments whom added money would have failed to bring.

Those who attended the Joplin shoot in '96 will recall that everything was carried out as announced, and that it was one of the best managed affairs on the circuit, and that the hospitality shown the visiting shooters was generous to a fault. Joplin is only 160 miles from Kansas City, and this shoot, following right after the Missouri State tournament, will make it convenient for shooters from a distance to attend this one also. Just ship your shells to E. Webster, Joplin, Mo., and you will find them when you want them.

PAUL R. LITZKE.

All preparations for the delegates from the different New Jersey gun Clubs on May 19 have been completed. The hour for the meeting is set for 2 P. M., and the place of meeting is Room 1009, No. 377-379 Broadway, New York city, the rooms of the Sportsmen's Association. So many clubs have notified the committee appointed to call the meeting of their having appointed delegates, that the success of the efforts to re-organize the old State organization, or to organize a new one, is insured. We may now look for a State shoot in New Jersey some time this summer or during the early fall. All gun clubs that have not elected delegates to date should do so at once.

Answers to Correspondents.

No notice taken of anonymous communications

PARTY OF THREE.—You will find good bluefishing and weakfishing at Barnegat, N. J., in the season. Write to Capt. John Kelly to keep you posted.

H. P., New Haven, Conn.—Ans.: Articles on smokeless powder small bore hunting rifles were published in our issues of Sept. 26, Oct. 17 and Nov. 21, 1896.

In answer to H. B. C., North Ferrisburgh, Vt., last week, an error was made in printing "burst" for "hurt." The sentence should read "They (steel gun barrels) are also less liable to be hurt by falls or blows."

B. B.—For the New York law on black bass see fishing columns. Best places near New York are Lake Ronkonkomo, L. I., and Greenwood Lake, N. Y. Write J. E. Waterstone.

A. H. S., Meshoppen, Pa.—For June trout flies select grizzly-king, brown-hackle, professor, ibis, cow-dung, silver-doctor. Use dark flies on bright days, and bright flies on dark days.

PUBLISHERS' DEPARTMENT.

Marlin Model of 1897.

THE Marlin Fire Arms Company, New Haven, Conn., send us an advance notice of a new .22cal. repeating rifle, which will be ready for delivery June 15.

This is a take-down repeater, weighing, with 24in. barrel, 5½lbs., and shooting without any change in adjustment the short, long and long rifle cartridges for this caliber. The action of this rifle is that of the very popular model of 1892, with the addition of the take-down feature and various improvements.

Chief among these improvements may be noted the following: The working parts are of tool steel, carefully hardened and guaranteed to wear, while the receiver is of the special tool steel used in the Marlin high-power smokeless rifles.

The important factor of cleaning has received due attention, and a great advance has been made in this respect. The barrel may be cleaned as easily from the breech as from the muzzle, and the working parts are finely polished, thus insuring an action even smoother than in the famous model of 1892. All parts of the action are securely fastened, so that none can be lost; but at the same time all may readily be removed, if desired, and every crevice thoroughly cleaned.—*Adv.*

Bicycles.

THE Relay Mfg. Co., Reading, Pa., issue a neat catalogue of their well-known and reliable bicycles. The Relay line is very complete, including six models ranging in price from $60 to $100, besides tandem, combination tandem and tricycle tandem.

The latter is a novelty in cycle construction, and should prove very popular with persons who have heretofore been debarred from the pleasures of cycling through the fear of upsets.

Relay bicycles possess many features of sterling excellence, none of which is perhaps more striking than their visible ball bearings, which enable the rider to inspect the bearings without removing the wheel from the frame. Catalogues will be sent on application.—*Adv.*

Antidote to Ivy Poisoning.

HIRAX is a non-poisonous lotion for external use, which insures an instant cure for ivy poisoning and the bites and stings of poisonous insects. It is said that a single application will relieve the pain caused by a bee or hornet sting, and a few days use will cure the most obstinate case of ivy poisoning. The preparation is especially valuable to sportsmen as an antidote to the poison of black flies, gnats, etc., and the importance of having this article on hand ready for use should not be overlooked.—*Adv.*

A Fishing Trip

ALONG the lines of the Chicago, Milwaukee & St. Paul Railway is the title of a beautifully illustrated pamphlet of thirty-two pages, the contents of which are devoted to practical methods of fish-catching in near-by lakes and streams.

One copy will be sent to any address on receipt of two-cent postage stamp. Geo. H. Heafford, General Passenger Agent, 410 Old Colony Building, Chicago, Ill.—*Adv.*

Hunting Launch.

THE Alco vapor engine launch is provided with a motor controlled from the bow, and is especially adopted for hunting. No licensed engineer or pilot is required. Catalogue, containing full particulars, will be mailed on receipt of 10 cents in stamps by the Marine Vapor Engine Co., foot Jersey avenue, Jersey City, N. J.—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, MAY 22, 1897.

VOL. XLVIII.—No. 21. No. 346 BROADWAY, NEW YORK.

NOTICE TO SUBSCRIBERS.

ATTENTION is directed to the new form of address labels on the wrappers of subscribers' copies. The label shows the date of the close of the term for which the subscription is paid.

The receipt of the paper with such dated address label constitutes the subscriber's receipt for money sent to us for a new or renewed subscription. Unless specially requested to do so, we do not send separate receipts.

Subscribers are asked to note on the wrapper the date of expiration of subscription; and to remit promptly for renewal, that delays may be avoided.

For prospectus and advertising rates see page iii.

If we are content with an ungainly fly, we will be satisfied with inferiority of rod and tackle; and although the fish may not see the difference, the angler may become, from neglecting one point, slovenly in all. A well-made fly is a beautiful object, an ill-made one an eyesore and annoyance; and it is a great satisfaction both to exhibit and examine a well-filled book of handsomely-tied flies. R. B. Roosevelt.

The Forest and Stream's Platform Plank.

"The sale of game should be prohibited at all seasons."

NAILS DRIVEN IN 1897.—No. III.

NEW HAMPSHIRE.

Act of March 3, 1897.—Section 1. That any person who shall for the whole, or any part of the time, engage in the business or occupation of fishing on any of the streams or ponds of this State for the brook or speckled trout, or in the lakes thereof of less size than the first Connecticut lake for lake trout, with intent to sell or trade fish so caught, shall for every such offense be fined not less than $200, or imprisoned not less than thirty days or more than six months, or both.

THE MAINE GUIDE LICENSE.

THE Maine guide registration law provides that before engaging in the business of guiding one must register with the Commissioners of Fisheries and Game his name, age and residence, and must procure from the Commissioners a certificate setting forth that he is deemed suitable to act as a guide. For this certificate he is required to pay a fee of $1, and for failure to comply with the law there is a fine of $50. The obligation is not imposed upon any person who does not directly or indirectly hold himself out to the public as a guide, or directly or indirectly solicit employment as such. Every registered guide is required from time to time, as requested by the Commissioners and on blanks furnished by them, to "forward a statement to them of the number of persons he has guided in inland fishing and forest hunting during the time called for in said statement, the number of days he has been employed as a guide, and such other useful information relative to the inland fish and game, forest fires, and the preservation of the forests in the localities where he has guided, as the Commissioners may deem of importance to the State." Whenever a registered guide is convicted of a violation of the fish or game laws he shall forfeit his certificate and be debarred for one year from engaging in the business of guiding.

The purpose of the new system manifestly is to give the Commissioners, who represent the executive machinery of the game law, some measure of control over the guides, who are most directly and personally responsible for the observance or the violation of the law in the woods. No one will question that the Maine guide has it absolutely within his own control to see that the game law shall mean in the cover of the forest precisely what it does on the page of the statute book. When a man from Boston or Worcester or Providence or Albany, or New York or Philadelphia, goes into the Maine woods and takes his game out of season or by dogging it into the water, he does so, and can do so, only with the purchased connivance, encouragement and assistance of his guide. And not only this, but he dares to defy the law only because he believes that he may trust his guide and accomplice to keep mum about it afterward.

This is not saying that ninety-nine out of every hundred sportsmen who go down to Maine are not in spirit and practice observant of the laws; nor that ninety-nine guides out of every hundred are not in spirit and practice law abiding. The fact remains that the hundredth sportsman and the hundredth guide do kill an unconscionably large amount of game in forbidden ways and seasons, and it is to get control of this hundredth factor that the guide license and guide reporting, after coming out of the woods, ystem has been put into effect. If the constitutionality of the law shall be tested, doubtless the line of reasoning adopted for its defense will be to show that no new principles are involved, but that the law involves only familiar ones carried to an extreme.

The police power of the State is very broad. In relation to game and fish it may prescribe conditions as to when, how, by whom, and for what purpose they may be taken; in short, may hedge about and restrict that taking even to the point of absolute prohibition. Maine may enact that moose may not be killed at any time, or that they may be killed at certain seasons only, under conditions that the hunter be licensed or that his guide be licensed, and that the killing be reported to the officials. Guiding sportsmen is a part of hunting; as a part of hunting, it is subject to that legislation which has to do with hunting. All that requires to be shown in defense of the constitutionality of this Maine guide's law in its general character is that the statute is in the direct line of game protection.

What the new system will accomplish in the direction of eliminating from the guide's calling unworthy members remains to be proved in practice. No qualifications are named by which the Commissioners are to govern themselves in determining the fitness of an applicant; it appears to be left wholly to their discretion to declare a man fit or unfit to act as guide; and just here perhaps is the weak point in the law. We may take for granted, however, the desire and purpose of the Commissioners to exercise their discretion for the good of the cause.

The chief objection to the system on the part of the sportsman is found in a natural and quite defensible objection to having made public or a matter of record his experience in the woods. The thought that his success or his failure, his goings in and comings out, rising up and sitting down, are to be made subject of official investigation and chronicle, takes away something of the freedom and abandon which are after all the chief charm of the wilderness; and the law-abiding sportsman is quite as apt to resent this feature as is his brother who finds in it a hamper of lawlessness.

SNAP SHOTS.

MR. JAMES A. MILLER, of Denver, Colo., has submitted to Congressman John F. Shafroth a proposition with respect to the buffalo remnant in Lost Park Reservation. There are very few of these animals surviving, and the machinery of the State game protective system does not seem to be adequate to cope with the problem of their preservation. They are killed by illicit hunting in such numbers as to overcome the natural rate of increase. The end not long deferred must be extinction, unless some more adequate protection can be provided. Mr. Miller proposes that the United States cavalry stationed at Fort Logan, near the Park, shall patrol the buffalo country to keep out poachers The proposal has much to commend it. The duty would be an agreeable one for the troops, and although the actual measure of protection might not be considerable, the knowledge that United States troops were on the lookout would doubtless deter the rascally class of hunters who are now bold, because under the present remote and inadequate system of protection machinery they have nothing to fear. We trust that the matter may have favorable consideration by the Interior Department.

Something of the complications and difficulties which must always attend interstate game legislation was hinted at in the letter from Dr. Geo. W. Massamore, printed in our last issue relative to the black bass law of the Potomac. In the winter of 1895–96, the legislatures of Maryland and Virginia adopted laws providing a close season from April 15 to June 1 for Potomac black bass. The operation of the statute, however, was made contingent upon the enactment of a like law by West Virginia, and it was stipulated that before the statute could go into effect in the three States, its adoption must be proclaimed by each of the several governors. West Virginia in its turn adopted the law last winter, but the proclamation was not made in season to procure the full close in time for this year. Last week Gov. Lowndes, of Maryland, named May 19 as the first day of the close time for 1897. Even the short season thus provided will be beneficial.

The case of Rev. Dr. Owen, of Hagerstown, Md., who was up before a Williamsport justice of the peace on the charge of having caught Potomac bass out of season this year, has attracted some attention. It appears that the justice authorized the prosecution under the misconception that the Potomac black bass law was already in effect, whereas it is to be said for Dr. Owen that the law—or lack of law—was on his side, and he was guiltless of actual violation of the statute. The question comes up, whether under such circumstances, it is the duty of an angler to obey both the letter and the spirit of the law. The Maryland Legislature having enacted this statute providing for a close season on black bass, to begin on April 15, but having its operation dependent upon the adoption of a like law made by sister States, the question is whether a fisherman who governs himself by the ethics of the fraternity rather than by the strict letter of the law should refrain from black bass fishing after April 15, or whether, taking advantage of the technicality of the case, he should insist upon his right to fish. Under the circumstances, should not an angler be governed by the higher law? It is an encouraging sign of the times to observe that this opinion is held by those who have expressed themselves in the local newspapers. Long before the millennium shall be proclaimed, anglers and shooters will govern themselves by the spirit as well as the letter of the game laws. The call to do this is not uncommon For instance, on Long Island, New York, because of a bungle in the law, birds which should be unprotected from Aug. 15 to Jan. 1 are actually unprotected from Jan. 1 to Aug. 15. Observing the strict text of the prohibition, one might kill these birds in the springtime, and yet defend his action upon the ground that he was law-abiding, whereas the obligation of his profession as a sportsman would require him to abstain from shooting in the untimely season permitted by the law, even though he was thereby deprived of his sport the year around. A similar condition of affairs existed not long ago in Minnesota where certain birds were by a twist of the law protected at the seasons when they should be pursued, and were left without protection in the nesting and immature periods. Under these conditions no one who professes to be governed by an enlightened regard for the interest of protection, or even by considerations of ordinary individual decency with respect to game can do other than observe the spirit rather than the strict letter of the statute. It has been intimated that Dr. Owen will take his grievance of an unwarrantable arrest before the Grand Jury, and the justice retorts that as for him he would be content to abide by the decision of a committee of leading citizens respecting his official action. As this is a question of field ethics, it should be left to the decision of sportsmen. If Dr. Owen and the Justice would submit their sides in the FOREST AND STREAM columns we could assure them of even and exact justice at the bar of public opinion.

The establishment by the Governor of Wisconsin of a Bird Day marks a distinct advance in public opinion by one of the most progressive States in the Union, and this proclamation is likely before long to be followed by similar action in other States. Slowly, but steadily, the interest in bird protection has been growing, ever since the FOREST AND STREAM, nearly twelve years ago, originated the Audubon Society idea and started the first Audubon Society, which it carried on unaided and alone for several years. Now there are Audubon Societies in many States, and the interest in them and in their work is constantly increasing. These societies appeal to two motives: the sentimental and the economic; and gain support alike from the tender-hearted and from the hard-headed and practical. To the latter class the effective presentation of the subject in Miss Merriam's little book, "How Birds Affect the Farm and Garden," is a cogent argument, and the Massachusetts Audubon Society has distributed a large number of copies of this pamphlet with great benefit to its work.

Florida mockingbirds have been trapped, and their nests robbed, until the diminution of numbers and the silence of field, garden and woodland have awakened alarm. The Legislature now in session is considering a measure for the protection of the birds. It should be made a law; and means should be provided to make the law a force rather than a farce.

We regret to record the death of Mr. Charles E. Parker, of Meriden, Conn., vice-president of the Charles Parker Co. and a member of the firm of Parker Bros. Mr. Parker succumbed to pneumonia, on May 11; he was in his fifty-sixth year.

The Sportsman Tourist.

A HOT SPRINGS ADVENTURE.

I RESIDE in that part of northern Ohio which was formerly the Wyandotte Indian Reservation. The General Government made a treaty with the Indians in 1843 under which the red men were removed beyond the Mississippi River, and the lands were put into the market.

The result is that this portion of Ohio is much behind the other portions of the State in the way of settlement and improvements, though developing rapidly of later years.

Until a comparatively recent date game was very abundant. Deer and turkeys afforded splendid sport, in which your humble servant took a hand.

I have spent the greater part of my life here, but as game became scarce I have made numerous excursions to the West and South, where the woods, prairies and streams afforded ample sport with rod and line, dog and gun.

Having heard of the Ozark Mountains and Hot Springs of Arkansas, I made that country a visit last fall. I found good sport in the valley of Washita River. I and some genial friends were treated one beautiful moonlight night to a possum hunt by some hospitable native darkeys. Our game was roasted in good shape and served up by the colored hostess in artistic style, after which we were treated to plantation music and dancing.

The fishing in Washita River and the tributary mountain streams was quite exhilarating.

While in that region I spent some time in the pretty little city of Hot Springs, nestled in a beautiful glen, where numberless springs come boiling hot from the mountain sides.

I have been healthy, and stood backwoods life very well until age came upon me and with it an attack of rheumatism. I had read a Government report from the pen of an official scientist, describing the curative properties of the springs, I therefore went prepared to spend some time at that famous health resort.

I took up quarters at a first-class hotel and stood the fancy rates, because I had confidence in the magic of the baths and anticipated that my stay would be brief.

I consulted a physician of high standing, who thoroughly investigated my corporal system and pronounced my malady to be gout, but otherwise I had a remarkable physique for a man past three score and ten; and the gout, he said, would readily yield to treatment together with the efficacy of the baths.

I obeyed his orders implicitly and soon experienced palpable relief, but was called home before my course was completed and before the muscles of my thighs resumed their former tension and elasticity.

I enjoyed hotel life very well, and the beautiful natural scenery, the streams, the rocks and hills, so different from the level plains and woods of western Ohio, were new and delightful to me. I soon made some pleasant acquaintances with invalids and tourists, who treated me politely and made due allowance for my rural manners. They frequently laughed at my rustic jokes, and gave me liberal applause for homely anecdotes and yarns.

It was perhaps lucky for the social position which I speedily obtained that I had the forethought before leaving home to put myself in the hands of a fashionable tailor and proprietor of a gent's furnishing store, out of which I came equipped in good style, and so far as dress was concerned I stood high among the fashionable guests at the hotel. I was perhaps deficient in another respect—I never had been placed under the tuition of a French dancing master, nor did I ever have any formal instructions in personal deportment, the etiquette of the drawing room, or fashionable carriage of my person. I suppose, therefore, that I was over-dressed for one of my station in life, and my rustic movements showed the more plainly in contrast with my fine suit of clothes.

To this, on reflection, I suppose I may also attribute the adventure which I will endeavor to describe.

One evening after a stroll up Happy Hollow, where I had feasted on a violin concert by a native, with organ accompaniment, and where I reveled in the delight of the beautiful surrounding scenery, when leisurely sauntering to my hotel, I was met by a polite gentleman, who cordially grasped my hand, exclaiming:

"How do you do, Mr. Hanes? I am very glad to meet you again. Don't remember me? Why, don't you mind when I met you in ——, Ohio, and was introduced to you by Henry Robinson, the banker? By the way, I then lived in Cleveland, and still make that my headquarters, though not there much of the time. Mr. Robinson is my cousin."

The circumstance of the former introduction by Mr. Robinson had faded in my mind, but I politely concealed it. He said he could introduce me to some genial friends in Hot Springs who would contribute to the pleasure of my visit, and made an appointment to meet me the next morning at 9 o'clock on the veranda of my hotel.

I pretty nearly forgot my engagement the next morning, but my mind recurred to it and consulting my watch I found I was half an hour late. I went to the veranda, however, and there sure enough was my friend, who had the patience to wait for me—I learned from him that it was a pleasure to wait for a friend of his cousin, and he invited me to accompany him. He took me upstairs to a room in a corner building across the street immediately opposite the hotel.

I was surprised to find myself ushered into a gaudily equipped gambling room. There sat behind a faro table a well-dressed man reading a morning paper. My friend introduced me and asked for another gentleman who he had said was fond of playing whist for amusement.

The proprietor of the room said it was earlier than he usually came, but to make ourselves at home; he would doubtless soon be in.

In the meantime my friend, the cousin of Henry Robinson, began to inquire of the proprietor in regard to the game of faro, saying he had never seen it played. The genial proprietor carefully explained the game, saying it was purely a game of chance, and chances were supposed to be even; that the only margin by which the proprietor could live, pay his light, fuel and rents, was the splits. He explained to us what the splits were. He showed a small nickel box which was open at the top, except a narrow rim that kept the cards to their place; the deck of cards that were pasted in rows on the table were those on which the player bet his money. The dealer drew his cards out of the nickel box one by one, face upwards, laid the first card next to the box, which was the dealer's side, and the next card was laid in a separate pile, which was the player's side. If the card on which the player bet fell on his pile, he won; and if it fell on the dealer's side the player lost. If two cards of the same denomination came from the box together, it was a split, and the dealer got half the stake. According to mathematical investigation, the odds were 17 per cent. in favor of the dealer, which is the pittance on which he is doomed to live; although he didn't complain in that respect.

My friend's curiosity was not yet satisfied. He stepped to the next table and asked for an explanation of that device. The gentlemanly proprietor said it was roulette, and politely explained its operation. There was a concave wheel revolving horizontally, a marble ball was thrown in the wheel with an impulse in the opposite direction. The centrifugal force for some time kept the marble in the outer rim of the wheel. As it slowed down the marble approached nearer a center circle perforated with holes and the marble fell into a cell, which determined whether the outsider won or lost. There were certain chances and combinations to encourage bets against odds, with big results to the player if he took the chances; but I cannot retain it all in my memory. He next gratified my unsophisticated friend by explaining another device; but here I became confused and cannot now clearly describe its workings.

It consisted of a funnel, shaped not unlike the hour-glass carried by Father Time, with tortuous and rugous interior, and parti-colored cells below, into which a marble fell after wending its winding way from the top of the funnel. The outsider's bet was decided by the color of the cell into which the marble settled. I can't remember the name, but he said it was a Mexican game, and the chances were absolutely even.

My friend, the relative of Mr. Robinson, thereupon said he would try his hand on that game, and started by the purchase of $5 worth of ivory checks. He won. He bet on another color and won again. He continued to win. When he had several $5 stacks of chips in front of him he generously passed one of the stacks to me and told me to try my luck. I bet, and much to my surprise made marvelous winnings. Large stacks of checks were piled before both my friend and myself. The proprietor, to make sure that he had sufficient currency to avert a failure of his bank, took from his pocket several packages of National Bank notes of large denominations, each package indicating from $100, $500 to $1,000.

At this time our winnings were over $1,000 each. We bet again and our luck was amazing. We won again.

At this point the proprietor became agitated, and said the bank had a rule that they must be satisfied they were playing with persons of responsibility, who, if they should lose, could stand it. He asked my friend regarding his financial condition. The latter answered that he had plenty of means, but had not much money in his pocket.

"Have you money elsewhere, or a bank account?" asked the proprietor.

He answered that he had $30,000 on deposit—$20,000 in a Cleveland bank and $10,000 in Toledo.

The proprietor said he would require of us a deposit of $1,000 each as a guarantee that he was not playing against irresponsible parties. He didn't doubt our solvency, but it was a rule they had. He inquired of me in regard to my financial ability. I told him what was true—that I had but $10 in my pocket. He asked if I had money elsewhere. I told him I had $200 deposited at the hotel. He asked if I had a bank account. I told him I had an ample bank account in Ohio. He said it was against their rule to take bank checks of strangers, but he would waive it in our favor, as I was virtually vouched for by the friend who introduced me. Therefore, as a favor to us, he would take our checks.

Here another trouble arose. My friend had none of his blank checks with him, and I told him I was in the same fix. The proprietor appeared to be a man of versatility. He said he had blank checks that could be readily filled out for any bank, and he passed a book of blank checks to my friend, who filled out and signed his check on his Cleveland bank for $1,000. While this was going on the proprietor blandly repeated that it was a mere matter of form for the temporary show of compliance with their rules, and continued in that strain during the process of the writing. Then my unsophisticated friend passed the book of blank checks to me, saying that he was satisfied it was a mere form to go through before the banker cashed in our ivory checks or continued the play, and advised me, with a tone of friendly confidence, to put in my check with his for the temporary purpose of drawing our big winnings.

By this time it dawned on my mind that my friend would hardly conduct me to a benevolent institution in order to have a sudden fortune burst upon me. I hastily reasoned with myself, also, that if the proprietor got possession of my check he might attach more importance to it than a mere temporary matter of form, and change his mind about returning it. I further hastily reflected that my big winnings, stacked on the table before me in the shape of ivory chips, needing only the form of the banker dealing out the cash for them, ought to be a guaranty that I was temporarily, as a matter of form, good for $1,000, and I promptly and without hesitation declined to give my check. He raked in our chips and said it was lucky for him, because the bank saved that much loss.

I noticed, however, that the big veins swelled on his neck, his facial expression at once assumed a tone of disappointment, and his manly brow displayed all the hues of the rainbow.

I turned to see what comments my friend the cousin of Mr. Robinson had to make, but he had vanished. I walked out of the room with becoming dignity, reflecting on my first experience with a bunco steerer and his confederate, who most likely obtained my name and address on the hotel register, and the name of Mr. Robinson by reference to a banker's directory.

S. R. HANES.

A ST. PETERSBURG paper says that in consequence of a silly rumor that the Turks had poisoned all the herring in the ocean, the peasants in some parts of Poland refuse to eat any more of them.

BY inadvertence Mr. Amery's paper last week, describing sport in British Guiana, was assigned to British Honduras.

THE WALTON CLUB.

Editor Forest and Stream:

In these days of private preserves in the Adirondack region, when more than one-fourth of the wilderness is owned or controlled by clubs, associations or individuals, and printed notices, conspicuously posted, everywhere warn the public that no trespassing is allowed, it is refreshing to recall the time in the not very remote past when the hunter, angler and tourist were privileged to roam the woods with perfect freedom. Although there are now more than fifty of these preserves and over one million acres of land on which people are prohibited from setting foot without permission from the owners or lessees, most of them have been established within a decade. The first organization formed, or one of the first, for the purpose of maintaining a private preserve in the Adirondacks, was incorporated in 1877; so that it is only a score of years, not a quarter of a century at the most, since there were no restrictions as to where a person could hunt and fish.

Long before any preserve was established, however, there were sportsmen's clubs whose members annually visited the wilderness. The initial organization of this kind, the famous Walton Club, was founded forty years ago, and doubtless the readers of FOREST AND STREAM will be interested to learn some facts about its early history which are not generally known.

The club's membership roll contained the names of many gentlemen who were prominent in political, professional and business life, including Hon. John A. King, Governor of New York State, 1857–59; Thomas G. Alvord, Lieut.-Governor, 1865–67; Gen. R. U. Sherman, for years prominently identified with the State Commission of Fisheries; William B. Taylor, Major J. P. Goodsell and Silas Seymour, all of whom at different times held the office of State Engineer and Surveyor; Hon. Ransom Balcom, Justice of the Supreme Court; ex-Mayor Alrick Hubbell of Utica, then State Senator from the Oneida district; Hon. Thomas Jones, Jr., Hon. Ornon Archer and Major Charles M. Scholefield, Members of Assembly; George Dawson, editor of the Albany *Journal;* Lewis Gaylord Clark, for many years editor of the *Knickerbocker Magazine*, and Alfred B. Street, the poet. The club motto was "O, for a lodge in some vast wilderness."

In the winter of 1857 several gentlemen, who had been often attracted to the wilderness of northern New York by the beauty of its primitive scenery, its exhilarating and health-giving air, and the broad and fruitful field which it furnished for the exercise of the arts of the hunter and angler, for which they had congenial tastes, met in Utica and formed a society with the design of making annual trips to that inviting region, and by organization and systematic preparation and arrangement, of rendering as perfect as possible their comfort and enjoyment in the wilderness.

They gave their organization the name of the Brown's Tract Association, to denote particularly the field which was to form the center and principal circuit of their operations, which was the territory then known, geographically, as Brown's Tract, a region embracing some 200,000 acres, lying in the heart of the wilderness, studded with majestic mountains, and gemmed throughout by crystal lakes. They made their first visit to the woods in an organized body in June, 1857.

The second annual meeting of the society took place at Albany, Feb. 10, 1858. For the reason that the name was deemed as not sufficiently indicating the purpose of the organization, it was changed to the North Woods Walton Club, and articles of association were adopted, members and officers elected, and a plan of a trip for the next sporting season agreed upon. It was not the policy of the club to seek accessions to its membership. It elected no honorary members and had no "deadheads." Yet the members were glad to welcome within their circle true spirits who could share in their enthusiasm for nature's enjoyments, who could find in the breathing of God's pure air and in the contemplation of the beauties of primitive creation a sufficient recompense for the toil and privation from luxury which these enjoyments cost. In short, they desired to have associates of such confirmed faith that they could find in a bed of boughs a couch softer than down, and in a bark shanty a palace grander than any celebrated in Eastern fable. For such their arms as well as their shanties were always open. "But to the pampered son of luxury, who prizes nothing except as it ministers to his animal enjoyment; to the conceited cockney, who recognizes not God save in city fanes, who knows his fellow-man only as the tailor has made him, and to whom all else in the animal creation is but as beef in the shambles," their doors were forever closed.

The officers of the Walton Club for 1858 were: President, Gen. Richard U. Sherman, Utica; Vice-President, George Dawson, Albany; Recording Secretary, William B. Smith, Rome; Corresponding Secretary and Treasurer, Major Charles M. Scholefield, Whitesboro; Commissary, Richard U. Owens, Utica; Good Samaritan, Col. Onias P. Nellis, Whitesboro.

The articles of association adopted by the club stated its object to be "the diffusion of trout, deer, health and enjoyment among its members." The qualifications for membership were: First—A unanimous election thereto at any regular meeting. Second—An initiatory payment of $5, and the annual payment thereafter of a like sum, on or before March 1. The failure to pay a ratable assessment of expenses forfeited membership, and rendered the delinquent incapable of renewing his connection.

The fund arising from the iniatory and annual payments was devoted to the purchase of camp furniture and other articles of permanent outfit and the payment of necessary contingent expenses. Additional expenses were defrayed by assessment.

The plans of the club for 1858 provided for a trip by several detached parties to Moose River and Racquette Lake between May 20 and June 20. The region designated was then reached the most conveniently by the way of Boonville. From that place the most direct route was via the old Brown's Tract Road, then a mere bridle path through the woods, to the old Forge on Moose River; thence by alternate boating and carrying to the various points to be visited. Transportation by wagon and by pack horses was procurable in Boonville, but in order to insure the most certainty and economy it was recommended to the members of the several detached parties that proper arrangements for transportation and for boats

and guides be made through the commissary several weeks in advance.

It was proposed that the detached parties should number at least six, and their locations, with accompanying suggestions concerning other matters pertaining to the expedition, were given in substance as follows:

1. One party will be located at the head of Third Lake of the Moose River chain, which will be denominated and considered the main camp, where the club has accommodations for thirty men. This camp will form the center of all operations during the stay in the Wilderness, being a point from which either of the other camps may be reached in from four to twenty-four hours travel. 2. One at the Moose Lake, a tributary of the south branch of Moose River. 3. One at the head of Fourth Lake. 4. One at the head of Seventh Lake. 5. One at the North Branch Lakes. 6. One at the Raquette Lake.

The Third and Fourth lakes are the most easy of access, and the most convenient in every respect for camping grounds. They afford excellent trolling for the large lake trout, while the First Lake and the inlets of the Third, Fourth and Fifth lakes, all within a few hours' approach, are stocked with speckled brook trout. The low grounds bordering the south shores of these waters are favorite resorts of the deer.

Moose Lake is good trolling ground for both lake and speckled trout, and is not difficult of approach, though not as convenient as the Third or Fourth lakes.

The North Branch lakes are celebrated sporting grounds, but they are to be reached only by severe effort by land and water, and none should undertake to visit them except those inured to the hardships of the wilderness.

The Seventh Lake is in its characteristics much like the Third and Fourth lakes, though more remote from the main camp.

The Raquette Lake is famous in the geography of the Northern wilderness. It affords every variety of sport, and exhibits all the beauty of wild scenery. It is reached only by a toilsome journey by land and water, but furnishes more comfortable accommodations to the visitor than either of the other lakes, as several families reside on its shores who make provision for the entertainment of parties. Those who may wish to see the most of the wilderness, and to enjoy in the largest measure the beauty of wild scenery, are recommended to visit the Raquette.

The enthusiastic sportsman, inured to toil and hardship, will, perhaps, prefer the lakes and streams of the North Branch, where he will find ample scope for both his propensities and his powers of endurance.

Those who wish to avoid as much as possible the severer experiences of wilderness life, and at the same time have plenty of good sport with the wild denizens of the woods and waters, should prefer the Third and Fourth and the Moose Lakes. The Third and Fourth especially will be chosen by the novices. These general remarks will serve to inform the inquirer of the general plan of the expedition.

Those were the days of long wagon rides over rough and rocky roads, long carries with heavily laden pack baskets and camping accessories, primitive log rafts and open bark camps. In those times none but true sportsmen cared to visit the woods, for it was only the lover of nature who could find there sufficient reward to compensate him for the deprivations and hardships incident to a wilderness trip. What was then considered the proper kind of an outfit for the hunter and angler would now be looked upon as decidedly eccentric by the average visitor in the Adirondack region. Of course, many of the articles then considered requisite to forest life would be useful now, and some of them necessary, to the person camping out, but at the present time the percentage of people who spend their vacations in bark shanties is very small. By far the greater number find accommodations at the hotels and boarding houses, or occupy cottages, and naturally their needs differ quite materially from those of the Adirondack visitors of forty years ago. In this connection it is interesting to note just what was required for a complete outfit in those early times.

The Walton Club recommended that each member should provide himself with fishing tackle and a good thick blanket. One rifle or double-barreled fowling piece, or fowling and rifle combined, would suffice for every two persons. Small arms were not considered requisite for either sport or safety. Those who carried firearms were advised to provide themselves with an ample supply of ammunition.

The articles of clothing recommended were as follows: 2 thin flannel or merino undershirts, 2 red flannel outer shirts with pockets, 2 pairs of drawers, 4 pairs of woolen socks, 2 short hunting coats or roundabouts with ample pockets, 2 pairs of woolen pantaloons, 1 pair of rubber overalls, 1 rubber coat, 1 Kossuth hat, 1 pair campaign boots, 1 pair laced wading shoes with hob-nailed soles, 1 pair of leather slippers, and 1 mosquito cap. This is a cap of oil silk, made to fit the head closely and to cover the forehead, ears and cheeks, leaving only the eyes, nose, mouth and chin exposed. It should have flaps which can be tucked in the collar of the shirt, and thus protect the neck from the insects. In the above list is included the suit to be worn, and these articles, with two or more strong towels, a cake of Castile soap, a pocket-comb, tooth-brush, a pocket-knife, suitable for dressing fish or game, a pocket drinking flask, a water-proof box of matches, and a small vial containing equal parts of oil of pennyroyal and spirits of camphor as a preventive or antidote to the bites of insects, form all that is necessary about the person. A few articles of standard medicines, particularly in the case of individuals subject to sudden attacks of illness, might prove very serviceable. For safe and convenient carriage, the articles not worn about the person should be packed in a stout canvas or rubber bag, impervious to rain. All superfluous articles of personal baggage should be strong and compact.

The articles of fishing tackle required by each member of the party were specified as follows: One fishing rod, such as are made for general use, being medium as to weight and elasticity, with reel and trout line; a trolling rod with reel and a line of 150ft. or more, will also be found convenient; one or more hand-lines for trolling; a hauser-laid line of hemp is preferable; it should be of $\frac{1}{16}$in. diameter, and not less than 150ft. long. Tackle for fly-fishing may be taken by those who are adepts at that branch of sport, but it is not at all requisite to success.

At least six gangs of hooks should be provided for trolling. They should be composed thus: Three hooks, No. 0, Limerick, should be firmly fixed on the end of gimp in the form of a grapple. An inch and a half above this should be fastened two other hooks in similar form, but of one or two sizes smaller. A still smaller hook should be tied on a similar distance above. At a distance of 6in. from the last hook a swivel should be attached to the gimp. Swivel sinkers should be provided of various sizes, from 1 to 4oz., to be used with the gangs, which are for trolling with minnows. A Buel spoon, or spinner, of each of the sizes Nos. 3, 4 and 5, will also be found convenient for trolling.

For buoy fishing, lines and sinkers of the same description will answer. The size of hooks for that purpose should be that of cod hooks. The hooks of the Kinsey pattern are the best. For speckled trout fishing, the following hooks should be provided; O'Shaughnessy Limerick on snoods, one dozen each, Nos. 0, 1, 2 and 3; or the same number of Kinsey hooks, Nos. 10, 11, 12 and 13. The Carlisle hooks are preferred by many. For sinkers, buck and pigeon shot, split, are sufficient. Each person should have a tin bait-box, with a strap to buckle round the body, and also a minnow hook and line. Those who may have gaffs would do well to take them. There should be a 15lb. fishing basket to each man. Worm bait will be furnished by the commissary.

In regard to camps and supplies this statement was made: At all the camps above proposed, good shanty accommodations exist. They will need but trifling repairs, and new bedding with boughs. Sufficient cooking utensils will be provided for all the camps. These, with the requisite supply of articles of consumption, both solid and liquid, will be distributed to each party at Arnold's, near the Forge, or at the main camp, where all the parties will rendezvous preparatory to going to their separate stations. The articles of provisions furnished will embrace all the substantials requisite for the supply of a good plain table. Those who are fastidious in the use of the "Virginia weed" will provide their own cigars, as only plain tobacco and clay pipes will be furnished in this department.

It is very requisite to the object of a trip in the wilderness that the services of experienced and faithful guides should be secured, as upon them must necessarily devolve not only the piloting of the parties through the mazes of the wilderness, but most of the heavy labor in field and camp. Those who have visited this region before will have their acquaintances and preferences, and will, therefore, need no suggestions as to choice. But for the benefit of newcomers the names of the following guides, with their respective post office addresses, are given, as those from whom a choice may be safely made. There are many others, readily attainable, and perhaps as meritorious in character as those suggested; but these have been tried by members of the club on various trips, and are known to be honest, capable and faithful: Otis Arnold, Edward Arnold, Dwight Grant, Francis Grant, San. Sperry, Boonville; George Morse, Little Falls; Frank French, Morehouseville; Alonzo Wood, William Wood, Raquette Lake. The wages of the guides are usually $1.50 cents per day, including use of boat. The expenses of the trip are estimated at $30 to each man.

The formal organization of the North Woods Walton Club was celebrated with a banquet. Toasts were feelingly and, in some cases, eloquently responded to. The reminiscences of wilderness experience, drawn out by the inspiration of the occasion, were listened to with great interest, recalling, as they did to all, romantic pictures, wild adventures and pleasant recollections of "The days when we went gipsying, a long time ago." With the sentiment, the song and story the hours passed cheerily away, and when the time of separation came all felt, with perhaps pardonable conceit, that "the fishing company is the best company." The regular toasts were highly entertaining:

1. *The Night We Celebrate:* The memory of Nimrod and Izaak Walton unite with the remembrance of our own wild wanderings to make it glorious.

2. *The President of the United States:* An old Buck, ever neglecting to take any doe, he must be considered *ill bread.* (James Buchanan was President in 1858.)

3. *The Governor of the State of New York:* An excellent man. May it be written in the third book of Kings how this King, by careful attention to duty and constant improvement of time, soared from the humble position of Governor of the State to that of King-fisher among the Northern mountains. (It will be remembered that John A. King, a member of the club, was Governor of New York State.)

4. *The Empire State:* Ahead of the world for beautiful women, brave men, speckled trout, and skill to catch them.

5. *The other States:* Well enough in their way. Let them keep out of ours. We give them all the road and take to the woods.

6. *Blackflies, Mosquitoes and Punkies:* A cosmopolitan police, detailed by Divine Providence, to guard the great hunting park of the Republic from the incursions of cockney poachers and murderers of deer in summer. Long may they wave.

7. *The Speckled Trout:* Whether leaping the foamy cascades in early June, enjoying his *siêstas* in the cold, crystal spring-fountains in summer, or lying in glorious state upon the birch-bark table of the sportsman, he is everywhere the truly royal and princely head of the great fish nation. May his shadow and substance never grow less.

8. *Our Deer Friends in the Mountains:* Long may they roam over the breezy cliffs and among the fragrant forests of our great free wilderness. Cursed be he who murders them for money, or in mere wanton sport.

9. *Fly Medicine:* The only medicine that a true sportsman ever requires.

10. *The Mountains, Forests, Lakes and Streamlets of the Northern Wilderness:* The shrine, the school and playground of the true man. May their haunts never be desecrated by the scoundrel feet of the man who plies the rod and gun for gain.

11. *The Press of the Wilderness:* Elegantly illustrated by lodging seven men in a shanty built for two. May it never lack for the right kind of matter.

12. *Lewis Gay* (Lord Clark), of the *Knickerbocker Magazine.* A truer man or a gayer lord never was known in our great hunting park. May he never fail to be with us in our forest home.

Volunteer toasts followed, and this feature of the post-prandial session was also very enjoyable. They included the following:

By Alfred B. Street—*The Northern Wilderness:* Although but a shred of wild nature's mantle, which she left in her flight toward the Pacific, before the sound of the axe—it covers mountains whose summits tear the clouds asunder, and skirts lakes in whose congregated waters all the cities in the State could be whelmed, and whose grandeur and beauty constitute the region as first of "all that the genial ray of morning gilds, and all that echoes to the song of even."

By Hon. O. Archer—*The President of the North Woods Walton Club:* Him of the cool head and warm heart; whose talents are equal to any emergency, and whose social qualities are not excelled—Gen. Richard U. Sherman.

By Major Scholefield—*Our Worthy Vice-President, the Ace of Trampers, George Dawson:* We can count him here; in the woods, being constantly tramping, no man can count him at all. Long may he wade.

By George Dawson—*Alfred B. Street:* The descriptive poet of the forests and rural life of America.

By Major J. H. Ledlie—*A. D. Barber:* For a generous heart, an open hand and good social feeling, he has no superior. May he learn, by and by, to catch trout.

The Walton Club was in existence several years, and its members annually visited the Fulton Chain, Moose River and Racquette Lake region. W. E. Wolcott.

Utica, N. Y., April 7.

Natural History.

FOREIGN SONG BIRDS IN OREGON.

Portland, Ore., May 5.—*Editor Forest and Stream:* Answering yours of April 30, requesting information regarding the introduction of foreign song birds into Oregon and the measure of success attending the enterprise, permit me to say: I have just had a lengthy and most agreeable chat with Mr. C F. Pfluger, Secretary of the Society for the Introduction of useful German Song Birds, and to whom is due about all the credit of its very successful efforts. And I herewith append a summary of my investigations and personal observations.

In 1889 and 1892 the society introducted here 400 pairs of the following species of German song birds, to wit: song thrushes, black thrushes, skylarks, woodlarks, goldfinches, chaffinches, ziskins, greenfinches, bullfinches, crossbeaks, black starlings, robin redbreasts, linnets, singing quails, goldhammers, linnets, forest finches, and of the plain and black headed nightingales. The funds for defraying the cost of importation and other incidental expenses, and for the keeping of the birds through the winter were subscribed by the citizens of Portland and other localities in Oregon. To import the first lot cost about $1,400. After the birds were received they were placed on exhibition at the Exposition building for some days, and about $400 was realized, which was applied toward the expense. Subsequently all the birds, with the exception of the sky and wood larks, were liberated near the City Park. The latter birds were turned loose about the fields here in the Willamette Valley.

The late Mr. Frank Dekum was a warm friend of the little warbling strangers and subscribed most liberally, $250 at the inception of the project and afterwards several hundred dollars in furtherance of the scheme. Its successful consummation was a source of great satisfaction to him, and we of Portland have much to thank him for in this matter.

When the second invoice of birds arrived it was late in the season, and Mr. Dekum caused a very large aviary to be built near his residence where all the sweet little strangers were safely housed and cared for during the winter. The birds were all liberated early in April. Up to that time (Spring of 1893) the total cost of importing the birds amounted to $2,100.

Since these birds were given their liberty the most encouraging results have followed. It is generally believed that the two varieties of nightingales have become extinct, as few survived the long trip and none have since been seen. All the other varieties have multiplied with great rapidity. This is true especially of the skylarks. These birds rear from two to four broods every season. Hundreds of them are seen in the fields and meadows in and about East Portland, and their sweet songs are a source of delight to all of us. About Rooster Rock, twenty-five miles east of Portland on the Columbia, great numbers are to be seen. In fact the whole Willamette Valley from Portland to Roseburg is full of them, probably not as plentiful as the ring-neck pheasant but plentiful enough for all practical purposes. In and about the city these sweet little songsters are in considerable abundance. A number of the black starling make their homes about the high school building. The woodlarks are also in evidence to a pleasing extent.

There is a special State law in force for the protection of these imported birds. They are all friends of the farmer, especially of the orchardists. They are the tireless and unremitting enemy of every species of bug and worm infesting vegetables, crops, fruit, etc. And I can say "without fear of successful contradiction" that they have voracious appetites. Most of them have a liking for a mixed diet, and my bill at the end of each month for bird provender is suggestive to say the least. But I have ample recompense when I go home in the evening, eat my dinner, light my cigar, put my feet up on the railing of the porch and listen to their earnest little reproaches and suggestions right at my very elbow. S. H. Greene.

Those Orioles.

St. Augustine, Fla., May 9.—*Editor Forest and Stream:* Before the grapes are ripe again, I mean to crook the hinges of my knees and apologize to Mr. John Burroughs for an attack I made on him a year or two ago for oriole murder.

They are bewitchingly beautiful birds, and I have always had such a feeling of affection for them, that I thought I ought to enter the lists in their defense; but my experience with them last summer softened my feeling toward Mr. Burroughs for the murder of the innocents. I had grapes, as he had (though they were not so precious as his), and if the little villains could have devoured, in a decent and mannerly way, enough to satisfy their hunger, they would have been welcome to all they wanted; but every grape in a bunch would be punctured, and if they had been intended for market the whole crop would have been utterly worthless.

We have here, as a summer bird, the Baltimore oriole, and as damager of fruit he is worse than any catbird that ever broke an egg-shell. The black and orange beauty does not stop with us, and I have not seen a single passing bird this spring. Didymus.

EFFECT OF MUSIC ON CAGED ANIMALS

Some time ago the writer was induced to experiment upon the animals in the Zoological Garden in Lincoln Park, with respect to the effect of music upon them. The experiments were made at 6 o'clock P.M., two hours after feeding, and the instrument used was a violin.

Puma, Panther (*Felis concolor*) Linné.—When the music first began two specimens of this species were resting in the back of the cage, half asleep. At the first sound of the violin they started up, and could not for a time locate the sound, the writer being some distance from the cage. They showed, however, that they liked the sound, and when the player came as close as he could to the cage, they manifested their appreciation by lying down at full length and placing their heads between their paws. During this time the music had been of slow and sweet pieces, such as "Home, Sweet Home," "Annie Laurie," etc. Suddenly, the player changed "Home, Sweet Home" to the "Irish Washerwoman." At this change the panthers worked their tails nervously and twitched their ears, and as it was kept up for a time, they got up and began pacing up and down the cage. From this action the writer judged that either the jig music, being sharp and piercing, hurt their ears, or that it was distasteful. After playing several jigs of this kind the player again relapsed into soft strains, when the animals slowly settled down in their old positions.

Jaguar (*Felis onca*) Linné.—This animal behaved much as did the panthers. While the jigs were being played he acted in a very nervous manner, jumping from a shelf to the floor of the cage and back again. Soft music seemed to quiet him. As the writer was leaving the jaguar's cage, having ceased playing for the time being, the animal walked up to the corner and reached out with his paw toward the player as far as he could. Whether this action was intended to call the player back, or was simply done to catch hold of him, as many animals will do if a person gets too near to the cage, the writer cannot say. It was a curious fact that when the paw was extended the claws were all *retracted*.

Leopard (*Felis leopardus*) Linné.—Two specimens of this species did not seem to notice the music to any extent, except at first, as a matter of curiosity.

Lion (*Felis leo*) Linné.—The lioness Juno, with her three cubs, occupied a large cage, and the player's attention was next directed to these. While the music was being played to the other animals the lioness and cubs had been listening and watching, the cubs playing about their mother's haunches. As the violinist drew near the cage the cubs scampered behind their parent, the latter greeting the player with a gentle hiss. As the music struck up a lively jig the cubs stood upon their hind legs and peeped at the player over her haunches. They appeared very curious and much puzzled, hearing these sounds for the first time. Desiring to test their appreciation, the player slowly backed away from the cage, playing all the time; as he retreated, the cubs gradually came to the front of the cage, and the mother crawled to the front and placed her two fore-paws between the bars and stuck her nose through as far as she could. After retiring to the side of the hall the player again moved toward the cage, but the family did not move, nor evidence any displeasure when he came very close to them, in fact, so close that he almost touched the great paws of the lioness. As he played the soft strains of "Home, Sweet Home" the cubs and mother sat motionless in rapt attention, the former turning their heads from side to side. A jig played very rapidly caused the cubs to prance about in a lively manner.

Bengal Tiger (*Felis tigris*) Buff.—The music had a peculiar effect on the pair of animals in this cage. The male paid absolutely no attention to it, save glancing in the direction of the player and giving a vicious snarl. The female, however, acted as though she liked it, for she jumped upon a shelf and placed her paws and nose through the bars as described under the last species. A second experiment with the male, later, when he was stretched out upon the floor of the cage, caused him simply to look at the player, twitch his ears, and viciously spit and snarl at him. The female, however, on all occasions showed that music was not distasteful to her and that it was, on the whole, pleasing.

Hyena (*Hyena vulgaris*) Buff.—This animal is probably the most cowardly of all the mammals, and the only effect which music had upon two individuals was to cause them to retreat to the farther end of the cage and try to squeeze out between the bars. A lively jig frightened them nearly to death, and made them tremble in every limb. Strange to say, however, they did not howl or make the least noise.

Monkeys (*Quadrumana*, Genus *Cynocephalus*).—The monkeys evidenced great curiosity at the music, but did not seem to show either pleasure or displeasure at the sounds. A South American Sooty Mangabey, however, seemed to be rather pleased with the strains, particularly the jigs. This animal is of a quarrelsome disposition, and is therefore kept separate from the other monkeys. It was thought by Mr. Sweeney, the keeper, that the sounds might awaken a feeling of anger in him, but such was not the case. As the violinist drew away, he followed as far as his cage would allow. A spark of reason was observed in this animal. His cage is of glass all around, and in order to hear the music better he placed his ear to a crack in the door. This he did several times as the player drew near or went farther from the cage. The monkeys confined in the larger cage, also of glass, formed themselves in a broken semicircle about that part of the cage nearest the violinist, and looked at him in apparent wonder. As he moved away from them, they arose from their sitting posture with one accord, and followed him along the side of the cage. This was probably simply curiosity, although the music may have given them some pleasurable sensations. On the whole, the monkeys did not show as much intelligence as might have been expected from their high position in the scale of nature.

Brown and White Pelicans (*Pilecanus fuscus*) Linné, and (*P. erythrorhynchus*) Gm.—The pen containing these birds is situated next to the monkey cage, and the music was next tried upon them. The effect was somewhat startling, for they all began to jump about, flap their wings, and snap their huge beaks; this might, perhaps, be called dancing. When the violinist drew near the cage they snapped at him with their beaks.

The other birds in the animal house paid very little attention to the music, partly, perhaps, because they were sleepy. Several varieties of parrots, herons and smaller birds were tried in turn, but without producing any results worthy of mention.

Coyote (*Canis latrans*) Say.—The last experiment tried was upon a den of coyotes in the park. When the playing began all the animals were in their holes, but the first note had hardly been struck when they came running out, and raced up and down their den until they had located the sounds. When this was done they all squatted in a semicircle about the violinist he having approached the bars of the den as near as possible, and sat in silence listening to the music. When it ceased they ran up to the player and pawed at him through the bars, indicating as plainly as possible that they wished to hear more. When he began to play again they again silently formed in a semicircle. This experiment was tried a number of times, but always with the same result. During this time not a sound was uttered by the coyotes, but a wolf in the den adjoining howled lustily. Here, as in the other cases, soft, sweet music seemed to be better appreciated than loud, harsh music.

Beside music made up of regular pieces, all sorts of sounds were made by the violinist—screeches, piercing notes, imitations of a cat, cow, rooster crowing and pig squealing, but these did not seem to have much effect. The loud, harsh, and piercing notes seemed to affect their ears, for they moved them about nervously as though the noise hurt the sensitive nerves. To sum up general impressions, slow and soft music was received, as a rule, with more signs of pleasure than the lively jigs. The females, also, seemed to pay more attention to the music, and to be more pleased with it, than were the males. The nocturnal mammals were more interested than were the diurnal birds. This was probably due to the fact that the experiment was tried after dark, when the animal house was lighted only by electricity. It was a curious and interesting fact that the whole performance was conducted without any noise other than an occasional grunt from the lions. The experiment is worthy of repetition, and should be made at different times during the day, as in the early morning and at noon, just before and after feeding, etc., to see whether or not these conditions have any effect upon the result. The writer is convinced that many interesting and valuable facts may be learned by experiments of this character.—*Frank Collins Baker, in American Naturalist.*

THE LOST PARK BUFFALO HERD.

Denver, Col., May 10.—*Editor Forest and Stream:* The writer of the inclosed clipping, Mr. J. A. Miller, is clerk of the U S Court in this district, and has held that office for some twenty years. I think his estimate of the number of wild buffalo in the Lost Park herd is probably too high. We have in the State also another herd, or, at least, we did have not long ago—of probably not more than ten or fifteen. They increase very slowly, probably because of long isolation and close in-breeding.

The Yellowstone herd appears to be about exterminated.

Wm N. Byers

The Secretary of the Interior at Washington, says the Denver *Republican*, has under consideration a project which will hereafter furnish some of the Fort Logan cavalrymen with a novel variety of active duty in the summer and fall seasons. It is that a detail of regular army troopers be told off to guard the herd of buffalo which exists in Lost Park, Colorado. There are still about forty of these rare beasts alive, but if some immediate precaution is not taken to protect them against the depredations of pot-hunters they will speedily be exterminated. Late last fall one buffalo was found dying at a remote distance from its fellows, having been wounded a number of times by rifle bullets. It was put out of pain by a deputy game warden, and its stuffed frame is now among the collection of rarities in the rooms of the State Historical society.

This incident led to the discovery that several others of the herd had been killed during the preceding summer. No trace of the marauders who did the killing could be discovered, nor could any effective means be devised by the State Game Warden to guard against them in future. A good deal of indignation was aroused thereat among sportsmen and others who are interested in preserving Colorado's rapidly dwindling buffalo. As a result the scheme to use cavalrymen was concocted, and James A. Miller, Clerk of the Supreme Court, was delegated to communicate with Congressman Shafroth on the subject.

This action was taken by Mr. Miller on the 5th of last month, and yesterday he received from Congressman Shafroth a reply to his letter, inclosing a statement from the United States Adjutant General's office to the effect that the military buffalo warden's proposal was under consideration by the United States Department of the Interior.

Mr. Miller's Letter.

The following correspondence gives the outlines of Mr. Miller's scheme for saving the Lost Park buffalo and the progress that has been made in putting it into effect:

"Denver, April 5, 1897.—*Hon. John F. Shafroth, Washington, D. C.:* My Dear Sir—You will pardon me for trespassing on your time at this, your busy days, but the matter I desire to call your attention to being in the interest of our people, I know you will patiently consider it, and trust you will be able to secure the relief.

"Some years ago that large tract of country lying between the forks of the Platte River above Platte Cañon, and extending west and south so as to include Lost Park, was set aside and designated as Lost Park Reservation. It is covered with fine timber, interspersed with beautiful streams abounding in trout, and supplied from time to time with fry as necessity requires. There are many deer, and possibly a few elk living in the park, but they are rapidly disappearing before the incursions of hunting parties.

"The park also contains the only herd of buffalo in the State, the increase of which about keeps pace with the slaughter. In fact, all game is being killed off, and the fish are disappearing faster from their illegitimate destruction by dynamite, etc., than they are replenished. Only last year a herd of five buffalo were driven over to near the town of Buffalo Park, and a fine bull killed by the miscreants. The investigation by the State Game Warden resulted in the usual report—killed by unknown parties.

"It has occurred to me that this park being so near to the military post—Fort Logan—a detail of cavalry from that post might be assigned to the protection of the game, timber, etc.—say eight or ten men—changing them from time to time; and that the change for the soldiers would be not only a recreation to them, but a great protection to the reservation. They might, by their own labor, build cabins scattered through the reservation for their use, so that it could be thoroughly patrolled, and a sure protection afforded against the devastation.

"Don't you suppose by application to the War Department, or through our department commander, that you could effect this and have the matter arranged?

"Let me hear your views on this matter, and if anything is determined upon for this year it should have early action, as the season for camping, hunting and fishing expeditions is near at hand.

"I can see no objection to the suggestion offered, and it looks as though it would be perfectly feasible, considering the nearness of Fort Logan, and the little expense necessary to carry it out. The mere experience of the 'blue coats' throughout the park would have a tendency to keep out or hold in subjection that lawless element that is so destructive to the games, and who set fires in the forests. Respectfully,

"James. A. Miller."

Congressman Shafroth's Answer.

"*James A. Miller, Esq., Clerk of the Supreme Court, Denver, Col.:*

"My Dear Sir - Yours of the 26th inst. received, and in reply thereto will say that I received your former letter relative to Lost Park reservation some time ago, and immediately submitted the same to the Secretary of War. I delayed writing to you for the reason that I expected every day to hear from the department, but as I have not been notified concerning it, I will again look into the matter. Yours truly,

John F Shafroth."

Congressman Shafroth's reply from the War Department, received after the above letter had been written, is as follows:

"*Hon. John F. Shafroth, House of Representatives:*

"Sir—I have the honor to inform you, in reply to your inquiry of the 30th ultimo, that the communication of James A. Miller, of Denver, Col., requesting a detail of troops from Fort Logan to protect the Lost Park Reservation, near that post, which was referred by you to this Department, was laid before the Secretary of War, and by him referred to the Secretary of the Interior, to whose department the subject-matter pertains. No reply has yet been received from the Department of the Interior. Very respectfully,

"J. O. Gilmore,

"Assistant Adjutant-General."

SOUL IN ANIMALS AND PLANTS.

"Life and Immortality, or Soul in Plants and Animals," is the title of a new and well illustrated work of 489 pages, treating on the immortality of all life, animal and vegetable. Mr. Thomas R. Gentry, the author, is no novice in authorship, he having written several other works on natural history. The theme is handled with skillful simplicity. There is no striving for the abstruse and mystifying. The similarity and relationship of animal and vegetable life are brought home to the reader by a series of chapters on the lives, habits, mentality of the dwellers in earth, air and water. The first chapter is devoted to cleaning up the ground in respect to life and its conditions. He explains that mineral objects are devoid of life, exhibiting only purely physical and chemical phenomena, and showing no tendency to periodic changes of any kind. Then, treating of plants and animals, he says: "But objects belonging to the vegetable and animal kingdoms differ markedly from inert, lifeless, mineral matter. Carbon, hydrogen, oxygen and nitrogen are the most important of the few chemical elements which enter into their composition, and these elements are combined into complex organic compounds, which always contain a large percentage of water, are very unstable and are prone to spontaneous decomposition. They are composed of heterogeneous but related parts, termed organs; the objects possessing them being called organized bodies. Some of the lowest forms of animals have bodies whose substance is so uniform that they exhibit no definite organs, but this exception does not affect the general value of this distinction. They are always more or less definite in shape, presenting concave and convex surfaces, and being limited by curved lines. When they increase in size, or grow, as we properly term it, it is not by the addition of particles from the outside, but by the reception of foreign matter into their interior and its consequent assimilation. Certain periodic changes, which follow a definite and discoverable order, are invariably passed through by organic bodies. These changes constitute what is known as life. All the objects there which fulfill these conditions are said to be alive, and they all appertain either to the vegetable or the animal kingdom. * * * Now that we have divided all organized bodies into plants and animals, it becomes necessary to inquire into the differences which subsist between them, and which will enable us to separate the kindred sciences of Botany and Zoölogy. Nothing was thought so easy by older observers as the determination of the animal or vegetable nature of any given organism, but, in point of fact, no hard-and-fast line can be drawn, in the existing state of our knowledge, between the animal and vegetable kingdoms, and it is sometimes difficult, or even impossible, to decide with positiveness whether we are dealing with a plant or an animal. In the higher order of the two kingdoms, there is no difficulty in reaching a decision, the higher animals being readily separated from the higher plants by the possession of a nervous system, of a locomotive power which can be voluntarily exercised, and of an internal cavity adapted for the reception and digestion of solid food. No so-called nervous system or organs of sense are possessed by the higher plants, although some of them manifest conscious or intelligent action, nor are they capable of voluntary changes of place, nor provided with any definite internal cavity, their food being generally fluid or gaseous. Descending the scale to the very bottom, we reach a class of animals, the Protozoa, which cannot be separated in many cases from the Protophyta by these distinctions, since many of the former have no digestive cavity nor the slightest trace of a nervous system, while many of the latter possess the power of active locomotion. As to external configuration, no certain rules can be laid down for separating animals and plants, either in their earlier stages or in their maturity, being exactly similar in form to some of the lower animals. This is the case with some of the Algæ which resemble very closely in form certain Infusorian animalcules. Again, many undoubted animals which are rooted to solid objects in their adult state, are so plant-like in appearance as to be popularly regarded as vegetables. The Sea-firs and the more highly organized Flustras or Seamats, which are usually considered as sea-weeds by seaside visitors, are a few of many examples that might be taken from the so-called Hydroid Zoöphytes. No decided distinction between animals and plants can be drawn as to their minute internal structure, both alike consisting of molecules, of cells or of fibers. * * * Before the invention of the microscope, no independent voluntary movements, if we except the opening and closure of flowers and their turning toward the sun, the drooping of the leaves of sensitive plants under irritation, and some other kindred phenomena, were known in plants. Now, however, we know of many plants which are endowed, either when young or throughout life, with the

power of effecting voluntary movements apparently as spontaneous and independent as those performed by the lower animals, the movement being brought about by means of little vibrating cilia, or hairs, with which a part or the whole of the surface is furnished. When it is added that many animals are permanently rooted, in their fully grown condition, to solid objects, it will at once be apparent that no absolute distinction can be made between animals and plants merely because of the presence or absence of independent locomotive power."

The author continues at some length in the first chapter to show the common life properties of plants and animals, thus concisely presenting the groundwork of his theme. The chapters following teem with most useful and interesting information on the habits of plants and animals, showing infinite research and the most painstaking care in its presentation. The animal and vegetable life in its commonplace forms, as seen by the ordinary person, is shown to be vague and fragmentary. To slime, so often seen in puddles and gutters, and which is by most people considered as being anything but living matter, he attributes intelligence. He says: "Nothing can be less animal like than one of these shapeless pieces of pure protoplasm, yet under a microscope of strong power it may be seen moving lazily along by pulling out a thick finger of slime and then letting all the rest of its body flow after it. When coming into contact with food it may be said to flow over it, dissolving the soft parts and sending out the hard, indigestible refuse anywhere, no matter where, for its body is devoid of skin, being merely one general mass of homogeneous slime. * * * And yet by means of the wonderful gift of life with which the all-wise omnipotence has endowed it, this slime-drop lives, and breathes, and eats, and increases, shrinks away when you touch it, feels for its food, and moves from place to place, changing its shape to form limbs and feeling threads, which are let into the general organism when they have served the purpose of their existing, only to be succeeded by others as short-lived as themselves when necessity requires their development * * * Minute jelly plants that live in the water and even higher animals than itself constitute its food. The presence of an animal with a shell does not deter it from attack, for it is just as able to deal with it as with the softer, shell-like kinds, sucking their jelly like contents and discarding the empty, innutritious shells."

The intelligence and habits of life of the common earthworm are most interestingly described. No less interesting are the chapters on Plants that Feed on Insects, Primitive Lasso-throwers, Five-Fingered Jack on the Oyster, Fiddler and Hermit Crabs, Funnel-Web Builder, Book Lovers Youee-up, or Ant lion, Tower Building Cicada, Honey-dew Milch Cows of the Ants, Living Artillery, Bright and Shining Ones (beetles), Luna Moths, Basket Carriers, Honey-Producing Caterpillars, Hibernating Butterflies, Leaf-Cutter Bee, Ants' Battles, Nest-Building Fishes, Eels, Rana and Bufo, Snakes, House Bearing Reptiles, Summer Duck, Woodcock, Piping Plover, Bob White, Ruffed Grouse, Domestic Turkeys, American Osprey, Turkey Buzzard, Curious Nests, Squirrel, Canine Sagacity, Feline Intelligence, Monkeys, in treating all of which the author contents himself with describing their wonderful methods in securing food, protecting themselves from enemies, caring for their young and preserving their existence. These subjects occupy by far the greater part of the work, but admirably serve the author's purpose, which is more fully set forth in the closing chapters, the first of which, "Untutored Man," describes the animal life, inferior physique and dull intelligence of the native Australian, concerning whom he sums up in this wise: "By competent critics the Australian is pronounced to be the most degraded of human beings, and the lowest type of man. In reason, love, generosity conscience and mere responsibility he is the inferior of many of the lower animals, and in the erection of a house for comfort, shelter and security he is surpassed by creatures even as low in the scale as the worms and insects. It is true, when hunger has to be met, that he has shown some skill in the manufacture of implements necessary to the obtainment of food, and also in resisting the attacks of his own kind and of the natural enemies by which he is surrounded. There is no doubt that he is well satisfied with his condition in life, and could hardly be induced to exchange it for another."

The next chapter, "Living Souls," is treated mostly from a Scriptural standpoint, and as plants breathe and therefore have the breath of life, he concludes that "It will be obvious that plants are living, breathing frames, or bodies of life, and hence are as much entitled to be considered as living souls as animals are. The 'consciousness of plants' is shown by the manner in which their tendrils seek or avoid light, and the manner in which they grasp and curl quickly around an object and cling to it, a similar trait being observed in climbing plants; also the manner in which the roots avoid obstacles in the soil and quickly follow the lines of least resistance, and in taking advantage of moisture and better soil, and the effects of light and gravitation, the sensitiveness of certain leaves, which will fold about insects or bits of meat and digest them, while mineral substances placed on the leaves have no effect upon them. The migratory habits of other plants, the changed manner of plants at night, in the rain or in the light," etc., which the author sums up as follows: "Concluding, then, let me aver that no plant can exist or fulfill its allotted part in the drama of life, without the possession of some form or degree of consciousness."

Of "Mind in Animals," the author to prove his position, cites numerous intelligent acts performed by domestic and wild animals. He further shows that they have many of the emotions—jealousy, pride, anger, revenge, shame, etc.,—and the moral responsibility common to mankind. He cites the work of Rev. J. G. Wood, entitled "Man and Beast Here and Hereafter," in support of the moral responsibility of animals. The chapter on "Life Progressive" treats of evolutionary processes, while that on the "Survival of the Fittest" follows closely on the lines of Darwin "Man's Pre-eminence" is treated as being from misapprehension of the facts, and the chapter on "Future Life" maintains that there is nothing in the Scriptures prohibiting immortality to all life. However much the reader may agree or disagree in respect to the author's conclusions, a perusal of the work will bring knowledge gathered from a vast and varied field.

More Hummingbird Phantasies.

Editor Forest and Stream:

One of your brother editors explained to me why so many funny little Münchausenisms got into print. He says many women and young girls make a little pin-money by writing for the papers, and when they think of a subject they go to work with the intention of making it interesting, and if they cannot do it by fair means they do not hesitate to do it by sacrificing truth. As a sample of such inventive stuff, I inclose a clipping from the San Francisco *Chronicle* ("not necessarily for publication") that would make a commonplace liar like Ananias hide his diminished head. I have lived and studied many weary years, but if there is any truth in this report I have a great deal to learn about the ways and means of even my special pets, the hummingbirds. This author says: "When the steamer Wallawalla was fifteen miles off Cape Mendocino, on her way to this port, at least 250 gorgeously plumed hummingbirds flocked out of the skies upon the headgear of female passengers * * * The birds were hungry, and many of them bored into the multi-colored millinery, etc. * * * Crumbs and pans of water were set out, and the birds ate until stuffed so that they rolled over." Rolled over is good, and so are crumbs and pans of water, but if they had thought of mutton chops so many of them need not have died of exhaustion so soon after reaching the ship."

There's nothing like mutton chops when a hummingbird is hungry. Moreover, "there were some odd incidents connected with the peculiar flight of the beautiful birds. W. S. McFarland, of Oakland, was promenading the deck with a lady when the birds struck the ship. One flew against his ear and stuck there. (Query—Did he have wax on his ear?) Frightened at the blow of the bird, Mr. McFarland ran into the cabin in great excitement. (Query—What became of the lady?) Third mate Hogan had a similar experience. One of the birds flew into his ear and another in his moustache, and so scared Hogan that he thought he was bewitched." Now, if the Greeks would send for these heroes and place them in the Pass of Thermopylæ, the Turks could never get to Athens. DIDYMUS.

ST. AUGUSTINE.

The Bobolinks in Florida.

INTERLACHEN, Fla., May 10.—Since about March 1 several flocks of rice birds have "camped" around here, flitting, circling and lighting, seemingly too uneasy to eat. Their color has changed perceptibly week by week, but they are not half plumaged yet.

Their note at first, and until last week, was a mild, diminutive croak; last Thursday I heard what I had been listening for: the halting, stuttering attempt at the song of the bobolink—just as if they never had sung it before, and pretty badly mixed up with the mild croaks Every spring I watch for those birds and listen for the return of their "voice." This spring they came here two weeks earlier than last and have just left (about ten days later). When I hear even those few stumbling notes, I can hear the mowing machine, can see the "sulky-raking," and the quiver of the hot air; smell the new mown hay and taste that old-fashioned beverage, molasses and water and ginger, that used to be drunk on the sly by us boys. CAPTAIN.

Gray Squirrels Breed in Captivity.

Editor Forest and Stream:

I have six full-grown gray squirrels that I am very fond of. One of them has four young ones, and I think I shall have two more litters soon I got my squirrels when they were young and brought them up on milk, and they will eat out of my hand, take a nut out of my pocket, and climb all over m-.

I have for a pen my father's box stall, which I have strung with ropes for them to chase each other on, and outside I have a nice wired cage, about 10×15ft. and about 5ft. high.

I feed them on cow's milk, corn, nuts, fresh boughs, and such other things as they have in their freedom.

These squirrels are the prettiest pets I ever had, and I think they are full as nice as a pair of tame crows that I had last summer, though I thought the crows were pretty nice at the time. The neighbors all hated the crows, and somebody shot them; but everybody likes squirrels

LUTHER W. FAULKNER.

The Ruffed Grouse and Music.

THE ruffed grouse is fond of music. I have long been familiar with this peculiarity of the bird In central New York near where I lived was a beautiful piece of woods, and I was walking in them one Sunday in October, with my wife, when my spaniel flushed a grouse and it lit in a hemlock tree right over the cart road. I asked my wife if she wanted to see a live partridge, and commenced to whistle a lively tune, and the bird sat and let us pass in under the tree and turn and come back, and sat there until we were out of sight. Another time my three boys were coming from school when they saw a partridge in an apple tree, and the eldest boy left the two youngest to whistle while he went for the gun and shot the bird. OLD WAY-BACK.

Game Bag and Gun.

VIRGINIA SHORE BIRDS.

KELLER, Va., May 13.—Atlantic coast birds continue very plentiful, and are affording the best of sport to good marksmen. If the gun is not held right, there is no great sport in shooting anyhow.

Dr. J. C. French left for his home to-day, and reported never to have found better sport, especially on curlew. When about to leave he drew from his pocket two shells, remarking: "This is all I have left out of $20 worth. Don't you think it time I had gone? The Doctor is a fine shot, and for the present it may be said that his love of the gun has been amply gratified.

Arrivals for the week have been in part: Messrs. Edward Thompson and Edward Pigeon, with Mrs. Pigeon, of Long Island, members of the Revels Island Club, and Messrs. H. M. Spratley and G. W. Jacobas, members of the Accomac Club. Hon. W K. Shiras returned to-day, reporting having a very pleasant trip and finding fairly good shooting. It may be said of the members of the Revels Island and Accomac clubs, that their purpose in coming to our shore, for recreation and amusement, is not a selfish one; but, on the contrary, it seems that they rather on every occasion strive to become useful by their liberality to our less fortunate citizens. It is said that the two clubs collectively represent millions upon millions of wealth. Such people are a blessing to any community they may enter.

Mr. N. I. W. LeCato, with a party of gentlemen, is expected to-morrow. They will be the guests of L. T. LeCato, Esq., residing in Upshire's Neck, a section rich in the best of sport.

Hon. W. Finley Browne, with a party of friends, is expected during the week. Mr. Browne well understands the demands of a first-class outing, and not only does he enjoy the fun himself, but delights in making all things agreeable for others We have understood that Mr. B. has in contemplation the purchase of a sea coast site for a club building, which, if consummated, will have erected a palatial edifice.

Birds will be plenty until June 10; in fact, fairly good shooting may be had during all summer, while fish are very plentiful. T. G. ELLIOTT.

THE MISSISSIPPI FLOODS.

VICKSBURG, Miss.—The overflow has been very destructive to game. Thousands of square miles of wild lands in Arkansas, Louisiana and Mississippi are deeply submerged. It will be a long time before the game will be replenished. I believe it never will altogether. The "advancement of civilization" is an aid to the overflow. Year after year the gobblers are fewer and wilder, and the sportsman must go further and work harder to be successful. He must be content with less of game, and more of a quiet paddle through the streams or a tramp through the timber.

All this is of small consideration in comparison with the loss to agriculture. Cultivatable lands are also under water, and farming stock of all kinds has suffered.

The fish, however, flourish. The lakes all over the delta country will be restocked, and good fishing can be had after the water subsides. The lakes had been fished out, and fishermen will enjoy the sport to be had." W. L. P.

MEMPHIS, Tenn.—I send you a clipping from one of our Memphis papers about the deer:

"Reports from Issaquena county, near Duncansby, say a herd of some 200 deer have taken refuge on the levee, and the planters are feeding and caring for them as tenderly as they mind their domestic animals and plantation stock. Seven other deer were rescued from drowning near this place and housed in a gin loft."

I know that many a good sportsman is wondering what will become of the game of the Mississippi bottoms, and I am glad to hear that in numbers of cases deer are being protected by kind-hearted men. Where they are needed for food of course they are being killed. Many more are starving and drowning than are being killed.

A. B. WINGFIELD.

CHICAGO AND THE WEST.

Bighorns in Colorado.

CHICAGO, Ill., May 1.—The Denver *Republican* says that at Jefferson, eighty miles southwest of Denver, Colo., a band of fifty mountain sheep have been seen near town a number of times recently. They are supposed to have been driven down from the high mountains by the heavy snows. There has not been a sheep seen in that locality for a long time, but these animals come often almost into the edge of town. Mountain sheep are absolutely protected in Colorado.

"The 'Forest and Stream' Luck."

A few weeks ago, when I was in Minneapolis, Mr. Carrington Phelps and myself, while walking at a short distance from his residence, saw a big, fine-looking orange and white setter in a door-yard not far away. I liked the looks of the dog, and at once told Mr. Phelps that it resembled very strongly the old dog Rex which my father used to own, and which was always my idea of what a meat dog should be. "And I will bet a hat that this dog here is a good dog, too," said I to Mr. Phelps, being willing to play the dog on form, in the language of the turf. We thought but little more of the matter, but just now I have a letter from Mr. Phelps, in which he says:

"You remember the dog we admired from the bridge as belonging in your special class of 'meat dogs,' and as resembling your old favorite? Well, I find him in charge of an I. O. O. F. friend of mine who has more, and who has offered me the loan of him for the trip of Aug. 25, next. And so the invisible, incomprehensible FOREST AND STREAM luck comes up again, as he was the property of a young man who lived in Dakota, very fond of a good dog and hunting, who unfortunately died, and whose superbly broken dog was sent here to his mother. She could not keep him, and turned him over to my friend. He had a great reputation in Dakota. I inveigled my friend into repeating his offer, and accepted it hard. So I don't see but we will have to make that trip."

I don't know about making the trip, but will venture that if we do that old yellow and white dog will be a corker, and we will kill a lot of birds over him; nor would it astonish me in the least if we should find a diamond or two in their gizzards. E. HOUGH.

1.06 BOYCE BUILDING, Chicago.

Rhode Island Association.

PROVIDENCE, R. I., May 16.—*Editor Forest and Stream:* The Rhode Island Fish and Game Association will soon, it is rumored, consider the advisability of establishing in this city a controlling board. The step will necessitate a complete reorganization of the Association, which will not probably occur until after the revision of the game laws now before a committee of the Senate for the elimination of crudeness. The draft has already been presented in one branch of the Legislature, but was found to be somewhat faulty in construction, and was in consequence sent back to the committee. The scheme is to have the control of the Association in this city. For this purpose a convention of delegates from the various branches in different parts of the State may be held, and a board appointed, with headquarters in Providence, whence all orders and business of State importance shall be issued and transacted. There has been considerable fault finding by the country branches, owing to what they term insufficient authority or protection. Some of these have considered the advisability of going ahead and caring for their own sections, such as the Pawtuxet Valley Gun Club and others. By centralizing the control, different districts could be established, each association to look out for a certain territory, all to report to the general office in this city. The ability to go ahead would rest in each after instructions from the local headquarters. Expense would be saved and better results obtained generally. The new laws contemplate the bestowing of a power upon the game warden to make arrests anywhere in the State without warrant from the authorities of the town in which the offense against the game laws occur. W. H. M.

SHOOTING ON A WESTERN STREAM.

Two years ago I spent a month hunting in the northern part of Minnesota, in the vicinity of Ada, a name well known to sportsmen who have hunted on the northern fields of this State.

Several years ago this little town was noted for its duck shooting, owing to the numerous sloughs in close reach. In later years the Government has dug great ditches through this section, in order to carry off the superfluous water in the spring of the year; and has in this way drained off also the best marshes. This in due time made the country lose its fame as a stopping place for the duck hunter; but every fall the little country-like hotels of Ada are filled with sportsmen who come from all parts of the continent to hunt the prairie chickens still to be found very plentiful on the surrounding fields.

A short way behind the little town flows a stream which in a place widens out into what is known as Long Lake. Its shores are marshy and thickly set with rushes, among which varieties of reed birds have their feeding grounds, and where occasionally a flock of ducks may be seen spotting its water.

One day I decided not to go out in the morning, but to keep my dogs fresh for an afternoon's hunt. Toward noon, as I was sitting outside the hotel, a farmer friend of mine came up and said: "Well, Heard, you better go down the stream after dinner and bag a few ducks; I just saw three flocks light there in Long Lake, on my way to town." This was all I needed to start me off; and after dinner I shouldered my gun, whistled to my dogs, and started on my way toward the stream, feeling confident that if any birds had been seen to light there, I would be the first one to disturb them, as not a hunter had been along the shores for days.

I continued my way along the road until I reached a bridge, where a little stream winds away to the north and south, and here I stood a few moments, wondering which way to go.

A light breeze was blowing from the south, and knowing this the most advisable way to endeavor to approach the birds I started against the wind, making my way cautiously through the thick reeds, with my eyes closely tracing up the sunlit water in hope of catching sight of the flock.

I had by this time wandered a good way from the town, and was making my way around a sharp bend in the stream, when my anxious eye fell on the first game. I dropped down in the rushes, out of sight, and took a peeping glance at the birds, which were about 75yds. ahead.

It was a big flock of widgeons, and they looked exceedingly inviting for my first shot. I crawled along until I was within good range before I drew the hammers back for the first shot, which woke them up in lively style, and they then wheeled up directly over my head, uttering their loud call, *scoke! scoke!* The second shot followed quickly, and then I watched the remainder in hopes of seeing them swing around and light in the stream again; but it was all in vain, as they soon faded away in the distance. My dogs by this time had delivered up four birds, which formed a good starter, and encouraged me to go further on. At a distance of about two miles from where I found the first flock I discovered a bunch of teal, which I managed to creep on to in fine shape, and open up on them with both barrels; I did not stop to see what fell, but hurriedly put in more shells, and watched the flock until I saw them swing and start to come back. I was in good cover, and lay low well prepared for the second shot, watching them as they made their broad swing over the water, where some of their number had been dropped a moment before, and my gun rang out again as they passed me within good range. Then putting the dogs in to get the birds, I soon had the pleasure of adding five to my string, and my game pockets told that there was something in them, and nice fat ones they were, too.

I walked several miles more down the stream, but failing to run on to anything, finally ordered the dogs out on the field to see if they could not strike a covey of chickens before sunset.

They were anxious to run and soon were covering a large territory, being as anxious to locate some birds as I was to see them, and after spending about an hour in wide and eager ranging, they drew up on a wheat strip away on my left, and here stretched out with the hot scent that seems to paralyze every muscle in a bird dog's body.

When I reached them and ordered them on to flush I heard a flutter and a big bird started almost from under one dog's nose, and as it sailed away I drew my little gun on a line with it, and as the report rang out the bird doubled up and with a dull thud hit the ground, telling me that there was another ready for my pocket.

The dogs then carried the trail off of the stubble into a hay meadow, where they placed another one, and I advanced to try my second shot. A bird soon started up, but the contents of the barrels failed to score, which caused the dogs to look around in disgust, but when they saw the sad expression on my face they took pity on me and worked on until they came to another stand. At the same time one bird started up in front of me another jumped up from behind, and as they both offered me excellent shots, I succeeded in making for once a neat double, which again set me on good terms with my dogs. After picking up my three birds I found that there were no more, and I then stood for several minutes gazing over the great fields at the setting sun, which was just burying itself in a bed of crimson clouds which formed the evening sunset.

I had not until now noticed how far I had wandered from the town, but I saw that it was at least eight miles distant, and knew that the only way I could get safely back after night set in was to go back to the stream and follow the same tracks in which I had come. So I soon reached the bank and started on my homeward journey.

I had almost given up hopes of another shot at ducks, but just at twilight I saw three outlined against the sky, and standing still for a few seconds I tried to find out whether they were coming or going, one minute thinking they were going and the next I was positive that they were coming; but after watching them a few minutes I discovered they were coming, and their quick flight soon told me to drop to my knee, as they were headed directly for me. As they drew nearer I distinguished them to be mallards, and I kept on muttering to myself, "Here they come, here they come," and they looked larger and larger as they came on, until finally they made a dart over my head, letting out their familiar call, *Swack! swack!* which rang loudly through the still night air. As I only had a minute to decide, I drew a line ahead of one of the birds and let drive, the first shot proving to be a clean miss; but a quick whirl gave me a second shot, and the picked bird wavered, tried to keep up with the rest, but as it was pretty badly hurt it finally had to give up, and came spinning down, falling among the thick reeds on the opposite bank of the stream.

Oh, what a happy feeling went through me as my old dog delivered it up; it was one of the largest mallards I have ever seen, and a beautiful drake at that.

The twilight soon gathered around me, and fixing my gun firmly on my shoulders I started for home, considering that my day's hunt was now surely over. After a long walk along the shore I at last reached the bridge from which I had started, and from there soon reached the hotel.

My little string of three chickens and nine ducks looked mighty handsome after I had spread them out on the floor, and drew a number of admirers, who smoothed their feathers and congratulated me on my good luck. P. C. HEARD.

ROD AND GUN CLUB OF MASSACHUSETTS.

THE work of the first year of the club is outlined as follows by Secretary Henry J. Thayer, of No. 53 State street (Room 948), Boston:

During its first year, the Rod and Gun Club of Massachusetts has gathered a membership of 100, giving a working capital of $1,000,000 (the annual subscription is $10). With that amount we have kept a warden in the field since Aug. 20; paid his salary and traveling expenses, published and distributed 600 copies of the Massachusetts fish and game laws, paid the running expenses of the club, and on Jan. 1, '97, we had a balance in the bank of $441.02.

Since Aug. 20 we have made two convictions for snaring partridges (probably the most difficult article in the game laws to enforce). The first case took two weeks, and the second over five weeks of hard time before we succeeded; but it was time and money well invested. If we had had two wardens working together, instead of one, we could have finished both cases in ten days' time; and a warden was then urgently needed in other places.

Before the law went off last fall, and since Jan. 1, our warden sent home about twenty gunners found in the field, and three persons found fishing with set lines. He has destroyed over 3,000 partridge snares (the secretary has about 500 of them at his offic), and has compelled the abandonment of several thousand more.

Connections through the eastern portion of the State have been established for early information regarding violations of the game and fish laws and the Boston markets frequently visited.

We have done more practical work in the forest and field since beginning our work than has any club at any time, and at a minimum expense. The policy of the club is that all money received shall be expended entirely for practical work; no portion being spent for social features. Our present membership of 100 is ample for the permanent employ of one warden. By employing two or more at certain seasons much larger returns for our money and time can be obtained in effectual work, and we ask the help of every sportsman and fisherman who believes the fish and game laws should be better enforced.

Our annual subscription is $10. We believe there are many hundred of Massachusetts men who will cheerfully give that amount annually for actual work. Help us to do that work. HENRY J. THAYER, Sec'y.

Florida Snipe Flight.

INTERLACHEN, Fla., May 15.—My notebook says that on April 5, 1895, I killed ten snipe, which closed the season. No more were seen. Also, on March 25, 1896, I killed nineteen snipe, and had two shells left. Starting for "dry land I flushed two or three wild, which, as usual, rose high and were making a circle before pitching, when I saw a wisp of eight appear in the sky, and while I was watching them a wisp of eleven appeared. They circled once or twice, joined company, circled again, and pitched not 100yds. from me in the edge of some mud. I was in the grass, and while walking toward them they ran to the right, so I only got a shot at one—killed, far at that. I was unable to get back to them till April 3d. They were there, and some more, too. In three hours I killed thirty-five, and had all the birds and wading I wanted. Ten or twelve birds were killed on some burned sow grass. There was almost no cover and no water—just a spongy black mould between the blackened bristles of burned grass. The birds were rather wild, but the air was bracing. The captain seemed to feel pretty young and seemed to have a good eye that day. In two days not a snipe was to be seen.

This year the last snipe was killed March 13. On March 16 they were all gone. But they apparently traveled slowly, for they did not reach your high latitudes early. It was very hot in March, more like April, and cold in April, like March. The snipe must have wished themselves back.

CAPTAIN.

Texas Birds.

PETTY, Texas, May 3.—Springtime is here in earnest, and with it come the dynamiter on weekly visits to the sloughs along Red River, and to Bois d'Arc Creek. Buffalo and bull heads (or cats) are killed almost by the wagonload.

Wild ducks and geese were not so plentiful on the ponds here as in former years, The flights of these birds grow less every year. Five years ago during the winter months, the quack of ducks, or the honk of the wild goose could be heard at almost any hour during the day; but during the last winter I observed very few geese and ducks. The few remaining quail that escaped the deadly net, are mating off to begin their labors to replenish the supply; but with the devices of destruction now plied upon them, it will be a miracle if they succeed this year in rearing enough to make moderate shooting next winter. A good many yellow-legged plover stopped here on their way to the North, but the flight has now about passed. F. E. WHITEMORE.

Chinese Pheasants in New Mexico.

SILVER CITY, N. M.—George H. Bell has six very pretty little Chinese pheasant chickens recently hatched. He also has several hens setting, and expects to raise fifty pheasant chickens this season. They will be turned loose, when old enough, to stock the Territory with this beautiful and delicious game bird. The sportsmen of the Territory are under great obligations to Mr. Bell for his efforts to stock the country with these birds.

The San Francisco parties who contracted with Mr. Bell to furnish a number of Chinese pheasants for the propagation of the species in the Territory were unable to obtain the birds in Oregon as expected. They sent to Japan for the birds. Mr. Bell received a letter last week stating that the pheasants were expected to arrive on first steamer, and would be forwarded to Silver City upon arrival.

EXTENSION OF THE NATIONAL PARK.

Editor Forest and Stream:

Toward the close of the 1895-6 session of the Wyoming Legislature a memorial was passed praying Congress to set aside, for the purpose of a "public park," a part of the territory south of and adjoining the National Park. The language of the memorial, in part, is as follows:

"That the region embraced between Townships 42 and 47 north, and Ranges 113 and 116 west, of the sixth principal meridian, contains the most noble and inspiring mountain scenery to be found on this continent. It is the Switzerland of America, in which the Matterhorn finds a worthy counterpart in the Grand Teton, whose majestic and inaccessible heights are reflected in the clear depths, and whose rugged grandeur is in marvelous contrast to the placid beauty of the mountain lakes which lie at its base.

"In immediate proximity to the National Park, its attractions are of a wholly different character. Together they form a panorama which, in its beauty and diversity of attractions, is without a counterpart. The Grand Teton is the culmination of this region, the fitting and appropriate landmark of this national pleasure ground."

It is further urged that this region is a great game preserve and "the winter feeding ground of the game that finds a summer home in the Yellowstone Park," and, further, that this winter home ought to be protected.

Here we have the very inception of this Park extension "scheme." Wyoming spoke first, through her representatives, and at that time it was considered an expedient and patriotic move. Have the conditions changed so materially in two years as to justify the hysterical opposition now manifested in certain quarters to the segregation of a small portion of our domain for a "public park?" Within the last two years not a dozen actual settlers have located in the territory in question; the conditions are precisely the same as when the aforementioned memorial was passed. The State and county revenue derived from the region under discussion would not pay postage on the political correspondence of a single member of our Legislature. And yet the attempt is being made to drag this question into local politics, thus affording certain narrow-gauged demagogues an opportunity to pose as champions of the "common people." The cry has gone forth that the plutocratic East is making another fell move to rob the defenseless West. A plague upon such nonsense!

Let us examine into the matter and test its merits.

The only possible industries which can ever flourish in this contemplated addition to the National Park are logging and mining. There is no such thing as commercial lumber, and the timber can be used to advantage only as railroad ties. Is it good policy, or charity to the masses, to leave this region so that its mountains and foothills may in future be denuded by the voracious railroad contractor?

As to mining: the possibilities are limitless, the actualities insignificant. I would not debar the American prospector from a rood of the public domain, where his persevering industry might develop a bonanza. It would be a simple matter—easily arranged in detail—to provide for the creation of mining districts, where mineral has been, or may be found in paying quantities, giving the miners full liberty to operate their claims, subject only to necessary restrictions concerning destruction of timber and game.

This would be an equitable arrangement, and would obviate all objections so far as *bona fide* miners are concerned.

I have read with much interest a recent letter from Gov. Richards in FOREST AND STREAM, criticizing the recent Forest Reserve proclamation of Mr. Cleveland. The Governor goes over the whole ground in a thorough and dispassionate manner. While it is not my purpose to express an opinion as to the wisdom of the Forestry Commission's action, I mention this matter merely to contrast the merits of Forest Reserve and National Park—so far as each would affect us locally.

The Teton forest reserve now embraces two-thirds of the territory which it has been proposed to annex to the Yellowstone Park. The status of the few residents embraced in this forest reserve is now anomalous and unsatisfactory in the extreme. They are without land titles, or the reasonable prospect of obtaining such titles, yet no provision is made to pay them for their claims and oust them; they are simply compelled to hold their ranches by occupancy and to be hedged in by galling restrictions.

The authority of the State is practically annulled by the proclamation, so the game ranging in this reserve is absolutely without protection—State or National.

By annexing this territory to the Park, settlers can (and will be) compensated for their claims, the game will be protected and every conceivable interest better subserved.

Jackson's Hole is the only community which can be directly affected by this addition to the Park.

I am a fixture here and have a family to care for. As a sane and sentient being I naturally favor what I conceive to be to my interest and to the benefit of the community in which I live. Bringing the Park line nearer to Jackson's Hole will unquestionably benefit us in many ways. A tourist route will be established through our community; summer travel will greatly increase, and the distribution of funds will increase in like proportion. Game is a great feature here; is it wiser to provide a refuge for this game that it may be preserved for our benefit—in common with all American citizens—or leave it to be soon and completely exterminated, rather than infringe upon the sovereignty of Wyoming?

I will not discuss this question of the preservation of our large game in a higher and more catholic spirit, but purposely confine myself to our local and selfish views and interests. Every resident of the game region well knows the utter inadequacy of State protection and the pitiful improbability of future appropriations for such purposes. The active and intelligent efforts of a Governor who thoroughly comprehends and appreciates existing conditions have failed to impress our lawmakers with the necessity for effective legislation. Add this strip of territory to the Park, and Wyoming will still be large enough "for the minds and hearts of her legislators."

Mr. W. L Simpson, a friend and neighbor of mine, has lately published a letter denouncing the Park extension in unmeasured terms. Mr. S. is entitled to his opinions, and I would be the last to question his right to air those opinions upon any and all occasions—but when he assumes to reflect the views of this whole section, or even of a majority here—he goes entirely beyond his province.

A majority of the *bona fide* residents here will not oppose a move calculated to benefit this community, and which can in no way prove detrimental to our interests.

I am aware that the shibboleth "monopoly" is being used

to prejudice people against the proposed Park addition. Which is preferable: a territory under national control, held for the use and benefit of all citizens, or the same territory under State control nominally, but really "bossed" and domineered over by rich and exclusive owners of "hunting lodges," "cottages" and "summer resorts"?

Leave this territory as it is and only too soon every lovely nook and corner, known and used by all of us on our summer outings, will be the private property of genuine "plutocrats." Can a more unbearable monopoly be imagined?

D. C. Nowlin.

Jackson, Wyo., April 22.

TURKEYS IN THE FLOOD COUNTRY.

Our long-time contributor, W. L. Polk, of Mississippi, sends us this turkey hunting story from his nephew, Paul M. Polk.

Mississippi, April 23.—*My Dear Uncle Jos:* Perhaps this may not seem so interesting as other hunting stories I have written you, if you allow the result to influence your interest; for our game bag came home poorly stocked. But as this is not the first case of the kind I will hope to the contrary.

On Monday morning father, Austin Warner and myself, went to the Rambler, raised steam, and left for the coal barges. There we met Austin's big brother Lawrence, who came just in time to get his hands dirty helping pack away the coal. We had about thirty-six boxes placed on the launch, and eight in an ancient but still serviceable skiff behind.

At last, after putting 400lbs. of ice in a model little refrigerator, we started, towing behind the old skiff and three of the prettiest little canoes you ever saw.

By common consent I was appointed fireman, and Austin coal-breaker. Of course we had the delicacy not to vote for ourselves, and we even went so far as to positively refuse the honors, but our kinsmen were not going to allow false modesty to prevent us from receiving the positions, so there was nothing to do but go at it with a will. Every time I felt lazy, the old steam would go down and tell on me, but every time Austin felt lazy I had to break the coal myself.

To make the launch go full speed, it took about three heaping shovels full of coal every four or five minutes, the steam probably averaging about 95lbs. Austin felt sorry for me, and offered to fire for me awhile. He commenced by putting in one shovelful and waiting about five minutes, and then gradually increasing until he got to two shovels, the steam gradually decreasing from ninety to thirty. In consequence of slow speed under Austin's firing, I had to be reinstated.

That night we stopped at Little Deer Creek, took a little ineffectual hunt next morning, and then raised steam and went to Panther Creek, fifty miles higher.

The water had overflowed almost everything, and the only land we found out for miles was a long lonely ridge of hills, running north and south, and extending from 150 to 250ft. in height. Some of the negroes take the high water stoically, as if they were accustomed to it; while others become panic-stricken at the first alarm, and leave for more elevated districts.

There was one woman living in the hills—about 175ft. above the highest possible stage the water could reach—who was told that the water would back up the little bottom in which she lived, and drown her out. She got scared, and became wild. She could not get her furniture out fast enough to suit her. Scared half to death, she left cabin, furniture and all to the care of others, and left for the highest hill she could find. It was some days before she could be induced to return.

Should the water reach such a height, a person might as well prepare himself for Judgment day, for it would be no surprising thing after such an occurrence.

At Panther Creek we did but little. Father and I went out early Wednesday morning, and called as we paddled up and down the little stream, without getting an answer until nearly 10 o'clock. We both got out of the canoe. I made the boat fast while father took out his tame gobbler and tied it to a bush. We then each stationed ourselves at the trunks of two big trees, about 20yds. apart, facing the direction we had heard the wild turkey. Father called. Our tame turkey answered. The wild one gave a loud gobble and for a few minutes we heard nothing.

Soon I heard a scratching sound, and saw a great, fine gobbler, coming as if to make straight between the two trees in front of which father and I were stationed, not more than seven steps away. Three more steps would place him on the direct line between us, and then neither could shoot without great danger. Noting this I raised my gun hastily and aimed; but I was too late. A bang! The noise of shot tearing the leaves almost at my feet and the turkey lay kicking in an admirable fashion.

Father said: "Paul, I wanted to give you the chance but was afraid to wait any longer," and looked upon me beamingly. But I had not seen him until he was very close, while father had seen him running along about 40yds. off and waited until he had gotten nearly between us. Well, that was the only chance I had on the trip, and I lost that one, so you know my success.

We stayed at Panther Creek until Friday, but killed no more game, excepting a few squirrels.

After we had gone over to the Sunflower River we heard a good many turkeys, but the water was over everything and they would not come to us. Father slipped in on one and killed it with his Marlin rifle.

It is very exciting to be in a position where you can see about three turkeys and hear five or six, to call and get one or two to answer; but do nothing more. It is humiliating, though, when you leave the turkeys, without a single exception, still where you first saw them. You bestow all the blame on the high water, of course, and then, turkey hunting is not so very grand a thing after all.

Monday found us at an entirely different place. It was at Dowling Bayou, fifteen miles higher than we had ever been before with our little launch Rambler.

In the morning we all heard turkeys, and most of us got a glimpse of them. Father shot four times, rewarded each time by seeing how fast a wild gobbler really can run, when safety lies before and danger behind. One came so near that a person would suppose it wanted to engage in friendly conversation.

That day Austin and myself beat Lawrence Warner in three successive boat races. Every time we would leave him bobbing in the curl of our waves, and every time, excepting the last, he proposed amendments to the conditions governing the race. The third and final race satisfied him, and created in father (an interested witness) a desire to show his skill. Every one is the same. Filled alike with overweening conceit, we would each want to try our own hand, and after being beaten we generally succeed in getting very good excuses.

The boat Austin and I used was far the heaviest, weighing about 140lbs; that of L. W.'s weighed about 56lbs.; and that of father's, the Amateur, "tipped the scales" at 80lbs.

Austin and I had one advantage. We used one pair of oars and a paddle. This counterbalanced our own excessive weight, and nearly all that of the boat. So, you see, looking at the thing in a straightforward, candid manner, we were about equal.

We had been victorious in three races, all with the same person; although in spite of father's apparent eagerness the other did not come off for several days.

The next day L. W. had to go home. We paddled about twelve miles in order to reach a railway station. The morning before he left he killed our little hen that weighed about 9½lbs. We were sorry to see him go, though he did call Austin and I "little humpy doodles," and managed to get us to wash the dishes, while he benevolently sat down to enjoy a novel.

The following morning the "little humpy doodles" paddled and rowed in turn twelve miles to the station previously mentioned, and twelve miles back, in order to mail a letter.

About this time a break in the levee was reported, and it was expected that the little land that yet remained out would be submerged in a few days. This news was given us by two men who were paddling through the woods, gathering their stock off the ridges.

One day Austin and I were paddling complacently out of a thickly wooded slough, up which we had been nearly two miles, when, accidentally looking back, we spied father, paddling for all he was worth, for it was evident that he considered this the time for his boat race. As soon as he noticed us watching him he slackened his speed and attempted to give us the impression that he was "taking it easy." If we turned a bend and looked right sharp through the intervening bushes, we could see him paddling with great vigor. This he kept up until he, too, had turned the bend, when he would be appearing to go nicely and smoothly, without effort. We made no attempt to prevent his catching us. We knew his game, and that he was playing it uselessly; for it was our intention to allow him to come up within about 20ft. before we should ourselves begin to pull hard.

Come he did. When within 200 or 300ft. he threw aside all pretense, put his whole force in his oar and beat the water in great swirls. We let him come. When nearly in the given distance, he gave on awful yell, scaring everything in hearing, and even startling us. He supposed we had backed down and the cup was his. He passed the danger line cutting the water at a great rate.

We commenced. He still gained slowly—more slowly. He stopped gaining. He began to lose slowly—more rapidly. Everyone strained every muscle. We soon turned the bend, leaving him rolling in the waves to contemplate in silence the deserted appearance of the horizon.

The day passed, the next did likewise, the next and the next, and he made no further allusion to that race, nor did he express any desire to try another.

One morning, while Austin and I were paddling around in the overflow, we found upon the gallery of a deserted cabin a lot of eggs, and consequently chickens. Austin wished to take the eggs. I told him that the negroes had, perhaps, left them there intentionally for the purpose of hatching them. He tried to convince me in the negative, and I wavered. I am not obstinate, and will listen as readily as any one to a good, sound argument. But just at this moment we discovered that the nearest house had not yet been deserted, and thought that possibly the occupants might be observing our actions. Considering the matter carefully, we concluded to do without four eggs apiece for supper that night for the sake of right.

That day we packed our things and returned home. I urged upon father the necessity of fixing the pump before we started. The thing had caused some very unpleasant sensations, as far as I was concerned, on the trip up stream. I had just put on a lot of coal and raised the steam to 100lbs., when the pump absolutely refused to put any water in the boiler at all.

There is no especial credit in getting blown up. That method of death does not suggest itself in very pleasing terms. In fact, one is strongly tempted to jump overboard and take a good cold ducking in preference to taking it by piecemeal. None of us, however, jumped overboard; and as the pump was at last induced to work, we felt considerably better.

It is not conducive to overflowing happiness to hear the steam roaring under the draft of a scorching fire; to see the water gradually sinking in the gauge; to hear the pumps turned on full force and yet fail to stop that water from sinking in the gauge; to see it sink persistently below the danger line, continue, and gradually recede from sight; the damper up, the pump clanking as fast as she can go it, and every precaution taken.

The putting up of the damper cooled the fire, which, by not converting water into steam so rapidly, allowed the water to accumulate in the boiler and reappear in the gauge. Owing to this I am sitting here writing to you, instead of lying piecemeal in the bottom of Sunflower River.

Paul M. Polk.

Another Arkansas Preserve Opportunity.

Little Rock, Ark., May 7.—*Editor Forest and Stream:* In addition to the game preserve mentioned by Mr. Claflin, there is another one that can be obtained. There is a tract of land in Faulkner county, embracing Adams Lake, Greens Lake and Gold Lake, and parts of Gold and Palarm Creeks, pin oak flats and duck marshes that can be obtained in tracts from 5,000 to 20,000 acres in a body. The lakes and streams are well stocked with bass and other fish, and in the woods is a good supply of deer and turkeys, and quail and ducks in abundance in the season. The Grassy Lake Club has bought Clear Lake and about 1 000 acres of marsh planted with wild rice this season, and will be glad to coöperate with sportsmen in securing more of this territory.

We have a comfortable club house on the tract, about three miles from Mayflower, which is twenty miles from here, on the Ft. Smith Railroad, with three trains each way daily. I will be glad to furnish any information to parties interested.

J. M. Rose.

ON WATER AND RUNWAY.

(Concluded from issue of May 1.)

The next day we all started out about 10 o'clock to try another section of the lake. Nutting and I had to climb a hill like the roof of a house. His stand was just on the top of the hill, mine further over where I could look down toward another part of the lake. Lefebvre, with a guide, took the dogs, with instructions to wait sufficiently long until we all got proper positions, which would take some little time. After the guide placed us he went along with the rest of the party, leaving two at some runways, and just as he was portaging the canoe to the other lake the dogs passed with a deer the other side of them. They were just about three minutes too late. There was about 3in. of snow on the ground and cold, drizzly showers were passing every little while. It was lonesome work standing under a tree waiting for something to turn up. Pretty soon I heard a noise to my left, but to my disgust found it was Lefebvre with his guide perambulating around to find if any deer were moving. I told him he should have stayed on his runway, or put himself in some other place and not come where hunters were already stationed. He moved off. When about 200yds. away I saw him stop under some trees apparently examining something. Later he told me that a big buck had been sleeping there.

A little after I heard the dogs coming, in fact saw them way over on another hill, going toward Nutting, but they and the deer passed way below him and then doubled back, so he did not get a shot.

If Joe had not disturbed that buck the chances are when the dogs were coming with their music he would have gotten up, when I am quite positive I would have seen him, and had he moved away, his natural course was to pass down the valley below me. Joe spoiled it, though. About 1 o'clock the guide summoned me, as nothing had been heard of the dogs, and the party wanted to go home.

After dinner the weather looked a little better, so we decided to try where we were the first day. Hudon, George Clement and Beaulne went with the guide in the canoe. Lefebvre and Joe Clement went with the dogs in the same direction. Nutting and I with a guide were to go away around a point, taking our stands between the main lake and another small lake, where the neck of land was only about three acres wide. This was considered the best stand, since if the dogs started the deer on the mountain the chances were they would run a while, passing by us for the other lake. We duly arrived and took up our stands, waiting patiently for the deer. We heard the dogs once coming, but they changed for some unknown reason, not coming our way. We left our stands about 5 o'clock and made for home. On arrival just about dusk we found they were all in except the canoe, but no luck. On inquiry as to who were still out we found Lefebvre, Beaulne, Hudon and two guides were supposed to come along in the canoe with the dogs.

Joe Clement had been with that party. He had a great story to relate. He claimed he was on a point for his stand, Lefebvre and the guide having left him there with the boat, they taking the dogs into the woods. After waiting there a considerable time he heard a shot some distance away; a little after he heard an awful noise, between a bellow and a growl. It must be a bear. He was scared. He looked to make sure his boat was all right, then hearing this terrifying noise again, he cut for the boat, jumped in and rowed as fast as he could for the club house.

He was then getting anxious about the others, especially as his brother George was still out. Asked as to whether he had heard any other shooting, he said he had heard several shots; did not know but that the bear must have captured some of them.

They were about two miles away—five people, their game and two dogs, to come back in one little birchbark canoe. We went for him for deserting his party, as at least two of them expected to come back with him. The bear was his only excuse.

As it was getting dark I told the other two guides to go out in the skiff and bring some of them back, and see what was the matter.

After they had started we heard several shots where the hunters should be, which we took to mean they wanted help. We fired some shots from the club house in answer, and called to the guides to fire from their boats as soon as they got a little further, to let them know that help was coming. Clement was greatly worked up, blaming himself for having run away, and of course we chaffed him in good style. Finally, about 7 o'clock, the two boats returned.

It appears that Beaulne, to whom I had lent my rifle, was sitting on a big windfall watching his runway, when the first thing he knew two deer disappeared behind the roots of his windfall and stopped there. He remained perfectly quiet and cool, so he says, waiting for them to show on the other side. Finally, within about 10ft. of him, he saw the side, part of the head and shoulder of one them. Taking steady aim he fired, when down went his deer, a very large doe. The other disappeared. The guide, hearing the shot and Beaulne cheering, made toward him from his runway when he ran onto three other deer. He had his shotgun with a load of buckshot, and promptly fired at one of them, which fell. He started toward it when it jumped up, and he after it. It was a small one, and badly wounded. It made an awful bleating, and finally got away from him. This was Joe Clement's bear that had scared him home. This made six deer for the party.

The next day we went back to where I had shot mine. Nutting took a stand near the lake, Whiteford in my old stand, I taking Joe Clement's stand, who said he had had enough of bear and deer, so would stay on the island near the club house and hunt partridges, which he did without any success, except that he got lost around the other side of the island, got completely turned around in 280 acres of an island, and becoming scared fired some signal shots which a farmer heard from the other shore, and started him right for the club house where he thankfully arrived.

Lefebvre took a stand with a guide over the hill from me. Beaulne had developed a bad cold, so he would not stand on a runway, but would go with the guide and put in the dogs.

I was on my stand about an hour when I heard a noise up the brook a bit. I brought my rifle to a ready, but soon saw Lefebvre with his guide coming my way. Just then we heard the dogs coming right toward us. Joe called out, "There they come," jumped under a bush, saw

the deer was likely to pass between us, in which event we would be shooting toward one another. He then jumped again behind a tree, calling to me not to shoot him. The deer of course heard this racket, and swerved away from us.

Joe stayed quiet about fifteen minutes, and then moseyed out again, coming up to my stand, saying he had scared that deer, was very sorry, but of course it would not come this way again, that we might as well go home. Within about 15ft. of my stand was a spruce tree with some nice gum on it, so standing up my Marlin, I took my knife to secure the gum. We were talking there, when suddenly we heard the dogs coming toward us. I dropped the knife, grabbed the rifle, brought it to a ready, the guide standing about 10ft. from me in the direction the deer should come, Joe about 15ft. away the other side, or almost on the runway.

At almost the same instant the guide called "Il est ici," pointing between two large trees; the deer made a bound turning back, bringing his rump almost in a line, with the guide between him and my rifle. I just saw his white flag, but was afraid to shoot, as I might hit the guide. Joe called to him, when he dropped on his knees, scrambling away, the deer at the same instant clearing an old treetop and disappearing behind it, so I could not shoot. The guide looked much scared as he got on his feet again, but looking up, said, "Oh, c'est, Mr. Payne, il n'avais pas danger," which was no compliment to Joe, as they knew him of old, and thought him to be a promiscuous shooter under the slightest provocation.

Joe was more and more disgusted with himself, as he had spoiled two shots for me. The dogs came up, when we put them on the back track again, Joe moving off to the boat completely disgusted with himself. On arrival there, the first thing he saw was a deer in the water, the same one, as the dogs being hot after him he took to the water at once. Joe put after him and secured a fine four-point buck, the best one of the whole hunt. He certainly did not deserve it, but luck is a funny and elusive creature sometimes; that is, my luck is or was that day.

Joe had been repeatedly cautioned to stay where he was put, but he always got to moving about unless he soon heard the dogs.

The first or second day out he was moving around that way when he picked up Whiteford and Nutting, the three walking on together, when the dogs run a deer near them that should have come Nutting's way had Joe left him alone and stayed quiet. A little after that Joe put up one that Nutting fired at, but missed.

He should have had it, as he was walking with his gun at full cock. Joe noticing it, told him it was dangerous; so Nutting set the trigger down. Right after the deer started up Nutting pulled up at once, forgetting it was not cocked, and before he could cock it he had missed his best opportunity and his deer.

However, when we got home we had seven deer hung up. We wanted one more to make us one each. We had a little more time this afternoon, but the hunt was unsuccessful; and just at dark we started home.

It was raining and blowing, but we were in a sheltered bay, and did not feel the effects or realize how much of a storm was on. Just before we rounded the point the other guide hailed us from the shore, asking us to take him on. The four of us loaded down the canoe pretty well, but the guide said we could safely carry him. We took him on. There was no room for him to sit down, so he sat in my lap next to the back thwart, the guide with the paddle being in the pointed stern. The two dogs were there, and as they were pretty well tired, and wanting to use them the next day, our last day, we decided to take them in also. The dogs got in at my back, one of them lying down under the guide's feet, the other standing up looking over the side. This loaded us down within about 3in. of the gunwale. Geo. Clement was in front with one paddle. We swung out carefully for the club house, about a mile and a half away. As soon as we rounded the point and got out about an acre we found the storm. It was raining quite hard, blowing about half a gale in gusts, the wind having about four miles of a sweep had put up quite a sea. Clement realized the danger first, saying we could never arrive with such a load, and to turn back. The guide behind said "Not on your life, don't you attempt to turn, or we will turn bottom up at once."

Clement paddled away for a few minutes, when a severe gust of wind coming, we shipped about a couple of pails of water. We were rocking up and down fearfully. Clement broke forth with his lamentations again, claiming there was no use, we could not make it.

I pointed out that we were making fair progress, to keep his courage, if he was too tired to paddle, not to work so hard, but at least keep some motion to his paddle, so as to be ready should a large sea happen to strike us. Some one suggested to fire some signal shots. Nutting said: "No, don't make any undue motion." The guns are all unloaded anyway. He encouraged Clement, told him he had been in worse places, just to keep cool and we would make it. We were continually shipping some water. I being at the stern sitting flat it came awash under me. I could not move, as the other guide was sitting in my lap. I had on an ordinary coat, a leather hunting jacket and an overcoat. I shut my eyes, as the storm was fearful to look upon; but as we caught some particularly heavy seas I opened them, thinking I would need all my faculties should we tip over, which we all expected to do at almost any time.

Clement again chimed in that there was no use, that he was completely played out.

We encouraged him again and I suggested, as we were fully a third of the way across, that he should call for boats from the club house. This seemed to take up his attention a bit as he called most lustily: "Help, help. We're drowning, we're drowning."

It was pitch dark; we could see the club house lights, but did not hear a sound. Sitting flat on the bottom of the boat, we had shipped so much water that it was washing cold around my thighs, almost covering my legs. The dog that was lying down became uneasy at the water washing around it. It kept trying to get up, which tended to lift the guide behind off his seat on the peak, not giving him sufficient purchase to work his paddle to advantage. The other dog was also trying to creep up to get out of the water, getting his fore paws on the gunwale, and trying with his hind ones to get a purchase on my back. He finally accomplished this, getting his hind feet on my shoulder, balancing himself with his fore paws on the gunwale, making it so much the harder to keep the canoe steady when we ran into heavy seas. With a dog on my shoulders and a man in my lap it looked as if I was in the poorest position of them all in case we went over. We were then getting the full force of the storm. Clement had been calling some time and was again very much discouraged. I told him to paddle and I would yell, which I did as I had never yelled before. I called for help and kept repeating it. Clement said it was no use, they were all in the club house telling stories and did not care about us.

What seemed to make it worse was that in order to keep out of the trough of the seas we had to steer diagonally away from the club house. Just then fortunately we saw a streak of fire from the club house and heard a faint report. Clement was encouraged, so we both yelled again. It seemed an age before we got any reply.

Finally a boat showed near us. We told them to keep alongside in case we went over. We battled away with the wind and waves, but were now comparatively easy in mind.

We finally reached shallow water near the shore when we turned carefully, making our way to the club house, where we arrived very thankful that we had escaped a ducking at least and possibly a watery grave. Clement's arms were almost powerless when we arrived.

The others went for us for scaring them so. The wind being right had carried out cries to them plainly, but we could not hear their answering calls. Whiteford and Joe Clement were about as wet as I was, as when they heard our calls for help they had run down to the wharf, jumped into the first boat they came to, which happened to be a leaky one that had not been used and was about one-third full of water. They did not stop to bail it out, but rowed as fast as they could in the direction of our cries, although they could not see us, nor we them until they were within say 100ft. of us.

That was an experience that I do not care repeating. Had Nutting and I been as hopeless as Clement it is hard saying what would have happened. Nutting had his coats all unbuttoned ready to throw off if we tipped, but in my position I could not do this.

We were cool, however, and kept encouraging Clement. The guide paddling also was quite cool and worked wonderfully. As a matter of fact our lives depended largely on him.

The next day was our last, and we tried for another deer, but without success.

We brought out our seven deer, had an elegant time, and voted the North Woods the right place to go after deer. The club have an elegant log house designed by an experienced architect of this class of building. They own the island of 280 acres, and have leased seven lakes for fishing for ten years from the Quebec Government, with option of renewing the lease. They have expended already some $7,000 on the plant. There is a resident caretaker. The house is well furnished as to beds, furniture, crockery and cooking range. The membership is limited to eighty, and I understand there are now sixty-five members.

The fishing is altogether for red and gray trout, the latter running often very large, 22lbs., I believe, being the record of one last season. Deer are very plentiful, not only near the club house, but on all the adjacent hills and lakes. Partridges are fairly plentiful, also ducks, of which we saw quite a number, but only shot a few, as we were not hunting them particularly. J. BRUCE PAYNE.

Grouse Momentum.

IN your issue of May 1, in the article entitled 'The School-House Cover—II.," Shadow speaks of shooting a grouse coming straight toward him at 20yds, and the momentum of the bird carried it 20yds. behind him before it struck the ground, making 40yds. that the bird was carried by its momentum. Now, does Shadow mean that the bird was killed 20yds. in front of him, and was a dead bird while covering the distance of 40yds.; or that the bird was struck by the charge 20yds. in front of him, and did not die until after it had gone 20yds behind him; for it strikes me that 40yds. is a "right smart" distance for a dead bird to go after flying head first against a charge of shot, unless it had a very early start in life? POINT.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

WE FISHED FOR SALMON TROUT.

Editor Forest and Stream:

It was a roasting day toward the latter part of July. Three of us concluded we would try our luck with the rod and line. The party consisted of Judge M., Charles M. and the writer. Where should we go to spend the day? That was an important question, considering the fact that the mercury was sailing along uncomfortably near the 90s. Plenty of places there were, but too remote from the dry and dusty streets of the city of Portland, Ore.

"Let us go to some quiet little place," said Judge M., "where we can fish a little and have a good sort of time. We don't want to work too hard. We do want lots of fun. I propose that we go up to that little lake not far from the village of Milwaukee. By cars we can reach the station nearest the lake in less than half an hour. Then we can foot it through the woods the rest of the way. It isn't far—not more than fifteen minutes' walk. They say that there are plenty of fine salmon trout there. I think there are no genuine brook or mountain trout."

So it was agreed to go up to Milwaukee. The "lake" referred to by the Judge was in reality no lake at all. There was a little brook that emptied into what was known as Johnson's Creek, which poured its clear waters into the Willamette River just below the little town of Milwaukee. Many years ago—during the old pioneer days of the State—some enterprising man had built a sawmill on the little stream, and had constructed a dam of huge logs, rocks and earth across the babbling little brook to obtain sufficient fall to drive the crude machinery. After some years the old mill was abandoned. Finally the building and much of the worthless lumber was totally destroyed by fire. Everything went to the "bats and owls," as the saying is. But the old dam remained, and the clear waters of the beautiful little stream continued to pour over the permanent obstruction. Back from the dam quite a pond or little lake had been formed. This was about 50yds. in width and several hundred yards long. The stream was fed by a number of ice cold springs, and the waters of the tarn were as clear as crystal. Around the margin of the lake the water was shallow, but it rapidly deepened as one advanced toward the middle, and near the center the depth varied from 25 to 30ft. So very transparent was it, however, that one could see the outline of the bottom quite distinctly.

In places the shore was rocky and irregular, but in many spots the beach, or shingle, was smooth and sandy, and shaded by giant old fir trees. Altogether considered, it was a beautiful and attractive spot in which to spend a scorching day. The stream-lake had been well stocked with fine salmon trout, but, owing to the proximity of the city, had been visited very frequently by anglers, and the number of fish was greatly decreased. However, we had no occasion to complain of our hot day's success.

"Hello, are you fellows going out for a fish a hot day like this, and do you expect to catch anything that has scales on?" exclaimed the conductor, as we scrambled on to the car.

We admitted we were.

"Well, I'll agree to buy all your fish for 25 cents apiece," said the big, jolly conductor, with a broad grin.

"All right," said the Judge, with a solemn expression of countenance. "We'll just remember that threat of yours when we come back this evening. Perhaps you'll change your tune when you see our strings."

But the big ticket puncher only laughed louder and went on taking in the fares. He kept looking back at us and winking with his coal-black eyes.

It lacked a few minutes of 8 o'clock when we boarded the car. Before 8:30 we had reached the little station where we were to get off. A moment later we were on our way through the cool, shady woods. As yet the temperature was quite pleasant, and the dew still glistened on the grass and foliage. Our way was along an old cattle trail that went zigzagging through the timber and brush. Less than fifteen minutes' walk brought us to the margin of the lake. Placing our lunch in a cool, shady spot, we at once began work. In five minutes' time our tackle was in trim.

But at the very outset we were confronted with a very serious difficulty. Our rods were not long, and the margin of the lake was shallow. We could not fish from the shore, and there were no boats. We had no gum boots and the water was too cold to stand in.

However, the Judge was a man of Napoleonic turn of mind. "I'll tell you, boys, we'll have to build some rafts, that's all. You watch me."

He soon rolled two old, half-decayed logs near the edge of the water, and launched them. Then he cut several long, slender shoots from a clump of hazel brush, with these fastened the logs together in a rude fashion, and placing several short pieces of timber across, soon had a substantial raft. Taking up his fishing tackle, and procuring a long pole to serve as paddle, he boldly stepped on his craft and pushed off. We soon had a raft apiece and were fishing hard enough. Some little time elapsed before any of us were fortunate enough to get a bite. Charlie, with his proverbial good luck, scored first. He pulled out a fine salmon trout about 10in. long. The fish made a game fight, and before Charlie landed it, he came near falling from his raft. Charlie's narrow escape from taking a "header" greatly amused the Judge, who gave vent to yells and prolonged peals of laughter.

"You're a great fisher, Charlie," he yelled. "Wouldn't I have split my sides if you had gone overboard. Steady, there," he cried. "Oh, boys, I've got a whopper! Look, look, see how he tugs at the line. Now I see him plain. Just watch me land him."

Sure enough the Judge had a fish—a splendid one too. Oh, he made a gallant fight for his life. Charlie and I stopped fishing and watched the sport with keen interest. It turned out to be fine sport too—at the Judge's expense. In his efforts to land the fish he lost his balance and made a frantic effort to save himself. The two logs of his raft parted suddenly, and plunge went the Judge into the ice-cold water. He went down clear out of sight, and his old silk tile floated gracefully away.

A moment later his bald head showed above the surface. He was puffing and blowing like a porpoise, shaking his head and struggling to get his breath. As soon as he gained voice he roared: "Help, help, don't you see I'm drowning. You're a nice set of fellows to stand there and see me lose my life. Come quick before I sink again. Give me your hand, Charlie. Oh, I'm freezing; help me."

Here the Judge clung to one of the logs. Charlie, who was only a few yards away, came promptly to the rescue, and the Judge was towed ashore, or until his feet struck the bottom, when he waded out.

His teeth chattered like a pair of castinets, his dripping clothes clung to him like glue and he cut a most ludicrous figure. As all danger was passed we set up a roar of laughter, in which the good-natured Judge heartily joined.

But where was the Judge's fine trout? When he tumbled overboard he let go of his rod. Taking advantage of this the fish darted away toward the upper end of the lake, carrying hook, line and rod along. How he sent the rod spinning along! I slowly followed with my clumsy raft, and, after a long, but lively chase, succeeded in capturing all, including the fish.

We soon repaired the demoralized raft, and all resumed fishing. The hot July sun soon dried out the Judge's suit, and he fished as hard and laughed as heartily as the rest of us over the very amusing episode.

Well, to make a long story short, we fished about six hours in the little lake. Our luck, did you ask? Capital! Over sixty salmon trout were captured. Charlie had the longest string; the Judge scored next, while I brought up the rear.

About 2 o'clock we halted and discussed our bountiful lunch. After an hour's rest we began fishing again. But the fish were too lazy to nibble, and we soon gave up. We had had fun enough and glory enough for one day. The Judge said he was perfectly satisfied with his share of both. "Look at my plug hat, and look at my wrinkled clothes, boys, but just take a squint at my string of fish."

Before 5 o'clock we had reached the little station. Soon the car came bowling along. It was the same car and the same conductor.

"Hello," cried the big, jolly ticket puncher. "Here are you fellows again. What luck, boys? Bet you didn't catch a fish; told you chaps so. Knew I was perfectly safe in offering you 25 cents apiece."

"Here!" cried the Judge. "Come, pungle down now. You owe us just $15. Here are our fish—just even sixty. Hand over that coin quick. What do you say, boys?"

"Well, he's got to pay us and take the fish," we cried.

When the big conductor saw our magnificent strings he wilted. "Oh, I give in, boys; I take it all back; I apologize," he said with a good-humored laugh. "I was only bluffing. But, really, I should like to buy several to take home for my wife and the children. They are very fond of fish."

"You can't buy any of me," said the Judge, holding out his hand and giving the conductor a cordial shake; "but I'll give you six, just for luck."

Charlie gave him three and I gave him three. So we had a jolly day's outing and our big conductor had a round dozen fish to take home. J. M. BALTIMORE.

MEN I HAVE FISHED WITH.

XLI.—Daniel H. Fitzhugh.

No man's name was more prominently connected with the discovery of the grayling as a new fish of the highest game qualities in America than that of the genial angler who is the subject of this sketch He was credited with being the discoverer of this fish in Michigan waters, but this he properly disclaimed; he merely sent some specimens to New York city, where they were the subject of a hot debate among the English anglers and epicures who frequented Sutherland's Café, where the fish were shown and served in 1872. He wrote to a New York journal that Dr. J. C Parker, of Grand Rapids, Mich., had classified the fish some five years before in a letter to the late Prof. E. D. Cope, of Philadelphia, to whom he sent specimens, and correctly diagnosed them as true grayling.

Science is a cold-blooded thing, dealing in refrigerated facts, and is as much interested in a new chub as in a newly discovered game fish; it records fins, fin rays, and maps out the geographical surface into head, eye, number of scales, and souses the specimen into alcohol and has done with it. That's all right, and is all that science wishes to know about a fish, but not all that the angler, at present, wishes to know from science.

All this I read with that interest which was commonly given to passing items concerning fish and fishing, and having pasted the item in my scrap-book it was as everlastingly disposed of as if science had entombed it, only to be resurrected by some future investigator. But when Mr. Fitzhugh wrote an article telling how this new fish rose to the fly, and how gamy it was, the scrap-book was overhauled, and an interest was awakened in the new game fish. One day early in 1874 Mr. Fitzhugh invited me to go to northern Michigan to try to get the spawn of the new fish I was then breeding trout in western New York, and the invitation was accepted. Arriving at his home in Bay City, we planned the campaign, and with his nephew, Frank Fitzhugh, and his favorite guide, philosopher and friend Len Jewell, we started for the little hamlet of Crawford, now Grayling, some ninety miles north, on a rickety railroad which ran a train up one day and down the next. The time of spawing was uncertain, and we had burned out five whisky barrels to take home some live fish if no spawn was to be had. We launched our boats in the Au Sable River on March 28 in a snowstorm, with the thermometer down to 17° Fahr

To see Len Jewell pole a flat-bottomed scow down the swift current and over rapids was a revelation only equaled by seeing him pole the boat up-stream on the return. A prominent trait in the character of "Dan" Fitzhugh, as I soon learned to call him, was that his guest always was put in the best boat, given the best guide and was put in the most likely spots for fishing that he knew of. In after years when comparing notes with George Dawson, Thad. Norris and others, who have made their final cast on earthly waters, this trait was one of the first things mentioned, and it may be taken as an index to the character of one of the kindest-hearted, whole-souled gentlemen whom I ever wet a line with.

It was practically mid-winter on the Au Sable in early April and our bed of balsam boughs was made above 2ft. of snow, with a gum blanket between, and there was no sign of thawing under us when we left on April 3, with no eggs, but with 200 live fish for my ponds. Dan begged me to stay, but my word had been given to Prof. Baird that I would start for the Southern shad waters before April 10.

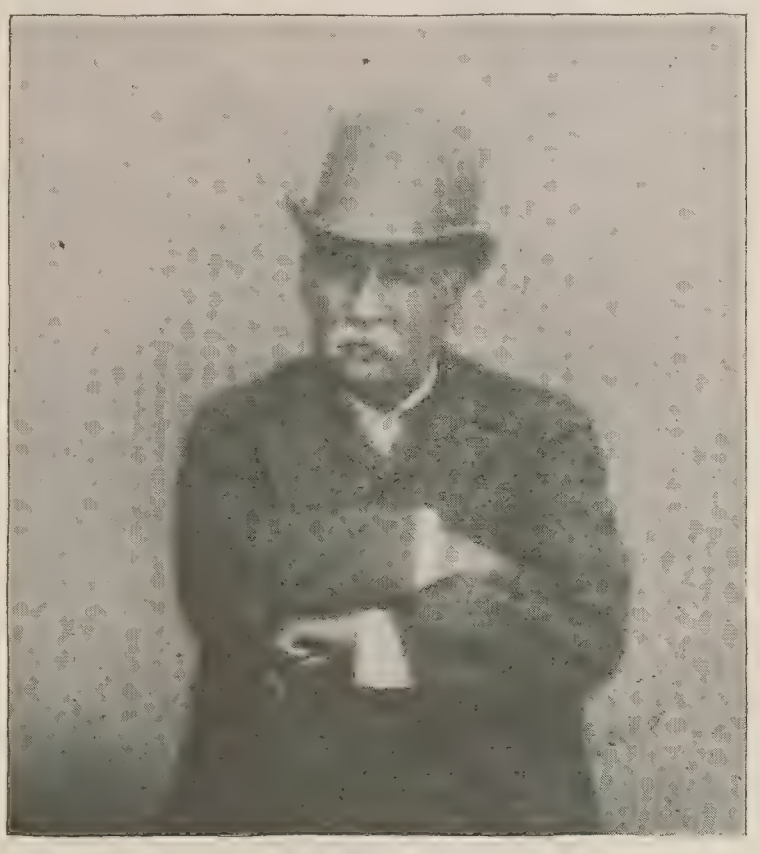
Such days and such fishing! Flies frozen to the side of the boat at the slightest contact and snapped off with the attempt to cast; the line so heavily coated with ice that it would not render through the rings and a grayling weighing 1lb. out of water, pulling and boring for the bottom, and even when nearly exhausted turning his great dorsal fin sideways to resist the strain of the rod. At a pause in the struggle Len would bite the ice off the line near the tip so that a few more feet could be reeled up, but if the fish was a small one he would bring it in by hand. Then he would bite the ice off the whole line down to the leader, which was comparatively free from it because it was longer in the unfrozen spring-fed river, but at times the reel line was as large as a lead pencil with ice accumulated by repeated castings before a fish struck. No matter if fingers were numb and ears tingled, there was that within us that voted the sport to be grand.

This trip was a short one, and a failure as far as obtaining eggs was concerned; but it was a glorious success in making the acquaintance of two such men as Dan Fitzhugh and Len Jewell. A full account of this trip will be found in FOREST AND STREAM of April 23 and May 21, 1874, covering nearly six columns, but only the fishing, the fish and the river are described, with no attempt to portray character.

Len was frying some grayling for dinner, and had just entered the tent where we lay for salt, pepper, or some other thing, when Dan called my attention to a Canada jay which was hopping about the fire, Len had covered everything eatable except the fish in the pan.

"Bet a million dollars," said Dan, "that that jay takes a red hot fish out of that pan."

"Go you ten millions better," said I, "he can't do it, for the rim of that pan is too hot for his feet, and the boiling fat will take his toes off."



Dan hadn't time either to raise or call me before the bird flew up, poised over the pan to see what was there, flirted a grayling out into the snow by some means unknown to the deponent, and when Len turned and saw the bird take the fish off into a tree, he made remarks highly derogatory to "venison hawks" and the whole tribe of jays, whether blue or gray, and I was indebted to Dan for a few millions of dollars. This debt was soon cancelled, for I won fifty millions from him within half an hour on a bet that I would catch the next meat hawk that came into camp. This gray jay is very familiar. One perched on the toe of my boot, and looked us all over as I lay on my back in the tent. They would hop around camp, and carry off bread, pork, fish, or anything eatable; yet, like the familiar European sparrow, they keep a sharp eye on every movement. I placed a bit of pork on a slanting stick, and fixed a noose on a twig just below it; and when the jay flew up to the bait a twitch on the string lassoed it, and then such a screaming! In a minute a score of jays assembled to help their kinsman, and their united screams brought more. The bird was released, and although my winnings had enriched me "beyond the dreams of avarice," I sat down with Len and Frank, and ate fried grayling and drank coffee out of a tin cup on terms of equality just as we would at Casey's table d'hote; and I can recall that winter camp, and say of Len's fried grayling as Eugene Field says of Casey's "tabble dote":

> "The very recollection of them puddin's 'nd them pies
> Brings a yearnin' to my buzzum 'nd the water to my eyes."

And as I write there seems no way to express the longing for the days that can never return unless I again quote from the same poem, and mentally substitute the Au Sable River for the mining camp, where Field says:

> "Oh, them times on Red Hoss Mountain in the Rockies fur away—
> There's no such place nor times like them as I kin find to-day!
> What though the camp hez busted? I seem to see it still,
> A-lyin' like it loved it, on that big 'nd war y hill;
> And I feel a sort of yearnin' 'nd a chokin' in my throat
> When I think of Red Hoss Mountain 'nd of Casey's tabble dote!"

Those days seem like a dream, or perhaps, as Tom Moore puts it, "like the faint, exquisite music of a dream"; for the keen air, the morning mist on the spring-fed river, the

DANIEL H. FITZHUGH.

novelty of taking a new and grand game fish, in the company of a most charming host, whose constant thought was to give his guest the best of the fishing and of everything else within his power. There are men who believe that we will do all these things over again on the other side of the Styx, and keep at it as long as we like. If so, Len Jewell will fry grayling while Dan Fitzhugh and I will swap yarns while watching the meat hawks dodge Len's boot, and Len will chew the ice off my line before I make a cast. But, then, other people say there's no ice there; and just how we can rehearse those days without snow and ice is a problem.

To turn from the realm of fancy to cold facts is sometimes necessary to a truthful historian, and at the end of my first grayling trip a fine lot of *Thymallus* were swimming in my trout ponds. Seth Green had declined Dan's invitation to get their eggs, but when a rival brought the fish so near him he came and looked them over, found that they had not spawned, and next day started for the Au Sable. He was too late; the fish had spawned, but he dug some 200 eggs out of the gravel, took them to his partner, Mr. Collins, who hatched the first grayling eggs in a trough that were so hatched in America; but none were raised from these eggs.

The newspapers of the day had many items concerning the new fish and its future as an addition to our game fishes. Mr. Charles Hallock, then editor of FOREST AND STREAM, had some sent by Mr. Fitzhugh and served at a dinner of the Blooming Grove Park Association, at Sutherland's, baked, boiled and fried, and the guests were loud in their praise of the grayling. Before I visited Mr. Fitzhugh the next year he had urged the Legislature of Michigan to protect this fish during its spawning season, and failed. He then urged me to again attempt their salvation, although I told him that the adult fish in my ponds had not, and would never spawn.

Next year I arranged with Prof. Baird to let me have my own time on the Au Sable, and so striking in between the dates when I left the river and when Green arrived there, we got a fine lot of eggs. We struck Grayling on April 5 and our party was as before, except that Dan took Charles Pierce as his boatman, leaving the giant Len Jewell to me. Our success last year had been talked of among the lumbermen, and when we arrived at the Grayling House the host, Mr. Hartwick, was anxious to have our rods unpacked in order that he might prove his statements that fish of 2lbs. weight could be taken on "slim Jim switches." The split bamboos were brought out and limbered for inspection. Pardon the artillerist's term, it's wrong, but I don't know what else to call it; we unlimber a gun for action, *i. e.*, detach the limber—chest and—but when we put a rod together for action it must be "limbered," for it is assembled.

The wood-choppers looked the rods over with ill-concealed contempt; the artificial flies and gut leaders were handed around with smiles which broadened into grins until one young fellow, whose views of things had been temporarily estranged by backwoods whisky, thought it necessary to show how weak such a slim rod tip was by breaking it between his powerful hands while Len Jewell held the butt, and was telling of the beautiful workmanship necessary to build up such a rod. Quicker than thought Len had the man's hands in his grasp and he was as quiet as a babe. There was no row because most of the men were sober and knew that the fellow had done wrong, and then all knew Len Jewell, who was a "land looker" and constantly traveled through northern Michigan. Still these lumbermen wanted to see how such slim "poles" could take a fish, and in the morning Dan and I went down to the railroad bridge and cast for nearly an hour before we took a ½lb. grayling on an artificial fly. They were incredulous at first and we cast until hope had become hopeless, when at last Dan had a strike and landed his fish. Blessings on that little grayling! To us it was a great victory. The light rod kills; the mild power cures and the victor can always afford to refrain from rejoicing.

It was not as cold on this trip as on the one the year before. There had been a thaw, and the river was a foot higher and somewhat discolored. There were no fish in the old places and we went down twenty miles before stopping to fish Len said the river had been netted and speared as far down as the market fisher could pole a boat in one day. We took one fish that had the marks of a spear on it, and this in the breeding season! The spawning beds were on shallows, but there were no fish on them; all that we caught were in the deep, dark pools. Suspecting that they were night spawners, we rigged up a jack-light and saw them on the beds. We released the unripe fish and only found four fully ripe females, and from these and half a dozen others that had partly spawned I took 8,000 eggs home, besides giving a lot to Mr. Frank N. Clark, the well-known fishculturist, then running a hatchery in southern Michigan. This was the first lot of grayling eggs taken by hand in America. The spawning season was about over when we left the river on April 11. A full account of this trip may be found in FOREST AND STREAM of May 13, 1875 Up to this time it was lawful to take grayling on April 1, but after several years of effort Mr. Fitzhugh got the Legislature to change the date.

Before I met Mr. Fitzhugh he wrote me a characteristic letter. He said: "You say you would like to go after grayling if it will not interfere with my business. I am quite a busy man, and never allow pleasure to interfere with business. My pleasure is to look after a lot of lumbermen, log drivers and others, keep account of the amount of lumber they get out and make out pay rolls. My business is fishing, shooting and vagabondizing in the woods, and pleasure is never allowed to interfere with it. I am at your service if you come." And it was not to me alone that such an offer was made. He entertained Prof. James W. Milner, who wrote a monograph on the grayling for the U. S. Fish Commission; Thad. Norris, George Dawson, Seth Green, and other lesser known anglers. His boats, guides and camp equipage were not only at their service, but the party was liberally provisioned by him for his guests. His fund of anecdote and his peculiar gift of humor made him a most charming companion, and it came naturally, for his cousin, Greene Smith, the ornithologist, was famous in this line, to the sorrow of his solemn father, Gerrett Smith, the famous abolitionist. Greene Smith could tell funny yarns for a week and never repeat, and Dan Fitzhugh was a good second. I may say, par parenthesis, that I believe myself a fair judge of that sort of thing.

In December, 1877, he wrote me: "I have been on the Manistee three times this summer, always with good success, but not such as we had a few years ago. We have to work harder, and it is more satisfactory. The vandals have invaded our pleasant waters with bait and all other devices to lure the gentle grayling. One party from Chicago took 5,000 from the Manistee this summer—fish from 1oz. upward—salted them and shipped them home to count! Then they have dammed the river at Grayling, and are going to put dams in the Manistee next spring. I think I can see two more seasons of reasonably good fishing in those streams, and then, in my old age, must seek new fields. Is it not hard? Do try and come and go a-fishing with me once more in the old holes."

Again, in August, 1879, he wrote: "Have been to the Mainstee once, with fair success. My last trip was poor as regards bag, but pleasant otherwise. * * * I have been trout fishing. Had not fished for trout in ten years. Before that all my fly-fishing was for trout, and I had an exaggerated idea of the staying qualities and resistance of the trout. Now, after mature deliberation and some experience with both, I believe the grayling of equal size has twice the resistance and all the staying power of his relative. I have never seen a trout come out and shake himself over two or three times before surrendering, while it is common for the grayling to make half a dozen desperate leaps before he comes to grief." Yet men who have fished for grayling once have denied that it leaps from the water. It seems like a crime to let this grand fish become extinct. Mr. Fitzhugh paid all the expenses of a trip after grayling eggs for the State of Michigan, and Mr. Chase, the fishculturist, got some eggs in 1878 and sent them to the hatchery at Pokagon, but I have no further knowledge of what was done with them. I also think Mr. Frank N. Clark attempted to get eggs, but am writing from memory.

In 1884 Mr Fitzhugh called me down for saying in 'Fishing with the Fly," that the grayling does not leap, therefore I am in with the others of small experience. He said: "You have made a grave error, which I do not attribute to your ignorance but to lack of experience. You assert boldly that the grayling never leaps from the water to take the fly. You were with me on what were probably the only trips for grayling you ever made, in what was almost the depths of winter, and you were right, as far as your experience went. They do then take the fly, as you say, just at or below the surface. But, take the grayling in the proper season it is as 'leapin'' a fish as any trout. I have lost my end fly, and with nothing but the hand fly, when fish were rising, have trailed it some inches above the water to see them leap and take it, and have caught many in that way, hooked 6in. in the air. Moreover, I have never seen a trout leave the water over two or three times after being hooked, while I have seen the grayling leap six times, for all he was worth, and Len backs me in this." The dear old soul! Doesn't he let me down easy?

I had another trip with Mr. Fitzhugh and Len Jewell, which I will relate in a sketch of Len, Dan's constant and

faithful friend. I last met Mr. Fitzhugh in Detroit, in 1888, when we met by appointment at a meeting of the American Fisheries Society, and how we did fish in the hotel that night! The old stories were retold, and we renewed our youth with memories of the past. He told of a priest who fished with him occasionally, and whom I had seen in the woods, retiring at the proper hours to tell his beads, and then joining us with a smiling face, brim full of good nature to ask what we thought of the fishing prospect. Some careless remark of mine about our not following the good example of our clerical friend caused Dan to say:

"Speak for yourself, my boy. All men do not perform their devotions in public, and only for your happening to stumble on the reverend gentleman and seeing him telling his beads, you would never have known that he did it. Neither do you know what I may do in that line; but as for you, I think you incline more to the jovial creed of the sporting monk of Fountain's Abbey, who said:

" 'Little I reck of the matin-bell,
But drown its toll with my clanging horn;
And the only beads I love to tell
Are the beads of the dew that hang on the thorn'."

Hon. Herschel Whitaker, President of the Michigan Fish Commission, wrote me that Mr. Fitzhugh died on June 26, 1896, and that he attended his funeral, adding: "He was one of nature's noblemen, a true sportsman, a brave spirit, with a heart as gentle as a woman's." Asking Mr. Whitaker to get me a picture of my old friend, he replied that Mr. Fitzhugh would never sit for a photograph, but that Mr. E. A. Cooley, of Bay City, had one that was worked up from a snap shot, taken by a young amateur, of a group among whom Mr. Fitzhugh was sitting. This picture Mr. Cooley sent and is here used.

Mr. Fitzhugh was born in Livingston county, N. Y., in 1826, and consequently was seventy years old when he died. He was a strong, healthy man, barring occasional attacks of gout, which, when they came on in the woods, rendered him helpless, and then Len Jewell has actually carried him on his back over twenty miles through the woods when so afflicted. He went to Bay City in 1847 and built a house, and went to New York city three years later, but in 1870 made Bay City his permanent residence. He left a wife, but no children.

Len Jewell is dead. Looking down the line of men I have fished with it is only an odd one or two who are left. A letter from a lifelong friend, just received, makes this statement: "A man makes no friends after he reaches fifty years, only acquaintances." This is a new and philosophical view of life that is worth recording, for some personal experiences in recent years seem to bear it out.

FRED MATHER.

CHICAGO AND THE WEST.

Big Fishing for Big Fish.

CHICAGO, Ill., May 1.—Mr. W. F. Souther, of this city, hands me the following letter from a friend of his who has been down in Lower California fishing for jewfish. He says the jewfish peculiar to the Gulf of California differs slightly from the Pacific Ocean fish bearing the same name. Mr. Souther says, with apologetic intent in regard to the story, that 6,500lbs. of fish in two or three hours does sound a trifle tall, but that it is unquestionably true. The letter reads as below:

"TOPEKA, Kas.—*My Dear William:* I know that one of your favorite pastimes is with the rod and line, and having just returned from a trip to Guaymas, in the State of Sonora, Mexico, where we spent several days fishing, thought possibly you would be interested in my account of our sport. Guaymas, as you know, is situated on Guaymas Bay, on the Gulf of California. It is a quaint old Mexican town, nobody knows how old, as it was an Indian village long before its discovery by white men. We left the Clearing House dock about 5 o'clock in the morning, being towed by a small tug in two yawls to a point about ten miles from the city and directly under Cape Haro lighthouse. Our party consisted of eight Americans, all prominently known in railway circles, and an equal number of natives—Mexicans and Yaqui Indians—who composed the crew of the tug and acted as guides and oarsmen.

"We reached the fishing grounds about 8 o'clock and lost no time in getting to work. During the months of November, December, January and February, a fish, called by the natives *tortoaba* (which was interpreted to us as sea bass) comes into the feeding grounds of Guaymas Bay, and it does not require much of an effort to catch a good-sized boat load. We had an abundance of lines, about half the thickness of ordinary clothes-line, with a hook about 8 or 10in. in length, and which was attached to the line with about 12in. of heavy well chain. This latter precaution is taken to prevent the sharks, which are quite numerous and frequently caught, from biting the lines in two. For bait we used the arm of an *octopus*, or devil-fish, or a small fish which is called there the *dulce*, or "sweet mouth." This latter fish weighs from 1 to 2lbs., and is put on the hook right under the back fin and allowed to swim as usual. The fish are found in very deep water, and we frequently had out over 100ft. of line. On the day in question the fish must have been very hungry, for we no sooner got our lines to the bottom than we had hooked a 100 pounder, and what fun it was hauling them in! It requires quite a strong man to haul a 100 pound fish from 100ft. of water, and we soon found out that the salt water, heavy lines and strong fish cut our hands unmercifully, and the writer was laid up for several days afterward with pretty sore hands. After getting the fish to the top of the water, we hauled them alongside of the boat, and then had to knock them in the head several times with a short, heavy ironwood club to stun them before we could get them into the boat. After fishing about an hour our two boats were loaded with fish to the gunwales.

"We rowed ashore and unloaded the fish on the bank and started afresh, and inside of another hour succeeded in refilling the boats, catching in all sixty-five fish, averaging a little over 100lbs. each. After we had refilled the boats we were pretty well tired out, and all went ashore for the purpose of eating our lunch and cleaning the fish. The water was about 20ft. deep along shore, but clear as crystal, and we caught lots of starfish and lobsters with our small harpoons. The big fish were so plentiful that we actually caught three of them hooked in the sides, they having run into the hooks. We lost a good many lines, as the fish are pretty strong, especially when first caught; but after we get them near the surface the air bag comes out of their mouths, and after that there is no danger of losing your fish, as it floats around on top of the water, and never goes to the bottom again. The most amusing feature of the day was when one of our party got his hook caught on the 200lb. anchor, which he pulled to the top amid shouts of laughter from the whole party. He was quite a heavy man, and the exertion made him puff lustily. Every time he would stop pulling he would see the line start for the bottom at a rapid rate, and he must have thought he had caught a whale. He finally succeeded in getting the anchor to the top, and I won't tell you what he said. You can guess.

"I am not much of a fisherman, as you know, but have made several trips to Guaymas, and always go fishing there, as it is no trouble to fill your boats in no time, and I am informed that Agassiz, the eminent naturalist, on a trip through the Gulf of California, said that it is the largest and best unfished body of water on the globe. They catch innumerable varieties of fish there and it is well worth a trip there, but it does not require an expert to be successful. In our country it requires brains to be a successful fisherman, while there it requires only strength and tough hands. When we returned ashore we were told by everyone that our catch was the largest that had ever been made by a single party—but still I wasn't happy. Between you and me I enjoyed vastly more our over Sunday trips on the C., M. & St. P. R. R. to Delavan and Eagle Lake, Wisconsin, and little as I know of 'scientific' fishing, I believe I'd rather catch half a dozen of the 2 and 3lb. bass we caught last summer at Kansasville than 100 of the biggest *tortoabas* that ever swam in the Gulf of California. McC."

The Thornapple River for Bass.

May 15.—Mr. R. P. Alden, of Saginaw, Mich., is good enough to add a bit of further information about the Thornapple River of the South Peninsula as a bass stream. It comes in the nature of the usual advice of to-day, "You ought to have been here about ten years ago," or "You'll find it a little better over in the next county," which fishermen of this region have become accustomed to hearing when they go out fishing anywhere. I hope we shall hear of better enforcement of the laws in the Thornapple country, so that we shall see this good stream as it always should be. Mr. Alden says:

I see you mention the Thornapple River as a good stream for small mouth bass There was a time when the Thornapple was alive with them, but of late years they are nearly run out. The law protecting the black bass is not enforced, as the fish are taken in every manner the year round. Spearing and netting has done its work. In 1860 I was born in the village of Alaska, seventeen miles southeast of Grand Rapids and on the bank of the Thornapple River, and I lived there for twenty-five years. I have fished and hunted its entire length, and will say that if the laws were enforced this would be the angler's paradise for the small mouth bass. I never tried the fly, but with natural bait one can to-day get good fishing there.

The Prairie River for Trout.

Mr. W. H. Comstock, of this city, is beginning to be troubled with the trout fever at this time o' year, and this week came up to the FOREST AND STREAM office to ask where he could go to get some good trout fishing, nearby in Wisconsin, all fly-casting of course, for he does not care for any other kind. This was a hard question to answer, for I really do not know a single stream in Wisconsin where good fly fishing can be depended upon. There are trout in many streams of Wisconsin, but the most trout are in the worst streams. The Paint and the Pine and the Fence all offer good fly fishing once in a while. The Little Oconto is about the best of any of the streams of upper Wisconsin which do not run into Lake Superior (the best trout fishing is in the streams which empty into that lake). I told Mr. Comstock that he would be apt to find about as good fishing of his sort in the white River, near Princeton, as in any stream I personally knew anything about, but that he would probably find the Prairie River, near Merrill, Wis., still better, if he cared to take a seventeen mile stage ride (no man deserves trout nowadays who is not willing to ride further than that by stage). The Prairie River was for a long time stocked by the State, and the fact was not generally known, the river being practically covered up for some years. Trout weighing up to 4 and 5lbs. were taken from it for the World's Fair. Since then the stream has been fished by a good many anglers, some of whom were careful not to give the snap away. I can't say what the stream will offer this season, but it ought to be about the best place in that State, all things considered.

I shall be vastly obliged to friends in Wisconsin and the South Peninsula of Michigan if they will be kind enough to give me the names of good waters for trout or bass. About this time of year a whole lot of people come in here and want to know where to go. I will not send anybody any but the right kind of people, so don't be afraid to tell where the good fishing is for the friends of FOREST AND STREAM.

Chicago Fly-Casting Club.

The Chicago Fly-Casting Club has begun its season casting tournaments, and held its first meet May 8 at one of the city parks, with the following results. The first column shows distance of fly-casting, the second and third the percentages and the fourth the bait-casting distance:

	Long Distance.	Distance and Accuracy.	Accuracy and Delicacy.	Bait-Casting.
I. H. Bellows	72	95⅔	70⁵/₁₂	96³/₅
L. F. Crosby	..	....	....	78¹/₅
B. W. Goodsell	85	9 1/3	92⅓	82³/₅
E. D. Letterman	..	....	....	87²/₅
C. A. Lippincott	8	89¹/₅	71¾	79
O. G. Ludlow	..	43⅔	44½	78³/₅
R. B. Miller	..	....	....	91³/₅
G. A. Murrell	72	79	77¼	9.³/₅
H. A. Newkirk	..	87¹/₅	62¹/₆	77³/₅
F. N. Peet	79	86¹/₃	85¾	85⅔
G. W. Strell	..	56⅓	....	80³/₅
J. E. Strong	..	79	87⁵/₆	84⁴/₅

Holders of medals: Long distance fly, B. W. Goodsell; distance and accuracy, I H. Bellows; accuracy and delicacy, B. W. Goodsell; bait casting, Itha H. Bellows.

E HOUGH.

1206 BOYCE BUILDING, Chicago.

Kentucky Fish Abundant.

MAYFIELD, Ky., May 8.—Never before were there so many fish in the small streams in western Kentucky. Last week a party of five spent the day on Clark's River, and in a few hours landed seventy-five nice trout. Now this may be a small catch for some waters, but it is extraordinarily large for Clark's River.

We fished just below a mill dam, where the water was not more than 8ft. deep.

I suppose the backwater from the Ohio has supplied the creek with its unusual amount of fine fish. HAYSEED.

ANGLING NOTES.

Fish Feeding.

IT is my belief that during the next few years the matter of feeding young and adult fish will command the attention of public and private fish breeders in this country to a greater extent than it has during any period in the past since artificial fish propagation has been practiced. It is natural that this should be so, as other branches of the work have occupied the attention of fishculturists until these branches having been perfected, as you may say, the problem of how best to rear the young and old fish in confinement, economically and in health remains to be solved. Not that the rearing of young fish to yearlings, or older, has not been practiced for years past, and has occupied the time and thought of fish breeders, but now it would seem as though they were concentrating their thought upon the discovery of the best and cheapest method of rearing and feeding fish fry, and maintaining stock fish.

Fish breeders in Europe have apparently devoted more time to solving this problem than the fish breeders in America, and this is explainable when we understand that their operations have been conducted on a small scale comparatively; for while they hatch thousands of fish in Europe we hatch them by millions in this country, or I might even say, by the hundreds of millions. Naturally under such conditions, while we have been perfecting plans for hatching fish on such a large scale, we have not devoted much time to the matter of rearing the fry after they are hatched. Within the past few days I have received several letters, which refer to the subject of feeding or rearing fish. One from Mr. Thomas Ford, Manor Fishery, Caistor, Lincolnshire, England, I quote from as follows: "For the last three or four years I have been feeding my trout from the fry stage up to my 12lbs. fish on a new system, at present used only by myself, and the results are most excellent. It is a perfectly natural food, and I have wholly discarded chopped liver and horseflesh. My fry have had no chopped liver for quite ten years. This will probably be news to you. This year my yearlings run up to 9in., and I sold a good lot from 4 to 8in., quite equal to the Scotch two-year-olds, and I got a good price for them, of course. I had smaller yearlings from smaller fish running from 3 to 6in. The last 500 yearlings, *fario*, I sent out were all from 4 to 8in., with the 9in. trout picked out for future breeders." We have no trouble to rear yearlings of 9in. in length on this side of the water, but it is not done on natural food. At the Cold Spring Harbor Station of the Fisheries, Game and Forest Commission, and in the rearing ponds of the Rosapeague Club, near Smithtown, L. I., I have seen 9in. yearlings a-plenty, though neither are fed entirely on natural food. The latter are not fed on liver, but they are fed on beef hearts and salt water minnows (mummys).

Last year at the meeting of the American Fisheries Society at Battery Park Aquarium, New York, fish feeding was discussed at length, and the method of William Thompson, of Warren, Ind., was referred to, not entirely with the seriousness which it deserved. Mr. Thompson feeds his fish on meal of some sort, but the process of preparing his fish food has never been made public. Corn meal, cooked and mixed with chopped liver, is a fish food that has been tried by the State and by private breeders. In fact, I now recall a letter from a private breeder received a month or so ago on this very subject. The writer is Mr. H. Seymour Buckley, of Odessa, N. Y. He said: "I notice a discussion in the Transactions of the American Fisheries Society in regard to trout food in which is mentioned the Page method of feeding mush. I have been in this business only three years, but I have used the mush and liver during that time and consider it a very good and economical food. I also use blood with this mush. I rear only brook trout, and they take this food readily and thrive upon it. Fish fed upon this food can be eaten at any time without changing the food, as there is no bad flavor from it in the flesh of the trout like that of liver-fed fish. In fact the fish fed on mush and liver are superior to wild trout. I am supported in this statement by all who have eaten my fish. I have had no experience with other foods so I will not say that this heads the list, but I do know that it produces a fish whose flavor cannot be beaten." But I have wandered from Mr. Thompson. It is one thing to rear brook trout or salmon and quite another to rear shad or whitefish fry. The United States Fish Commission in its shad pond in Washington does rear shad fry from spring until fall, but does not feed the fry, as they subsist on the food generated by the plant life in the pond. Mr. Thompson writes me that by his method of feeding he rears whitefish to from 1½ to 3in. in length. This is a system of feeding artificial food, and he tells me he has furnished his food to the United States Fish Commission to rear 1,000,000 whitefish to June 1. If this is successful, it will be a long, long stride in the direction of solving the food problem so far as the delicate whitefish is concerned.

While I have been writing, a letter has come to me which has a bearing on this subject.

When the Fisheries, Game and Forest Commission recommended in its report for 1895, that in the future no plants of German carp should be made in waters containing other fish, because it was no better than the common sucker, and instead of being a vegetarian, as was heralded when introduced from Europe, it had been convicted of spawn-eating; a New York newspaper commented upon the recommendation as unwise, and said that the carp had not been convicted of spawn-eating, or words to that effect. The letter just received is from a member of one of the best known private clubs in this country, and he is chairman of the hatchery committee of the club.

He says: "Years ago, acting on the advice of the U. S. Fish Commissioners, the club stocked a lake with carp on the assumption that they would provide food for the black bass, with which the lake was stocked. * * * The black bass has deteriorated. Some years ago the fair run was from ¾ to 1½lbs., with an occasional big one. I have raised and turned into the lake some thousands of black bass fry about 3in. long, yet the catch has proven smaller and smaller, now running about 8in., and a pound fish is the exception. There used to be shoals of minnows in the lake; these have entirely vanished, and last summer I did not see them at all. We were troubled by the numbers of yellow perch and pickerel. To see a pickerel now is an event, while the number of perch have wonderfully fallen off. I lay all this primarily to the

carp. They have increased enormously, and take very good care that no bass shall breed in the lake. *I have repeatedly seen them shove the bass off the nest and suck up the spawn*, and I imagine that every other spawning fish has an equally bad time." There is much that can be said about this state of affairs in the lake referred to, but I have quoted from the letter chiefly to show that there is some evidence that the carp is a spawn eater.

I have always believed that the New York commissioners were justified in their recommendation, and this is only one of a number of instances that have come to my personal notice to prove that the carp is most undesirable in waters where better fish would thrive if it were not for the carp. The writer of the letter informs me that a determined effort has been made to clear the carp out of the lake, but so far without success. It is the simplest of all simple matters to get an undesirable fish into a lake, and once in, it is the hardest kind of a matter to get the undesirable fish out without at the same time doing injury to the desirable fishes in the same water.

Color of Trout Flesh.

Col. Wm. L. Stone has made it plain to me that he means the flesh, and not the skin, of the trout when he said that the males are of one color and the females are of another. He writes: "I have just heard from my friend who lives at Beaver Lake, near the Boreas, and he says that it is the male trout whose flesh is white and the female a rich salmon." It will be interesting to investigate what the male and female trout of other lakes may show in the way of coloring of flesh. A. N. CHENEY.

QUEBEC ANGLING SEASON OPENED.

Editor Forest and Stream:

The ice has gone out with a rush, and the fishing season has opened here much earlier than usual. Telegrams from Lake St. John report that the ice left the lake on Wednesday last, and that ouananiche are being taken in abundance by the habitants around the shore. This fishing is altogether with bait; but by the early part of next week the fish will undoubtedly rise well to the fly in the mouths of the Metabetchouan and Ouiatchouan rivers.

The ice left most of the smaller lakes along the line of the Quebec & Lake St. John Railway over a week ago, and fly-fishing is now becoming good, but will be better in about a week. A party of prominent anglers from Syracuse, N. Y., arrived in town yesterday. They are members of the Triton Fishing Club, and are on their annual excursion to their fishing grounds in the Lake St. John region. The party consists of Mr. C. P. Gregory, proprietor of the Yates House in Syracuse, and vice-president of the club; Messrs. L. C. Smith, Fred Barnes, G. S. Larrabbee, M. C. Pierce, T. D. Wilkin, Dr. and Mrs. W. H. Brown and H. E Gregory, Lake Edward, it just clear of ice, and soon the public may look for reports of the great red trout that are taken every spring out of its deep cold waters. Messrs. Samuel Dodd, W. B. Ives, W. B. Hall, W. B. Cashen, George A. Fay, Francis Stevenson, of Meriden, Conn.; Dr. George L Porter, William B. Hincks, George H. Johnson, of Bridgeport, and Mr. A. E. Foster, of New York, passed through here two or three days ago on their way up the line of the Lake St. John Railway to their club waters. Most of them are members of the well-known Metabetchouan Fish and Game Club, which has its club house at Kiskisink. The Messrs. R. R. McCormick and William McCormick, of Florida, who are annual visitors to this country, arrived here ten days ago and immediately proceeded to Lake Edward, where they have taken a cottage for the whole season. Here they will make their headquarters during the summer, first fishing Lake Edward for some time and then going to Lake St. John after ouananiche. Their wives, when not in the woods with them, will live either at Lake Edward or at the Roberval Hotel, for the two gentlemen of the party calculate this year upon making a long trip up the Peribonca River, and getting as nearly as possible to its waters.

The lakes in the immediate vicinity of the city have now been clear of ice for some time, and pretty good sport is reported from both Lake Beaufort and Lake St. Charles In the latter lake a Quebec angler, on Saturday last, took a gray trout or "laker" (*Salmo namaycush*) weighing 8½lbs. It rose to a Palmer-hackle. This is not the first instance of the kind that has occurred in this lake. Some few years ago, as related in "The Ouananiche and its Canadian Environment," one of these fish, double as large as that above reported, was killed there by a fly-fisherman. The *namaycush* are only on the top of the water in the very first days of the season, while it is still quite cold, and it is probably only in quite northern latitudes that they are known to take the fly at all. The angler who killed this last fish hooked another and larger specimen on the same day, but lost it. That killed by him gave him about an hour's work. It made a long run upon feeling the steel and threatened to run out the whole line. After that it was simply weight that told. It resisted much as a pike does, and as it was taken upon light tackle, had to be finally towed ashore. Similar sport could no doubt be had in many of the lakes in which this fish abounds in the Lake St. John country, if properly sought, early in the season. E. T. D. CHAMBERS.

QUEBEC, May 15.

Florida Swordfish.

AT Fort Myers, Mr. E. Vom Hofe, of New York, on May 2 and 3, landed two large swordfish with rod and reel. The first measured 14ft. in length by 4½ft. in breadth, from fin to fin, and weighed 600lbs.; while the other measured 13ft. in length and weighed over 500lbs. The saws were 3½ft. long.

The fish were caught near Redfish Point, on the Caloosahatchee River, four miles below Fort Myers, and were taken while fishing for tarpon, on a No. 15 linen line and 14oz. split-bamboo rod. It took two hours to bring the largest fish to gaff. Mr. Vom Hofe has caught ten tarpon to date, five of which were taken in the waters about Fort Myers.

B.

Moosehead Fishing.

BANGOR, Me., May 14.—The Sterns party, of Bangor, in their first afternoon brought to Kineo 153 splendid square-tailed trout. Mr. Andrew was high line with thirty-two, and Mr. L. A. Perry, of Auburn, took the largest fish—2½lbs. Wednesday the party took 112, with Mr. Greenleaf as the heavy-weight catch, just 3lbs. GEO. M HOUGHTON.

THE MAINE FISHING.

BOSTON, May 15.—Parties for the trout waters of Maine are in order now that the lakes and ponds are all clear of ice. The last lake to clear was Rangeley, the ice leaving the 11th, or four days later than last year. Richardson cleared the 9th and Mooselucmaguntic on the 10th; these lakes each about four days later than last year. A number of sportsmen were already at the several accessible points on the Rangeleys and Moosehead, waiting for the ice to leave. Others started as soon as news of the ice leaving was received.

Senator W. P. Frye, of Maine, passed through Portland the other day *en route* for his camp, Lake Mooselucmaguntic. It is reported that he is at the head of a petition that is being circulated praying the commissioners to prevent deep-water bait fishing in all the Rangeley waters during July and August. The claim of the petition is that a great many large trout are destroyed by this fishing in the deep water of the lakes, the work being done with very long lines, at points that have been previously "baited up," as it is termed; minnows having been chopped up and thrown overboard for several days beforehand.

Thus far no great catches are reported from the Rangeley waters, the water being unusually cold. It is noted that the ice lingered longer than ever before after having actually broken up, indicating unusually cold water. Capt. Fred C. Barker writes from Bemis that he was two days in getting his little steamer up to the dam, at last succeeding after driving through miles of ice. Travel that way has started off with a rush, a through train from Boston in one day, direct to the heart of the Rangeleys, being appreciated.

Reports from Moosehead are of a crowd of sportsmen and good fishing. It is reported that at least 500 people are scattered among the principal hotels at Moosehead and at the private camps; a good many camping out, though it is early in the season for such dwelling out of doors.
